Published Date: November 19, 2017

Dear Guests...

Welcome to the 8h INTE & ITICAM & IDEC -2017.

International Conference on New Horizons (INTE) and, International Trends and Issues in Communication & Media Conference (ITICAM) and International Distance Education Conference (IDEC) are international academic conferences for academics, teachers and educators. They promote the development and dissemination of theoretical knowledge, conceptual research, and professional knowledge through conferences activities, the conference proceedings books and TOJET, TOJNED Journals. Their focus is to create and disseminate knowledge about new developments in these academic fields.

INTE & ITICAM & IDEC conferences are now well-known international academic events and the number of paper submissions and attendees are increasing every year. This year our conferences have received more than 900 applications. The Conference Academic Advisory Board has accepted approximately 600 papers to be presented in Berlin, Germany.

We would like to thank Prof. Dr. Muzaffer ELMAS, Rector of Sakarya University for his support of organizing these conferences.

We also would like to thank our distinguished guests, keynote speakers for their collaborations and contributions for the success of these conferences.

And finally, we would like to thank to all of our participants who have presented their academic works in INTE & ITICAM& IDEC- 2017, Berlin, Germany.

Without their participation, INTE, ITICAM & IDEC-2017 would, of course, have been impossible.

We would like to sincerely thank all of you for coming, presenting, and joining in the academic activities.

We would also like to thank all of those who have contributed to the reviewing process of INTE, ITICAM & IDEC conference papers, which will be also published in TOJET, TOJNED.

Finally, we would like to wish you all a successful conference, pleasant stay in Berlin, Germany.

Thank you

Coordinators

Prof. Dr. Aytekin ISMAN

Assoc. Prof. Dr. Ahmet ESKICUMALI

KEYNOTES

The Future of Teaching, Learning, and Technology in Higher Education

Prof. Dr. Teresa FRANKLIN
Ohio University, United States

*Preparing students to live in a complex world:
Connecting the curriculum and co curriculum to
enhance holistic student learning*

Prof. Dr. Douglas FRANKLIN
Ohio University, United States

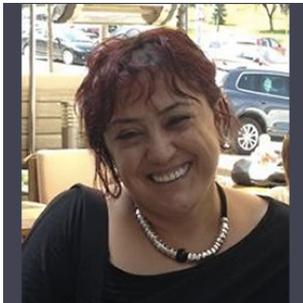

Designing Learning Spaces for University Campuses

Prof. Dr. Robert G. DOYLE
Harvard University, United States

*Using mixed methods designs to understand
technology-based interventions*

Prof. Dr. John HITCHCOCK
University of Indiana, United States

21st Century Skills Beyond the Classroom

Prof. Dr. Buket AKKOYUNLU
Cankaya University, Turkey

What Are The Possibilities of Distance Learning For The Disadvantaged Groups

Prof. Dr. Ferhan ODABAŞI
Anadolu University, Turkey

Quality Process in Higher Education

Prof. Dr. Muzaffer ELMAS
Sakarya University, Turkey

Strange Pairings – The case for “Science and Literacy” in an era of populist science!

Prof. Dr. Colleen SEXTON
Governors State University, United States

Are You With Me? Engaging Students in the Learning Process in Today’s University Classroom?

Prof. Dr. Deborah E. BORDELON
Governors State University, United States

INTE 2017 Workshop

Project-Based Learning

Özet

Son yıllarda her alanda artan teknolojik gelişmeler de artık kaçınılmaz olarak teknolojinin eğitimle ilişkilendirilmesi gereğini ortaya çıkarmaktadır. Bunun için, öğretme-öğrenme süreçlerini daha verimli yapmanın, yani nitelikli bireyler yetiştirmenin bir yolu da, teknolojinin eğitimle bütünleştirilerek kullanılmasıdır. Teknoloji, tüm eğitsel sorunlara çözüm olabilecek bir unsur olmasa da, eğitim öğretim faaliyetlerinde teknolojinin kullanılması eğitimde ilerlemeyi sağlamak adına önemli bir role sahiptir. Sağlık alanında ön lisans diplomasına sahip ebelik ve hemşirelik programlarından mezun olanlara kendi alanlarında, diğerlerine ise Yükseköğretim Kurulunun belirleyeceği, ebelik ve hemşirelik dışındaki ilişkili alanlarda lisans tamamlama eğitimi olanağı başlamıştır.

Bu eğitimler, Yükseköğretim Kurulunun belirleyeceği alanlarda uzaktan eğitim yöntemleri ile verilecek, uygulama eğitimleri için Sağlık Bakanlığı ile Yükseköğretim Kurulu işbirliği yapacaktır.

Lisans tamamlama eğitimleri, uzaktan öğretim ile üniversitemizce belirlenen çeşitli yöntemlerle verilecek olup alanına, müfredatına uygun şekilde yürütülecektir.

Sağlık alanında teorik eğitimlerin büyük bir kısmı uzaktan eğitim yöntemleriyle verilebilecek önem arz eden uygulamalı eğitimler yüz yüze yapılmak durumundadır. Uygulamalı eğitimler için üniversitemizin sağlık uygulama araştırma merkezleri (üniversite hastaneleri) yanı sıra Sağlık Bakanlığına bağlı hastaneler de üniversitemizin ilgili birimlerinin sorumluluğunda kullanılabilir.

Türkiye'de sağlıkta lisans tamamlama alanları; Acil Yardım, Acil Yardım Teknikerliği, Acil Yardım Teknikleri, Adli Tıp, Adli Tıp Teknikerliği, Ağız Diş Sağlığı, Ağız ve Diş Sağlığı, Ambulans ve Acil Bakım Teknikerliği, Ambulans ve Acil Bakım, Ameliyathane Hizmetleri, Ameliyathane Teknikerliği, Anestezi, Anestezi Teknikerliği, Cerrahi Teknikerliği, Çevre Sağlığı, Diş Protez, Diş Protez Teknikerliği, Diş Protez Teknolojisi, Diş Teknik Sekreterliği, Diyaliz, Ebelik, Eczane Hizmetleri, Eczane Teknikerliği, Elektronörofizyoloji, Engelli Bakımı ve Rehabilitasyon, Evde Hasta Bakımı, Fizik Tedavi, Fizik Tedavi ve Rehabilitasyon, Fizyoterapi, Hastane Yönetimi ve Organizasyon, Hemşirelik, Hidroterapi, İlk ve Acil Yardım, İş ve Uğraşı Terapisi, Laborant ve Veteriner Sağlık, Nükleer Tıp Teknikleri, Odyometri, Optisyenlik, Ortopedik Protez ve Ortez, Otopsi Yardımcılığı, Paramedik, Patoloji Laboratuvar, Patoloji Laboratuvar Teknikleri, Perfüzyon, Perfüzyon Teknikleri, Podoloji, Protez ve Ortez, Radyoloji, Radyoterapi, Sağlık Kurumları İşletmeciliği, Sağlık Yönetimi, Sağlık Memurluğu, Sağlık Teknikerliği, Tıbbi Görüntüleme Teknikleri, Tıbbi Laboratuvar, Tıbbi Laboratuvar Teknikleri, Veteriner Sağlık Teknikerliği, Yaşlı Bakımı, Yaşlı Bakım Hizmetleri, Yaşlı Hizmetleri Bakımıdır.

A PROPOSAL FOR A DISTANCE LERANING IN HEALTH EDUCATION; DEGREE COMPLETION

Mustafa Altindis¹, Selma Altindis², A.Rıza Atasoy¹

¹*Sakarya University Faculty of Medicine,*

²*Sakarya University Vocational High School, Sakarya, TR.*

Abstract

In recent years technological advances increasing in every field and reveals the need to be associated with education technology. Integrating with technology in education is used for teaching-learning process more efficient and way the training of qualified individuals. Use of technology in education has an important role in education and training activities. Education via the Internet is particularly widespread in higher education stage.

Nurse and midwife who graduate from associate degree in the field of health and nursing and midwifery program in their fields, while other healthcare workers will be determined by the Board of Higher Education, license in areas outside the associated possibility began of continuing education in Turkey.

This training, higher education and distance learning methods in the field will be determined by the Board of Higher Education will cooperate with the Ministry of Health for practice training. Complete undergraduate education is to be given in various ways determined by our universities with distance education field the curriculum will be implemented accordingly.

A big part of the theoretical training in the healthcare can be applied distance learning method. The important at least one part of practice education must be made face to face training. Practical training can be made in university research centers and Ministry of Health hospitals as well.

Bachelor degree in health areas in Turkey; Emergency aid, Emergency Technician, Emergency Technician, Forensic Medicine, Forensic Technician, Oral Health, Mouth and dental health, Ambulance and Emergency Care Technician, Ambulance and Emergency Care, Operating Room Services, Operating Room Technician, Anesthesia, Anesthesia Technician, Surgical Technologist, Environment, Environmental Health, Denture, Dental Technician, Dental Technology, Dental Technical Secretariat, Dialysis, Midwifery, Pharmacy Services, Pharmacy Technician, Electro neurophysiology, Disabled Care and Rehabilitation, Patient Care at Home, Physiotherapy, Physical therapy and rehabilitation, Physiotherapy, Hospital Management and Organization, Nursing, Hydrotherapy, Emergency and First Aid, Occupational Therapy, Veterinary Sciences, Nuclear Medicine Techniques, Audiometry, Optician, Orthopedic Prosthetics and Orthotics, Autopsy Assistant, Paramedic, Pathology Laboratory, Pathology Laboratory, Perfusion, Perfusion Techniques, Prosthetics and Orthotics, Radiological, Radiotherapy, Health Care Management, Healthcare Management, Health Officer, Health Technician, Medical Imaging Techniques, Medical Laboratory, Medical Laboratory Techniques, Veterinary Technologist, Aged Care, Elderly Care Services, Elderly Care Services.

Key worlds : Distance Learning, healthcare education, Degree Completion

Giriş:

Bir ülkenin gelişebilmesi için yeterli sayı ve nitelikte yetişmiş insan gücüne gereksinim vardır ve bu da o ülkenin eğitim sisteminin verimli biçimde çalışması ile ilişkilidir (Sünbül, 1998). Günümüzde her insan, bilgisi oranında güçlü ve o oranda saygındır. Bu nedenle, eğitim kurumlarının toplumdaki yeri ve işlevleri değişmiştir. Üniversiteler, toplumların kalkınmasında, gelişmesinde ve saygınlığında öncü; ekonomik ve siyasal yaşamında etkin rol oynayan kültürel iletişim merkezleri haline dönüşmüştür. Bilimsel araştırma yapma, bilgi üretme ve yayma, eğitim öğretim yapma, nitelikli insan gücü yetiştirme, topluma önderlik etme ve kamuoyu oluşturmaları bakımından üniversiteler ve meslek yüksekokulları yadsınamaz konumdadır. Ön lisans eğitiminin temel amacı meslek sahibi insan yetiştirmektir. Bunun anlamı; yaratıcı, üretken, bilgi ve teknolojiyi iyi kullanabilen, kendini tanımaktan ve tanımlamaktan korkmayan, mesleğini iyi bilen, çok yönlü düşünebilen, evrensel değerlere sahip, çevre koruma bilinci gelişmiş insandır. Ayrıca lisans ya da ön lisans eğitimi alan birey; günlük hayatta karşılaşılabileceği sorunların üstesinden gelebilecek yetide, sosyal, iletişim becerileriyle donanmış olup karşılaştığı problemleri çözme olgunluğundadır.

Geleneksel öğretimin sınırlılıklarından dolayı öğrenciler yeterli eğitim hizmeti alamamaktadırlar. Bu bağlamda; bilim ve teknoloji alanındaki gelişmelerle birlikte öğrencilere eşit eğitim şartları sağlayan “Web Tabanlı Uzaktan Eğitim Programı” geliştirilmiştir. Son yıllarda her alanda artan teknolojik gelişmeler de artık kaçınılmaz olarak teknolojinin eğitimle ilişkilendirilmesi gereğini ortaya çıkarmaktadır. Bunun için, öğretme-öğrenme süreçlerini daha verimli yapmanın, yani nitelikli bireyler yetiştirmenin bir yolu da, teknolojinin eğitimle bütünleştirilerek kullanılmasıdır. Teknoloji, tüm eğitsel sorunlara çözüm olabilecek bir unsur olmasa da, eğitim öğretim faaliyetlerinde teknolojinin kullanılması eğitimde ilerlemeyi sağlamak adına önemli bir role sahiptir. Sağlık alanında ön lisans diplomasına sahip ebellek ve hemşirelik programlarından mezun olanlara kendi alanlarında, diğerlerine ise Yükseköğretim Kurulunun belirleyeceği, ebellek ve hemşirelik dışındaki ilişkili alanlarda lisans tamamlama eğitimi olanağı başlamıştır.

Türkiye'de sağlıkta lisans tamamlama alanları; Acil Yardım, Acil Yardım Teknikerliği, Acil Yardım Teknikleri, Adli Tıp, Adli Tıp Teknikerliği, Ağız Diş Sağlığı, Ağız ve Diş Sağlığı, Ambulans ve Acil Bakım Teknikerliği, Ambulans ve Acil Bakım, Ameliyathane Hizmetleri, Ameliyathane Teknikerliği, Anestezi, Anestezi Teknikerliği, Cerrahi Teknikerliği, Çevre Sağlığı, Diş Protez, Diş Protez Teknikerliği, Diş Protez Teknolojisi, Diş Teknik Sekreterliği, Diyaliz, Ebellek, Eczane Hizmetleri, Eczane Teknikerliği, Elektronörofizyoloji, Engelli Bakımı ve Rehabilitasyon, Evde Hasta Bakımı, Fizik Tedavi, Fizik Tedavi ve Rehabilitasyon, Fizyoterapi, Hastane Yönetimi ve Organizasyon, Hemşirelik, Hidroterapi, İlk ve Acil Yardım, İş ve Uğraşı Terapisi, Laborant ve Veteriner Sağlık, Nükleer Tıp Teknikleri, Odyometri, Optisyenlik, Ortopedik Protez ve Ortez, Otopsi Yardımcılığı, Paramedik, Patoloji Laboratuvar, Patoloji Laboratuvar Teknikleri, Perfüzyon, Perfüzyon Teknikleri, Podoloji, Protez ve Ortez, Radyoloji, Radyoterapi, Sağlık Kurumları İşletmeciliği, Sağlık Yönetimi, Sağlık Memurluğu, Sağlık Teknikerliği, Tıbbi Görüntüleme Teknikleri, Tıbbi Laboratuvar, Tıbbi Laboratuvar Teknikleri, Veteriner Sağlık Teknikerliği, Yaşlı Bakımı, Yaşlı Bakım Hizmetleri, Yaşlı Hizmetleri Bakımıdır.

Uzaktan Eğitim:

Günümüzde sosyal hayatın ihtiyaçlarının çeşitlenmesi ve giderek artması, birden fazla uzmanlık alanının iç içe girdiği çoklu alan bilgisine sahip bireylere gereksinimi gündeme getirmiştir. Bu durum, birden fazla temel alandan bilgi edinilmesini gerekli kılmaktadır. Ancak eğitime yönelik klasik bakış, gerek yasa ve mevzuat açısından, gerekse disiplinler arası öğretime uygun müfredat kitaplarının bulunmayışından; yasa-mevzuat-müfredat uygun olsa bile bir öğretim kurumunun çatısı altında çoklu disiplin öğretimini yürütmeye yetecek kalifiye öğretim elemanı bulma güçlüğünden dolayı, eğitimde yeni anlayışlar şekillenmeye başlamıştır. Zengin olanaklara sahip olan web ortamının gerek bilgi gerekse teknolojik altyapısından faydalanan, dinamik bir yapıya sahip ve öğrenmeyi hedef alan “Web Tabanlı Uzaktan Eğitim” anlayışı doğmuştur. Bu anlayış sayesinde öğrenenlerin bireysel gereksinimlerini karşılamak, onları öğrenmeye motive etmek ve çağın gerektirdiği bir öğrenme-öğretme ortamı sağlamak mümkün olabilecektir (Stromen, 1992). Web Tabanlı Uzaktan Eğitim uygulamaları, geleneksel sınıflarda genellikle yetersiz olan etkileşimi arttırmak amacıyla kullanılmaktadır. Bilimsel ve teknolojik gelişmeler, eğitim isteğindeki artış, maliyet, etkililik ve verimlilik, web tabanlı uzaktan eğitimin gelişmesini sağlayan nedenlerdir. Farklı yerlerde bulunan öğretmen ve öğrenciler arasında gereksinim duyulan yazılı, sesli ve görüntülü iletişim İnternet yoluyla sağlanabilmektedir. Bu yolla öğrenci, herhangi bir anda istediği bir derse katılabilmekte ve bu durum zamanın daha etkin kullanılmasını sağlamaktadır. Öte yandan öğrencilerin ve öğretmenlerin sınıftan bağımsız olması, bina ve personele gereksinim duyulmaması, öğretim masraflarının azalmasına da neden olabilecektir (Yeniad, 2006).

İnternet aracılığıyla eğitim özellikle yüksek öğrenim basamağında hızla yaygınlaşmaktadır. Yüksek öğrenimde, WTE aracılığıyla gerçekleştirilmeye çalışılan amaçları şunlardır (Kaya, 2005):

- Tüm dünyadaki insanları uzaktan eğitmek
- Öğrencilere belirli bir yerleşkede açılmamış derslere katılma olanağı sağlamak
- Öğrencilere farklı üniversitelerde açılan derslere katılma olanağı sağlamak
- Yerleşkeler arasında gidip gelmeye gerek kalmadan, uzaktan öğrenenlere bir sınıfa katılma şansı vermek ve onlara uygulama örnekleri göstermek
- Öğrencilere dünyanın değişik yerlerindeki uzmanlarla etkileşim olanağı sağlamak
- Uluslararası programlarda öğrenim gören öğrencilerin kendi aralarında ve uzmanlarla toplantılar düzenlemesine olanak sağlayarak öğrenmelerini desteklemek
- Dünyanın farklı yerlerinde bulunan uzman ya da öğrencilerle değişik konularda toplantılar düzenlemek
- İş başvurusunda bulunmak isteyen öğrencilerin ilgililerle görüşme yapmalarına olanak tanımak.

ABD, Almanya, İngiltere gibi gelişmiş ülkelerde, çeşitli özel ve kamu kuruluşları tarafından uygulanan WTE, ülkemiz eğitim kurumlarınca da hayata geçirilen uygulamalar arasındadır. Ülkemiz; uzaktan eğitimde bilgisayar destekli öğretim ve çoklu ortamlardan (multi-medya) yararlanma konusunda oldukça geride olmasına rağmen, bazı üniversitelerde (örneğin başta Anadolu Üniversitesi olmak üzere, Fırat, İTÜ, ODTÜ, Başkent ve Çukurova) uzaktan eğitimde teknoloji ve yöntemlerden yararlanmaya yönelik çalışmaların yapıldığı dikkat çekmektedir (Yeniad, 2006).

e-öğrenme ortamları, bireylerin gerçek yaşamlarında karşılaşılabilecekleri durumlara uygun projeler halinde desenlendiği ve farklı öğrenme hızına sahip bireylere değişik düzeyde

güçlüklerin sunulduğu sanal ortamlar olmalıdır. Güçlüklerle karşılaşan bireyin, kendi olanaklarıyla başa çıkamadığı durumlarda ise bir e-arkadaşa yönlendirilmesinde yarar vardır. Oluşturmacı kuramın en temel özelliklerinden biri, ortaklaşa öğrenme ortamlarına uygun eğitim ortamlarının tasarlanmasıdır. Benzer ya da farklı öğrenme özelliklerine sahip diğer e-bireylerle etkileşen bir kişi, sanal ortamda yalnızlık ve soyutlanmışlık duygusuna da kapılmayacaktır.

Tartışma:

Verilen eğitimde istenen başarıların sağlanması için kişilerin tutumları da verilecek eğitim yönünde olumlu olmalıdır. Böylece eğitim alan kişilerin de üst düzey doyum alması sağlanabilir. Öğrenenlere özgü içerik geliştirilmeli, kullanıcılar katılıma teşvik edilmeli, motivasyon eksiklikleri giderilmeli, konu seçiminde konuların tamamı değil, ölçülerek ihtiyaç duyulan konular hakkında eğitim verilmelidir. Uzaktan eğitimde karşılaşılan en büyük sorunlardan biri teknik alt yapı eksikliğidir. Ülke genelinde de internete sorunsuz ve hızlı bağlanabilmek için geniş ağ kapasitesine ihtiyaç vardır. Ya da mevcut internet altyapısı göz önüne alınarak ders içeriği ve uygulamalar hazırlanmalıdır. Yüz-yüze eğitimin en önemli özellikleri iletişim, anında geri bildirim, hatalı ve yanlış öğrenmeyi düzeltebilmedir. Uzaktan eğitimde etkileşimsiz ortamların sohbet ortamı, e-mail, forum gibi eşzamanlı ve eş zamansız gibi teknolojilerle desteklenmesi daha sağlıklı iletişim kurulmasını sağladığı görülmektedir.

SAĞLIK YÖNETİMİ LİSANS ÖĞRENCİLERİNİN GİRİŞİMCİLİK EĞİLİMLERİNİN BELİRLENMESİNE YÖNELİK BİR ARAŞTIRMA

Zeynep KAVSUR, Selma ALTINDIS
SAU İşletme Fakültesi Sağlık Yönetimi Bölümü

ÖZET

Bu çalışma sağlık yönetimi bölümü öğrencilerinin beş faktör kişilik özellikleri ile girişimcilik eğilimi arasındaki ilişkiyi ortaya koymayı amaçlamaktadır. Ayrıca çalışmada, sağlık yönetimi lisans öğrencilerinin demografik özelliklerine göre girişimcilik eğilimi ve kişilik özelliklerinde farklılık olup olmadığı da araştırılmıştır. Araştırmanın evrenini Gümüşhane, Sakarya, Acıbadem ve Medipol Üniversitelerinde okuyan sağlık yönetimi bölümü öğrencileri oluşturmaktadır. Çalışmada söz konusu üniversitelerdeki tüm öğrencilere ulaşılmaya çalışılmıştır. Bu amaçla dağıtılan 500 anketten kullanılabilir 402 anket dönüşü sağlanabilmektedir. Veriler 1 Şubat-15 Mayıs 2015 tarihleri arasında toplanmıştır. Verilerin analizinde IBM SPSS Statistics 20 programından yararlanılmıştır. Verilerin analizinde tanımlayıcı istatistiksel yöntemler, Bağımsız Örneklemeler t-Testi, Tek Yönlü Varyans Analizi, Pearson Korelasyon Analizi ve Çoklu Regresyon Analizi kullanılmıştır. Çalışmanın bulgularına göre; kişilik özelliklerinin dışa dönüklük, sorumluluk, yumuşak başlılık ve deneyime açıklık boyutları ile girişimcilik eğilimi arasında istatistiksel bakımdan anlamlı ve pozitif yönlü, kişiliğin nevroitiklik boyutu ile girişimcilik eğilimi arasında istatistiksel bakımdan anlamlı ve negatif yönlü ilişki bulunmaktadır. Kişilik özelliklerinden dışa dönüklük, sorumluluk ve deneyime açıklık boyutu girişimcilik eğilimini pozitif yönde etkilemesine karşılık; nevroitiklik boyutu girişimcilik eğilimini olumsuz yönde etkilemektedir. Kişilik özelliklerinden yumuşak başlılık boyutunun ise girişimcilik eğilimi üzerinde anlamlı yordayıcı bir etkisi bulunmamaktadır. Ayrıca, katılımcılar arasında girişimcilik eğitimi alma durumuna göre girişimcilik eğiliminin farklılaştığı bulunmuştur. Sonuç olarak kişilik özellikleri ile girişimcilik eğilimi arasında bir ilişki vardır ve kişilik özellikleri girişimcilik eğilimini etkilemektedir. Ayrıca, girişimcilik eğitimi alan öğrencilerin girişimcilik eğilim puanı anlamlı bir şekilde bu eğitimi alamayanlardan yüksektir. Bu sebeple sağlık yönetimi bölümü öğrencilerinin ders programlarına girişimcilik dersi konulması önerilmektedir.

Anahtar Kelimeler: Girişimci, Kişilik özellikleri, Sağlık yönetimi, Yönetim, Üniversite öğrencileri.

A STUDY ON DETERMINING ENTREPRENEURSHIP TENDENCY OF HEALTH MANAGEMENT UNDERGRADUATE STUDENTS

Zeynep KAVSUR, Selma ALTINDIS

ABSTRACT

The aim of this study is to reveal the relationship between the Big Five personality traits of students attending healthcare management department and their entrepreneurial tendency. In addition, an attempt is made to determine whether or not entrepreneurial tendency and personality traits vary among undergraduate healthcare management students by demographic characteristic. The research universe consists of students studying healthcare management at Gümüşhane University, Sakarya University, Acıbadem University, and Medipol University. An attempt was made to reach all the students in those universities. To this end, 500 questionnaire forms were distributed. 402 usable forms were returned. The data were collected between the 1st of February and the 15th of May 2015. The data were analyzed via IBM SPSS Statistics 20. They were analyzed through descriptive statistical methods, independent samples t-test, one-way analysis of variance, Pearson's correlation analysis, and multiple regression analysis. The research findings indicate that there is a statistically significant positive relationship between entrepreneurial tendency and the personality trait factors of extraversion, conscientiousness, agreeableness, and openness to experience, but there is a statistically significant negative relationship between entrepreneurial tendency and the personality trait factor of neuroticism. Though extraversion, conscientiousness, and openness to experience have a positive influence on entrepreneurial tendency, neuroticism has a negative influence on it. Agreeableness, on the other hand, does not have any significant predictive influence on entrepreneurial tendency. Moreover, entrepreneurial tendency varies among the participants by status of receiving entrepreneurship training. In conclusion, there is a relationship between personality traits and entrepreneurial tendency, and personality traits influence entrepreneurial tendency. In addition, the entrepreneurial tendency scores of the students receiving entrepreneurship training are significantly higher than those of the students not receiving such training. Thus, it is recommended to include entrepreneurship course in the curriculum of healthcare management department.

Keywords: Entrepreneur, Personality traits, Health management, Management, University students.

SATISFACTION LEVEL OF FACULTY OF EDUCATION STUDENTS WITH THE SERVICE QUALITY OF TEACHING

Assoct. Prof. Dr. H. Ömer BEYDOĞAN
Ahi Evran University
hobeydogan@gmail.com

Abstract

Today, the quality of the teaching service provided in educational institutions is evaluated based on perceptions of students who receive the teaching service in question. Quality in teaching involves certain decisions and practices which lead to improvements in student learning and satisfaction before, during, and after the teaching process. School policies which guide student learning and apply a teaching program that is generally accepted by the society constitute the basis for student satisfaction. It was aimed in this study to explore satisfaction of students enrolled in the Faculty of Education with teaching service quality.

The survey method was employed in the study to describe the current situation. The sample included 449 randomly selected students enrolled in different departments of the Faculty of Education, Ahi Evran University. Survey questions and the teaching service quality scale developed by the researcher were used for data collection. Validity and reliability of the teaching service quality scale were tested with 670 students. Exploratory and confirmatory factor analysis showed that the scale explained 57.26% of the total variance and had a 7-factor structure. The Kaiser-Meyer-Olkin (KMO) coefficient of the scale was 0.895 and the Barlett Test significance value was significant above at $p < 0.00$ level. The Cronbach's Alpha reliability coefficient of the scale was $\alpha = 0.854$ and the test-retest method applied to 130 students produced a stability factor of $r = .872$.

Regarding α values for the factors of the scale, the relationship was found to be significant at 0.777 level of physical and technological equipment; at 0.635 level for appropriate environment; at 0.715 level for integrity in learning; at 0.721 level for encouraging learning; at 0.386 for keeping up-to-date; at 0.598 for internalizing learning; and at 0.535 level for process-based evaluation. Fit index values of the seven factors of the scale, which were found as a result of exploratory factor analysis, were calculated using confirmatory factor analysis. Fit index values were RMSEA= 0.061, SRMR= 0.050 NFI= 0.92, CFI= 0.95, GFI= 0.86, and AGFI= 0.83.

The study attempted the answer the question, "What is the satisfaction level of the students with teaching services in relation to the factors of the scale and teaching practices?". Correlation with satisfaction level and predictive power for satisfaction level were explored for each factor of the scale. The data collected in the study was analyzed and results were discussed comparatively with literature findings. Certain recommendations were presented within the framework of findings obtained in the study to improve teaching service quality in education faculties and ensure student satisfaction.

Keywords: *Educational service, educational quality, educational environment, physical and technological equipment, integrity and actuality in learning*

NOTE: *This study was supported by the Scientific Research Projects Unit of Ahi Evran University within the scope of project no. EGT.A3.17.011.*

INTRODUCTION

Different opinions have been suggested about the concept of quality to this day. While Deming defines quality as fitness of the product or the performance to desired quality characteristics and judgment of the consumer about the product or service (Deming, 1998, p.137); Juran defines it as fitness for intended use (Juran, 1986, p.22), while Crosby defines it as conformance to requirements (Efil, 2003, p.10). Taguchi (1986) considers quality in education as deviations from educational objectives at the end of the teaching-learning process. He suggests that less deviation means better quality in education. Japanese scientist Ishikawa includes categories such as quality of work, quality of service, quality of information, quality of process, quality of people including workers, engineers, managers, and executives, quality of system, quality of company, quality of objectives, and so on (Ishikawa, 1997, p.47). The individual and the education received by the individual are the basis of all services and products, and therefore the main determining factor for quality.

Formal education is carried out through teaching. For this reason, the concept of education quality is usually identified with teaching quality. Today, the highest-level teaching institutions, universities, are looking for ways to be recognized (or accredited) by international or national organizations, which audit institutions and give quality certificates, in order to demonstrate the quality of their services and products (Saarinen, 2005).

1. QUALITY IN TEACHING

Hunter (1979), who dealt with the concept of teaching quality, notes that it involves making and implementing decisions before, during, and after instruction to increase the probability of learning. Ensuring teaching quality is the activity of ensuring student satisfaction through school policies developed by administrators in order to

foster a mentality which will guide teaching. It is possible to mention teaching quality to the extent that students are able to improve their desired skills and creativity at the end of the teaching process and to the extent that institutions are able to meet expectations of students and other stakeholders of education with the teaching service which they provide during the teaching process. Quality in teaching refers to a situation where student and parent expectations are met, educational objectives are achieved, and student potential is revealed.

The teacher must provide a good learning environment, improve learning motivation, and ensure that students engage in self-learning and learn by doing and experiencing (Vermeule and Schmidt, 2008). Teaching is an activity which involves the teacher-student interaction, efficient use of language to allow for positive change in student attitudes and behaviors, and sharing the belief that educational ideals and goals can be attained (Kyriakides, Campbell, and Christofidou, 2002). According to White, Wyne, Stuck, and Coop (1987), the teaching-learning process involves ensuring enhanced student behaviors by managing student behaviors, presenting appropriate messages, guiding students throughout the learning process, and managing learning through useful feedback.

Brookes University (2005) addresses quality in teaching in nine dimensions: courses, lecturers' motivation, instructional design, relationship among students, relationship between students and lecturers, assignment, lecturers' competence, obstacles and constraints, and evaluation. Wilkie (1990) defines customer satisfaction as the emotional response to the evaluation of the affairs of consuming a product or receiving a service. Satisfaction with teaching and learning quality is the student response after the lecture. It is possible to say that increased teaching and learning quality increases student satisfaction.

Ramsden (1991), Rowley (1996), and Stringer and Irwing (1998) found a strong correlation between instructor quality and perceived teaching quality of students. Henning et al. (2001) discovered that the quality of teaching and students' emotional commitment to the institution were important to maintain the students' loyalty. Ander and Burns (1990) suggested that, for high teaching quality, teachers must interact and communicate with their students in such a way that it will change students' learning behavior. Teaching is an activity which involves the teacher-student interaction, efficient use of language to allow for positive change in student attitudes and behaviors, and sharing the belief that educational ideals and goals can be attained (Kyriakides, Campbell, and Christofidou, 2002).

The relationship between the student and teacher in and out of the classroom has significant effects on the student. There are numerous studies which show that the relationship between the student and the teacher out of the classroom influences the student's personal and social development, academic achievement, self-confidence, perceived self-worth, and willingness to assume active roles in the learning process (Kuh and Hu, 2001; Endo and Harpel, 1982; Thompson, 2001).

The way that the student positions himself/herself in the learning process impacts the teaching quality considerably. In student-centered teaching, student is the receiver, the controller, and the reflector of the teaching service. Rather than just performing given tasks and being a spectator during classroom activities, the student benefits from the teaching service, controls efficiency and performance of the teaching service, actively participates in intra-classroom management processes with his/her ideas, behaviors, and criticisms, and uses his/her critical-thinking skills freely to reflect his/her opinion.

While communication is important for teaching quality, it does not only refer to instruction or conveying implicit messages via teaching materials. Studies show that students are affected by attitudes and behaviors of teachers, rather than the information provided by them (Gözütok, 1988; Baykul, 1990; Elçi, 2002; Akkoyunlu, 2003).

White, Wyne, Stuck, and Coop (1987) suggests that managing student behaviors, presenting appropriate messages, guiding students throughout the learning process, and managing learning through useful feedback will improve the quality of the the teaching-learning process. Learning-related behaviors of the student must be strengthened at the end of this process. In all these processes, teachers are expected to present information to students in an empathetic manner. Good presentation may be considered as an indication of being a good teacher.

By its nature, teaching involves abstract and intertwined concepts and active processes. For this reason, teaching quality involves much more than just teaching and learning. According to Borahan and Ziarati (2002), quality assurance in teaching is all those planned and systematic actions necessary to provide sufficient confidence that a product or service will satisfy given requirements for quality.

Quality in teaching is to develop a shared mentality which will guide teaching, ensuring that teachers adopt school policies, enhancing student satisfaction, and equipping students with appropriate knowledge and skills at the end of the teaching process, and contributing to their creativity. Only then the teaching service can meet the expectations of stakeholders (teachers, students, and parents). Meeting expectations of students and parents will allow for achieving educational goals as well.

Emanuel and Adams (2006) suggested 5 dimensions to evaluate classroom performance of instructors: "Tangibles", which include appearance of the classroom, student seating, and the like; "reliability", which is the instructor's ability to instruct the course dependably and accurately; "responsiveness", which addresses the instructor's willingness to respond to students' questions and concerns, "assurance", which refers to the

instructor's knowledge and ability to convey trust and confidence to students; and "empathy", which is the caring and individual attention the instructor provides to his/her students.

Ramsden (1981), Rowley (1996), and Stringer and Irwing (1998) found a strong correlation between instructor quality and perceived teaching quality of students. Henning et al. (2001) revealed that the quality of teaching and students' emotional commitment to the institution were important to maintain the students' loyalty.

Faculty of education students participate in various activities in their environment, establish positive relationships with their peers and faculty members, successfully manage interactions with their environment, participate in artistic activities such as theater, painting, and music, which are activities that enrich their lives in the faculty and contribute to their satisfaction. However, the determining factor in the center of these interactions is their perception about the purposeful teaching activity.

It was found in various studies on student satisfaction (Şara & Kocabaş, 2012; Tatlı et al., 2011; Ulusoy et al., 2010; Açıkan & Saydan, 2009; Şahin, 2009; Uzgören & Uzgören, 2006; Ceylan & Demirkaya, 2006; Kaya & Engin, 2007) that students were "moderately" or "highly" satisfied with the quality of education which they receive. In studies where students evaluated instructors (Arslantaş, 2011; Şen & Erişen, 2002), it was reported that students found instructors to lack effective teaching skills and incompetent in many aspects. Awang and İsmail (2010) and Ekinçi and Burgaz (2007) found that university students had high expectations, yet low satisfaction levels, which led to reduced student motivation. This study aims to explore effects of physical equipment in the faculty of education, integrity in learning, keeping up-to-date, encouraging learning, internalizing learning, and process-based evaluation on student satisfaction.

2. THE PURPOSE AND THE SIGNIFICANCE OF THE STUDY

Main components of the teaching quality in educational institutions are the instructor, the student, and the administrative personnel, who provide intermediary services. Complementary components of the instructor-student interaction based teaching process include physical equipment; teaching-learning environment; psychological atmosphere; student-instructor relationships; communication style; teaching strategies and methods adopted in the teaching-learning process, techniques used to implement such strategies and methods, content of teaching, teaching materials, and evaluation processes. It is also very important that teaching service providers follow new developments in teaching, encourage students to learn, and use appropriate evaluation tools and techniques to receive feedback. Students, who are the recipients of the teaching service, will make the best and most effective decision regarding the quality of the teaching service.

Appropriate physical and technological equipment: Every educational institution desires to provide physical settings where students can meet their biological, psychological, and social needs and maintain interaction among themselves. If the educational environment lacks a visually comfortable environment, students may experience physiological and psychological problems such as false perception, reduced academic achievement, fatigue, and irritability (Çabuk, 2006). School buildings and classrooms must be suitable for ergonomic use and designed to meet expectations of all student groups. Unfortunately, school buildings and yards in Turkey are not properly planned and do not fit to the environment. Başar (2003) found that the majority of elementary schools are stuck between residential buildings, open to noise pollution, environmental pollution, and other threats, have additional buildings which deface the school and the environment and shrink yards, which are already quite small in most cases, and school buildings are not suitable for education with respect to their structural properties and equipment. Although the most commonly preferred colors in elementary school buildings include yellow, pink, and peach (Barker, 1982), it is reported that straw yellow and salmon pink are the most preferred colors for schools in Turkey (Akar and Sadık: 2003; Halis, 2000). Students' perceptions about the physical structure and equipment of the school where they receive education are stuck in their minds. Perceptions are the building blocks of satisfaction. Schools usually do not have sufficient physical equipment (laboratory, multi-purpose salons, workshops, physical education areas, etc.). The school environment becomes more attractive for students when the physical structure and equipment have a modern appearance and are supported with technological tools and materials (Soedijati & Pratminingsih, 2011). In appropriate physical conditions in schools lead to crowded classrooms and classrooms shared by multiple student groups. When the physical environment is organized in a way that it will create enthusiasm in the student, it serves as an external stimulus to encourage the student to learn.

Appropriate environment: A physical environment where teaching is carried out requires an organization where instructors and students can interact, students act freely in terms of their learning, students and instructors do not encounter constraints, and different learning components come together. An appropriate environment is where the student, an important stakeholder of interaction, willingly participate in the process. The student should find opportunities to acquire knowledge, have fun, learn, and achieve satisfaction in this environment. An appropriate environment refers to an interaction-based atmosphere which allows for psychological and social integration. All elements which are stakeholders of teaching are transformed into elements that fit to the nature of the student.

The environment is one of the basic factors which define the character of teaching and impact student satisfaction.

Integrity in teaching: Integrity in teaching refers to conveying information from the same discipline or different disciplines to the student without breaking the body of information into pieces. Integrity in teaching is to allow students use their holistic and higher-order thinking skills to use information from different disciplines to solve problems which they encounter. The purpose of making connections between other courses and interdisciplines in the teaching process is to ensure integrity in teaching to improve students' basic and higher-order thinking skills with a thematic approach. Integrity has a very important function in seamless and correct progress of the teaching process. According to Jacobs (1989) and Erickson (1995), the student improves his/her personal awareness and available potential thanks to integrity of teaching.

Encouraging learning: Teaching is an activity carried out in a purposeful and planned manner. Encouraging the student to learn is to create enthusiasm in the student and motivate the student. It is a process which aims to eliminate physiological and psychological deprivations of the student, trigger a behavior or an urge for a specific purpose, and maintain the behavior or the urge (Tevrüz and Sürekli, 1996:33). When motivating students to encourage them to learn, the question is whether to aim achievement motivation or commitment motivation. According to Başaran (1982, p. 178), it is preferred to prompt achievement motivation in some societies, while commitment motivation is preferred in others (Başaran, 1982: 178). It is essential to prompt the achievement motivation in the teaching process. Students who act with this motivation have more confidence and have less anxiety and take firm steps toward their goals. This allows students to cope with anxiety and improves perceived satisfaction.

Keeping up-to-date: One of the basic criteria related to adequateness of teaching services is designing decision-making processes in accordance with current conditions. Determining course contents according to current subjects and requirements of the specific industry helps meet student expectations and improves student satisfaction with education experience (Bjorklund, Parente, & Sathianathan, 2004).

Internalizing learning: Learning occurs as a result of a transformation process in individuals. The student respond to new stimuli, then accepts them, and finally advocate them in his/her cognitive world by integrating them. The individual begins to cognitively advocate his/her new experiences in the school when he/she reaches a level where individual-specific learning takes place.

Process-based evaluation: Process-based evaluation is a type of evaluation which allows for receiving constant feedback for the program by revealing difficulties encountered by students throughout the teaching-learning process and taking measures to eliminate such difficulties (Fitzpatrick, Sanders, and Forten, 2004:16). It is part of a process where students are guided throughout the teaching-learning experience, acquire knowledge and skills, and practice-based learning-teaching strategies are employed (Ashman and Conway, 1993: 56). It is a measurement and evaluation approach in which students are monitored within the process, supported for meaningful and permanent learning, and given feedback. Teaching process carried out with this approach allows students to receive feedback any time and at any level.

It is essential for institutions to evaluate their teaching service performance according to student conceptions and experiences in order to maintain teaching quality within a process which involves change and competition. This study aims to evaluate teaching service quality in faculty of education based on student perceptions.

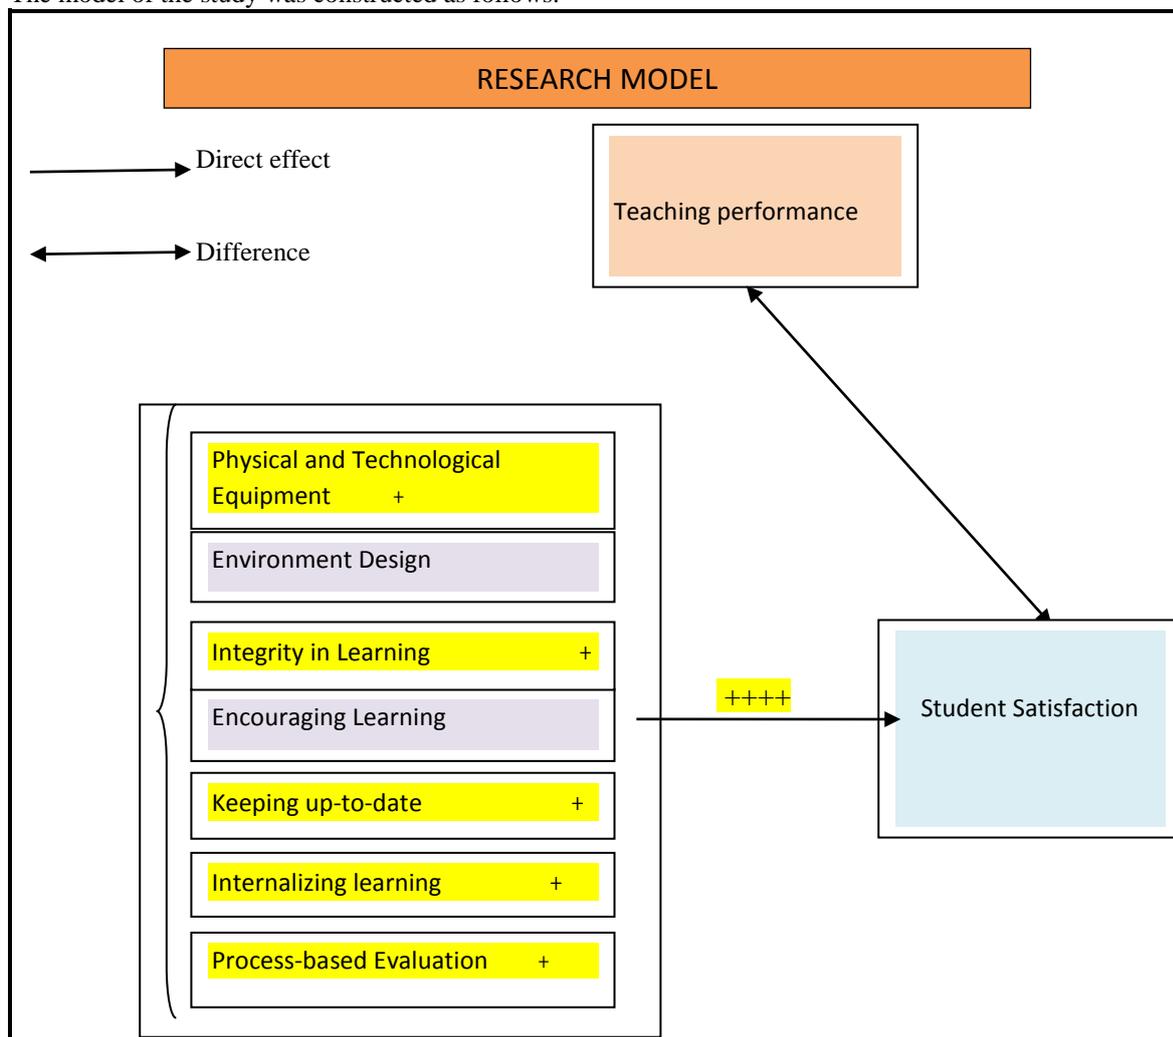

Problem: Students shape their perceptions regarding the quality of the teaching service provided by the educational institution depending on the institution's performance in the teaching process. This perception helps student form their opinion about the institution's value, integrate with the institution, digest their learnings, and internalize their professional competence. In this study, an attempt was made to answer the question, "What are the perceptions of students who attend the faculty of education to acquire competences required by the teaching profession?". Based on the main problem, sub-problems of the study were determined as follows:

- 1) Is there a difference between genders in terms of satisfaction with teaching service quality?
- 2) Is there a difference between preference levels in terms of satisfaction with teaching service quality?
- 1) Is there a difference between departments in terms of satisfaction with teaching service quality?
- 4) Do variables of physical and technological equipment, encouraging learning, keeping up-to-date, integrity in learning, internalizing learning, and process-based evaluation affect student satisfaction?

3. METHOD

The purpose of the study was to determine perceptions of Faculty of Education students regarding the teaching service quality based on interactions and experiences in the learning process. To this end, the survey method was employed to describe the current situation.

The model of the study was constructed as follows.

The main elements of the model were determined by considering performance areas which are reflected at the end of the teaching process. Every student requires a physical teaching environment where he/she can meet his educational needs, appropriate technological equipment in this environment, stimuli and practices which encourage learning, presentation of up-to-date learning experiences and learning activities in integrity, applications which allow him/her internalize what he/she acquired throughout the process, and evaluation practices spread across the process so that he/she can make decisions about his/her situation. All of these activities are processes which administrators, instructors, and deputy administrators carry out in cooperation.

Measurement tool: Statistical values related to the validity and reliability of the measurement tool used in the study are given below. The measurement tool was a Likert-type scale consisting of 7 factors and 35 items. The principal component analysis of the scale showed that the eigenvalue was 12.79% in the first factor; 12.63% for the second factors; 8.36% for the third factor; 7.73% for the fourth factor, 6.26% for the fifth factor; 3.72% for the sixth factor, and 3.005% for the seventh factor. Model fit indicators obtained as a result of the confirmatory factor analysis performed for values produced by the principal component analysis were as follows: χ^2/df (2.64), RMSEA (0.061), SRMR (0.050), GFI (0.86), AGFI (0.83), NFI (0.92), CFI (0.95). In terms of scale reliability, all of the items in the scale were significantly discriminatory at $P=0.05$ significance level and item-total test correlation values were found to vary from 0.409 to 0.620. Test-retest showed that the correlation value between two applications of the scale was $r = .85$ and the Cronbach's Alpha internal consistency coefficient was calculated to be $r = .87$. The sample included 449 randomly selected third and fourth year students receiving teaching service for two or more years and enrolled in different departments of the faculty or fourth year students enrolled in the pedagogical formation program. Participation in the study was on voluntary basis. Surveys

answered by the students were collected and the resulting data was entered into the package program for analysis.

Data Analysis

The data was analyzed in computer environment using SPSS 20.01 package program. "T test" was used in dual comparisons made to determine whether student satisfaction with teaching service quality was affected by gender, preference, and department variables or not, and one-way analysis of variance was used in comparisons between more than two variables. The significance level was $p = 0.05$ for all statistical calculations. Correlation values between dimensions were calculated to determine whether elements of the teaching service quality affected student satisfaction and then multiple regression analysis was performed to reveal how much independent variables affected student satisfaction according to correlation values.

4. FINDINGS

Table 1 shows the distribution of the students included in the sample by gender.

Table 1. Distribution of the students by gender

Branch	Female		Male		Total	
	Frequenc y	Percent	Frequenc y	Percent	Frequenc y	Percent
Science teaching	34	75.6	11	24.4	45	10.0
Elementary math. teach.	38	86.4	6	13.6	44	9.8
Pre-school teach.	45	.75	15	.25	60	13.4
Form teach.	29	64.4	16	35.6	45	10.0
Social studies teach.	37	77.1	11	22.9	48	10.7
Turkish teach.	30	60	10	40	40	8.9
PCG	30	60	20	40	50	11.1
History teach.	29	63	17	37	46	10.2
Mathematics teach.	20	60.6	13	39.4	33	7.3
Phy. ed. teach.	13	34.2	25	65.8	38	8.5
Total	305	0.679	144	0.320	449	100.0

As shown in Table 1, the ratio of the female students (.679) enrolled in the Faculty of Education was higher than the ratio of male students (.320%).

Sub-problem 1: Is there a difference between genders in terms of satisfaction with teaching service quality?

Findings Related to Sub-problem 1

In order the answer the first question of the study, "Is there a difference between genders in terms of satisfaction with teaching service quality?", the mean of the total satisfaction score of the students was calculated. *T*-test was performed to explore whether there was a significant difference between genders in terms of the mean of the total satisfaction score of the students. Results can be seen in Table 2.

Table 2: Results of the *t*-test performed to determine the difference between genders in terms of the mean of the total satisfaction score

Gender	N	X	SK	t	sd	p
Female	305	2.9760	.63558	.255	447	.799
Male	144	2.9597	.62259			

As shown in Table 2, there was no significant difference between genders in terms of the mean of the total satisfaction score ($t(447) = .799 : p > .05$). The mean score obtained by the female students from the satisfaction with teaching service quality scale was $\bar{X} = 2.97$, whereas the mean score obtained by the male students from the satisfaction with teaching service quality scale was $\bar{X} = 2.95$.

Sub-problem 2: Is there a difference between preference levels in terms of satisfaction with teaching service quality?

Findings Related to Sub-problem 2

In order the answer the second question of the study, "Is there a difference between preference levels in terms of satisfaction with teaching service quality?", total satisfaction with teaching service quality scores of the students were calculated. One-way ANOVA was performed to explore whether there was a significant difference between preference types in terms satisfaction with teaching service quality. Results can be seen in Table 3.

Table 3. Results of the t-test performed to determine the difference between departments in terms of satisfaction with teaching service quality

Preference type	Sum of Squares	df	Mean Square	F	Sig.
Between the groups	2.751	4	.688	1.740	.140
	.064	1	.064	.162	.687
	1.078	1	1.078	2.727	.099
	1.673	3	.558	1.411	.239
Within the groups	175.508	444	.395		
Total	178.259	448			

As shown in Table 3, there was no significant difference between preference types in terms of satisfaction with teaching service quality scores ($F(444) = .140, p > .05$). It was observed that the preference variable did not lead to difference in terms of satisfaction with teaching service quality.

3. Sub-problem 3: Is there a difference between departments in terms of satisfaction with teaching service quality?

Findings Related to Sub-problem 3

In order to answer the third question of the study, "Is there a difference between departments in terms of satisfaction with teaching service quality?", total satisfaction with teaching service quality scores of the students were calculated. One-way ANOVA was performed to explore whether there was a significant difference between departments in terms of satisfaction with teaching service quality. Results can be seen in Table 4.

Table 4: One-way ANOVA performed to determine the difference between departments in terms of satisfaction with teaching service quality

Departments	Sum of Squares	df	Mean Square	F	Sig.
Between the groups	9.599	9	1.067	2.776	.004
	1.806	1	1.806	4.701	.031
	7.793	8	.974	2.536	.010
Within the groups	168.660	439	.384		
Total	178.259	448			

As shown in Table 4, there was a statistically significant difference between departments in terms of satisfaction with teaching service quality scores ($F(9-439) = 2.776, p < .05$). According to the results of the Scheffe test performed to find which department caused the difference in satisfaction with teaching service quality, mean satisfaction with teaching service quality scores of the students in "Pre-school teaching", "Form teaching", and "Turkish teaching" departments were higher compared to the students in "Science teaching", "Elementary mathematics teaching", and "Psychological Counseling and Guidance" departments. While the students in the Pre-school teaching department had the highest mean satisfaction with teaching service quality scores with $X = 3.109$, the students in the Science teaching department had the lowest with $X = 2.62$.

Sub-problem 4: Do variables of physical and technological equipment, encouraging learning, keeping up-to-date, integrity in learning, internalizing learning, and process-based evaluation affect student satisfaction?

Findings Related to Sub-problem 4

Table 5. Arithmetic mean, standard deviation, correlation, skewness, and kurtosis values related to factors of the satisfaction with teaching service quality scale

	FTE	AE	IE	EL	KU	IL	PE
FTE	1						
AE	.313**	1					
IE	.543**	.252**	1				
EL	.494**	.402**	.441**	1			
KU	.173**	.240**	.160**	.319**	1		
IL	.404**	.263**	.398**	.558**	.366**	1	

PE	.407**	.273**	.320**	.340**	.121*	.103*	1
Arithmetic mean	19.871	13.759	16.755	11.781	9.276	7.155	6.9235
Standard deviation	5.5372	5.2519	4.8371	3.6666	3.0079	2.6032	2.21251
Skewness	-.428	.173	-.460	-.063	.163	-.300	-.202
Kurtosis	-.163	-.738	-.295	-.519	-.499	-.813	-.271

**Correlation is significant at the 0.01 level (2-tailed).

*. Correlation is significant at the 0.05 level (2-tailed).

Correlation values between the factors of the scale were significant at $p=0.01$ level. There was a positive relationship between correlation values between $r= 0.18$ and $r=0.52$.

Table 6. Number of items in and Cronbach's α values of the factors of the satisfaction with teaching service quality scale

Variables	Number of Items	Cronbach's α values
Physical and technological equipment	6	0.83
Appropriate environment	8	0.84
Integrity in learning	6	0.64
Encouraging learning	5	0.76
Keeping up-to-date	4	0.77
Internalizing learning	3	0.64
Process-based evaluation	3	0.63

The relationship between two or more variables is calculated with Pearson correlation coefficient. The correlation value varies between -1 and 1. A value of -1.00 or +1.00 indicates excellent correlation. If the value is negative, there is negative correlation, and if the value is positive, there is positive correlation. As shown in the table above, variables related to teaching service quality (Physical and technological equipment, Appropriate Environment, Encouraging learning, Keeping up-to-date, Integrity in learning, Internalizing learning, and Process-based evaluation) were found to influence student satisfaction positively. Physical and technological equipment ($\alpha = 0.83$) in the environment where teaching is carried out was found to influence student satisfaction positively at 0.01 significance level. This was followed by Appropriate Environment ($\alpha = 0.84$), which was also found to influence student satisfaction positively at 0.01 significance level. There was a high correlation between Keeping up-to-date ($\alpha =0.77$) and student satisfaction. This was followed by Encouraging learning ($\alpha =0.76$), which refers to a teaching approach that motivates and guides students and help them focus on their goals. There was a correlation between satisfaction and Internalizing learning ($\alpha =0.64$) as well, which is a dimension necessary to ensure students understand, construct, and practice what they learn. There was a moderate correlation between satisfaction and Integrity in learning and process-based evaluation ($\alpha =0.63$) factors.

Table 7. Results of the general regression analysis regarding predictive power of independent variables for the dependent variable

	Standardized Coefficients	t	sig	Colinetary		
				Tolerance	VIF	
Physical and technological equipment	.512	13.442	.000	.575	1.740	hypothesis accepted
Appropriate environment	.029	.907	.365	.795	1.258	hypothesis rejected
Encouraging learning	-.011	-.308	.758	.642	1.557	hypothesis rejected
Keeping up-to-date	.463	11.662	.000	.529	1.892	hypothesis accepted
Integrity in learning	.103	3.244	.001	.831	1.203	hypothesis accepted
Internalizing learning	-.141	-3.747	.000	.593	1.687	hypothesis accepted

Process-based evaluation	-.038	-1.133	.258	.759	1.317	hypothesis rejected
Adjust R ²	.627					
F	108.397					
Sigma	.000					

The multiple linear regression analysis which was performed to determine whether independent variables believed to be effective on student satisfaction (Physical and technological equipment, Encouraging learning, Keeping up-to-date, Integrity in learning, Internalizing learning, and Process-based evaluation) predicted the dependent variable (satisfaction with teaching service) showed a significant relationship between student satisfaction and variables of Physical and technological equipment, Encouraging learning, Integrity in learning, Internalizing learning, and Process-based evaluation ($R=0.796$) and the model was significant ($F(7-440) 0108.397$, $p>0.001$). As shown in Table 7, these seven variables explained satisfaction by %633 ($R^2= 0.633$). According to standardized regression coefficients, the order of importance of the predictor variables for student satisfaction were as follows: Physical and technological equipment ($Beta=0.512$), Encouraging learning ($Beta=0.020$), Keeping up-to-date ($Beta=0.11$), Integrity in learning ($Beta=0.463$), Internalizing learning ($Beta=0.103$), Process-based evaluation ($Beta=0.141$). Considering significance tests of regression coefficients, variables of physical and technological equipment ($p<0.05$), integrity in learning ($p< 0.05$), and internalizing learning ($p<0.05$) were seen to be significant predictors of satisfaction. The tolerance values (Collinearity) varied 0.529 and 1.892. As shown in the table, the multiple regression analysis produced a value of $R^2= 0.633$ for predictor variables. This result explained 63% of the variance in independent variables. This was significant at $p=0.05$ level. Tolerance values were within the expected range.

CONCLUSION AND RECOMMENDATIONS

In this study, student satisfaction was investigated based on gender, preference, and department variables, their satisfaction with teaching service quality scores were calculated and analyzed according to the variables. According to the findings, there was no significant difference between genders or preference levels in terms of satisfaction with teaching service quality scores. Students form their perception regarding teaching service quality based on their experiences and expectations. Enrolling in their preferred school increases their expectation and it seems that current practices are not so poor as to reverse their expectations. Satisfaction levels of the students in the Faculty of Education were usually above moderate. It was shown in a study conducted by Ko and Chung (2014), satisfaction of students with learning was moderately affected by instructor quality and academic performance.

Considering student satisfaction according to department, it was found that satisfaction level was higher in departments such as the pre-school teaching department and the form teaching department, whereas it was lower in the mathematics teaching department, science teaching department, and the psychological counseling and guidance department. It is reported in the literature that students who perceive behaviors of instructors positively have higher academic achievement and there is a positive correlation between achievement and attitude (Akkoyunlu, 2003; Baykul, 1990; Elçi, 2002; Özler, 1998). Our finding might have resulted from attitudes and behaviors of instructors in the department, their competence to communicate with students, or their instruction style.

Physical and technological equipment, using up-to-date approaches in teaching, carrying out the teaching process with a holistic approach, and performing activities which help students internalize what their learn seem to be variables that influence satisfaction. The following measures may be taken in light of findings obtained. Student quotas in education faculties should be determined taking short- and long-term requirements of the country. Physical structures in education faculties (buildings, classrooms, conference halls, Libraries, laboratories, workshops, practice centers, and other spaces) should be designed in a way that they will support a student-centered approach and active learning.

The teaching environment, the number of students in the classroom, the active course load of each instructor should be determined in accordance with international standards to improve the effectiveness of programs in the faculty of education.

Programs in the Faculty of Education should be updated in regular intervals to meet student requirements. Changes implemented in a planned manner should be revised in accordance with elements of the program.

E-libraries open to common access should be established to share significant studies conducted in relation to education faculties.

Guidance services should be provided throughout the teacher training process with a holistic approach which will meet psycho-social and physiological requirements of students.

The internalization process should be supported by providing a training program based on graduate standards. The training program should cover all qualifications required to be an expert. The number and quality of education faculties in the country should be determined according to social requirements and revised according to scientific findings with an approach which does not ignore student requirements.

Abstract: A new framework that allows scalable multimedia content transmission by estimating the bandwidth of the client's network is proposed. By evaluating the network condition, the multimedia content is delivered. Scalable multimedia coding (SMC) is the encoding of a high quality multimedia bitstream which in turn contains one or more subset bitstreams. A subset stream is achieved by dropping either video packets or transmitting only the audio packets to reduce the bandwidth for the subset bitstream. Hence, the multimedia lecture content is delivered according to the network condition of the client which enables the client (student) to view the main content of the lecture even in poor network conditions.

Keywords: Multimedia streaming, Streaming media (SM), Bandwidth

INTRODUCTION

Multimedia streaming applications are becoming increasingly popular in everyday life. In this fast pace world, multimedia is in increasing demand as the mobile devices have gained its popularity in the last few years. Wireless multimedia streaming is still a challenging task because of the change of wireless networks, bandwidth constraints, packet loss, and other computing capabilities of the mobile clients.

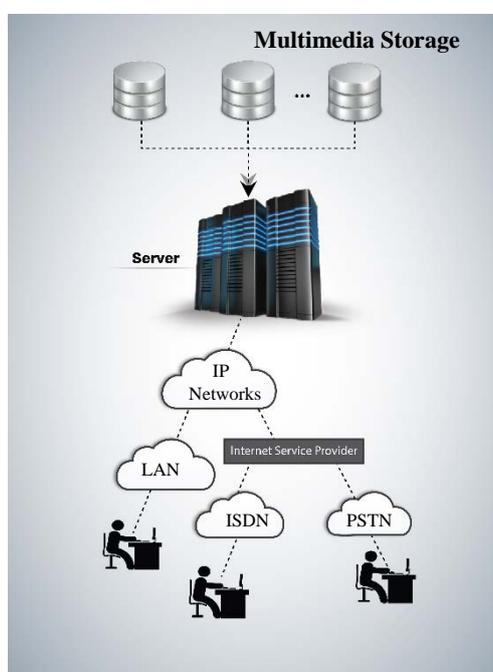

Fig. 1: Users can access the multimedia database over networks for streaming multimedia content

Streaming is defined as the process of playing a particular file while it is still downloading. Multimedia streaming is where a user views or hears the multimedia content while it is still being downloaded. This can be referred as 'Streaming Media' (SM) (Fig. 1). There are a lot of multimedia content available for a various range

of applications including Video conferencing, remote learning, multimedia presentations, video archives and libraries and so on.

When the user sends a request to display the multimedia content that is stores on a remote server, the data are retrieved from the server over a network and is sent to the client for display. There are two ways in which the data is passed onto the client for display.

- Store and Display model
- Remote Streaming model

In case of ‘Store and display’, the SM objects are downloaded entirely from the server to the local storage before the display process is initiated whereas in the ‘remote streaming’ the data are retrieved from the server over a network and are displayed to the client while it is still being downloaded. Both the models that have been mentioned above have their own advantages and disadvantages.

Advantages of Streaming over Store and display model:

- No need to wait for the whole file to be downloaded
- No copies of the data will be stored locally
- No storage requirements at the client side
- Suitable for live events

Limitations of Streaming:

-
- Playback solely depends on the network connection of the client
- Slower playback
- Lost/damaged packets might cause coarse playback of video

The focus here is on the limitation of the streaming that requires the streaming going on even in the poor network condition without any intrusion in the playback.

The remainder of this paper is organized as follows: Section II deals with an overview of the existing system and explains the novelty of the proposed system. In Section III the proposed system with the help of the relevant diagrams is presented. In section IV the algorithm that has been employed in the proposed system is given. In section V the results of the simulation and an insight in to the advantages of the proposed system is provided. In Section VI, a summary of the paper and also discussion about the future scopes is dealt.

RELATED STUDIES

Previous research works that has been carried out by Reibman et al (2003), Benzler et al (2000), Wang et al (2003), Schierl et al (2007) and Chou et al (2004) focuses on the video quality adaptation according to the network conditions but none of them are specially designed for educational multimedia content. Since Multimedia streaming is necessary in developing e-learning and mobile learning systems (Dorai et al (2001), Leung et al (2003) and Liu et al (2002)). There have been lot of research work carried on scalable video coding (Reibman et al (2003), Benzler et al (2000), Wang et al (2003), Schierl et al (2007) and Chou et al (2004)) network bandwidth allocation (Legout et al (2001) and Chou et al (2004)), and video streaming which is discussed in papers by Won et al (2014), Kennedy et al (2011), Falik et al (2010) and Pudlewski et al (2011).

In Scalable video coding, the network conditions of the client is analysed and thus depending on the available bandwidth, the enhancement layers are added onto the base layer which means, a client with a poor bandwidth receives a low quality video and the client with a higher bandwidth receives a better quality video with all the enhancement layers.

For different network conditions, different quality video is being delivered in the case of scalable video coding explained in the following papers by Reibman et al (2003), Benzler et al (2000), Wang et al (2003), Schierl et al (2007), Chou et al (2004), Li et al (2008), Wu et al (2001) and Lu et al (2013).

In wireless streaming of lecture multimedia content, it is important that the main content of the lecture is being delivered to the client. For example, even for the client with a poor network bandwidth, the content of the lecture has to be somehow delivered.

Considering the above issue, a framework of encoding video in not just different qualities is provided, also determination of what content has to be delivered to the client depending on the network conditions of the client. Different versions of the lecture multimedia content will be available while encoding it to the storage server.

1. Video & Audio (High rate network connection)
2. Text (with low resolution) & Audio (Low rate network connection)
3. Only Audio (with low quality) (Very poor network connection)

PROPOSED METHOD

A framework is designed considering the fact that there would be varying network conditions across different clients. The figure 2 explains the overall architecture of the proposed system. The multimedia lecture content is encoded in different forms to the local storage server which is then transferred to the web server. The clients who request to access the multimedia content would receive the version of the lecture content which is suitable for their network condition.

The idea behind the proposed system is that the client (students) who have poor network condition should also be available to the lecture content available online. Thus there are different version of the content available in the local storage. The multimedia lecture content is made available to all the clients irrespective of the network condition. Hence all the clients (student) will be able to have an access to the lecture content they need.

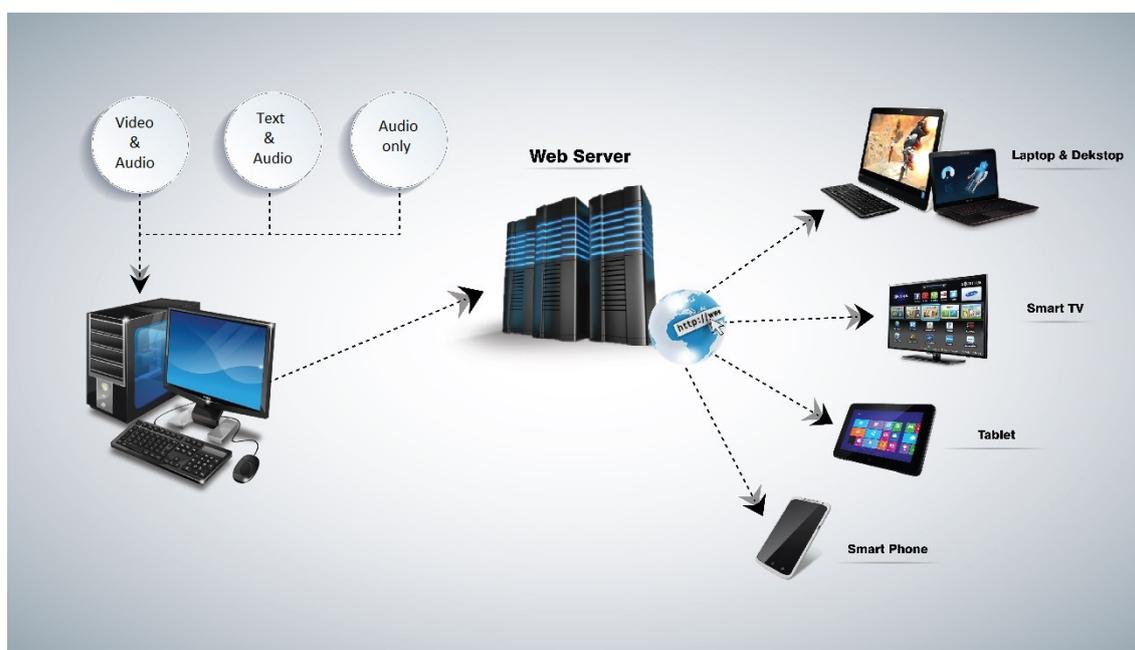

Fig 2: Proposed system Architecture

There are two stages in the proposed system: the encoding stage and the decoding stage. Fig. 3 explains the encoding stage. In this stage, the multimedia content is being encoded to the server and is available in different versions.

At the given transmission time t , the network bandwidth T_c of the Client is estimated. A threshold T_i is set to decide on the client's network condition.

- Condition 1: If T_c is greater than T_i then the first quality video as well as audio will be transmitted to the client.
- Condition 2: If T_c is lesser than the T_i then only the text and the audio of the lecture content is made available to the client. The threshold T_i is set low that only in poor condition this condition is applied.
- Condition 3: A new threshold value T_n is set as the worst case scenario, if T_c is lesser than T_n then the video packets are dropped and only audio is delivered to the client.

ALGORITHM

Phase 1:

In this phase, the determination of the multimedia content that has to be transmitted to the client is performed. As explained in the previous section, each threshold T_i is associated to the multimedia content to be sent. This phase is executed periodically, to check if a new threshold has been reached.

End phase 1.

Phase2:

In this section the algorithm is used to find out what multimedia content would be suitable to be transmitted across to the clients.

The following steps are performed:

- Step 1 Encoding different versions of multimedia lecture content
- Step 2 Analyse the network condition of the receiver
- Step 3 Decision making performed on the multimedia content to be sent
- Step 4 Sending of data to the destination.

End Phase 2

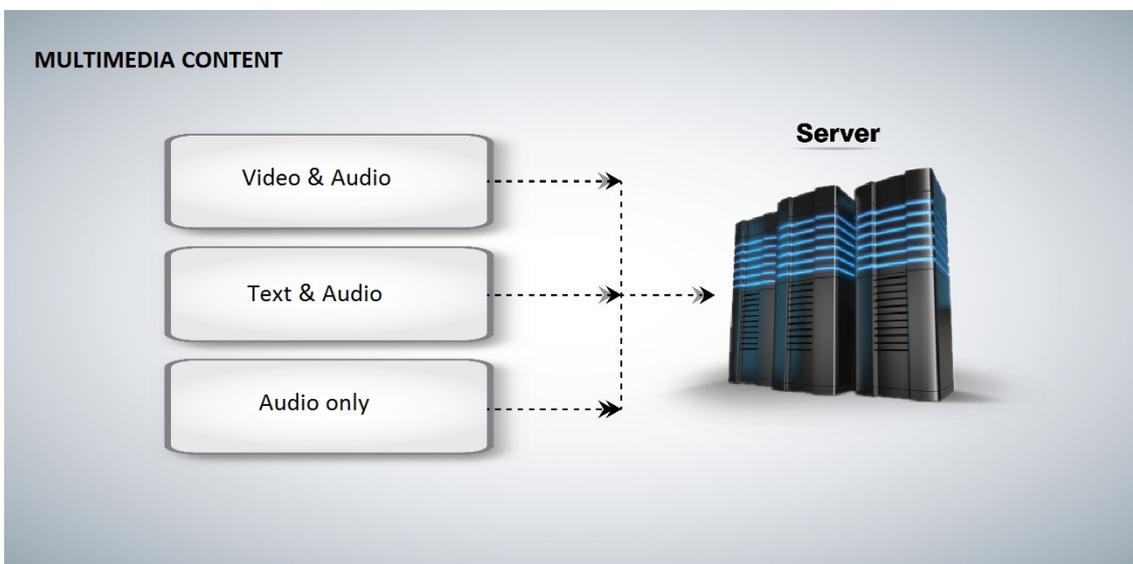

Fig. 3: Encoding multimedia content to the server

The third condition is considered in the worst case condition in which the client/student is in need of the content, for example, if he/she has an exam coming up and needs the lecture content then there is at least the audio delivered to the student than giving nothing.

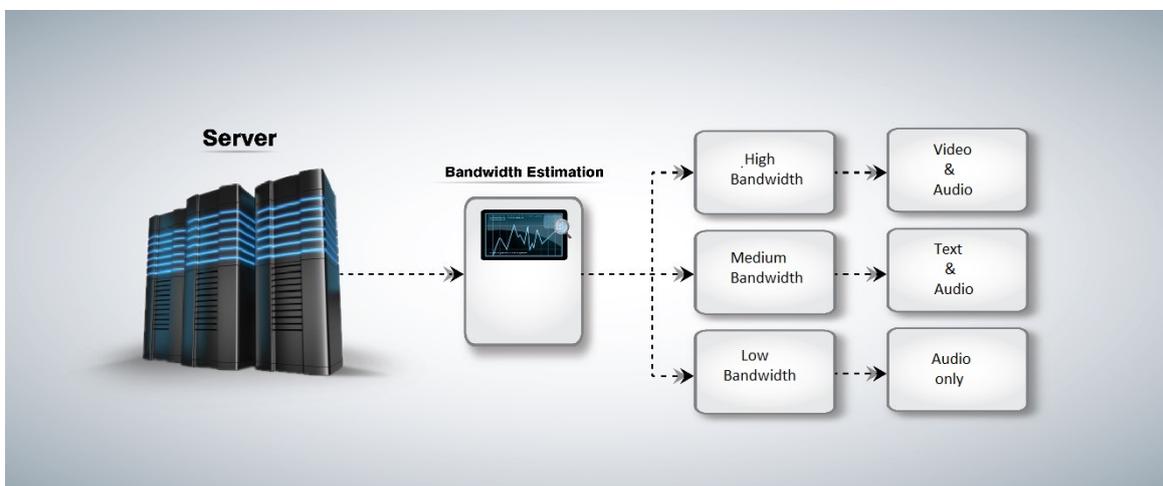

Fig. 4: Decoding multimedia content depending on the client's network conditions

RESULTS & DISCUSSION

The main aim of this research proposal is to make the lecture content available to the students irrespective of the poor network conditions. We consider the scenario in which the student requires the lecture content, for example, during an assessment time and stuck with a poor bandwidth, hence unable to go through the content. In this case, the core lecture content is aimed at somehow being delivered to the student.

Fig 5: Multimedia streaming in high speed network condition

Fig 6: Streaming only audio for poor network condition.

The prototype of the design suggested is shown in the figures (Figure 5 & 6). This proves the effectiveness of the system that delivers the multimedia lecture content according to the network conditions of the student.

CONCLUSION & FUTURE DIRECTIONS

In this paper, a framework has been presented which is scalable multimedia content transmission of lecture videos over wireless networks. Real time evaluation of network condition and scalable multimedia content transmission are provided. Different multimedia content transmission for varying network conditions of the clients is provided.

The system could be further improved by analysing the energy consumption characteristics and employing packet scheduling algorithms to bring about energy efficiency in the proposed framework. The efficiency of multimedia streaming system for education will be further investigated and its social effect on students will also be covered as future work of this paper.

SCALE DEVELOPMENT AND VALIDATION FOR CAREER APTITUDE TEST FOR DESIGNERS IN SOUTH KOREA

Imjoo GIL
Dongseo University

Daedong HAHN
Pusan National University

ABSTRACT

Career Aptitude Test for Designers (CATD) was developed through a series of research in South Korea. The test was intended for future designers to check if they have design talents or aptitude. This is a direct and supportive manner of guiding students in their design-career decisions. Three previous studies on developing CATD were presented briefly, focusing on the structure of CATD items. The participants in the present study were 1,251 students majoring in design (a 4-year course) at 13 universities across S. Korea. The structural model of CATD was evaluated with confirmatory factor analysis, which is the first follow-up empirical study since its standardization in 2009. Results showed that the seven-factor model of 'basic design competency' and the five-factor model of 'advanced design competency' provided a good fit. It was concluded that CATD is a useful instrument for university students in S. Korea to identify their aptitude as future designers.

Key words: Career Aptitude Test for Designers, Scale Validation, Design Ability, Basic Design Competency, Advanced Design Competency

INTRODUCTION

The attempt to develop a career aptitude test for future designers to check if they have design talents or aptitude was borne from the lack of direct and supportive manner in South Korea (S. Korea) to guide students in their design-career decisions. In particular, the need for objective methods that complement performance-based assessments has led to a series of research to develop the 'Career Aptitude Test for Designers (CATD)'. The test was developed to guide design-major college students, who would want to diagnose their aptitude as a potential designer and to explore the specific majors within the design field (Gil, Park, & Yang, 2009). Before the emergence of CATD, students who were interested in exploring their aptitude as potential designers were used to being limited and confused, having no other way to check their design aptitude except for their portfolio to be examined by an expert designer. Colleges and universities in S. Korea provide students with support systems such as career counseling centers with psychological tests. Students who plan on a college major in a design field, and who ponder about their specific major area, could also use one of the vocational interest tests or multiple aptitude tests, which include sub-tests for spatial ability, perceptual reasoning, and sometimes personality tests related to certain careers. However, these tests are merely an indirect way of evaluating their aptitude as potential designers. Often, the advices they get are easily fallible and based on intuitive and aesthetic judgment rather than objective methods.

In recent years, the design field has become more specialized, multidisciplinary, and commercialized compared with the past, providing more promising career paths for students, but at the same time, causing more confusion and uncertainty to the students. Furthermore, the number of freshmen in design schools who start their university without performance-test screening before admission is increasing in S. Korea (Gil, 2011). This situation also causes those students to be, at times, uncertain with their abilities and future careers in the field of design. There has not been any follow-up research to update the norms of CATD that can meet the demands of those changes during 4 years since its standardization. Hence, due to recent changes and the need for follow-up research, this study was planned to verify the validity of CATD to ensure if the test is still psychometrically appropriate, using a sample of current design-major students in universities in S. Korea.

RELEVANT LITERATURE

Though there has been no direct history to measure design aptitude objectively, related literature can be classified into four topics. First, artistic judgment aptitude, which is a foundational aspect of artistic ability related to visual preference that contributes to artistic expression (Bezruczko & Frois, 2011), was developed as a psychometric construct. Second, researchers wanted to evaluate what children have learned in their art and design subjects in primary and secondary schools. Thus, they developed objective achievement tests to assess students' visual art learning. Third, the model curriculum for art and design subject in elementary and secondary school has been studied continually. Fourth, the selection criteria during college admissions for those interested in art and design have been controversial.

Although the history of measuring artistic judgment aptitude had begun as early as the beginning of the 20th century in the US, artistic judgment aptitude today still does not have an objective or reliable method of

identification (Bezruczko & Vimercati, 2004). Eysenck (1972b) reported three tests of aesthetic sensitivity in 1970s and they were proven capable of measuring the effect of specialized training rather than aesthetic sensitivity. Researchers have conducted studies of children's preference for visual stimuli with polygons or other visual designs (Bezruczko & Schroeder, 1996). Numerous empirical evidence on artistic judgment testing during the first half of the 20th century had led to the development of many visual memory tests such as the Benton Visual Retention Test (1974), Wechsler Memory Scale (revised, 1987), Biber Figural Learning Test (1989), and Continuous Visual Memory Test (2003). Some of these tests were used in clinical practice. With these tests, researchers have put more emphasis on comparing the artists' and the laypersons' visual preference on perception. A research finding showed that laypersons prefer more complexity in both abstract and figurative images than artists, who tend to prefer less complex, more coherent images (Bezruczko, 2002). Gordon (2005) argued that children with an aptitude for drawing, whether they are autistic or not, had a facility for seeing wholes in terms of their parts rather than as unified gestalts.

One of the problems that hinders the development of objective tests on artistic and design aptitude and achievement is that art educators or experts do not want or like to depend on objective tests even though they agree on the need for tests. Rayment and Britton (2007) noted that the concept of art and assessment is mutually and implacably hostile. Hickman (2007) argued that some aspects of learning in art and design should not be assessed at all. Although activities of art and design are essentially unique and creative, another line of research noted the need for objective tests that complement performance-based assessment (Frechtling, 1991).

In England and Wales, a statutory requirement for teachers to assess art and design subjects has been in existence since 1997. A scale of 1 to 8 was introduced to art and design subjects as with other subjects. Not only have researchers tried to develop a method to measure artistic judgment aptitude, but they have also developed objective achievement tests to assess students' visual art learning.

The problems in identifying design aptitude are similar to the issues with identifying artistic judgment aptitude. It is not certain what the underlying dimensions and factors are with regard to the talents designers have and how to measure such talents or abilities before students start their career. Most of the prestigious schools of art, design, and architecture require applicants to submit 10 to 20 slides of their work. The fundamentals to be included in an applicant's portfolio are a self-portrait, landscapes, still-lives, and a figure drawing. All works should be from personal observations and should show experimentation with color, perspective, and composition, though deciding what to include in a student's portfolio is very subjective (Hoek, 1991).

To develop an objective test for identifying design aptitude, the underlying abilities or factors of being a designer should be identified specifically with empirical validation, not with relying on simplistic folklore formulations. Few have tried to find out those underlying factors. Csikszentmihalyi & Robinson (1990) proposed perceptual, emotional, intellectual, and communicational dimensions for aesthetic experience. For visual and performing art curricula, there are lists of learning objectives as a statewide model curriculum in the US. By categorizing these learning objectives in the state of Illinois, Bezruczko (1992) showed empirical delineation for dimensions of visual art learning as six components.¹ Analysis found that three primary factors (perceptual sensitivity, physical sensitivity, and knowledge of tools) were sufficient to describe the response to the measurement items for Grade 3 learners. Hickman (2007) noted that the General Certificate of Secondary Education (GCSE) examination of art and design in the UK assesses nine abilities.² Bezruczko & Frois (2011) conducted a research for cross-cultural comparison of the dimensions of artistic judgment aptitude targeting schoolchildren between the ages of 9 and 10 years. Two dimensions, simplicity and uniformity, based on the principle of order and complexity showed stability across the Chicago and Lisbon samples. As most of the studies on artistic judgment aptitude and assessment focused on primary and secondary school students' abilities for arts and design subjects, they are not sufficient to identify underlying abilities or factors of talents of a designer for students in early collegiate years.

CATD IN SOUTH KOREA

A series of research was conducted in S. Korea to identify underlying factors of aptitude of a designer. The first study was an overall attempt to investigate underlying factors of 'design career aptitude' from previous job analysis of designers and relevant literatures. After preliminary items were developed, the content validity of those items was examined three times by experts in the field of design. The corrected items were administered to 506 design-major students at universities located in a metropolitan city (Gil & Yang, 2006).

The second study began to conceptualize dimensions of design abilities and to identify detailed abilities and personal qualities in each dimension which is required from future designers. A total of 427 freshmen and sophomore design students at universities in big cities participated in the preliminary test of 20 items of 'basic design competency' and 20 items of 'practical design competency'. After exploratory factor analysis (EFA), 18

items were selected, which measure the four factors of 'basic design competency (BDC)' such as creativity, imaginative ability, planning and initiative ability, and aesthetic sensitivity. Another 18 items were selected which measure four factors (formative ability, sense of color and texture, power of expression, and computer skills) of 'practical design competency (PDC)'. Confirmatory factor analysis (CFA) was conducted with a reference group which consisted of 335 design-major juniors, seniors, and graduate students at a university. The model of 'BDC' and 'PDC' scales showed over .900 of index (NFI .987, IFI .994, CFI .993) (Gil & Park, 2006).

The third study was composed of three consecutive studies. In the 3-1 study, a latent dimension of advanced design competency (ADC) was introduced to identify areas of specialty students have in their interests and patterns of behavior as beginning students in design at a university level. Eighteen items of BDC, 27 items of PDC, and another 27 items of ADC were tested by 516 design-major undergraduates and graduates in a metropolitan area. EFA showed that 18 items which were composed of the four factors of creativity, aesthetic sensitivity, imagination, and planning and initiative abilities were extracted to measure BDC, same as with the second study. For PDC, 20 items were selected which were composed of four factors (formative ability, power of expression, computer skills, and craftsmanship). For ADC, 21 items were selected that measured five factors, namely, fashion, visual, product, media, and space design.

In the 3-1 study, factors that have the most loading value in EFA for PDC items appeared to include a mix of formative ability, power of expression, and a sense of color and texture, unlike the result of the second study. A new fourth factor, 'craftsmanship' was extracted. This means that PDC items are unstable in terms of validity compared with the other two dimensions (BDC and ADC). BDC means basic qualification and the ability required in a design activity including innate tendencies. On the other hand, PDC items are mainly intended to measure acquired competency by education and experience. However, unlike expectation, these two dimensions appeared to be complementary, which is difficult to differentiate between the two dimensions.

In study 3-2, 22 modified items of BDC, 26 items of ADC, and 15 items of PDC were administered to the first nationwide sample. The participants were 1,993 students majoring in design from 16 different universities across S. Korea. Analysis showed instability in the validity of the PDC items, as was the same result in study 3-1. It was concluded that PDC items should be included in the dimension of BDC rather than be an independent dimension.

In study 3-3, final item selection was conducted where 871 university students majoring in design nationwide participated. After EFA, 4 items which show over 0.30 factor loadings on two or more factors were eliminated. BDC turned out to include seven factors, namely, formative ability, imaginative ability, craftsmanship, creativity, computer skills, planning and initiative ability, and aesthetic sensitivity. ADC turned out to include five factors, namely, measure product, space, fashion, media, and visual design. Finally, the CATD was completed with 31 items for BDC and 24 items for ADC. Reliability coefficient for BDC was .89, and for ADC, it was .90 (Gil, 2009). The research summary when developing CATD is shown in Tables 2 and 3.

THE PRESENT STUDY

The present study extended the validity of CATD through the administration of the test to bigger nationwide samples of S. Korean students majoring in design at universities to examine the invariance of the internal structure of CATD. This attempt was the first follow-up validation study after 4 years since the first standardization of CATD. Evidence of structural invariance across different samples with 4-year interval would support the further validity and generalization of CATD.

The model of CATD structure hypothesizes that (a) the BDC response scale can be explained by seven factors, and that of ADC can be explained by five factors. It also hypothesizes that (b) the seven factors of BDC are correlated, and the five factors of ADC are correlated; and (c) the error/uniqueness terms associated with the item measurement are uncorrelated (Figures 1 and 2).

METHOD

PARTICIPANTS

The participants in this study totaled 1,251 design-major students at 13 universities (4-year course) across S. Korea (Table 1). More than 10% of total design-major students nationwide at four-year universities in S. Korea participated. The total number of students majoring in design at four-year universities in S. Korea were 11,440 (2011, KEDI)³. They are ethnically all Korean students between the ages 19 and 24 years (mean age: 21.6 years old); the number of male students is 284 (23.6%) and female students are at 917 (76.4%). The 13 universities are located in a city, two among them (Seoul, Pusan) are metropolitan cities. The 13 four-year universities have a fairly larger student body enrolled at their School of Design compared with other universities in S. Korea. The participants all belonged to the School of Design, not to the College (Department) of Fine Art.

MEASUREMENT AND PROCEDURE

The CATD consists of 55 self-report items structured on a 6-point Likert scale, from 1 (has never been done) to 6 (always do). 31 items among them belong to the dimension of BDC and 24 items to ADC. BDC items measure basic and necessary competence, and the behavioral patterns of a designer. ADC items identify areas of specialty students have in their interests and behavioral characteristics as beginner students in design. Through a series of research on scale development presented earlier, the underlying structure of CATD has been established on empirical and theoretical bases. The scale of BDC consists of seven factors and each has its own items: 7 items of formative ability (the ability to organize abstract notions to practical outcomes), 6 items of imaginative ability, 5 items of exquisite craftsmanship, 4 items of creativity, 3 items of computer applicability, 3 items of planning and initiative ability, and 3 items of aesthetic sensitivity. The scale of ADC is composed of five factors: industrial (6 items), space (5 items), fashion (5 items), media (4 items), and visual design (4 items). Cronbach's alpha for BDC is .89 and for ADC, .90. The CATD has been commercially marketed since 2009 in S. Korea (appendix).

Administering the CATD was permitted by a representative faculty member from the School of Design of each 13 universities through review of the test items. Students were guided during the test and were informed on possible advantages they could get from the results. Some faculty members took advisory roles for the test construction process, as they agreed that the needs for an objective test to identify the design aptitude for a targeted age group were gradually expanding. The CATD was administered to the participants by graduate assistants or staff members working at the department office. CATD results were handed over to each student. After excluding doubtful and incomplete responses, 1,202 responses were used for the analysis of validity by CFA using Amos21.

CFA was performed to examine if the seven-factor structure of BDC and the five-factor structure of ADC in CATD were supported. Goodness of fit was evaluated using the root mean square error of approximation (RMSEA), comparative fit index (CFI), and Tucker-Lewis index (TLI). Acceptable model fit was defined by the criteria of RMSEA value close to .08 or below, and that of CFI and TLI value are close to 0.90 (Brown & Moore, 2012).

RESULTS

Table 4 shows the indices for goodness of fit to each BDC and ADC scale for the present study and for the study 3-3 data collected in 2008. RMSEA under .06 means a very good fit, and RMSEA between .06 and .08 means a good fit (Hu & Bentler, 1999). In Tables 4, RMSEA values for both scales of BDC and ADC show .063 and .067 each, which are a very good fit, while CFI and TLI values show a bit under 0.90. When compared with the 2008 data, the RMSEA value of BDC (.63) in the present study shows a very good fit similar to the value of the old data (.61), and the RMSEA value of ADC also shows a good fit in both present study (.67) and the old data (.70).

The values of critical ratio and P on the statistical tests of regression weights for the influences of latent variables to each items in the proposed model show significance. In other words, the regression weight for formative ability in the prediction of item no. A2 is significantly different from zero at 0.001 level. All the regression weights in figure 1 and 2 show statistically significant values. Variances of latent variables, that of the error/uniqueness terms, and covariance of each latent variables in BDC and ADC showed statistical significance.

Internal consistency by Cronbach's alpha for the BDC scale is .894, and when each item is removed, the alpha shows .888 to .896. Only one item (item no. 29) showed a higher alpha (.896) when removed. Cronbach's alpha for the ADC scale is .879. When each item is removed, the alpha ranges from .871 to .879. The only one item (item no. B49) showed a higher alpha of .879 than .871 when removed. Using the criterion of 0.30 as an acceptable correlation (Nunnally & Bernstein, 1994), correlations between the items of BDC and total BDC score range from .389 to .624, only item number 29 showed a correlation coefficient of .252. Correlations between the item of ADC and total ADC score range from .384 to .605. No correlations were found to be under 0.30.

DISCUSSIONS

The present study examined the validity of the internal structure of CATD. To this end, 1,251 design-major university students in S. Korea participated in the test. Analysis showed that the seven-factor model of BDC and the five-factor model of ADC provided a good fit for the present nationwide sample, which shows a same good fit as the result of study 3-3.

While χ^2 is reported routinely in the result of CFA, other indices are more heavily used for evaluating goodness

of model fit. The most widely accepted global goodness of fit are RMSEA, TLI, and CFI (Brown & Moore, 2012). Based on the RMSEA, it is concluded that the CATD is psychometrically valid self-report instrument for future designers.

Items which showed correlation coefficients under .30 are presumed not to measure similar psychological constructs as other items. In this research, however, due to the large sample size and the fact that correlation coefficients are influenced by sample size, item number 29 which showed a lower correlation coefficient between item score and total BDC score can be considered to measure similar psychological constructs.

The result showed that the structure of CATD has enduring qualities that represent the aptitude of design students over a 6-year period, even though there have been recent changes of specialized and multidisciplinary trait and an increase in the number of students who start university without a performance test or portfolio evaluation in S. Korea. Meanwhile, the interpretation of CATD result should be careful in that this research does not prove that these dimensions of design aptitude represent qualities that are independent of training or education to be a designer or the innate aspect that takes shape early in development before adolescence. Further research needs to be extended to test the validity of CATD to high school students and to designers working in related areas.

CATD has been used occasionally for students at universities (4-year courses) during counseling on their career decision-making in S. Korea. The empirical verification of the internal structure or underlying factors which comprise the aptitude as a potential designer is in the beginning stage in S. Korea, except for a few attempts with a group of students in a university. Thus, this empirical validation study carries on much importance to the use of CATD afterward and eventually, it will help more students in deciding on their career.

ABSTRACT

This research is modeled according to the descriptive survey model. Research collects data from existing properties of participants without any changes and try to get the views of participants about existing situation. Description method is aimed to describe research approach in existing situation or the past. The subject of the research, attempt to define their terms. There is no struggle for affecting or changing the situation. The most significant thing is observing the required object and identifying it. In this regard, the research model is based on the model of descriptive scan to determine social values in Turkish Folklore.

Key words: Turkish Folklore, Social Values

INTRODUCTION

Folk can be used with the names of the people or tribes that emerged together with the birth of the groups in which the work is divided, such as political, religious, economic and social events. Folks are more important because they have the characteristic of living under cultural qualifications and preserving their cultural characteristics (Yardımcı 1999: 1).

Folklore is a science which is closely related to sciences such as Sociology, Ethnology, Social and Cultural Anthropology, Psychology, Literature, Linguistics, History, Art History, Medicine, Geography and Law. When in need, it may have been benefitting from that discipline's methods and findings and comparisons may have been done by creating a parallelism between the datas regarding to the folklores of other countries. (Kalaycı 2014: 2).

Beside these concepts and values with significant value for the people and for the people in science have taken their place among the issues discussed in many disciplines.

While it has been emphasized on the subject of values, it appears that it has not been made as clear as conceptual meaning (Dilmaç, 2002).

Folklore

In Turkey, the concept of folklore is generally used as folklore and started to used in European countries between 1913 and 1914. After the conquest of Istanbul, the age of discovery that started in Europe, have a significant share in the spread of the concept of reform and Renaissance movements. As a result of discoveries, urbanization and industrialization, the humanism, romanticism and enlightenment including cultural and political influences have emerged. The contribution of the new dimensions and interpretations which is coming with the French Revolution to the public approaches can not be denied (Oğuz 2012: 14).

When we look at the products of popular science, it is seen that some of verbal, some of them are created and transmitted by the behaviors, some of them are transmitted together with the words and behaviors. It is possible to say that certain features such as traditional, diversity, stereotyping and adoption in the form of folk art products, verbal production and oral transmission based on the word are clear (Durbilmez 2013: 104).

There are some common judgments that are agreed by some national scientists for a public consciousness that examines the material and spiritual cultures of the people's strata from a psychological and sociological point of view in terms of history. It is possible to list them as follows (Yardımcı 1999: 4-5):

1. Folklore forms the science of traditions
2. It examines all the actions that are believed and practiced by the traditions inherited from the ancestors.

3. The tradition that the people have learned for themselves includes legends, word order, riddles and beliefs about stars and magic, as well as information and practices..
4. It includes the cultural remnants, even if it is more or less deteriorated day by day.

As a result, everything that is peculiar to the public in relation to folklore can be called anonymous ancestry, tradition, knowledge and any social action of the people . The main reason for the formation of folklore is the development of national romanticism and the simultaneous formation of nationalist movements of folklore spread in Europe.. In this process, among the Ottoman Turks, the idea of Ottomanism is tried to be kept alive instead of nationalism. For this reason, the development and results of public approaches in Europe have not attracted much attention of Turkish intellectuals (Oğuz 2012: 14).

In the Ottoman society, there is a distinction between the educated-cultivated class (havas) and plebs (avam). In this case; The conception corresponding to the meaning of the concept of the people used in the 19th century, began to be used as equivalent to the concept of the peasant after the 20th century in Europe. The separation of this class, which has been transformed by the changes in the management system, has become a full distinction between peasant and urban. When the studies of the public were accelerated and started to develop, the first public arts researches in our country were made within the scope of the villagers and villages. The 19th century is closely related to the notion that the concept of folklore does not define these games because of the fact that the first public arts researches on the popular folklore that make up some of the popular knowledge, is another reflection of the concepts of folk and folklore used in Europe. Even today still can not be corrected as a folklorist arising from this wrong, expressions like Folklore and Folk Team Play are among the problems from that period (Ekici 2012: 4).

The transfer of national culture and Turkish folklore towards young people should take place among the tasks of national education. The best way to do this is to transfer it to literature and history. In this way, however, individuals will be able to acquire a national identity and live a life compatible with the society that they live in. (Cemiloğlu 2003: 15). It can be said that the language, which is the most important carrier of the cult, is in the best works of literature and the way of culturing and educating a nation culturally is also passed through literature because almost all of life and life view styles are reflected in these works. This culturing emerges as both learning in literature and history, as well as monitoring the development of Turkish culture, which is reflected in literature. (Özbay 2002: 115). As a result, it is possible to say that Turkish society is rich in cultural and social terms. However, it is vital that these values are transferred to the new generation correctly.

Social Values

Values can be defined as standards, beliefs, or moral principles that are accepted within an individual or social group. (Collins, 1991: 1694). It is also possible to say that your values are comprehensive and empowering principles and beliefs that guide the human being in their lives and bring together the societies as well as the distinction between the groups (Avcı, 2007: 21).

The whole of the principles or means that can be used to measure the material and spiritual needs of people and their separation from other assets can be called social value. The most important characteristic of social values is the extent of behavior and activities. In short, social values offer us criteria and measures to understand what is wrong, good and bad, beautiful and ugly. Social values are people-specific and universal. It is also bipolar and has parallelism and integrity in itself. In addition to these, happiness and lack of social values give people unhappiness. It is possible to say that the need for social values is above all needs (Sarı 2013: 202).

METHODOLOGY

The Method of Research

This research was modeled according to the descriptive scanning model. Data were collected without any changes in the characteristics of the participants of the research and the opinions of the subjects were tried to be taken about the present situation. It is a research approach that aims to describe the way of description as it is, or as it exists, as it exist The method of description is a research approach which aimed at describing the past or present situation as it existss. It is attempted to describe the event that is the subject of the investigation as if it is within its own conditions. The effort to change and influence the event is not shown. In this context, the research model is based on a descriptive screening model.

Analysis Of The Data

SPSS 23.0 package program was used in the analysis of the data obtained from Scale of Social Values In Turkish Folklore and applied to the sampling participant. Frequency analysis was applied for the demographic and personal information of the sample participants. Frequency analysis is used to tabulate the numbers and percentages to describe the values of one or more variables or their distribution characteristics. The findings are tabulated and expressed as percentage (%) and frequency (f). As a result of the data obtained from the sample participants, in the analysis of the sub-problems of the research, The Independent test was used to test whether the scores obtained from two unrelated samples varied significantly from each other. ANalysis Of Variance(ANOVA) was used to test whether two or more unrelated sample averages significantly differed from each other. In order to determine the difference between the groups when the ANOVA results were significant, the Scheffe test was used if the variances were homogeneous and the Tamhane's T2 test was used if the variances were homogeneous. Numerical improvements were interpreted and interpreted as tabulations, and a significant difference between the independent variables was tested at $\alpha = 0.05$ level.

FINDINGS AND COMMENTS

This section of the survey sample included disclosure of demographic information and research belong to the bottom so that you can install the resulting data to respond to problems of statistical methods and analysis to the findings and interpretations of these findings.

1. Scale Validity and Reliability Analysis Results

A validity and reliability analysis was conducted for the scale measured by the Social Values Scale in the Turkish Folklore Scale used in the research part of the study. Cronbach's Alpha test statistic was used for the validity and reliability of the questionnaires.

Cronbach's Alpha Coefficient, evaluation criterion;

$0.00 \leq \alpha < 0.40$ scale is not reliable.

$0.40 \leq \alpha < 0.60$ Scale has low reliability.

$0.60 \leq \alpha < 0.80$ The scale is fairly reliable.

$0.80 \leq \alpha < 1.00$ The scale is highly reliable.

Table 1. Scale Validity / Results of Reliability Analysis

<i>Cronbach's Alpha</i>	<i>Number of Substance</i>
0,900	42

Table 1 sample group Scale of Social Values In Turkish Folklore "applied reliability, $\alpha = 900$ and highly reliable, so this value is sufficient for the research.

2. Interpreting Frequency Schedules

In this part of the survey, collective frequency distribution tables will be created and interpreted according to the personal information and scale included in the questionnaire.

Table 2. Distribution of Participants

		<i>f</i>	<i>%</i>
Gender	Female	39	39
	Male	61	61
	Total	100	100
Age	Age 20-30	20	20
	Age 30-40	44	44
	Age 40-50	36	36

Total 100 100

As shown in Table 2, 39% of participants were female, 61% were male, 20% were 20-30 years, 44% were 30-40 years and 36% were 40-50 years old 100 individuals were included in the survey.

Table 3. Descriptive Statistics for Sub-Dimension

	$\bar{\chi}$	SS
I move with them to solve the problems of the people in difficult situation	3,64	1,20
I see competition as a tool to lead the to success.	3,77	1,17
I give great importance to my family.	2,65	1,27
I percieve as a opposite site who dont think in a same way with me..	2,88	1,30
It is important that people trust me.	3,39	1,29
I prefer to work alone to work together.	2,18	1,12
Religion can be effective in state administration.	3,31	1,23
I see the money as a power among people.	2,96	1,40
Women must play an active role in the management of family.	3,27	1,14
I know that the thoughts of the people who are in opposition can also be valuable.	2,07	1,17
I always appreciate hard working people.	2,10	1,16
If I get a job offer from another country, I can pass to that country.	2,18	1,29

As shown in Table 3, the participants of the sample, "I will move with them to solve the problems of the people in difficult situation", from the expressions of the "eagerness to learn" sub-dimension of Scale of Social Values In Turkish Folklore = 3.64 mean and SS = 1.20 standard deviation It is dispersed at the level of instability. It is distributed at the level of "unsteadiness" with a mean of 3.77 and a standard deviation of 1.17 with the expression "I see it as a tool to lead the competition to success". It is distributed at the level of "I do not care about the individuals in my family" with a mean of 2.65 and SS = 1.27 standard deviation. It is distributed at the level of "I do not consider people who do not fit my system of thought as a counterparty" with a mean of 2.88 and SS = 1.30 standard deviation. "It is important for people to trust me." = 3.39 mean and SS = 1.29 standard deviations. The expression "I prefer to work alone to work alone" is distributed at the level of I do not participate with a mean of 2,18 and a standard deviation of SS = 1,12. It is distributed at the level of "undecided" with a mean of 3,31 mean and SS = 1,23 standard deviation. "I see the money as a source of power among people." The expression is distributed at the level of I do not agree with the mean of 2.96 and SS = 1.40 standard deviation. It is distributed at the level of "unsteadiness" with a mean of 3,27 mean and SS = 1,14 standard deviation. It is distributed at the level of "I do not know that people's thoughts of the opposing intellectuals may be valuable." With a mean of 2,07 and a standard deviation of SS = 1,17. It is distributed at the level of "I do not agree with the hard working people" with a mean of 2.10 and a standard deviation of SS = 1.16. If I get a good job offer from another country, I can pass to that country's nationality. "= 2,18 mean and SS = 1,29 standard deviations.

Table 4. Descriptive Statistics for Sub-Dimension

	$\bar{\chi}$	SS
I design new things in my dreams.	2,57	1,39
If seller make a discount at shopping,I do not take the bill.	3,52	1,15
my professional career is highly valued in terms of ethics	3,47	0,99
I accept the necessity of having a family.	3,28	1,14
Whatever it takes, I prefer to be honest all the time	2,97	1,27
I obey the general hygiene rules where I live.	3,23	1,25
	3,02	1,29
I like being good to others.	3,37	1,10

I try to stay away from the behaviors that would cause waste in daily life. 4,00 1,10

As can be seen from table 4, sample Turkish folklore participants who created the "Social Values" from the bottom of the scale size I design new things in my dreams." = 2.57 average and SS = 1.39 and it spreads with disagree level of the standard deviation. It is distributed at the level of "neutral" with an average of 3.52 mean and SS = 1.15 standard deviation.

It is distributed at the level of " neutral " with a mean of 3.47 and a standard deviation of SS = 0.99 in "my professional career is highly valued in terms of ethics"."I accept the necessity of having a family." this expression is distributed at the level of the neutral with an average of 3.28 and a standard deviation of 1.14.

It is distributed at the level of "I do not agree at all costs" with a mean of 2.97 and SS = 1.27 standard deviations. It is distributed at the level of " neutral " with a mean of 3,23 mean and SS = 1,25 standard deviation, in the phrase "I follow the general hygiene rules in my living environment."

It is distributed at the level of " neutral " with an average of 3.02 mean and SS = 1.29 standard deviation. The expression "I like to be good to others." is distributed at the level of neutral with a mean of 3.37 and a standard deviation of SS = 1.10. "I try to stay away from the behaviors that would cause waste in daily life." Statement is distributed at the level of agreeing fully with an average of 4.00 and SS = 1.10 standard deviation.

Table 0 5 Scale of Social Values In Turkish Folklore, Identification Of Lower Size Statistic

	$\bar{\chi}$	SS
I can work with other people in the competition environment.	3,45	1,37
My religion has a large effect on the events that I met in life.	3,70	1,23
Scientifically proven knowledge is important.	2,87	1,37
I believe that the participation of woman to the worklife can cause damage.	2,75	1,35
Trying to figure out the cause of the behavior of people around me.	3,30	1,41
Being hardworking and useful person is important for me.	2,60	1,33
I believe the divinity of the army and military service.	3,07	1,23
I can be happy with the person that who is suitable for my culture	3,17	1,44
As a conscious voter, Im fulfilling my duty.	3,15	1,26

As shown in Table 5, the participants who made the sample, Scale of Social Values In Turkish Folklore expressions are distributed at the level of "I can work in the competition environment with others" expression = 3.45 mean and SS = 1.37 standard deviation. "Religious beliefs have great influence on events that I encounter in life." The expression is distributed at the level of indecision with a mean of 3.70 and a standard deviation of SS = 1.23. It is distributed at the level of "I do not care about scientifically proven knowledge" with a mean of 2.87 and SS = 1.37 standard deviations. "I believe that the participation of women in the working life is harmful to the family structure" is distributed at the level of "I do not agree" with a mean of 2.75 and SS = 1.35 standard deviation. With a mean of 3.30 and a mean deviation of 1.41 from the mean of "I try to understand the causes of the behavior of people in the environment." It is distributed at the level of "I am hardworking, it is important for me to be a good worker" with a mean of 2.60 and a standard deviation of SS = 1.33. "I believe in the sanctity of the army and its military service." The expression is distributed at the level of unsteadiness with an average of 3.07 and a standard deviation of SS = 1.23. "I believe that my culture can be happy with a matching partner." The expression is distributed at the level of unstable with an average of 3.17 and a standard deviation of 1.44. "Satisfying citizenship as a conscious voter" is distributed at the level of indecision with an average of 3.15 and a standard deviation of 1.26.

Tablo 6. Scale of Social Values In Turkish Folklore Identification Of Lower Size Statistic

	$\bar{\chi}$	SS
Secularism means the protection of freedom of religion and conscience.	2,17	1,16
I will act on my duty and responsibilities in the work I do.	2,12	1,03
Your worship has helped people to develop tolerant behavior..	2,18	1,23
I live in a system of thought that never compromises national values.	2,56	1,36
I try to stay away from the people who do not give me a trust.	3,57	1,20

I believe that social assistance will be effective in solving the problems of society.	3,35	1,26
I want to question the things that known by everyone else.	3,24	1,10
I believe that there is a creator, who created us.	2,93	1,22
I will pay attention to the consequences of behaving for others	3,19	1,34
I believe that information and ideas that can not be proved are not reliable.	3,33	1,32
I search for the different way for the work that I want to do.	3,44	1,23
I think I can keep a long relationship with my partner when I build a family..	3,73	1,33

As shown in Table 5, the participants who made the sample, "Scale of Social Values In Turkish Folklore expresses "secularism means the protection of freedom of religion and conscience", with a mean of 2,17 and a standard deviation of $SS = 1,16$. I do not agree with the statement "I will act on my duty and responsibilities in the work I do" = 2.12 average and $SS = 1.03$ standard deviation. I believe that "Your worship has helped people to develop tolerant behavior." The expression is disaggregated by a mean of 2,18 and a standard deviation of $SS = 1,23$. "I live in a system of thinking that never compromises national values." = 2.56 average and $SS = 1.36$ standard deviation. "I try to stay away from building relationships with people who do not trust me" is distributed at the level of unstable with mean = 3.57 mean and $SS = 1.20$ standard deviation. "We believe that social assistance will be effective in solving the problems of the society." The expression is distributed at the level of unstable with an average of 3.35 and a standard deviation of $SS = 1.26$. It is distributed at the level of "unsteadiness" with a mean of 3.24 mean and $SS = 1.10$ standard deviation. It is distributed at the level of "I do not believe that we are a creator who creates us" with a mean of 2.93 and $SS = 1.22$ standard deviations. "I will pay attention to the consequences of behaving as I do for others" is distributed at the level of "I do not agree" with a mean of 3.19 and $SS = 1.34$ standard deviation. It is distributed at the level of "unstable" with a mean of 3,33 mean and $SS = 1,32$ standard deviation, "I believe that unsubstantiated knowledge and beliefs are not reliable." It is distributed at the level of "unstable" with a mean of 3,44 mean and $SS = 1,23$ standard deviations. "I think I can keep a long relationship with my partner when I build a family." The expression is distributed at the level of unstable with an average of 3.73 and a standard deviation of 1.33.

3. Variation Analysis

Table 7. Analysis Of The Differences By Gender

	<i>Gender</i>	<i>N</i>	$\bar{\chi}$	<i>SS</i>	<i>t</i>	<i>p</i>
Learning demand	Female	39	2,85	0,68	-0,137	0,891
	Male	61	2,87	0,71		
Two	Female	39	3,22	0,71	-0,573	0,568
	Male	61	3,30	0,77		
Three	Female	39	3,13	0,96	0,134	0,893
	Male	61	3,11	0,96		
Four	Female	39	2,97	0,88	-0,152	0,880
	Male	61	2,99	0,84		

Table 7, Turkish folk Science Social Values in terms of the gender level Scale child dimensions is not observed significant difference between average ($p = 0.891$, $p = 0.568$, $p = 0.893$, $p = 0.880 > 0.05$). In other words; According to Social Values Of Turkish Folklore, gender level showed similar distribution, that is, the lower the scale dimension of learning. They're the equivalent of social value for average level.

Table 8. Analysis Of The Differences By Age

	<i>Age</i>	<i>N</i>	$\bar{\chi}$	<i>SS</i>	<i>F</i>	<i>p</i>
Eagerness to learn	Age 20-30	20	2,85	0,60	0,636	0,531
	Age 30-40	44	2,79	0,78		
	Age 40-50	36	2,97	0,63		
	Total	100	2,87	0,70		
two	Age 20-30	20	3,23	0,80	0,546	0,581

	Age 30-40	44	3,20	0,81		
	Age 40-50	36	3,37	0,63		
	Total	100	3,27	0,74		
three	Age 20-30	20	2,97	0,99	3,195	0,045
	Age 30-40	44	2,93	0,97		
	Age 40-50	36	3,43	0,85		
	Total	100	3,12	0,95		
four	Age 20-30	20	2,96	0,87	1,544	0,219
	Age 30-40	44	2,84	0,89		
	Age 40-50	36	3,17	0,78		
	Total	100	2,98	0,85		

When Table 8 were examined, the age variable in terms of the scale of Social Values In Turkish people are learning the child size request and social value is not significant differences observed between average ($p = 0.531$, $p = 0.581$ and $p = 0.219 > 0.05$). In other words; age according to the Social Values Scale of Turkish Folklore in the level of similar distribution of lower dimension, so learning request and the average age of social value for level is equivalent to according to the level. According to the age levels it is found that there is a statistically significant difference in the social value subscale ($p = 0.045 < 0,05$). This difference was found to be due to the average of adult social values from 30-40 years and 40-50 years, while the average age of participants in the 40-50 age range was significantly higher than those in the age of 20-30 .

CONCLUSION

This research was modeled according to the descriptive scanning model. Data were gathered without any change in the characteristics of the participants of the research and the opinions of the subjects were tried to be taken about the present situation. It is a research approach that aims to describe the way of description as it is, or as it exists, as it exists. It is attempted to describe the event that is the subject of the investigation as if it is within its own conditions. The effort to change and influence the event is not shown. The important thing is to observe what you want to know and define it. In this context, the research model is based on a descriptive screening model because of the need to determine Social Values in Turkish Folklore. 100 subjects were included in the study, 39% of whom were female, 61% were male, 20% were 20-30 years, 44% were 30-40 years old and 36% were 40-50 years old.

According to the age levels ,it is found that there is a statistically significant difference in the social value subscale ($p = 0.045 < 0,05$). While the average age of participants in the 40-50 age range was significantly higher than those in the age of 20-30 range, this difference was found the average of adult social values from 30-40 years and 40-50 years.

ABSTRACT

The study focuses on the school image based on its value messages, as perceived by pupils in former education. The theoretical framework is constructed of elemental value conceptualisation, the explanation of value messages and power of the school. The attention is equally focused on the school image in the context of the education turnover as a reaction to the value crisis and value orientation crisis in young people. This paper introduces a short trip to the typology of school reforms in the Slovak Republic. Moreover, it observes the individual value preference with emphasis on the reflection of moral messages of the school in the attitude of university students. The goal of the present study is to demonstrate how the university students perceive the norms that are presented to them during their studies. We are particularly focused on the norms relating to the partnership and parenthood education, notably if and how these themes are presented to the students by the school. The sample was composed of 38 university students (34 females, 4 males), the future psychology teachers in primary and secondary school. Applied ethical discourse opened the themes that are still regarded as controversial, such as the norms of sexual behaviour, and the risky patterns of behaviour found especially in young women's sexuality. The present study is a part of the project VEGA 1/0623/15 "Value Messages Perceived by Pupils in Formal Education".

Key words:

values, value messages, value framework, value structure, norms, school habituation, school image, value preference in the group of young people

INTRODUCTION

The values and their preference in the present-day young generation are often discussed in various contexts. Researchers look for the causes determining the current state of value preference and value orientation of the young generation. What is clear is the reality that the value structure is always determined by the generation, by the current culture, but also by the political and ideological state of the society, which makes the value structure multifactorial. That is why the values, value orientation, and value messages can be found in the theoretical and methodological portfolios of many scientific fields, especially psychology, pedagogy, social sciences, sociology, and recently neurology and social medicine (e.g., finding the value of health or behavioural aspects of health).

Our professional interest is focused on the research of the values in psychological context, where the values are regarded as the attributes of the human existence, personality, society, family, and school.

Main foundations to understanding the values, value orientation, and value messages

We live in a very complex social environment. Our decision-making, values, and norms are significantly influenced by the media, the society, and the political, artistic, and scientific (who have probably the least influence) figures. Social norms are the measures of human behaviour – our own and of other people (Zahn et al., 2008 in Koukolík, 2016). Bilsky and Schwartz (1987 in Koukolík, 2016) add that the social norms are composed of abstract concepts tied to emotional state and social action.

Value messages of schools

The formative influence of school shows that the value messages communicate the values and the value dimensions of the learning process. They have an impact on the forming of the pupil's value structure of the personality, on the group,

and on the society. The longer and more intense the influence, the more effective it is in affecting the scale of values. However, the value preferences in the scale of values can sometimes be just verbally proclaimed, rather than experienced (e.g., *the value of health is usually proclaimed as the most important value, but the individual does little to nothing to support their health*). It can also be illustrated by the high preference of the family value in the scale of values, but in the real life, this value decreases, and the sociologists have rung the alarm bell for some time now to point out that we witness the so called family crisis. The question is, however, which factors influence these discrepancies between the proclaimed value and the real-life experienced value. In this context, it is important to look closer on the scale of values and its limits, boundaries, and delimitation of the accepted values. In the pedagogy and psychology literature, the answers to the importance of the limits in the educational process have been intensively searched for in the past few years. The value framework represents a space, a demarcation of accepted, respected, and presented values of each individual. It is, therefore, an important dimension of values forming the individual (Prudký, 2009). The value framework is sometimes mistaken for the structure of values. The structure of values comprises of an organised inner system of values of each individual and is manifested in the life values preferences, value orientation, and value framework. It is considered to be a significant phenomenon creating the patterns of behaviour. The structure of values is present in the values, i.e. the norms of behaviour.

In each historical period, the society created a set of norms, the moral codex, which was universally valid and comprised of the rules, norms, values, and social behaviour (Fukuyama, 2005). This codex was controlled and sanctioned if needed. The same goes for the present day. We witness the value preferences in the time where the philosophy of “no limits” dominates.

School image

The image of the school represents its main contours enrooted in the school’s ability to pass on the ideas about the world, reality, science, and its role in the life of the members of the society. Therefore, it presents the different understandings of the world and of the human in a broad diversification. The school image is influenced by the different understandings of the values. The goal of the school in this context is to teach the pupils to understand and to use the human values, norms, and virtues. To put it differently, it aims to cultivate a moral intuition in the pupils (Koukolík, 2010). Thus, the school should inevitably secure the transfer of the sociocultural regulations in the course of the entire educational process, from the preschool age until when the student is ready for work.

The school habituation is a daily, regular socialization transfer, where the impact of the values and norms of the behaviour has its place. During the socialization process, an individual learns the basic norms and values that are presented to them by the culture and the environment where they grow up. These norms and values are either interiorized, rejected, or treated indifferently. It is important to remember that in the school area, the applied forms of repetitive synchronization and coordination of the behaviour constitute a specific school dispositions. These later, in the form of a “child habituation”, function as the “generative schemes” for the subsequent social action and behaviour with a respect for the mediated values and norms (Kaščík, 2006, p. 97).

In the present study, we asked a question identical to that of K.P.Liessmann (2015): “WHAT DOES THE SCHOOL HAVE, WHAT CAN IT DO?” Liessmann quotes P. Bieri (in Liessmann, 2015, p.96) who, apart from other things, defined the important dimensions of the education: “one’s own orientation, understanding, knowledge of history, communication skills, self-determination, moral sensibility, and poetic experience.” According to Bieri, education cannot be called *education* if it does not contain self-appreciation, self-reflexion, values, and evaluation. The author stresses that the school cannot be focused solely on the training of the operational competences, thus bringing up only the homo-jobs. Similarly, Liessmann (2015, p. 97, 113) reminds that “where the education is understood only as a training, the practice of the lack of education emerges in its limited and limiting nature.” The omnipresent practice of the lack of education demonstrates that we have become cowardly, petty, propelled, limiting, and inhuman. It is Liessmann (2012) who came up with the strongest criticism of the current European education in his sociological essay “The theory of lack of education”. He pointed out the still inspiring studies of Wilhelm von Humboldt who developed an idea that, based on philosophy, three stages of schooling could exist: 1/ elementary, 2/ scholastic, 3/ university. Humboldt’s concept describes the central tasks of school: a/ which cultural techniques each person should master in order to maintain a chance of acquiring further knowledge, b/ what kind of knowledge secondary schools should offer, so that the understanding of our world and a desire to learn more are ensured, c/ how the institution with a central role in the clarification of the learning and of the scientific instruction should be designed.

Attempts to change the “school spirit” are visible from 1990 in Slovakia, as well. This year can be characterised as a groundbreaking point in the terms of our whole society. It was preceded by November 1989 (Velvet Revolution) which brought considerable political and social changes that had their impact on the perception of the social image of schools, education, and life perspectives. These changes logically led to a new philosophy of education and upbringing in our country. In 1990, a new school project called “*The Spirit of School*” was introduced. The ambition of this project was, amongst other things, to “*create the highest human values*” in the educational system. In 1994, another education system-change project was presented, named “*Constantine*”. Here, socialization of the children and the youth, creative

and humanistic education, and understanding of the humans and their place in the world were emphasized. Introduced in 2014, a project “*Millenium*” was more focused on the curriculum changes rather than the changes in values. To shortly evaluate the impact and results of these projects, we must note that apart from the daring plans, resolutions, and suggestions, nothing big has changed in the Slovak schools. All of the projects brought solely curricular changes and additions, but not changes in character-forming values. In all cases, it was rather a reform of the previously reformed. The formative power of schools is still discussed, but the discussions stay only on the level of images and expectations.

Therefore, we ask: *What power does the school have nowadays?* Does it have the ability to form, influence, and change the behaviour and actions of the pupils and the students visiting it? O. Kaščák (2006) defines the school as a formal, state-controlled institution that “*universally influences the behaviour*”, an institution where “the school becomes an element of the global social influence, it becomes a component of the social power”. There is no doubt that the school is one of the main socialization institutions, meaning that it fulfils the social functions, too. It is an environment where the entire generations are being social and educated. This is where the *power of the school* lies. However, it is a power restricted by the social changes, by the political power, and also by the big disintegration of the basic moral norms and values.

Many prominent scientists talk about the human crisis – the crisis of the ways of life, and most importantly of the understanding of the values. According to Z. Helus (2011), it is a sign of the failure of the person who “by his own produces the disturbed conditions of life.” Helus also reminds the notes of Anthony Gidenss (2000, in Helus, 2011) about the weakening of the generally limiting moral ties and virtues. Fromm (2009, in Helus, 2011) named it an “*anthropological grounding of the crisis.*” Viktor Frankl (1997, in Helus, 2011) talks about an existential or noogenic neurosis which can be also manifested as an effort for natural human dignity. The anomy, which instils an idea that everything is permitted in the present-day era, tolerates immoral behaviour and deception. It all starts with cheating and lying in school where *performance* is more important than *morality*. It was only the end of the 19th century and the classic of modern sociology Durkheim (in Fukuyama, 2005) already warned about the risk of the expansion of the anomy that would weaken the broad acceptance and clear respect for the norms constituting the main pillars of the society. He also stressed that something that was later called a *great disintegration* by Francis Fukuyama (2005) would come. It can also be called a general disintegration of the main moral norms and values (Fukuyama, 2005). Z. Helus (2016) proposed the *Education Turnover* by developing an original idea of R. Palouš and Z. Svobodová (2011). Helus emphasizes that a teacher or other educator should not only play a role of a supervisor, controller, or of someone just giving orders, but also develop the potential of an individual. The education as understood by the author is “a complete view of the world and the place or the purpose of the person in it” (Helus, 2016, p.10). According to R. Palouš, “education turnover is an effort to liberate the human from sinking into obtaining the technoscientific operations. The education should be a challenge so that the human places the highest demands of his profession on himself.” (Palouš, Svobodová, 2011). Education turnover is a philosophy focused on the personal qualities, and the individual development respecting the anthropological constants. The authors of this trend place emphasis on the following aspects: 1/ Anthropological – focusing attention on the human, 2/ Ethical – deepening and teaching of the moral attitudes, 3/ Context – teaching the human to be responsible to himself, to nature, and to the world and 4/ Transcendental – orientation of the life from purposefulness to responsibility (Palouš, R., Svobodová, Z. 2011).

The question that arises is what is important in school in terms of the formation of the moral consciousness and the value orientation. It appears that it is mainly: a/ to be open to the values, b/ to be able to create one’s own hierarchy of values, c/ to know the value traditions of one’s own country and family, d/ to be able to respect and keep said values in one’s own life.

Therefore, we were interested in the norms presented by the school as perceived by the present-day university students in the area of the education towards the partnership and the parenthood. We also looked at the preference of the personal values with emphasis on the reflection of the moral messages of the school in the attitude of the university students. The aim of the study was to find out how the university students perceive the norms presented to them during their studies. We were notably focused on the norms concerning the education towards the partnership and the parenthood, and whether and how they are communicated to the students by the school.

METHODS

Participants

The sample was composed of the future teachers of psychology - the first-year students of the Faculty of Pedagogy at the Comenius University, Bratislava. The number of participants was 38 (34 females, 4 males).

Measures

We created our own concept of the research of values. A qualitative design was chosen as the main methodological approach, using two methods. In the beginning of the *discourse*, we applied the concept maps. The students received a

blank map on the A4 paper, where they were to write values and norms for the behaviour that came to them within 10 minutes. The resulting values can be found in Fig.1.

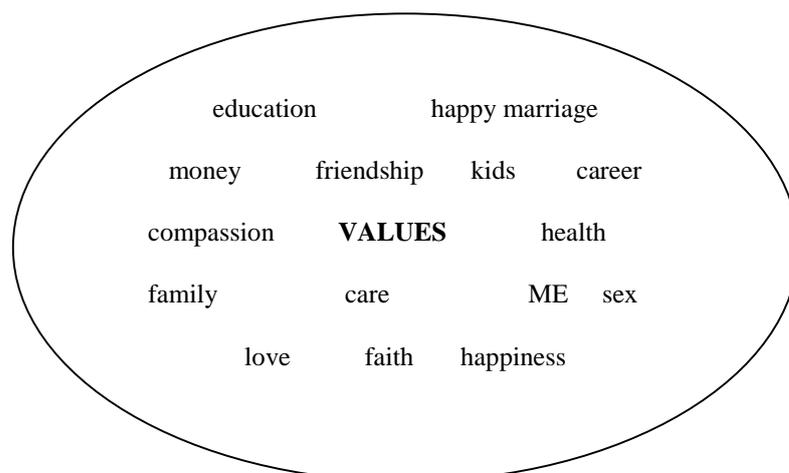

Fig.1 Concept map

Subsequently, the *method of ethical discourse* was used because we find it to be the most suitable procedure, especially in the questions with an arising dilemma. Ethical discourse is characterized by an open communication among the group of participants, it is a form of exchanging and finding arguments and coming to a potential consensus. We abided by the five main rules of ethical discourse (Flyvbjerg, 1999): 1/ no party can be excluded from the discourse; 2/ all of the participants have an equal opportunity to present their suggestions and criticize the question of validity presented by others during the discourse; 3/ participants must want to and be able to empathize with all the demands arising during the discourse; 4/ potential power differences between the participants must be neutralized; 5/ transparency.

RESULTS

The discourse lasted for 90 minutes. All of the participants (34 female, 4 male) agreed to the application of the proposed method with the conditions.

The leader of the discourse (Questioner, Q) firstly explained the reasons behind the discourse and its problematic parts.

Q: "What I will be interested in are your opinions on the importance of the values in a human life, as well as the importance of the moral norms. You wrote your values into the concept map, and you expressed your opinions and questions about the connections between the values and the moral norms. We said that the moral norms are social regulators of the human behaviour. Could you tell me, what is the oldest regulator of the human behaviour, a universal moral code that is known to us?"

A general silence ensued, awkward smiles on the faces and soft conversations.

Q: "Could you tell me, what is that universal moral code?"

[P2, F]: "I don't know."

Q: "And you?"

[P1, F]: "I don't remember."

[P6, F]: "I don't know, I've never heard of it."

None of the students remembered.

Q: "How many of you attended religious education during primary school?"

[P10, M]: "I did."

[P15, F]: "Me, too."

[P5, F]: "Me, too."

It turned up that out of 38 students, 7 attended religious education, and the rest attended ethics during secondary school.

Q: "So, remember what was one of the first information about some rules on how should people behave to each other?"

Again, quiet consultations and hesitation appeared.

Q: "Does 'Ten Commandments' say anything to you?"

The auditorium suddenly became more alive.

[P22, M]: "Of course, my God, I haven't thought of that."

[P2, F]: "Of course I know it, it just didn't occur to me."

[P27, F]: *"I know something about it, from my childhood."*

Q: *"And could you tell me, what are the norms in Ten Commandments?"*

[P16, F]: *"'You shall not steal', I guess."*

[P22, M]: *"'You shall not commit adultery' is there, too."*

[P1, F]: *"I remember now – 'you shall not covet', 'you shall not commit adultery', and I think 'you shall not murder' is there too, but I'm not sure."*

Q: *"I am surprised that you have such problems with one universal regulator of behaviour. So what is your norm, a model for behaviour in the area of morality and everyday life?"*

[P32, F]: *"Something that our parents told us."*

[P28, F]: *"Definitely the parents for the most part."*

[P2, F]: *"For me, it was my grandparents, my parents didn't have time for that."*

[P18, F]: *"For me, it was mainly my grandma."*

[P30, F]: *"My grandma, as well, today still."*

Q: *"Can you remember other Commandments?"*

[P16, F]: *"I think there was also 'you shall have no other gods before Me', but I can't remember the rest."*

Q: *"Alright, I will remind you all of the Commandments, and you think about whether they still have a meaning and a power to form moral conscience of people even nowadays."*

All Ten Commandments were named.

[P2, F]: *"Nothing has changed in their validity."*

[P23, F]: *"It has, though. The moral rule – 'you shall not covet' – is no longer valid."*

[P2, F]: *"But you cannot claim that, there is still a lot of couples who keep that rule."*

[P23, F]: *"Is that so? Where are they, then? I haven't met people like that."*

[P2, F]: *"That's because you seek out only those who keep nothing sacred."*

[P23, F]: *"Excuse me, you don't even know me."*

Q: *"This is not a conversation about the problem. In our conversation, we do not aim to create moral norms, or to argue whether some patterns of behaviour are bad, because each and every one of you has a right to have his or her own opinion and truth, regardless of what the truth might be. We will move on."*

Q: *"What about ethics classes, which is where you were supposed to talk about norms and values and behaviour? What do you remember from that?"*

Spontaneous reaction of the majority: *"We did nothing at ethics. The teacher said: 'There you have computers, do whatever you like.' And that is how all of the classes went."*

[P22, M]: *"That's why I switched to religious education."*

[P13, M]: *"Me, too, at least we were doing something."*

Q: *"What about the rest of you? You are such a quiet majority. Talk, talk, ask questions, comment. If you do not have any notes and comments on this topic, I do have one more issue. Most of you mentioned in the past that girls do not have moral restraints in sexual behaviour. Why this evaluation? Where do you see the problem that such patterns of sexual behaviour that you marked as inappropriate and immoral are dominating, and why in girls especially?"*

[P13, M]: *"The girls behave like they have been torn loose."*

[P38, M]: *"They go down with anyone, they have no boundaries."*

[P13, M]: *"That's true, they have no morals."*

Q: *"Girls, do you agree with that assessment?"*

[P2, F]: *"The boys are basically right, but they are not different."*

The majority nodded in agreement.

Q: *"But where do you see the cause of such behaviour? Is it a problem in the family, is it in insufficient sexual education, where is the problem?"*

[P28, F]: *"I think we need to focus on the media. What is shown on screen, what sort of behaviour is encouraged."*

[P34, F]: *"Definitely the media."*

[P2, F]: *"School is not innocent either, we didn't learn anything there, after all. Is someone here who had a different experience?"*

Others laughed and nodded in agreement.

[P32, F]: *"In our school, we had one single class in the 7th grade. They screened the anatomy of sexual organs to us and then showed us the examples of sanitary pads."*

[P11, F]: *"I guess it was the program 'When I'm maturing', or a different one?"*

[P32, F]: *"I don't know, I can't remember."*

[P27, F]: *"We learn about sex from the internet and our friends."*

Q: *"Are you telling me that you do not talk to your parents about these issues?"*

[P26, F]: *"We do, but only about the protection against the sexually transmitted diseases."*

[P22, M]: *"Can I say something? We talked about sexuality during religious education. That the first sexual intercourse can be only after the wedding and that we ought to be faithful to our partner for the rest of our lives."*

The auditorium became more alive and people were shouting over each other: *"Oh, right, I can see that."*, *"Those are such foolish ideas."*, *"They surely didn't mean that."*

Q: *"But those are moral norms that clearly delineate the behaviour. For religious people, it is a clear and understandable norm about how to behave in an area so sensitive like sexuality. Why do you see the problem in keeping it?"*

[P2, F]: *"You don't want to tell us that having only one sexual partner for the entire life can be attainable. I have female friends who have 3-4 sexual partners a year, and I don't find them amoral."*

[P11, F]: *"I also think that today this norm is unacceptable, it is nonsense."*

[P1, F]: *"It is not so big of a nonsense, really. Do you know how many less AIDS patients and those with other diseases would be there, not even mentioning how many less unhappy young people?"*

[P11, F]: *"Please, don't say things like that, even AIDS can be treated these days."*

[P1, F]: *"But you wouldn't like to catch that, would you?"*

[P11, F]: *"I don't sleep with gays."*

[P1, F]: *"But are you sure that your partner doesn't sleep with some gay?"*

Q: *"As I am listening to you, I gather you perceive this problem as a problem of health, so we talk about the health norm. It, however, says that the norm is only one sexual partner."*

[P2, F]: *"But when I have a partner and I sleep with him, I'm faithful to him. And I keep this with every partner."*

Q: *"This is called a serial monogamy, but it is also a risk for health and morals. Sure, a requirement to have only one sexual partner in a lifetime is unreal and we would find enough arguments to support this conclusion. We ended up in a moral dilemma and we should resolve it."*

[P27, F]: *"Maybe we should talk about bigger responsibility in this area, of girls and boys equally."*

[P3, F]: *"How to harmonize moral aspects and health norm with the current lifestyle?"*

[P7, F]: *"Do you think that present-day teenagers will think about sex in this way, though?"*

Q: *"That will be your responsibility one day, to prepare the children, the young people, for a high-quality, active, and creative life, including the acceptance of moral norms and values. We opened these issues step-by-step, only naming them and finding the causes of risky behaviours in youth, but the essence has to be in finding the paths leading to the correction of the "public matters". It is therefore important that the school is the bearer of such correction and change."*

[P8, F]: *"More education than knowledge, although I don't want to trivialize the later."*

[P32, F]: *"That is a problem because the world trend is like we described it in our country. Do you think that the school has the power to change anything?"*

[P2, F]: *"So we change the school."*

The students clearly declared that they care about transparency, especially about passing the right, true, clear, and relevant information about topics that are crucial in their lives.

CONCLUSION

Our concept of research of the power or the "lack of power" of school expected the gain of relevant research data about the transfer of values and moral norms into the life of pupils and students. The question was how they behave in real life in the context of these norms and values, how they evaluate the influence of school on their scale of values, on the value framework, or on the moral norms that were accepted as regulators of their behaviour. The study brings knowledge about the value orientation and the acceptance of the moral norms in university students, in the context of selected theoretical conceptions. It looks for the intersection between the real-life reality and the expected patterns of behaviour within the moral norms. The answers of the university students carry an insight to an evaluation of the power of the school. The applied ethical discourse opened topics that are still regarded as controversial, such as the norms of sexual behaviour, and the risky behaviour of young women in the area of sexuality. The acquired research data brought new knowledge about the power and the losses of school influencing moral attitude, value frameworks, and value orientation of young people.

We see the concretization of the education turnover especially in the developing personality of the individual. We put emphasis on the development of moral conscience, together with the development of moral action in accordance with

the ethical norms. If we know our value profile, we can defend our social rank and our ideals that give meaning to the human existence. According to Vernarcová and Ternényová (2016) teachers can make a world of difference for all students and can help them to succeed by implementing certain adaptations or interventions. Knowing the values of their students can lead to maximizing of learning process.

Many authors point out the danger of dehumanization of society, which is of course linked to the value orientation, moral norms, and their acceptance. Therefore, we regard the subject of our research and the results as an important contribution to the change of the spirit of our school. Future teachers regard the norms previously presented to them by the school as insufficient, especially in the area of development, care, and humanization of the pupil. This is the path that the current pedagogy should take, and by doing that, to “face the weakening of the humanizing ethos” (Helus, 2016; Palouš, Svobodová, 2011), to which we are (thanks to the ongoing school reforms, for instance) witnesses.

SCHOOLS AS INSTITUTES OF ACCULTURATION: A QUESTION OF BELONGING

Maura SELLARS

Australia

Maura.Sellars@newcastle.edu.au

ABSTRACT

This paper considers the position of students with refugee experiences in Neo Liberal classrooms. It explicitly raises questions about the notion of belonging, school culture and invariable tensions these constructs create in the context of age - related standardized testing, the epistemological foundations of the curriculum and the inevitable context of competition that is characteristic of economy based schooling. It questions the capacities of Neo Liberal educational systems to educate these students in ways which acknowledge their relative strengths, their cultural richness and their need for holistic, supportive teaching and learning interactions. It also examines the cultural tensions that are created by educational spaces which exclusively privilege the majority culture, as is currently the case in many of the 'host' countries in which these students find themselves. The widespread focus on individualism at the expense of community and on personal achievement and gain as a replacement for collaborative, joint effort may be tolerated as a necessary evil in many western cultures, but may prove to be the ultimate devastating challenge to students with refugee experiences as their communities struggle to come to terms with the horrors of displacement and the subsequent battle to retain their sense of identity.

INTRODUCTION

The world is currently experiencing the most widespread displacement of people that has ever been known. Over sixty five million men, women and children have been forced to flee their homelands in an effort to escape, war, violence, religious and civil conflicts and widespread destruction of the lives they had previously known in their countries of origin (United Nations Refugee Agency, 2017). Over half of this number are young people and children under eighteen years of age. Those who survive face great difficulty and hardship in their quests for new homelands and many spend months and years in camps and temporary accommodations under conditions which cause further stress and trauma. Amongst those who make up this global diaspora are millions of school aged children and young people. They, together with their existing families and communities, exist in hope of finding a new homeland on which to settle, to be accepted and to belong. Currently, however, many of the countries who have agreed to accept these newcomers as citizens have political and educational agenda and policies which marginalize the disadvantaged in their own communities and which do not have the structures and services to productively accommodate the degree of religious, cultural, and social diversity that is characteristic of the displaced communities. Consequently, many individuals with refugee experiences find themselves in new homeland societies which are very different from those they were forced to flee, and into which they are expected to be acculturated and assimilated.

ACCULTURATION

There are two distinct approaches to understanding the what occurs as the result of the coming together of two dissimilar cultures. One approach is the psychological approach which seeks to understand the changes and processes of that individual experience as the result of these interactions (J. Berry, Phinney, Sam, & Vedder, 2006; John W. Berry, 2009; J.W. Berry, Horenczyk, & Kwak, 2006). In this model, acculturation is generally understood to be the 'general process and outcomes (both cultural and psychological) of intercultural interaction' (J. Berry, 1997, p 8). The second, original model is primarily an anthropological model which seeks to explain how people as groups begin to live their lives in the context of other, different cultures (Ogbu, 1995a, 1995b). Both of these perspectives are valuable when discussing acculturation in the context of individuals with refugee experiences as these populations usually arrive in a context which is to be their homeland with others who have similar characteristics and backgrounds. In discussions of acculturation generally, there are several factors which impact on the process of acculturation. These are identified as the size of the groups who are undergoing the changes, the reasons for the migration, how long these groups have been in contact with the majority culture to which they are attempting to integrate and the degree of difference between the two cultural groups. One factor which both perspectives of acculturation agree as a critical factor is the in the predictor of acculturation outcomes is the degree to which the cultural interaction is forced or voluntary (J. Berry et al., 2006; John W. Berry, 2009; J. W. Berry et al., 2006; Ogbu, 1995a, 1995b). This is a particularly important aspect to consider in case of students with refugee experiences as the contact is generally involuntary and there are limited prospects of returning to the homes from which they have fled or been forcibly displaced. This lack of choice makes these individual more vulnerable to

developing an ‘oppositional cultural frame of reference’ (Ogbu, 1995a, 1995b) in which they engage in behaviour in their cultural groups which are not acceptable ways of behaving in the majority culture; or of developing negative acculturation attitudes towards intercultural contact as a result of negative interactions such as marginalization (J. Berry, 1997; J. W. Berry et al., 2006). This may be a particularly pertinent factor for consideration in educational settings where students with refugee experiences are regarded as ‘deficit’ and are perceived by themselves and others to be at a disadvantage in relation to the other students from the majority culture. Education systems which are developed in the context of the neoliberal economic politics have particular characteristics and processes which serve to privilege specific groups of students and lack the creativity and flexibility to honor diversity and difference REF. It is in these educational contexts that many students with refugee students find themselves placed in their newly settled contexts and in which they may, in many instances be at considerable risk of not developing positive acculturation attitudes and processes unless considerable accommodations are made to ensure their acceptance and inclusion (Atasay, 2015; Vickers & McCarthy, 2010).

SCHOOLS AS SYSTEMIC INSTITUTIONS

Schools are acknowledged to be the major centre of acculturation for young people (Hamilton & Moore, 2004; Stewart, 2011). They are expected to convey the culture, social expectations and behaviors of the societies in which they are placed. They frequently act as the ‘gatekeepers’ to other learning opportunities and prospective occupations by the implementation of the evaluative practices that are deemed appropriate for the societies in which they are placed. They are generally part of a system, the policies, characteristics and policies of which are implemented as mandatory curricula, processes and procedures. In many cases, these requirements are institutionally implemented with little or no provision for diversity or difference. A student’s age, for example, determines the stage of schooling in which they are placed, what they are expected to learn and the ways in which these expectations can be achieved (Hamilton & Moore, 2004). This alone can be a source of disorientation and distress for many students with refugee experiences. Irrespective of variations in the educational backgrounds of these students, a defining characteristic is that, for some, their schooling has been at least interrupted, for others, formal schooling is a new experience as they have had little or no formal education in their previous context REF. The notion that learning is age related may also be challenging for some students and their communities as coming together to learn what needs to be learned, irrespective of age, is a more familiar concept to many students with refugee experiences, especially those from African countries REF. Despite these factors that place the learning needs of the students as a secondary consideration to the administrative practices and procedures of formal education in most countries where schooling is mandatory from a defined age, the school environment and context are recognized as critical to the potential for students with refugee experiences to develop positive attitudes and intercultural interactions towards acculturation (Stewart, 2011). Historically, students with refugee experiences were generally treated like any other students in a well-meaning effort to minimize difference and demonstrate acceptance into the school community and emphasize the need for assimilation into the mainstream culture (J. Berry, 1997). However, a body of evidence provides evidence that contradicts this notion as a successful strategy (Stewart, 2011), with the result that schools have mainly served to marginalize these students with potentially significant consequences for both the communities with refugee experiences and the communities to which they seek to belong.

The consequences of prioritizing institutional procedures and policies and assuming assimilation will take place has particular impact in school systems which are heavily influenced by neoliberal economic principles. Identified by their focus on individual competition, one size fits, all high stakes testing and inflexible curricula, schools in these systems have the capacity to marginalize not only students with refugee experiences, but any students with a background of disadvantage who do not identify with the complex values, beliefs and principles that are inherent in these schools and systems. Students with refugee experiences are particularly disadvantaged. The issues of language and literacy skills are always problematic as are the difficulties that many students with refugee experiences encounter when subsumed in a world of printed material. This reliance on print impacts not only on students with backgrounds of oracy, but also those students whose educational backgrounds were previously limited to the knowledge of specific religious or cultural texts. The additional stress that is created for these students is accelerated by the ways in which assessment procedures are implemented, most especially in situations where national testing regimes are implemented. Not only may the epistemologies of the curricula, and therefore the contents of the tests, be unfamiliar to them and conflict with their own cultural beliefs and ways of knowing, the language proficiencies required to engage productively with these evaluations of learning only serve to further marginalize and disadvantage these already vulnerable groups of learners. A further disadvantage for many students with refugee experiences may be their physical appearance. These may include facial features, skin colour and general physique that sets them apart from the students of the mainstream culture, resulting in cultural interactions that demonstrate attitudes of prejudice and discrimination by those belonging to the mainstream culture. Once again, this can be particularly dominant in schools and systems that are governed by policies and procedures which are exclusive and inflexible, such as those dominated by ‘one size fits all’ pedagogies and

curricula, deficit remedial programs which exaggerate perceived shortcomings and lack of linguistic and other social capital (Bourdieu, 1986, 1990) and which limit the choices of acculturation strategies for students with refugee experiences.

BELONGING AT SCHOOL

There are different types of acculturation and often, the strategies for some types of acculturation are either too challenging or are not possible in the contexts in which some students with refugee students find themselves (Hamilton & Moore, 2004; Stewart, 2011). Assimilation, which is an expectation in many of the countries who regularly permit an annual quota of migrants, including populations with refugee experiences, into their nations, actually means that these people are expected to forfeit their original cultures and to totally embrace the language, customs and values of the countries in which they are resettled. The opposite of this total immersion in the culture of the 'host' country is separation. This is where the individuals wish to retain their culture of origin and avoid contact with those of other cultures. As a result, these individuals do not readily acquire the language, values and customs of the country in which they are resettled and so find it difficult to sustain productive, positive interaction with others who do not belong to their cultural group. Most at risk of separation are females who do not attend school but remain at home with their communities. Integration is likely when these populations are able to retain the aspects of their culture of origin, but also be able to interact in their new cultural contexts by acquiring language, values and ways of doing that are associated with participating positively and productively in their new cultural contexts. Strategies to integrate have been found to be the successful option for those individuals wishing to adapt to life in another cultural context. There is one more option for acculturation which is especially pertinent when considering the expectations of students with refugee experiences in schools in countries with neoliberal politics and economies. This is marginalization. Marginalization is frequently the result of negative interactions with other cultural groups. Individuals reject their culture of origin because of negative perceptions and interactions with the dominant cultural group and, although they may strive towards achieving the language, norms and values of the dominant group, they are unable to do this effectively or efficiently and, consequently, they also develop negative attitudes towards the dominant cultural group. This can be a particularly problematic outcome in schools, especially those where difference and diversity are met with low degrees of tolerance and limited understanding and support systems. In many schooling contexts, students with refugee experiences simply cannot compete academically with their peers in formal school systems which prioritizes high stakes testing and one size fits all pedagogies and so cannot fully access the cultural capital of education which may lead to a gradual process of marginalization.

Conclusion

Acculturation is gradual process which develops over time and changes individuals, communities and the 'host' culture as interactions create new norms and perspectives. It is essential for students with refugee experiences to have significant support systems made available to them in a variety of contexts, including school contexts. It is also vital for the development of positive acculturation strategies and attitudes that students with refugee experiences experience interaction with their peers from the dominant culture, not least for the saturation of language experiences that native language speakers can provide for their classmates (Schumann, 1986). Schools have particular responsibilities as the major avenue by which students with refugee experiences can be acculturated to provide environments which are inclusive, tolerant and accepting of difference. School climate has been well established as an important indicator of student belonging and inclusion REF and consider not only the policies and practices of schools but also the ethos and 'hidden curriculum' REF. for students with refugee experiences, school climate becomes paramount to their future success, not only in academic terms but terms of their social and emotional wellbeing. The question, however, that appears not to have been asked, much less answered, by policy makers, school systems and support agencies is simply this 'How can an educational system that prioritizes individual competition and academic success accommodate students with refugee experiences?' If they cannot successfully compete, the only way they can belong in such education systems is to become the failures that are required to validate winners. Society's risk then is that the only type of acculturation that many students with refugee experiences may be able to develop is that which is least beneficial at all three levels of consideration (J. Berry, 1997): the individual, the institutional and the national.

ABSTRACT

This paper analyzes and critically assesses the school-work alternating model as practiced in the high school system of the Autonomous Province of Trento (Italy). Throughout the assessment, the main weaknesses highlighted by graduates were the limited guidance they received from their teachers and the ineffectiveness of the work placement schemes put in place by the schools. The paper therefore raises fundamental questions about this educational model and suggests that improvements should include greater involvement of the students in selecting and shaping their internships and greater assistance to help students choose career paths or further academic directions.

Keywords: Guidance – Internship – School-work alternating - Post-diploma transition - Work placement

1. THE SCOPE OF THE PROBLEM

Many are the causes external and internal to the labor market that have led to the high rate of youth unemployment in Italy and in many European countries, as well as to job instability that extends long after entering the labor market. The gap between school-based learning and working practice is one of the central factors that adversely affects the ability of young Italians to find an occupation that is coherent and congruent with the educational title obtained, relatively quickly after completing their studies. The Italian school system therefore needs to create conditions for greater employability of its graduates, and especially for those who do not move on to university.

A solution may come from offering opportunities that allow high school students to acquire so-called "key skills" that are particularly sought after by companies (communication, teamwork, leadership, autonomy at work and problem solving). Another important factor for a young person seeking employment also consists in becoming acquainted with work culture and business organization.

As a whole, the education system can hardly provide training that meets the needs of flexibility, adaptation and adjustment to new technologies as well as advanced specialization, which would limit the possibility of a widespread and positive encounter between supply and demand.

A significant step in addressing the problem in Italy is Law No. 107 of 13 July 2015 that has attached particular importance to the work experience of young people during their school years, so much so that it has made it compulsory. To implement *work placement schemes* does not imply only organizing *internship* for students but also to take the outlook of changing the position of school in society, so that it no longer stays exclusively locked within its walls as a repository of knowledge, but opens out to local, national and international cultural and productive reality (Schizzerotto, Barone, 2006).

Internship remains a basic tool albeit to be placed within a larger context. First, internship have nothing to do with employment. Students in general are not paid, but are offered educational goals. They cannot be thought of as a means of creating employment, even though the recruitment of a student on placement may be a valid secondary effect, as confirmed by research conducted in other countries (Mihail, 2006; Smith, Wilson, 2004) and in Italy (AlmaDiploma, 2016).

Highlighted instead are the guidance purposes of internship in producing greater awareness when choosing the path of study after the high school diploma or of the employment sector when seeking a future job. This tool can therefore be considered as an integral part of the guidance process that schools have the task of activating during the last three years of secondary school in Italy. It is within this problematic framework that the survey that this paper deals with was carried out. The survey was conducted between 2013 and 2015 by the *Department of Sociology and Social Research of the University of Trento*, on behalf of IPRASE - the Institute for research and educational experimentation of the Autonomous Province of Trento - and focused on the analysis of students'

perceptions, attitudes and decision-making styles during the transition phase. Anna Ress worked on the survey together with the authors of this essay.

The survey questions can be grouped into three main categories:

- a) *Guidance applied*: how was guidance towards employment implemented by the schools? What were the levels of participation? What other sources, channels, or experiences were added to it by the students?
- b) *Guidance perceived*: what degree of success did the guidance towards employment implemented by the schools receive in terms of positivity, satisfaction and usefulness of any experience made? What criticisms were made? What shortcomings were observed?
- c) *Guidance results*: what effect did guidance activities practiced by the schools have on the actual integration of secondary school graduates into the labor market? Are there other non-school paths that could significantly influence labor market access?

2. METHODOLOGY

A first collection of data was conducted by means of a questionnaire distributed to 51 high school 5th year classes (equivalent to a total of 835 students who would graduate at the end of the school year). The procedural nature of the phenomenon analyzed required a second investigation, longitudinally, after graduation. In fact, in the following year 479 graduates were surveyed via two parallel interview methods (*web survey* and *Cati*). It was thus possible to compare the data concerning intended choice with the choice actually made at the conclusion of this transition phase.

As for the variables used, the *current condition*, which identifies the post-diploma situation, distinguishes four main categories: *students*, including those studying *workers*, with the exclusion of students but including those also looking for another job; *young people looking for work*, namely those only looking for a job and not engaged in any other activity; and *NEETs*, or those who do not study, do not work nor are looking for a job. In the analyses, several socio-demographic features such as *gender*, *cultural capital* of the family (defined by the highest academic qualification achieved by the parents) and *citizenship* were used as control variables. Independent variables used by the study include the *type of secondary school attended*, which may be either: (i) a '*liceo*' (high school specializing in scientific, classical, linguistic, social and artistic studies) or (ii) an '*istituto tecnico*' (secondary school specializing in technical and trade subjects); the *final score obtained at the school-leaving examination*; the degree of *guidance-related confidence* achieved in the transition, an *additive index* constructed from a set of attitudes that define the degree of awareness about his/her options through which the young person looks at the future. This index was subsequently recoded into three levels (*low, medium, high*).

3. THE RESULTS

3.1 *Guidance applied*

A student's participation in guidance activities for employment purposes is related to that student's will to enter the labor market as soon as the school-leaving diploma high school examination is obtained. In fact, nearly one in three young people declares not to have done anything, in the post-diploma transition phase, to expand his/her future professional horizon through guidance activities, thus showing complete lack of interest in the matter. Only a quarter of the interviewees showed a proactive attitude, claiming they had analysed work prospects in detail. Among the others, participation remained at a substantially passive level. If one observes the prevailing attitude in the different profiles of interviewees, there is less interest in the issue about finding a job among those who have continued their studies than among those who are working or looking for a job. Other analyses have shown that graduates from technical institutes, when compared to '*liceo*' students, were more involved in gaining knowledge about the labor market. It is important to note, however, that even among those, more interested in the professional world, i.e. those who have a job or who are looking for one, as well as among the graduates of technical institutes in general; the proportion of those who have sought detailed information never reaches the majority.

The main source of guidance for over two-thirds of interviewees is Internet. Important for about one-third of young people is also reading newspapers, magazines and specialized brochures. Less significant are events such as trade fairs, placement services and traditional media (TV and radio). If one looks at the role played by the school, one sees that only one in five interviewees turns to school guidance to acquire knowledge about the labor market. As students place relatively little faith in employment guidance activities conducted by schools, which anyway seem to be not very effective, let us analyze the reasons why.

The first element that emerges is the interviewees' scarce perception of having experienced guidance activities. This can be attributed, at least in part, to the lack of recognition of the specific purposes of the guidance activities proposed by the schools. By comparing the activities between them, individual *counseling* initiatives are less frequent compared to other routes such as choice support workshops, skill evaluation tests, university open days, group talks with experts. The perception of having participated in guidance activities is higher among

high school graduates from technical institutes compared to 'licei' graduates, and higher among those who are working or looking for work than among current university students.

Focusing on concrete life experiences considered typical of employment-related guidance, the survey has shown good, at times outstanding, distribution of contacts with the world of labor through personal initiative and events organized by the school or work placements (see Table 1). The experience-based links between school and work, where they exist, are concentrated in the central years of secondary school and especially in the fourth year. When students reach the fifth year and approach the school-leaving exam, they find it is difficult to have profession-oriented experiences because they are not proposed by the schools and because most of the near-graduation students concentrate their efforts on the final exam of the educational cycle and/or on the preparation for university admission tests.

Almost three-quarters of the students claim, however, that they have had work experience not organized by the school. Less common is work experience organized by the school and *internship* in particular. The survey confirms the trend among vocational schools of offering more opportunities for work experience or work placement opportunities compared to 'licei'. Finally, it is much more likely that workers have already had work experience when attending secondary high school compared to university students.

Table 1 - Participation in guidance activities during school studies, by type of school (percentage)

	Liceo (N = 254)	Istituto Tecnico (N = 225)	Total (N = 479)
Work experience organized by the school	38.5	67.3	52.1
Other work experiences	70.3	78.2	74.0
Training placements at companies or other bodies	36.9	73.0	53.8

3.2 Guidance perceived

According to the data collected, only one third of young people are satisfied with the information on the employment market received from schools. Looking at interviewees from the perspective of the school path they followed, the least satisfied are the 'licei' graduates (14.9%) compared to the "istituti tecnici" graduates (54.9%), while considering the current condition of the interviewees, university students are more critical of the school's labor market information services (25.2%) than workers (54.1%) or job seekers (38.8%).

Table 2 illustrates the perception of the usefulness of work experiences practiced concretely during high school. According to data collected through the questionnaires, it is evident that job opportunities, organized or not by the school, as well as work training have satisfied in terms of adequacy only from one fifth to one third of those who have experienced them.

Table 2 - Perception of usefulness of work experience, if done, related to current condition (percentages)

<i>They have been very or quite useful:</i>	Students	Workers	Job seekers / NEETs	Total
Work experience organized by the school	17.5	29.8	24.2	22.2
Other work experience	20.4	39.0	11.1	24.0
Training placements at companies or other bodies	23.5	44.3	34.3	31.7

3.3 Guiding experience and entering the labor market

Beyond perceptions, that are subjective, there remains the need to measure the actual effectiveness of guiding experiences. Which factors actually affect real opportunities in the post-exam high school transition? Are guiding experiences important in terms of objective results? We have tried to answer these questions by analyzing the incidence of guidance practices compared to the chance of finding work or not after high school graduation. For this reason, the following analyses are limited to the sample of young graduates who have chosen to work or to seek employment, thus excluding current students and *NEETs*.

Probability of getting a job is higher for those who have a meaningful work or training experience (not necessarily related to the job in question): for example, for those who have spent a period of study abroad, the chance to work a few months after graduation was equal to 63.8 % Vs. 54.6% for those who did not have such experience; likewise, the work experience organized by the school increases the chances of working from 53.1% to 61.6%.

Even the practice of *work training placement* organized by the school seems to have a positive impact, albeit in a very limited way, on the access to the labor market, seeing that if the probability of working is equal to 56.1%

for those who have not practiced work placement that increases to 59.6% for those who have had this opportunity. However, the most important action seems to be the experience of a job found independently from the school. In fact, we find that 69.7% of those who have experienced work activity independently from the school are inserted in the world of labor after a few months of obtaining the high school degree. Only 27.8% of those who did not have this experience worked at the time of the interview. This phenomenon apparently proves that work found autonomously or anyhow without the intervention of the school is more functional to the purpose of faster employment of secondary school graduates. However, it should be noted that this is a snapshot of the situation of neo-graduates shortly after obtaining their high school diploma and that in most cases the type of work found when exiting the school system on average consists in a low profile job featuring poor temporal stability. The situation may be different after a longer period of time and with reference to less precarious work. Table 3 shows a more detailed analysis, based on three logistic regression models, conducted to verify the actual extent of some of the factors influencing job opportunities of the young neo-graduates interviewed.

Table 3 - Logistic regression models on worker status rather than on looking for work status, N = 135

Pseudo R ²	0110	0115	0250

N.B. ***: $p < 0.01$; **: $p < 0.05$; *: $p < 0.10$; ^a Warning, low numerosness

Model 1 is the starting point and confirms that the most meaningful guiding experiences as regards job placement are those conducted in the workplace independently from the educational institution. Training and professional experiences considered alone account for 11% of the variability in the probability of getting a job.

Model 2 includes the socio-demographic control variables such as gender, nationality and the family's cultural capital in order to ascertain how the guiding experiences conducted remain significant under the same conditions of social status. The impact of such experiences remains unchanged even when considering the socio-demographic aspects of the interviewees. These factors add little to the explanation of the different job opportunities among the high school neo-graduates (11.5%).

The third model introduces school career indicators (type of school attended and school-leaving exam score) and attitude (guidance-related determination index): extra-curricular work experience remains the most important indicator even independently from the type of school education and the degree of motivation shown. This last aspect seems to be very important in finding a job, namely the level of guidance-related determination achieved seems to have a very strong impact on accessing the labor market. Considering these elements too, it explains up to 25% of the diversity in the probability of finding employment. Although these results offer several interesting indications, it is evident that there is undoubtedly a large degree of variability in the job opportunities of young graduates that cannot be explained with these factors.

SUGGESTIONS FOR ENHANCING THE SCHOOL-WORK ALTERNATING MODEL

With this essay, our intention was to explore how and to what extent *school-work alternating* model has been acknowledged by the school system of the Autonomous Province of Trento as a whole. This means not just how it has developed in the "*istituti tecnici*" that for a long time have been offering projects aimed at providing practical skills to future workers, but also how "*licei*" are reorganising in order to comply with national legislation that envisages work experience in collaboration with the world of labor. These are our conclusions:

- The initiatives carried out by schools to guide students in their post-diploma high school choices were many, but a significant part of the students did not see the role played by the educational institution as being particularly active, especially where employment is concerned.
- Predictably, the focus of students on employment opportunities following the diploma depends on their school path: it is greater for students from "*istituti tecnici*" and less intense for those from "*licei*" who, in a greater number, envisage the continuation of their studies.
- Overall, however, the data show that the information on future opportunities is pursued autonomously by the students (via Internet), individualized counseling activities appear to be quantitatively limited, not always evaluated positively and placed on a lower level of importance compared to other activities such as choice supporting workshops, skill evaluation tests, "university open days" and group talks with experts. The appreciation for all of these actions in any case never reaches high levels.
- Lights and shadows also characterize the internship activated in companies, to a variable extent according to the type and quality of individual experience acquired and to the climate found in the labor context. A partly unexpected result entails the need to reflect and rethink how the student address the internship, how he/she is prepared by the school and how the company approaches him/her. It appears, in fact, that institutional education produces rather limited practical effects on the opportunity to find work after secondary school graduation.
- Extra-curricular work experiences are rather more significant in terms of post- high school graduation employability. Those who have acted autonomously in the search for some contact with the world of labor, therefore, seem to have more probability of finding a job quickly after graduation, as seen in the interviewees who were already working five months after graduation. This result is in contrast with the aims of the school's work placement schemes and it sheds doubt on their guiding and educational role, at least as regards their more common applications.
- To improve organizational work placement proposals, it may be useful, instead, to consider the proactive attitudes of young people who have identified, and perhaps even chosen independently, the company where they wish to engage in work experience. Initiative, commitment and motivation in acquiring the necessary skills for a future career already during their studies are useful qualities on the road to success in finding employment. These factors are included in the "guidance-related determination" index that, as we have seen, appears to be closely correlated with the access of the neo-graduated to the world of employment.

- Therefore, rethinking school-work alternating means to conceive internship - which are its constituent instrument – by paying attention to aspects such as student motivation, his/her active involvement in the project, coherence with the student's secondary school subjects, innovative teaching of the skills that accompanies, progress monitoring (done by a school tutor and a company tutor) and, finally, evaluation of the achievement or not of expected results and the student's reflection on or processing of the experience undergone.
- The foregoing phases represent an ideal model of *school-work alternating* that requires, however, flexible interpretation for its implementation in different work contexts and according to the different types of schools. More complexity is highlighted especially for 'licei' than for "istituti tecnici", due to their different characteristics and hence the different perspectives of post-secondary school choice.

ÖZET

SCORM (Shareable Content Object Reference Model) kavramı, ilk olarak Amerikan ordusunda hizmet içi eğitim verme amaçlı olarak kullanılmaya başlandı. Zamanla, yüz yüze eğitimin el vermediği durumlarda uzaktan eğitim metodu ile etkileşimli eğitimde vaz geçilmez bir yapıya dönüştü. Moodle veya benzeri ÖYS (Öğrenme Yönetim Sistemi) yapıları içerisine dâhil edilebilecek standart hale getirildi.

2000 yılının ocak ayında SCORM 1.0 sürümü ilk olarak piyasaya sürülmüştür. Daha sonra 1.1 ve 1.2 sürümleri devamında gelmiştir. 2004 yılında SCORM 2004 1 ve 2. Sürüm, 2006 yılında SCORM 2004 3. Sürüm, 2009 yılında SCORM 2004 4. Sürüm, 2008 yılında IMS, 2010 yılında IMS LTI ve 2016 yılında ise CMI5 sürümü yayınlanmıştır.

SCORM nesnelere ile ders içerikleri yayınlanabilir, öğrenim süreci takip edilebilir, ders içeriklerine kısıtlama getirilebilir, öğrenci ile ilgili rapor tutulabilir, sınav uygulamaları yapılabilir, hareketli animasyonlar eklenebilir. Öğrencinin kendi kendine eğitim alması için gerekli olan her türlü ortam, SCORM ile sağlanabilir. SCORM paketi veya standardı halinde hazırlanmış bir ders içeriği veya etkileşimli eğitim seti bu standardı kullanan tüm ortamlarda (Web veya Masaüstü) sorunsuz bir şekilde çalışabilir. Moodle veya benzeri öğrenme yönetim sistemlerine (LMS: Learning Management System) eklenerek Web ortamında eğitimlerin daha çok öğrenciye ulaşması sağlanabilir.

Anahtar Kelimeler: SCORM, uzaktan eğitim, Moodle, etkileşimli eğitim

GİRİŞ

İnternet hızlarının artması ve Web teknolojilerinin gelişmesiyle artık birçok hizmet veya sistem Web sayfalarına taşınmış oldu. İlerlemenin temel çekirdeği olan eğitim de bu gelişmeden nasibini aldı. 1840'lı yıllarda ilk olarak mektup ile eğitim sürecinin başladığı uzaktan eğitim, artık küçük bir bilgisayar olan cep telefonlarına sığar hale geldi.

Uzaktan eğitim, yapı olarak teknik bir altyapı gerektiren bir hizmettir. Bu altyapının tedarik sürecinde birçok eksiklikler yaşanmaktadır. Özellikle teknik eleman ihtiyacı en büyük sorunlardan biridir. Ders içeriklerinde kullanılan malzemeler, etkileşimli eğitim için uygun olmalıdırlar. Öğrenci, istediği her anda sunumları takip

© *Corresponding author.* Tel: +90 532 226 4334; Faks; +90 262 349 39 97;
E-mail address: kazim_kahraman@hotmail.com

edebilmeli, dersleri dinleyebilmeli ve konu sonunda sınavını alabilmelidir. İşte uzaktan eğitim bu ihtiyaçların tamamını karşılamaktadır.

SCORM nesnelere sayesinde bir öğrencinin kendi kendine eğitim almasını sağlayabilecek bir ortam tesis edilebilmektedir. Sabit sunum içeriklerinden tutun da hareketli animasyonlar, videolar, ses kayıtları, kısa sınavlar ve daha birçok eğitim içeriği bir SCORM paketinde bulunabilir. Bu paketlerin hazırlanması süreci her ne kadar teknik bilgiye ihtiyaç duysa da temel bilgisayar kullanımı ve İnternet okuryazarlığı olan bir öğreticinin SCORM nesnelere hazırlanması, uygun yazılımlarla çok kolay hale gelmiştir. Bu makalenin amacı bir SCORM nesnesinin hazırlanması ve kullanımı sürecinin kolay aşamalardan meydana geldiğini öğreticilere ve okurlara hatırlatmaktır.

UZAKTAN EĞİTİM

Uzaktan eğitim, fiziksel olarak öğrenci ve öğreticilerin aynı konumlarda bulunmalarına ihtiyaç duymadan, teknolojinin ve özellikle İnternet'in imkânlarından faydalanılarak, öğrenci ve öğreticilerin bir uzaktan eğitim sisteminde eşzamanlı veya eş zamansız değişik şartlarda ders yapabildikleri bir öğretim şeklidir. Uzaktan eğitim, eğitim için zaman ve mekân imkânı bulamayanlar ve özellikle bazı özelliklerden yoksun olan engelliler için bulunmaz bir nimet olmuştur.

Uzaktan Eğitimin Gelişimi;

Teknolojinin hızlı gelişmesiyle orantılı olarak gelişen uzaktan eğitimin tarihsel gelişimini dört Ana evreye ayırarak incelenebilir;

- Posta ile Eğitim Modeli
- Çoklu Ortam Modeli
- Tele Öğrenme Modeli
- Esnek Öğrenme Modeli

Çağın şartlarına göre eğitim metotları da kendini geliştirmiştir.

Posta ile eğitim modeli

Posta ile Eğitim Modeli, uzaktan eğitimin başlangıcı sayılabilecek bir evredir. Bir okul veya yetkili kurum tarafından posta vasıtasıyla yürütülen öğretim metodudur. Mektupla öğrenim, kültürel gelişim ve mesleki eğitim için hemen her bilim dalında eğitim sağlamıştır. Özellikle fiziksel engelliler ve eve bağlı olanlar için ideal olan mektupla öğrenim kursları, görme engelli ve sağır çocukların anne-babaları için de özel programlar düzenlenmiştir. İş çevreleri, dernekler ve silahlı kuvvetler, mektupla öğrenimden yoğun biçimde yararlanmış olan kurumlardır. İlk olarak 1840 yılında İngiltere'de uygulamaya başlanmıştır. Türkiye'de ise 1958 yılında temelleri atılmış. 1974 yılında ise Milli Eğitim Bakanlığı, Mektupla Öğretim Merkezini hayata geçirmiştir.

Bu Uzaktan eğitim metodunun en büyük eksi özelliği, öğrenci ile öğreticinin iletişim probleminin olmasıdır. Ayrıca posta dağıtımını sırasında yaşanan sıkıntılar da bu metodun eksileri arasında bulunmaktadır.

Çoklu ortam modeli

Radyo ve televizyon, ilk olarak 1919'da ABD'de eğitimsel yayın yapan bir radyo istasyonunun kurulması ile beraber ilgi odağı olmuş ve şu ana kadar da geçerliliğini sürdürebilmiştir. Ekonomik, zaman ve mekâna bağlı olmaksızın, kitle yayınına uygun, görsel ve işitsel öğeleri kolayca aktarabilme özellikleriyle uzaktan eğitimde bir çığır açmıştır. Ayrıca kolayca kayıt altına alınabilme, tekrar tekrar izlenebilme ve diğer sistemlere uyumlu olması radyo ve televizyonu uzaktan eğitimin önemli bir aracı haline getirmektedir. Bugünlerde radyo ve televizyon çeşitli sosyal ve kültürel tabakadan birçok insana hitap edebilmektedir. Bu da uzaktan eğitimde çoklu ortam araçlarının kullanılabilirliğini önemli ölçüde artırmaktadır.

İlk olarak Amerika'da 1919 yılında uzaktan eğitim amaçlı bir radyo istasyonu tesis edilmiştir. 1920 ile 1930 yılları arasında 200'ün üzerinde eğitim amaçlı radyo istasyonlarına lisans verilmiştir. Türkiye'de ise 1981 yılında Anadolu Üniversitesi ile T.R.T. (Türkiye Radyo Televizyon) kurumları ile okul televizyonu hizmet vermeye başlamıştır (Anadolu Üniversitesi BÖTE, Uzaktan Eğitimin Tarihsel Gelişimi. <http://ftoker.home.anadolu.edu.tr/uzaktane-kitap.pdf>, 14.07.2017).

Tele öğrenme modeli

Üçüncü nesil tele öğrenme modeli sesli konferanslar, video konferanslar, görsel metin tabanlı konferanslar ve canlı televizyon ve radyo yayınlarını kapsar. İki yönlü ses, iki yönlü görüntülü sesli ve görüntülü konferans uygulamalarına verilen genel isim olan eşzamanlı model, aynı zamanda tele öğrenme modeli olarak da bilinir. Video konferans iki ya da daha fazla bölgede eş zamanlı olarak ses ve görüntü transferine imkân sağlayan bir

etkileşimli telekonferans teknolojisidir. Video konferans, farklı yerlerdeki insanların oturdukları yerde sanki yüz yüzmüşçesine birbirleriyle iletişime geçebilmelerini sağlar. 2 çeşit video konferans vardır.

Bir Noktayla Video Konferans

Bir öğretmenin bulunduğu yerden bir sınıftaki öğrencilere ses ve görüntü transferi ile ders anlatmasıdır. Bu teknolojiyle uzak bir yerde bulunan bir öğretmen sınıftaymışçasına öğrencilerine rahatlıkla ulaşabilir ve öğrenciler de anlayamadıkları konuları öğretmenlerine sorabilir.

Birden Çok Noktayla Video Konferans

Farlı yerlerde olan çok sayıda insanın buldukları yerlerden birbirleriyle buluşmasıdır. Bu teknoloji sayesinde de aynı yerde bulunamayan öğretmenler öğrencilere ders anlatabilir ve öğrenciler de takıldıkları yerleri sorabilirler.

Esnek öğrenme modeli

Esnek uzaktan eğitim modelinde etkileşimli çoklu ortamlar, internet vasıtasıyla web tabanlı kaynaklara ulaşım, iletişimi internet tabanlı yapmak ve kullanıcıya otomatik cevap veren sistemleri kullanmak, sanal kampüs ortamları oluşturmak yer almaktadır. Uzaktan eğitim teknolojilerini karşılaştırdığımızda yeni teknolojilerin eskilere öğrenme ve kaynak açısından daha etkili ve sınırlılıklarının daha az olduğunu görüyoruz. Yeni teknolojiler bireye zaman, mekân ve öğrenme hızında esneklik sağlıyor. Kurum maliyetlerinin azalması ve bununla rafine edilmiş bilgi en etkileşimli vasıtalarla öğrenciye sunulmaktadır. Bu eğitim modelinin sunduğu esnek öğrenim birçok üniversitenin bu sisteme geçmesine neden olmuştur. Bu modelin öğretim elemanına, öğretim mekânı ve zamanına gerek duymaksızın ders verme imkânı sağlaması uzaktan eğitime geçilmesinin başlıca sebeplerindendir.

Dünya üzerinde en çok tercih edilen uzaktan öğretim modeli yukarıda bahsi geçen Esnek Öğrenme Modelidir. İnternet'in ve Web teknolojilerin gelişmesi bu eğitime olan katkıyı arttırmıştır. Bu sisteme her türlü bilgisayar ortamından erişim sağlanabilir. Örneğin bir masaüstü veya dizüstü bilgisayardan veya cep telefonundan. Kamuya açık ücretsiz lisansı bulunan bu eğitim sistemlerinden en çok tercih edilen öğrenme yönetim sistemi Moodle öğrenme yönetim sistemidir. (L.M.S. : Learning Management System)

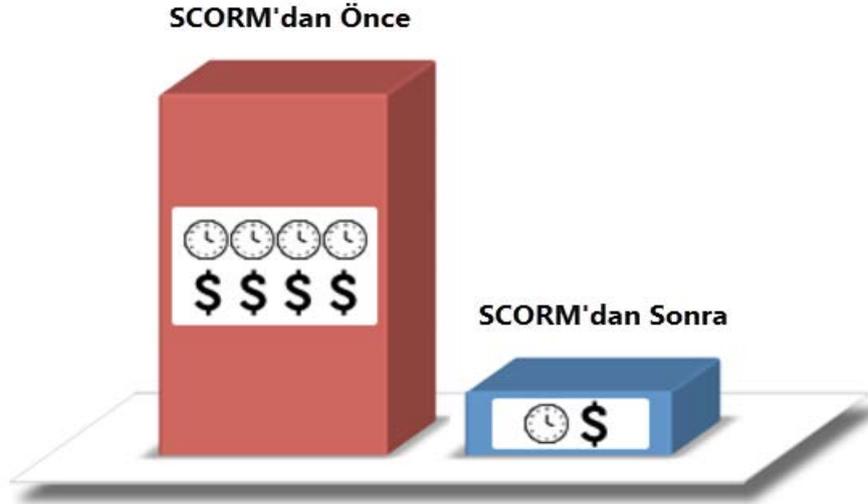

Moodle, bir Web tabanlı öğrenme yönetim sistemidir. Bir Php sunucusu ve Mysql Veri tabanı sunucusuna ihtiyaç duymaktadır. Ve kurulumu son derece basittir. <http://www.moodle.org> adresi üzerinden son sürümüne ait (Moodle 3.3.1+) kurulum dosyaları indirilebilir. (<https://download.moodle.org>)

SCORM (SHAREABLE CONTENT OBJECT REFERENCE MODEL)

SCORM (Shareable Content Object Reference Model) kavramı, ilk olarak Amerikan ordusunda hizmet içi eğitim verme amaçlı olarak kullanılmaya başlandı. Zamanla, yüz yüze eğitimin el vermediği durumlarda uzaktan eğitim metodu ile etkileşimli eğitimde vaz geçilmez bir yapıya dönüştü. Moodle veya benzeri ÖYS (Öğrenme Yönetim Sistemi) yapıları içerisine dâhil edilebilecek standart hale getirildi.

2000 yılının ocak ayında SCORM 1.0 sürümü ilk olarak piyasaya sürülmüştür. Daha sonra 1.1 ve 1.2 sürümleri devamında gelmiştir. 2004 yılında SCORM 2004 1 ve 2. Sürüm, 2006 yılında SCORM 2004 3. Sürüm, 2009 yılında SCORM 2004 4. Sürüm, 2008 yılında IMS, 2010 yılında IMS LTI ve 2016 yılında ise CMI5 sürümü yayınlanmıştır. (<https://scorm.com/scorm-explained>, 10.07.2017)

SCORM nesneleri ile ders içerikleri yayınlanabilir, öğrenim süreci takip edilebilir, ders içeriklerine kısıtlama getirilebilir, öğrenci ile ilgili rapor tutulabilir, sınav uygulamaları yapılabilir, hareketli animasyonlar eklenebilir. Öğrencinin kendi kendine eğitim alması için gerekli olan her türlü ortam, SCORM ile sağlanabilir. SCORM paketi veya standardı halinde hazırlanmış bir ders içeriği veya etkileşimli eğitim seti bu standardı kullanan tüm ortamlarda (Web veya Masaüstü) sorunsuz bir şekilde çalışabilir. Moodle veya benzeri öğrenme yönetim sistemlerine (LMS: Learning Management System) eklenerek Web ortamında eğitimlerin daha çok öğrenciye ulaşması sağlanabilir.

Şekil 1: SCORM Nesnelerinin Kullanımından Elde Edilen Kazanç.

SCORM nesnelerini oluşturmak için birçok editör uygulaması bulunmaktadır. En çok kullanılan uygulamalar; Adobe Captivate ve Articulate Storyline uygulamalarıdır. Eğitim senaryolarında kullanılacak birçok içerik (Ders sunumu, Sınav, Ses, Video, animasyon vb.) bu uygulamalar sayesinde kolayca SCORM paketi haline getirilebilir.

Adobe Captivate, Adobe firmasına ait olan bir yazılımdır (<https://elearning.adobe.com/adobe-captivate-tutorials/>, 04.06.2017). Yazılım, çeşitli görsel tasarımlarla hareketli ve etkileşimli sunumlar yapmaya yarar. E-Öğrenme içerikleri oluşturulabilir. Ses, video içerikleri kullanılabilir. Öğrenci ile birebir etkileşimli içerikler kolayca hazırlanabilir. SCORM çıktıları oluşturabilir.

Articulate Storyline ile ders sunumları, ses, video kaynakları, Abode Flash animasyonları, sınav kaynakları, hazır resimler vb. birçok eğitim amaçlı kaynaklar kullanılarak etkileşimli eğitim seti hazırlanabilir. Ayrıca kendisine has olan programlama dili kodları ile etkileşimde daha ileri noktalara gidilebilir. Sunumlar, SCORM paketi olarak çıktı haline getirilebilir. Kullanıcı ara yüzünün Microsoft Office menü yapısına benzerliği nedeniyle kolay kullanıma uygundur. (<https://articulate.com/#resource-menu>, 2017)

SCORM nesnelere nasıl oluşturulur?

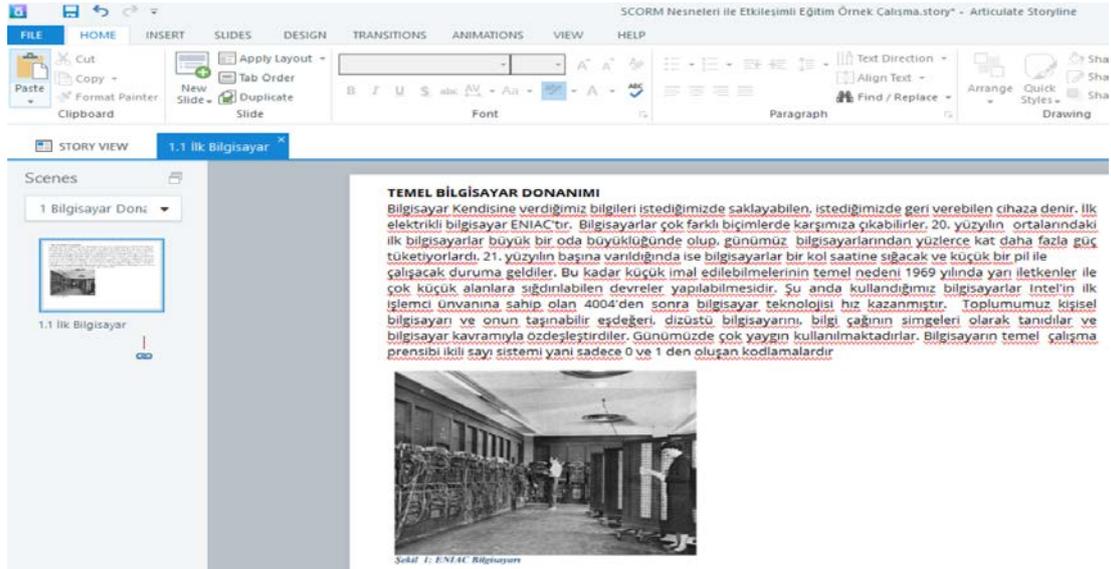

SCORM nesnelere oluşturulan dosyalar, aslında bir Web tarayıcısının yorumlayabildiği standartlardan oluşmaktadır (Html, JavaScript, v.b) . Bu nesnelere oluşturmak için birçok farklı uygulamalar bulunmaktadır. En çok tercih edilen uygulama olan Articulate Storyline uygulaması üzerinden bir SCORM nesnesinin meydana getirilmesi işlemi aşağıda gösterilmektedir. Özellikle sunum hazırlama uygulaması olan Microsoft PowerPoint uygulamasını kullananlar bu uygulamada pek yabancılık çekmeyeceklerdir. Bu uygulamanın ücretsiz deneme sürümünü kendi sitesinden indirilebilir (<http://www.articulate.com>, 15.13.07).

Articulate Storyline uygulaması çalıştırılır.

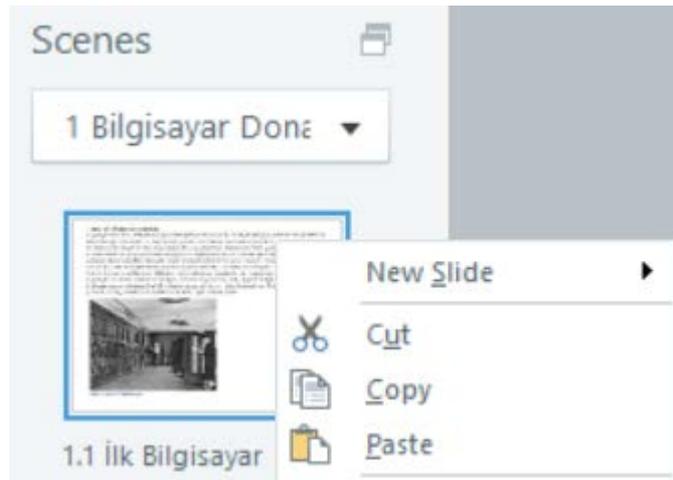

Şekil 2: Articulate Storyline 3.0 giriş ekranı.

“New Project”, ile yeni bir proje başlatılır. İstenirse bir Microsoft PowerPoint sunumu da bu sisteme aktarılabilir. Bu işlem için ilk giriş ekranındaki “Import” seçeneği seçilmelidir. Sunumda ilk olarak gösterilecek içerikler hazırlanır. Başka uygulamalardan kopyala yapıştır metodu ile bilgiler alınabilir.

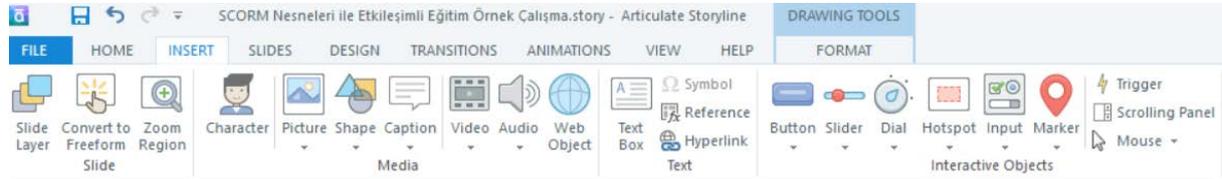

Şekil 3: Articulate Storyline sunumuna içerik ekleme.

Yeni bir sunum hazırlamak için aşağıdaki gibi “New Slide” komutu kullanılır. Veya “Copy, Paste” komutları ile var olan sunumdan kopya alınabilir.

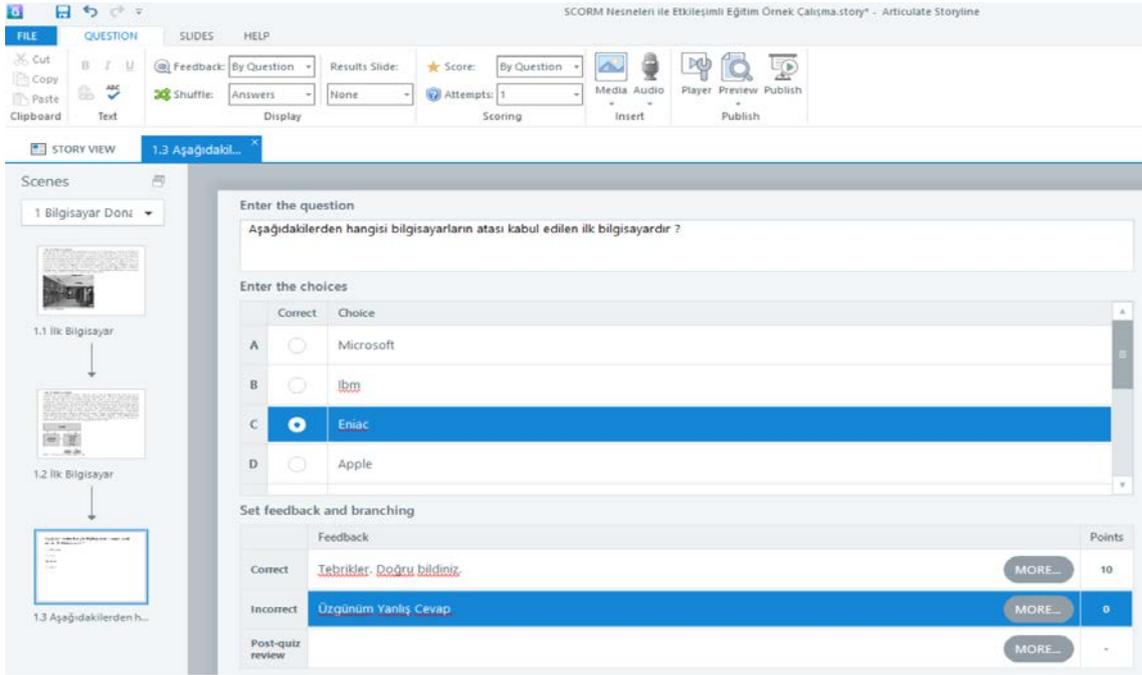

Şekil 4: Yeni sunum ekleme.

Sunum içerisine etkileşimli ortamı sağlayacak birçok nesne eklenebilir. Aşağıda eklenebilecek bu nesnelere bazıları görülmektedir.

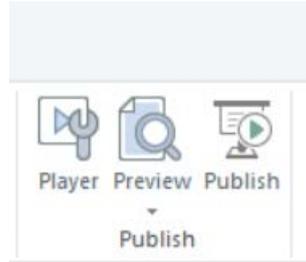

Şekil 5: Sunuma eklenebilecek etkileşimli nesnelere.

Sunum içerisine kısa sınavlar eklenebilir. Sunum listesinin olduğu panelde sağ tuşa basıldığında New Slide>Graded Question komutu ile kısa sınav hazırlama ekranına ulaşılabilir. Soru metni ve seçenekler yazılır. Doğru cevap olan seçenek işaretlenir. Puanı belirtilir.

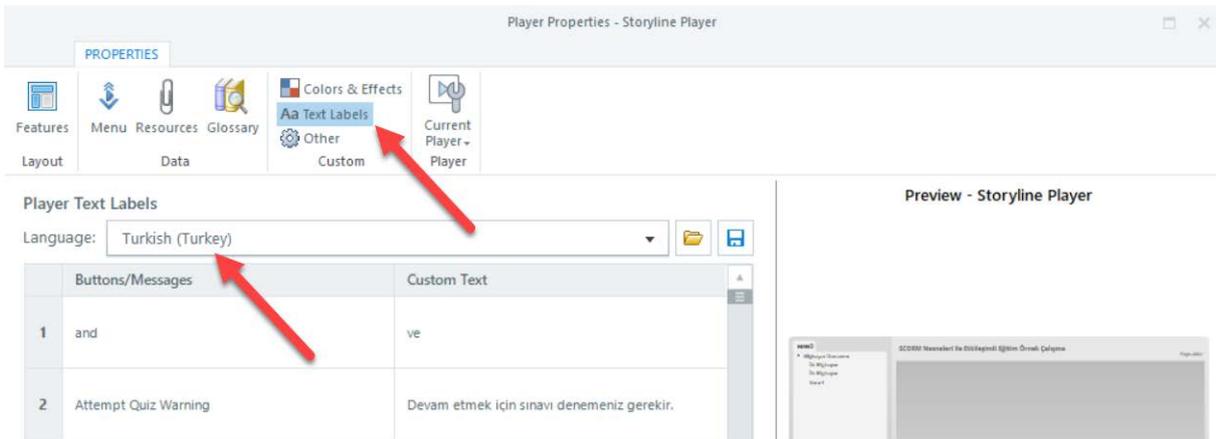

Şekil 6: Kısa sınav hazırlama.

Sunum içerikleri tamamlandıktan sonra ön izleme yapılabilir. Hangi aygıtlarda nasıl görüntülenebileceği ayrıca denenebilir. Ön izleme işlemi “Preview” komutu ile yapılabilir. Bu işlemden önce oynatıcı ara yüzün komutlarını Türkçeleştirilmesi sağlanabilir. “Player” düğmesi seçilerek işlem aşağıdaki gibi yapılır.

Şekil 7: Oynatıcı, Ön izleme ve Yayınlama düğmeleri.

Şekil 8: Oynatıcı mesajlarının Türkçeleştirilmesi.

“Preview” Ön izleme düğmesi ile nasıl çalıştığı ekranda görülebilir. Sağ üst tarafta bulunan farklı cihaz seçenekleri kullanılarak cep telefonu vb. aygıtlarda nasıl görüneceği görülebilir.

SCORM Nesneleri ile Etkileşimli Eğitim Örnek Çalışma Kaynaklar

TEMEL BİLGİSAYAR DONANIMI

Bilgisayar Kendisine verdiğimiz bilgileri istediğimizde saklayabilen, istediğimizde geri verebilen cihaza denir. İlk elektrikli bilgisayar ENIAC'tır. Bilgisayarlar çok farklı biçimlerde karşımıza çıkabilirler. 20. yüzyılın ortalarındaki ilk bilgisayarlar büyük bir oda büyüklüğünde olup, günümüz bilgisayarlarından yüzlerce kat daha fazla güç tüketiyorlardı. 21. yüzyılın başına varıldığında ise bilgisayarlar bir kol saatine sığacak ve küçük bir pil ile çalışacak duruma geldiler. Bu kadar küçük imal edilebilmelerinin temel nedeni 1969 yılında yarı iletkenler ile çok küçük alanlara sığdırılabilen devreler yapılabilmesidir. Şu anda kullandığımız bilgisayarlar Intel'in ilk işlemci ürününe sahip olan 4004'den sonra bilgisayar teknolojisi hız kazanmıştır. Toplumumuz kişisel bilgisayarı ve onun taşınabilir eşdeğeri, dizüstü bilgisayarını, bilgi çağının simgeleri olarak tanıdılar ve bilgisayar kavramıyla özdeşleştirdiler. Günümüzde çok yaygın kullanılmaktadırlar. Bilgisayarın temel çalışma prensibi ikili sayı sistemi yani sadece 0 ve 1 den oluşan kodlamalardır.

Şekil 1: ENIAC Bilgisayarı

< GERİ İLERİ >

Şekil 10: Kısa sınav sorularının ön izlenmesi.

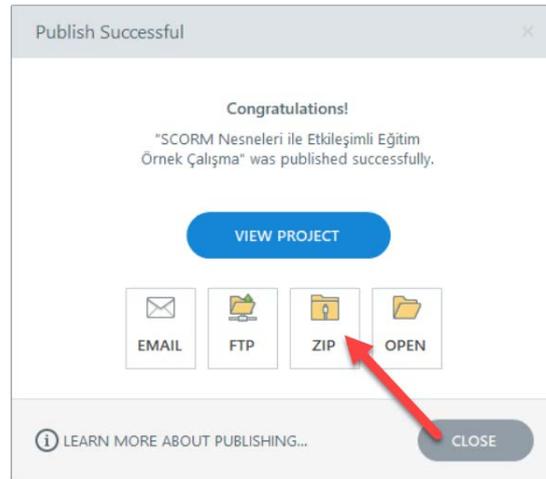

SCORM çıktı biçimine dönüştürme

Moodle veya benzeri ÖYS'lerde (Öğrenme Yönetim Sistemi) kullanılacak SCORM nesnelere ilişkin belirlenmiş standartlarda oluşturulması gereklidir. Yukarıda hazırlanan sunum içeriğinin son aşamasında SCORM çıktısı şeklinde yayınlanmalıdır. Bu işlem için üst menüde bulunan "Publish" komutu kullanılır.

Şekil 11: Sunumun SCORM çıktısı haline getirilmesi.

SCORM çıktıları birden fazla Html veya benzeri dosyalardan oluşabilir. Bu yüzden bu dosyaların Zip biçiminde oluşturulması daha kullanışlı olmaktadır. Özellikle Moodle veya benzeri ÖYS'lerde içeriğin derse eklenmesi işlemi bu yolla daha kolay hale gelmiştir. Bilgisayarlar farklı donanımlarda ve farklı platformlarda bulunabilir. Örneğin bir akıllı cep telefonu masaüstü bilgisayardan farklı bir donanıma sahiptir. (OF, 2014) Bu yüzden oluşan SCORM dosyaları her ortamda aynı şartlarda çalışmayabilir.

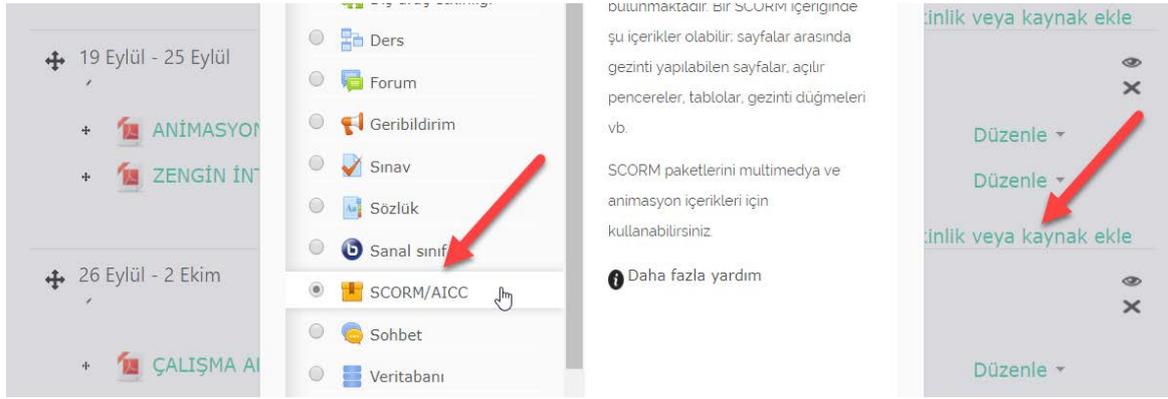

Şekil 12: SCORM çıktısının Zip biçiminde oluşturulması

Sonraki aşama SCORM nesnesinin Moodle ÖYS'de bulunan bir derse yerleştirilmesi.

SCORM çıktıların moodle ÖYS içerisine yerleştirilmesi

Örnek olarak Kocaeli Üniversitesi Uzaktan Eğitim Araştırma ve Uygulama Merkezi'nin ÖYS'si kullanılacaktır. <http://uzem.kocaeli.edu.tr/ue> (KOÜ UZEM, 2017) adresi ile sisteme giriş yapılır ve ders ortamı açılır.

Düzenleme moduna girilerek “Yeni Kaynak veya Etkinlik Ekle” bağlantısı seçilir. SCORM/AICC seçilerek başlıklar girilir ve oluşturulan Zip dosyası eklenir.

Şekil 13: Moodle ÖYS'de SCORM etkinliğinin eklenmesi.

SCORM nesnesi Moodle ÖYS dersine eklendiğinde aşağıdaki gibi görünebilir. Öğrenci, bağlantıyı seçerek kendi kendine etkileşimli olarak dersi çalışabilir.

Şekil 14: Moodle ÖYS dersinde bir SCORM nesnesinin görünümü.

SONUÇ VE ÖNERİLER

Her geçen gün İnternet hayatımızın her aşamasına girmekte ve buna bağlı olarak Web teknolojileri gelişmektedir. Masüstü bilgisayardan tutun da cep telefonuna kadar geniş bir yelpazede birçok Web sistemini kullanmak artık mümkün hale gelmiştir. Öğrenme aşaması hayat boyu sürecek bir süreçtir. Dolayısıyla bilgiye her yerden ulaşmak ve bu bilgiyi paylaşmak büyük bir ihtiyacın ötesine geçmiştir. Uzaktan eğitim sistemleri bu ihtiyacı ucuz ve hızlı bir şekilde karşılayarak nesillere sosyal bir katkı da sağlamışlardır.

Basit ara yüzlere sahip uygulamalar sayesinde SCORM nesnelerinin herkes tarafından oluşturabilmesi hedeflenmiştir. Bu makalede bahsi geçen işlemlerin nasıl yapılacağı adım adım açıklanmıştır. Sanki bir öğretici sistemde mevcutmuş gibi bir ortamda öğrencinin eğitim alması hem zaman hem de maliyet bakımından çok büyük bir kazanç elde edilmesini sağlamıştır. Ayrıca eğitim alma ihtiyacı olan fakat mali, fiziki veya benzeri sebeplerden dolayı bu eğitim hizmetlerini alamayanlara da uzaktan eğitim bir umut olmuştur.

SELF-CORRECTING MECHANISM IN EDUCATION: A MECHANISM TO IMPROVE READING A LANGUAGE TAKEN ONLINE

Nabil Al-AWAWDEH

University of Missouri- Columbia- USA

ngapp5@mail.missouri.edu

ABSTRACT

This paper is showing how, as teachers and online classes monitors, we developed a mechanism to help student to read and comprehend a text at or above grade level. We wanted our students to take ownership of their reading, monitoring themselves while they are reading and self-correcting.

Goal

Self-correction mechanism may seem less important as a diagnostic tool than errors, but it demonstrated for us the way in which a reader is working to make sense of a text he is reading. The students are establishing a self-correcting mechanism to help them to improve reading a language taken online because the results of our students in reading skill show weakness, see the following chart.

	semester 1	semester 2	
Reading	65-72%	62-71%	As we can see from the results, the reading skill is below average, so we tried to help students to improve it. As teachers, we wanted our students to read at or above level and to take ownership and monitoring themselves while they are reading and then self-correcting when they need to. Definition: Self-correcting mechanism is a guided mechanism that aims to help student to correct themselves through building reading strategies to improve their reading, so learners correct themselves instead of a teacher doing it.
Speaking	85-87%	85-86%	
Writing	79-86%	77-83%	
Listening	80-83 %	76-83%	

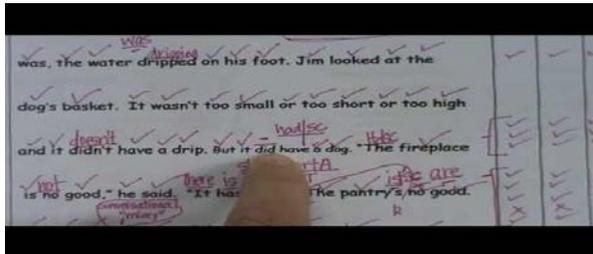

Recht (1976) says: "...in fact most readers, regress to correct a percentage of their errors. Self-correction occurs when the reader, aware that he has made an oral reading error, moves his eyes back over previously read material and attempts to read the text correctly. He is either successful, producing the expected response, or unsuccessful, producing an alternate response" (P. 632).

Why using such mechanism

Our established mechanism give the students the ability to self-monitor which enables them to select and use strategies to improve comprehension. Readers who self-monitor know when their reading makes sense and when it does not. If comprehension is blocked , they know what strategies to use to repair it. Self-correcting is a significant component of comprehension. Comprehension monitoring instruction teaches students to: Be aware of what they do understand, Identify what they do not understand and use appropriate strategies to resolve the problems in comprehension, because students learn from their mistakes. D. Recht (1976) says that " Research shows that self-correction is a positive indicator that the reader is comprehending. The correction, then, should not be regarded as an error, but rather as evidence of the reader's successful interaction with the text". So, Self-correcting mechanism helps students to reflect on their own language use and helps them to be more critical of their production.

The mechanism

Teachers can involve learners in self-correcting to different degrees, by giving them more or less guidances as to the location and nature of their errors and examples of good use of a language to compare it with their own reading. One of the strategies that we use it in our mechanism is a guided reading and running records. Students are asked to record themselves reading into a computer, phone or tablet. The students have a passage in front of them that is at their reading level. They record themselves and then go back and listen to their recorded reading, marking any errors on their paper as shown in the illustration below.

If students are able, we have them mark what they said. They record the number of errors that they made and then repeat the process until they erase the errors. As last step, They should also play back the record and pause it every time they hear a mistake, talk about what they said and how it could be improved. Afterwards, play again and point out any significant errors that they missed and work on correcting the language together.

To do this mechanism, we have developed several strategies and techniques that encourage self-check, provide the necessary tools for self editing and proofreading, develop critical thinking and independence. The positive side of this approach is that evaluation gradually become and internal rather than external process, shifting the focus from grades to self-check and diminishing the tension caused by grades.

How to perform these strategies and techniques

To perform the strategy: we recommend the students to do the following three steps:

1) Reading aloud and record: It provide a demonstration of stopping within a text and predicting or searching for cues to self-correct. Stop and talk about why you have to look for more information (e.g., "Oooops! That didn't make sense. I need to...").this strategy has several advantages and among them:A) It trains them to listen to themselves. Too many students rush through answers without even taking a few seconds to gather their thoughts. B)It helps them take responsibility for their learning. The teacher is not there to correct them all the time, and the teacher can't correct every single mistake. C)It helps students gain a better awareness of the language. They're not just saying things in a language. They really "get it". D) It boosts confidence. When a teacher corrects a student, this mistake is singled out. The more a teacher corrects someone, the more aware they are of their mistakes – their confidence suffers. But by self-correcting, the student is taking charge; corrections are less easier. E) It allows students to gauge their own problem areas. Some might come to realize they always make verb tense mistakes. Others might see they need to improve their vocabulary and word choice.

2) the second step is to find the mistakes but First of all, we should help our students to define a mistake concerning their case. For us, a mistake is a misuse of the rule/s that has already been studied and exercised. A mistake is not a wrong use of rule/s or vocabulary that have not yet been studied. One of the effective technique, that we used, is to ask the students to note their errors. When noting down errors during reading, it is advised to group these mistakes by type by putting them under headings, for example: Subject, verb, Object...etc. when students come to correct them afterwards, they can pick and choose those that are most frequent/ important and also do so in logical order. Based on our experience with students, It is much simpler for students to follow if they correct their errors in its categories. It is also important to note that we encourage them to use colorful markers and special signs to edit, see the following Examples: Ex. She is read the book (error is the V), eliminate. (error is V. elimiate).

3) The third step is to re-reread aloud: we ask the students to Periodically stop while they read to let the material "sink in" and think about what they just read. Perhaps it brings up certain memories or reminds them of something

they like or dislike. We also ask the students to pause to ask themselves whether or not they understand what they are reading. If not, reread again. And ask a closing to the process.

4) In the last step, we ask the students to re-record to improve final reading. In their final error check, they should highlight mistakes, teacher should here provide them with necessary suggestions to create a list of repeating mistakes. Teachers should also give the students more and more exercises to practice specific points that they have probably misunderstood. If grading is necessary, suggest some extra points for completing the correction assignment.

Based on our experience, results showed that using the above tips always improved the student's overall performance, raised their self-confidence and developed their reasoning skills.

NEW RESULTS

The results of our students are very positive, The chart below shows the new results of our students after performing the mechanism for 2 semesters.

	semester 1	semester 2
Reading	73-82%	74-85%
Speaking	85-87%	85-86%
Writing	82-89%	81-88%
Listening	80-83 %	76-83%

As we can notice, The new results show that many students have shown improvement in the number of words that they read correctly in a minute, but, of course, there are still some students who are making the same mistakes and are not paying attention to what they are reading. Our goal is to get students to pay more attention to what they are reading and to read accurately the first time. The more attention we can draw to students' misreads and the more we can get students to see that they are not looking at the entire word, the fewer mistakes they will make and the better readers they will become. By comparing the old results with the new results, we can conclude the following:

	2010-2011		2016	
	S 1	S 2	S 1	S 2
Reading	65- 72%	62-71%	73- 82%	74-85%
Speaking	85-87%	85-86%	85-87%	85-86%
Writing	79-86%	77-83%	82-89%	81-88%
Listening	80-83 %	76-83%	80-83 %	76-83%

- 1) The reading skill at the beginning of our project was between D and C and after performing our mechanism it did improve to be B which is at average level.
- 2) The writing skill did also improve because when we write, we imitate a writing style of something we read before. So, our mechanism had double impacts.

CONCLUSION

In our project, that took several years till we reached a better understanding to it, we developed a self-correction mechanism that allowed students to identify the mistakes they have made while reading and reading accurately at the first time. We showed how our modeling and practice were very successful. Statistics listed above, showed that many students have shown improvement in the number of words that they read correctly in a minute, but, of course, there are still some students who are making the same mistakes and are not paying attention to what they are reading. We will also analysis the Self-correcting materials, those that provide the student with correct instruction to use the mechanism. At the end, we evaluated this mechanism to show peers how effective it is and how student's ownership plays a critical role in the learning process.

SELF-EFFICACY STUDY OF COMPUTER SCIENCE ENGINEERING STUDENTS

Ildikó HOLIK
 Ágoston Trefort Centre for Engineering Education
 Óbuda University
 Hungary
 holik.ildiko@tmpk.uni-obuda.hu

ABSTRACT

In our study, the self-efficacy of 188 freshman computer science engineering students were surveyed. We studied how much they trusted that they would be able to carry out their action intentions and to what extent they were convinced of their ability to generally cope with difficult life situations, how much control they could exercise over their environment and adaptively cope with challenges and the expectations of their surroundings and everyday stress-inducing situations. In our study, Schwarzer's General Self-Efficacy Scale was used (Schwarzer and Jerusalem, 1995). We had hypothesized that the studied computer science engineering students had a bigger ratio of high self-efficacy than low. The outcome of the study supported our hypothesis. According to respondents, they experienced the most deficiencies in the area of creativity and handling unexpected situations, which areas need the most improvement.

Key words: Self-efficacy, Computer, Engineering, Students

INTRODUCTION

During the last decades, in higher education a growing attention is paid toward the measurement and developing of competencies of students. It became a preferred aim that education help the students to be successful in learning and in working after the university, to prove their capabilities.

Numerous definitions for the concept of competency is used, here we highlight the definition of Wheeler and Haertel (1993): "Competency is a system of knowledge, capability, bent, personal quality, experience and other traits, that give a base for the successfulness of learning or work" (cited: Hercz at al., 2013, 84). The most important property of competency measurements is that they yield data not about the formal achievements but about the capabilities being behind or just missing from behind (Halász, 2012).

The investigation of generic and specific competencies in higher education makes it possible to put into shape expectations in connection with their potential achievement and to analyse how their skills and capabilities used in learning advance their success at the university, and at their workplace respectively (Koltói, 2013). In different high education institutions different specific competencies are developed (Benedek and Molnár, 2017) but some general competencies are developed there indirectly, social, personal or communication competencies for example (Schomburg, 2010).

During the last years, several competency measurements have been executed in Hungary (Kiss at al., 2010; Biró at al., 2007; Hercz at al., 2013). Knowing their results, it is a reasonable question: What to measure? The knowledge? The intelligence level? The skills? The aptitude of students for the profession chosen?

We are convinced that the indicators, solely in connection with the cognitive areas, do not yield sufficient information for predicting the students' level of aptitude for the profession chosen and the success in future work. This is the reason to measure a wider range of attributes in our research.

THE AIM OF THE RESEARCH AND THE AREAS INVESTIGATED

Our research group tried to obtain a global image of the competencies of computer science engineering students and was looking for development possibilities. Concerning the design of research, we based on the experiences of earlier measurements, in analysing data, we were taking into consideration their results published (Tóth, 2014; Tordai, 2016; Simonics, 2017; Sanda, 2016). The research began by measuring background data, and the following attributes were involved: competency list intelligence, style of learning, personality traits, emotional intelligence, achievement motivation, self-efficacy. The present essay deals solely with self-efficacy. The first phase of research was executed in September of the 2016/2017 session, among first-year computer science engineering students.

A pilot investigation in June 2016 (among first-year computer science engineering students as well) helped in developing and making precision enhancement of the tools of measurement and evaluation methods, taking the results of international scope into consideration. We attached great importance to check the reliability of the

measurement tools.

THE CHARACTERISTICS OF THE SAMPLE

A sample of 188 first-year undergraduate engineering informatics students of a Hungarian university participated in the study, including 166 males (88.3%) and 22 females (11.7%). The average age was 20.07. The youngest student was 18 years old, the oldest one was 26. The majority (34 %) of the participants is 20 years old (see Figure 1).

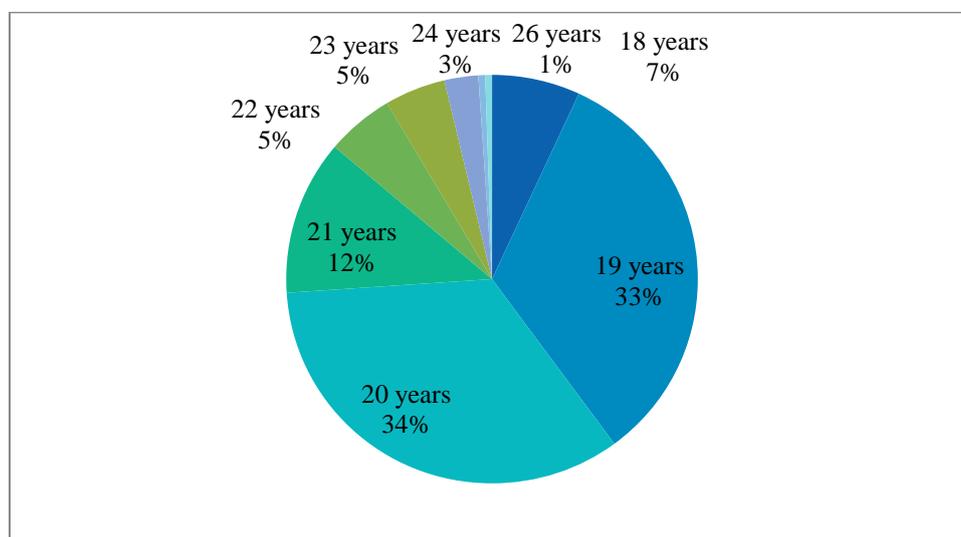

Figure 1: The age distribution of the engineering informatics students (N=188)

Most of the students live in the capital (38,8%), 11,2% in a county seat, 29,8% in some smaller town, 20,2% of them lives in a village. 60,1% of the participants took the final exam in 2016 at the secondary school, 19,7% in 2015, 9% in 2014, 11,2% earlier. Their majority, 29,8%, took the final exam in vocational school, and 28,2% in a traditional secondary school of 4 years. Most of the participants (76%) have work experience: 23,4% of them student work in their secondary school years, 70,2% summer work, 28,2% works after secondary school, and, in fact, 6,9% of them are working students.

TESTING THE SELF-EFFICACY

The concept of self-efficacy was used first by Albert Bandura who published his article entitled "Self efficacy – Toward a unifying theory of behavioural change" in 1977. This work was a breakthrough in psychology since Bandura constructed a frame and model able to explain and predict change of human behaviour.

Self-efficacy is the belief of the individual that he or she can solve the problem given (Bandura, 2006) perceivable certainty of being able to solve a problem, that is, a goal-oriented evaluation (Koltói, 2013). Our belief being able to achieve our purposes by our actions, intensively influence our decisions and efforts in numerous spheres of our life (Jámbori et al, 2016).

People having a weak self-efficacy (Bandura ,1994):

- live to see a difficult problem as a personal threatening and thus they shrink back from them,
- do not desire their goals so intensively, and thus, when they face a difficult problem, they pledge themselves less to them, do not concentrate on the successful issue but they think of their personal defectiveness, imagine the possible obstacles and expect a negative issue,
- if they face an obstacle, they retreat, namely they decrease the amount of efforts and they give up the struggle soon,
- if they do not succeed or face an obstacle it takes long to regain their self-confidence,
- they trace the insufficient achievement to their insufficient capacities, thus, even if their defeat is not total, they loose their belief in their own capabilities,
- they have a bent to stress and depression.

People having a strong self-efficacy (Bandura ,1994):

- if they face a difficult problem, they consider it a challenge,
- they are able to give themselves entirely to an activity, because they are really interested in it,
- they choose such goals which are challenges for them and they pledge themselves to them intensively,
- if they defeat in something, they increase their efforts and hold out,
- when they face an obstacle, or they are not successful in something, they regain their self-confidence soon,
- they live to see a defeat so that they trace it to the lack of their efforts or the insufficiency of their knowledge, that is, next they will have a possibility to success: the level of efforts can be increased and the knowledge can be acquired,
- they are sure to be able to control even the difficult situations,
- such people have a better achievement, their circumstances of life are better and they have less bent to stress and depression.

The aim of our research was to investigate the degree of confidence of the given person to be able to achieve his or her purposes of action, the degree of conviction to be able to manage the difficult life situations, to control people surrounding him or her and respond the challenges adaptively, to suit the expectations of other people, and manage the everyday stress-generating situations.

We applied the Hungarian version of General Self-Efficacy Scale, Schwarzer and Jerusalem, 1995 (Kopp et al., 1993), where the students evaluated 10 positive statements on a 4 degree self-estimating scale (1 = Not at all true, 2 = Hardly true, 3 = Moderately true, 4 = Exactly true).

We have hypothesized that the studied computer science engineering students had a bigger ratio of high self-efficacy than a low one.

THE RESULTS OF OUR RESEARCH

The value 0,803 of Cronbach alpha shows that the reliability of the question form is good.

The average of scores for the 10 questions is 29,54 (N=188, MIN=19, MAX=40, SD=4,181). This is slightly lower than in case of the pilot test (30,96), but the total scores are between 10 and 40, this also can be considered as a high average score, showing a high self-efficacy.

This is almost equal to the result of the research on an international sample (in 25 countries) (Scholz et al., 2002): total average: M=29,55, SD=5,32.

However, comparing with the Hungarian sample of the international test above, our average is higher: 28,6 (N=158; Cronbach-alpha: 0,88).

This is true even if we consider the questions separately, except two questions (see Figure 2). These two items are: "It is easy for me to stick to my aims and accomplish my goals.", and "When I am confronted with a problem, I can usually find several solutions." The greatest difference can be found in case of Item 1. ("I can always manage to solve difficult problems if I try hard enough.")

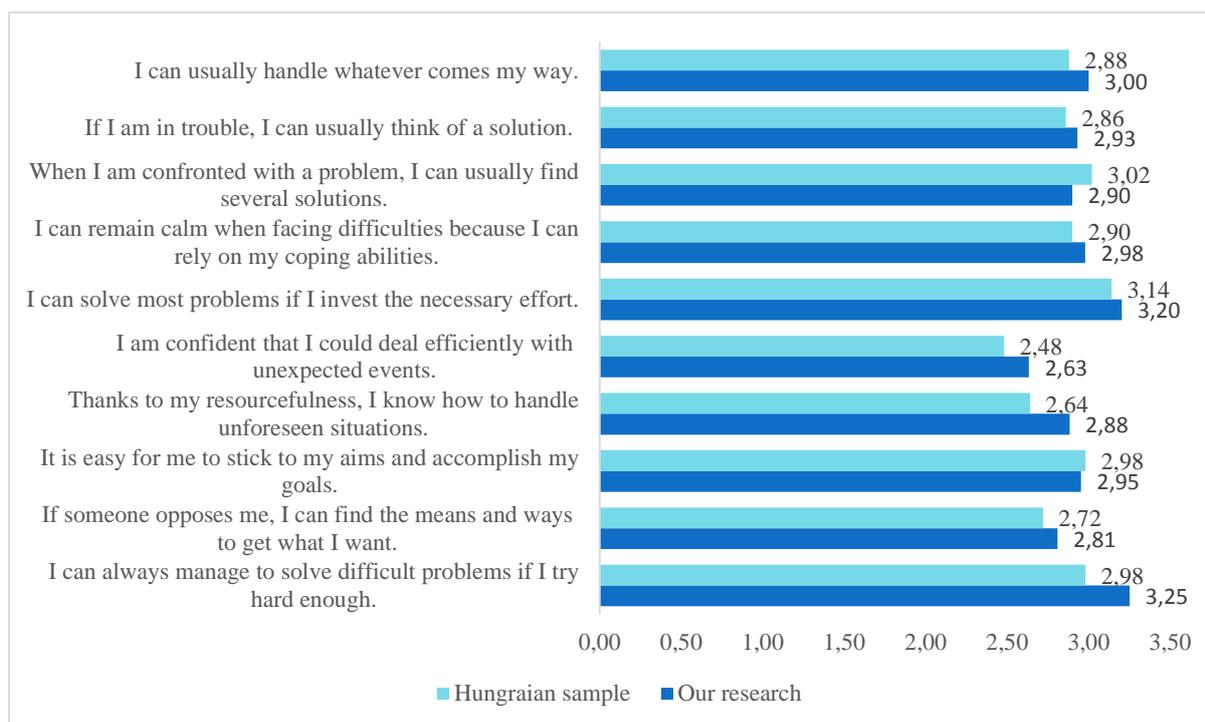

Figure 2: Comparison of results, based on the average score of items, for the Hungarian sample (N=158) (Scholz et al., 2002) of the international test and our test (N=188)

Éva Szabó and her colleagues (2015) represented the higher level of self-efficacy on a sample of grammar -school students, compared with an earlier Hungarian research (Kopp et al., 1993). However, the evaluation of the researchers is: “This difference does not imply a real difference of the level in the psychological sources of power between the two groups since the impact of the social expectation that is frequent in case of a self-filling question form and the social representation of the changes in society has to be taken into account.

As an effect of the political changes in 1989 in Eastern Europe, the experience of self-efficacy is expected more intensively. The character of an active person who can find a solution in any situation has been integrated into the image of a successful person (Szabó, 2012). It is possible that the answers of the students were not in connection with their experience on themselves but with the trend concerning the ideal of the self.” (Szabó et al., 2015, 16.) *This can be true in our case as well.*

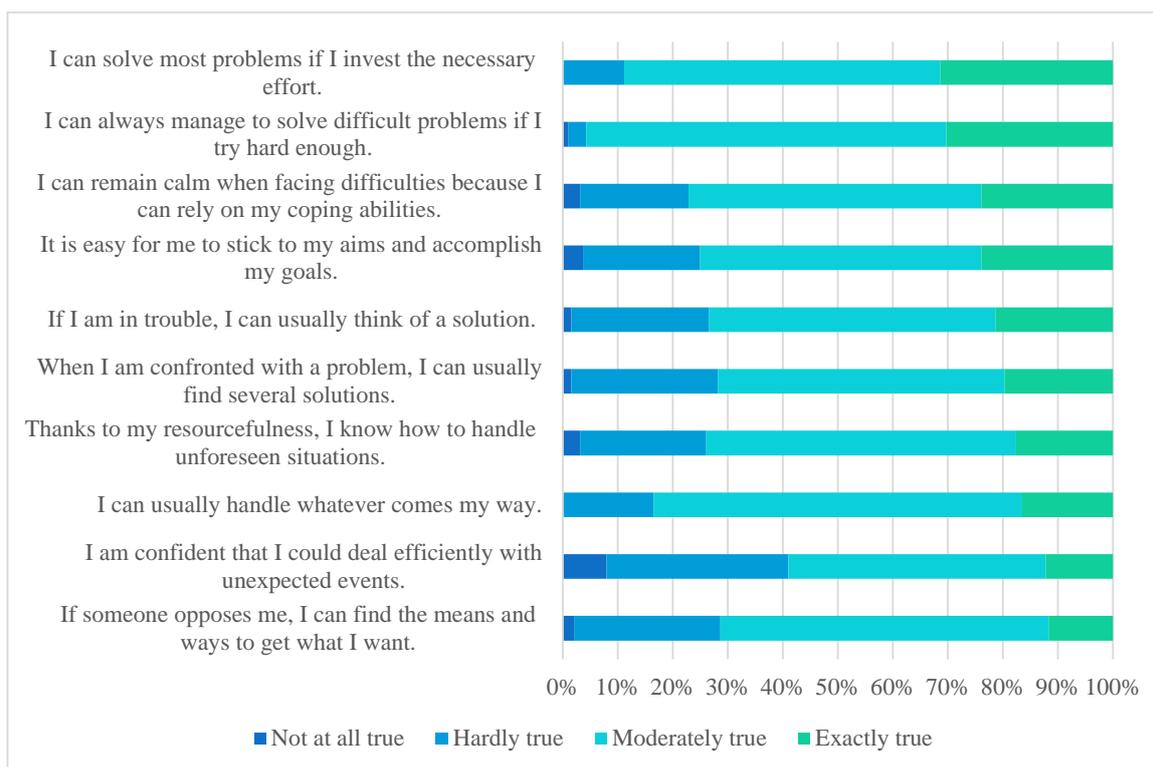

Figure 3: Answers, self-efficacy question form, (evaluated on a 4-degree scale, N=188)

Evaluating the questions separately (see Figure 3), one can see that the students emphasized mostly their ability of solving problems, while the creativity was not mentioned so frequently, furthermore the participants estimated so that they can manage the unexpected situations less.

This is an area to be developed as well.

Taking into account the mean of total scores ($M=29,54$) and the standard deviation ($SD=4,181$) we obtained the categories of medium, low and high self-efficacy. The self-efficacy of the majority (69,7%) of the students is medium, while 14,4% of them has a low and 16% has a high self-efficacy. (The results of the pilot test: medium: 68%, low: 14%, high: 18%.)

Self-efficacy	Number of students	%
Low (<M-1SD)	27	14,4
Medium (between M-1SD and M+1SD)	131	69,7
High (>M+1SD)	30	16

Table 1: Evaluation of self-efficacy (N=188, based on the mean results of participants)

CONCLUSIONS

Several international research groups emphasize the role of self-efficacy concerning achievement in learning (Schunk, 1989; Zimmermann, 2000; Bandura, 2006). The results of the investigations suggest, that self-efficacy has an impact on the motivation of the students, achievement in study, cognitive and metacognitive strategies (Dinther et al., 2011) and expresses the connection between the different factors of competency measured.

The feeling of self-efficacy is determined by four factors: the earlier experiences of success and defeat, the observation of models of other persons (social learning), encouragement given by other people and physiological reactions (anxiety, for example). Consequently, self-efficacy is a psychological characteristic which can be influenced and developed, and has a determining significance in explanation of achievement level in learning (Schunk, 1989). Those students who have confidence in their capabilities, make more efforts for executing their tasks, they live to see them as challenges.

Consequently, it is important to develop the self-efficacy of students in high education as well, and it can be

enhanced by applying education forms based on the active participation of the students.

SEMIOTIC ANALYSIS OF CONSTITUTIONAL AMENDMENT REFERENDUM ADVERTISEMENT FILMS

Elif SESEN
Nigde Omer Halisdemir University, School of Communication
Nigde, Turkey
elifsesen@gmail.com

ABSTRACT

Although rising mass media of the age is the Internet, extensity and generality power of television can not be denied to reach all parts of the society. Advertising films on television is one of the mostly preferred media for the political parties which want to address as many voters. Television advertisements of political parties were featured on before the constitutional amendment referendum held on 16 April 2017 in Turkey. In the study which aimed to evaluate the television advertisements related to the referendum by Christian Metz's semiotic method, meaning and connotations of the images, people, places, writings and dialogues in the films and also the use of music and sound have been examined.

Keywords: Semiotics, referendum, television, advertisement films

INTRODUCTION

Advertising in political communication is becoming more and more important and during the election campaign period, all mass media tools have been frequently used to explain the views of the political parties to the public.

Although rising media of the age is the Internet, extensity and generality power of television can not be denied to reach all parts of the society. Television as an audio visual media has long-lasting effect on audience. Advertising films on television is one of the mostly preferred media for the political parties which want to address as many voters as possible as well as public meeting, press conference, interview, internet sharing, and etc. In Turkey, the use of advertising films has been also increased during the election campaign periods. In this study, semiotic analysis of the television ads of political parties were featured on before the constitutional amendment referendum held on 16 April 2017 have been done.

POLITICAL COMMUNICATION

As a concept emerging from the use of the communication methods and practices in the political arena, political communication might be defined as "one-way or two-way, continuous communication efforts of a political ideology which is carried out by using methods and techniques of advertising, public relations and propaganda in order to provide the trust and support of the target audience and also to come to power in the political system" (Uslu, 1996: 790)

Political communication also emphasizes the importance of communication in politics. In today's democracies, this situation reveals inevitable rivalry and conflict in every political arena shaped on the communicative method (Gestlé, 2008). Communication is one of the most important effort of the political power today and it is specialization field as a mediating power, a new cultural phenomenon, as well as a philosophical and ideological holder in the columns of the daily newspapers, in the birth of political press, in politic films and finally on the Internet, in other words in almost every stage of the socialization process. Rapid population growth and the complexity of social structures have led to be used the new communication tools and techniques in the political process. In the process of political communication, it is necessary to consider the characteristics of the target groups while deciding on which style, methods and techniques will be used to convey the political messages.

POLITICAL ADVERTISING

Political communication is all the communication activities which are used by the political actors in order to have expected behaviours of the target groups. For political parties, one of the basic objectives is to reach the widest possible and potential voters and to explain what they are doing and what they will do. As a result of the increasing importance of political persuasion, activities such as propaganda, political marketing and lobbying as well as political advertising have become one of the foremost techniques. Kaid and Holtz-Bacha (2006: 31) define the political advertising as the process of giving political messages of a political party or candidate via mass media in order to influence voters' political beliefs, attitudes or behaviors.

Political communication and political advertising, as concept and practice, raised in the United States after World War II and spread in Western European countries in the late 1960s (Topuz, 1991: 6). In Turkey, political advertising in the election process has gained momentum in recent years (Taşcıoğlu, 2009: 8).

Political advertising is one of the most important means of bridging between politicians and target voters due to the ongoing struggle for power since the early ages of history. Today this bridge has been built on visual communication means because of being able to be perceived easily as well as being more memorable.

Some main purposes of political advertising are publicity, drawing attention of the voters, persuasion and the conveying the idea and ideology of the party. There are two main expectations from political parties or candidates during the political campaign process. The first one is to persuade the electors why they should vote for and the second one is to persuade them why not to support other parties or candidates. Political advertising on television is one of the easiest and quickest ways to influence voters' on these two objectives.

Nowadays television is a tool that offers cheap, fast and efficient access to the voters in all democratic countries of the world. Therefore, in spite of new communication technologies like the Internet and social media, television still has an important place in marketing and advertising in many countries including Turkey. According to Postman (2005: 139) who states that the basic metaphor and tool of political discourse in America is television ads, television advertising is the most specific and inclusive form of electronic communication.

1960 United States presidential elections have a great importance with regard to the manipulative power of political advertising and television (Topuz, 1991: 61). In Turkey, the spread of television towards the 1980s and the transition to private television broadcasting from 1990s have caused a great impact on the political arena by leading to the transfer of political struggle to the screens.

The broadcasting of political advertisements on television was released on 3 March 2011 with the amendment in the Radio and Television Supreme Council (RTÜK) code. Television has rearranged the political manner and has changed many things such as the nature, content, style, effect of the political messages given to electors.

Today in political campaigns there are informative and promotional advertisements as well as hidden and subliminal messages that contribute to the image of the party or candidate and also strengthen the effect of the propaganda. In this context, advertising messages based on the cultural codes and signs are becoming more and more important. Because political advertising has naturally been shaped compatible with the social structure of the country.

In television advertisements, political parties or candidates try to create a positive image by informing the voters about their performance and future projects in other words they send positive messages but at the same time they emphasize the inadequacy of their opponents either directly or indirectly in other words they send negative messages. Positive messages are generally preferred by leading or ruling parties. On the other hand, there are some studies which revealed that the negative messages are catchy and interesting than positive ones (Kahn & Kenney, 2000; Lau & Redlawsk, 2006).

Visual signs are often used on television which is the most common means of information and entertainment with the aim of persuading large mass of people. In the political advertising films with special lighting and shooting techniques, some elements such as music, effects and animation are also utilized to capture the instant interest of the voters. The analysis of these elements helps to reveal the explicit or implicit messages in other words the meaning of the advertisement as a whole. In this regard semiotics which might be accepted as an effort to understand the meaning of all kinds of texts, is one of the most commonly used methods in political advertising analysis.

SEMIOTICS

Semiotics is generally defined as “general theory of signification” (Bertrand, 1989: 105). In terms of semiotics everything is a text, a discourse such as traffic signs, clothing, table manners, novels, photography, advertising, and etc. In semiotic analysis, the meaning of the text is examined.

The basic analysis unit of semiotics is the sign. The sign is a communication tool that connotes the thing though it is not itself. According to Deely (1990: 35) to be a sign, it is necessary to represent something other than the self. The sign can be a word, a sound, or a visual image. The sign consist of two elements as signifier and signified. The signifier is the perceived side of the sign such as letters, sounds, images, and so on. The signified is the image, concept or meaning created in our minds by the sign.

Semiotics aims to reveal the construction of the meaning by analyzing the meanings of images and signs in all kinds of texts. In television ads, each image has its own meaning, but has new meanings with new images.

According to semiotician Christian Metz (1991) the image acquires its meaning for its relations with cultural codes or context. Because individuals interpret everything, including advertising messages, in terms of their cultural and social connotations. Cultural codes consist of images shaped in the cultural memory of the individuals of a society from their birth. Metz (1991: 34) defines cultural codes as “the codes that are not required a special education or learning”, so it is enough to be born and raised in that society to understand these codes. Individuals encounter these codes so often, eventually in time they internalize the codes and perceive them directly without thinking them as cultural products.

METHOD

The aim of this study is to examine the television advertisements related to the constitutional amendment referendum held on 16 April 2017 by Metz’s semiotic method. In the study, the meanings and connotations of the images, people, places, writings and dialogues in the films and also the use of music and sound have been examined.

Metz introduced his semiotic analysis method in cinema first in his work titled “Le Cinema: Langue ou Langage? (Cinema: Language or Language System?)” dated 1964 and mentioned four basic elements of cinema language as the image, the speech, the music and noises. He added the “writings” in his work of “Langage et Cinema (Language at Cinema)” dated 1971. Here are the five basic elements of Metz’s semiotic analysis:

- Moving photographic images
- Written mentions (writing and other graphics)
- Speech (recorded phonic sound)
- Music (musical sound)
- Noises

Metz (1991) refers photographs and moving images by the expression “moving photographic images” and all written things on the screen by the expression of “written mentions”. Term of “speech” or “phonic sound” includes all the recorded dialogues and “music” or “musical sound” includes all the music in the film. “Noises” refers all sounds heard as natural or surround sound (or added later as a sound effect) in a film. These five items are the basic elements which are tools for interpretation. From this point, referendum advertisements films have been examined within the frame of these 5 elements.

RESULTS AND DISCUSSION

During the referendum process 7 advertisements of Justice and Development Party (known as Ak Parti in Turkish), 5 advertisements of Republican People’s Party (known as CHP), 2 advertisements of People’s Democratic Party (known as HDP) and 2 advertisements of Nationalist Movement Party (known as MHP) were featured on TV. The ones which have similar dramatic structures and messages were evaluated together and in the scope of the study 8 ads were analyzed.

Advertisements of Ak Parti

1. Name: Yes the people make

Time: 01.42

Moving photographic images

Signifier: An ordinary tea garden, people in their daily clothes

Signified: Actors represent ordinary people and audience might identify with the actors easily. The cafe / tea garden atmosphere reminds politics. Because in Turkey the politics is one of the top topics spoken in coffee shops.

Close shots are used to emphasize the hero’s psychological state, thoughts and inner world (Ertike, 2009: 22). This kind of shot expands the measures of the object and gives it a symbolic meaning. In the film it is used for the shots of faces of the all actors.

Written mentions

There is logo and in the middle of the screen with a red color “Yes, the people make” on a white background. They are the colours of Turkish flag as it is known.

Speech

A young man in the tea garden is talking about the positive results of the constitutional amendment such as “two-headed ruling is over, the power of parliament is increasing and more effective governments are coming”. The expression of “What did some say? He can not even be a mukhtar” connotes the President Recep Tayyip Erdoğan without mentioned his name. Then performance of the government is mentioned by dialogues such as “Remember, they said it is not possible to pay IMF’s debt or omit 6 zero from Turkish Lira. There should not be

headscarf in the public administration. You can't build Marmaray or third bridge in İstanbul. But we did." These expressions have negative messages and also are double-sided. There are positive messages like "This people love this country, this flag, this state. If they want, they do everything".

The voice-over reinforces this effect with the words as "We trust our people, we believe in Turkey. Yes, the people make"

Music

Music is not used. Without music, the viewer might focus on the dialogue.

Noises

Mixing sounds coming from tea spoons are heard in harmony with tea garden atmosphere.

2. Name: Solidarity

Time: 03.03

Moving photographic images

Signifier: A village house, a young man, a white car with a picture of Prime Minister Binali Yıldırım, AK Parti logo and "Yes" text, people working on the fields, people shaking hands by the roadside, many white cars, horses, Eurasia Tunnel, Yavuz Sultan Selim Bridge

Signified: The young man kissing his parents' hands in front of the house emphasizes respect for family values. Turkish flag and red-white "Yes" are seen on the vehicles. The Turkish flags are used to emphasize the national feelings. The performances given are explained by the footages like Eurasia Tunnel.

Written mentions

At the end of the film a red colored Turkey map and a white "yes" text appear on it. Then on the right side of the screen photograph of the Prime Minister Yıldırım and "Our power is our nation, our decision yes" writes. Since the photograph of the person covers a large space on the screen, the audience perceives the image closer and more carefully.

Speech

There is no dialogue.

Music

In the film an upbeat music is used to increase enthusiasm. Lyrics of the song as "80 million is of one heart, we are Turkey" are integrated with the images of the people shaking Turkish flags on the roadside. In their research, Thorson et al. (1991) found that the presence of music in an advertisement and feature of the background (such as an office or house) are associated with emotional reactions to political advertising.

Noises

Rooster voices are heard that strengthen the village life effect at the beginning of the film.

3. Name: Come on Yes

Time: 01.32

Moving photographic images

Signifier: Image from different cities, women peasants, a peasant woman who gives water to a man who has a digging in his hand, working people in the factories and buildings, İzmir Clock Tower, fishing boat

Signified: Working people present the nation and labour, the peasant women rolling dough thin represent the village life.

Written mentions

The names of the cities are written down on the left.

At the end there are logo and in the middle of the screen with a red color "Yes for peace, yes for solidarity" on a white background. They are the colours of Turkish flag.

Speech

Dialogs are short and used to connect the story. For example, a young girl comes to a room with a paper in her hand and screams "Mom, dad I won" and then we see the exam result. Another young girl wearing a headscarf is seen first while she is drawing in a room. Then we understand that she designed a furniture and she says to a man in a shop "Daddy, let's begin."

Music

There are the images of the first girl standing on the entering the door of Istanbul University and the images of people on the boat going fishing with a upbeat music. Lyrics of the music as "We need keep alive hope today" mention about hope and happy future. There are positive messages in the films.

Noises

Wing sounds of the birds and sound of water are heard.

Meanings of the signifier and the signified in the advertisements

Signifier	Signified
Kissing hand	Respect to elder people
Turkish flag	Patriotism and emphasis on national feelings
Amulet	Superstition
Landscape, farms, tinny carafe	Village life
Folk outfit like peasant cap, shalwar, vest	Folk culture
Horses	Anatolian nomadic culture
Maiden's tower	Istanbul
Entrance door of Istanbul University	Education, a better future
Broader roads	Service, performance

Advertisements of CHP

1. Name: For my future

Time: 42 sec

Moving photographic images

Signifier: Children holding little banners written on "No", photographs of Atatürk in children's hands, a child wrapped around a Turkish flag

Signified: Children are the symbol of future, hope and enlightenment. Photographs of Atatürk are associated with republic and the Turkish flag is used to emphasize the national feelings.

Written mentions

On the left of the screen a colored pencil sun drawing and with a red color "No, for my future" on a white background. The figure of sun reminds the light and enlightening.

Speech

Some sentences are heard from children's voices such as "For my future", "For not staying in the dark", "For my freedom", "for my dreams full of hope", "Do not forget me".

The voice-over reinforces this effect with the expressions of "Is it worth not to hear the children for us? Is it worth to deliver all the authority to one person? No, for sunny tomorrows, at most for our children". Speeches contain positive messages and refer to the constitutional items to be voted on in the referendum.

Music & Noises

Music and other noises are not used.

2. Name: My first duty

Time: 02.45

Moving photographic images

Signifier: Figure of Atatürk, playing children, working women, cuffs, court, woman in red dress, rising sun, Kemal Kılıçdaroğlu

Signified: Atatürk reminds heroism and the night evokes darkness. The figure of the woman in red dress is the symbol of the Gezi Park protests.

Written mentions

The image of Kemal Kılıçdaroğlu and the name of his at the bottom right.

Speech

The voice-over belongs to CHP leader Kemal Kılıçdaroğlu. His words “We are the light itself” accompanied by a rising sun figure. We heard the expression of “We are the people who count our first duty to protect our freedom and our republic” on the images of the opening of the Grand National Assembly. These words remind Atatürk’s Address to the Turkish Youth.

Music

The Izmir March is preferred. It is a cultural code that evokes heroism and nationalism.

Meanings of the signifier and the signified in the advertisements

Signifier	Signified
Children	Future, hope
Turkish flag	Patriotism and emphasis on national feelings
Sun	Light, bright
Pictures of Atatürk	Republic, heroism

**Advertisements of HDP**

1. Name: We all win 1

Time: 45 sec

Moving photographic images

Signifier: A boy, a bench by the water, a man sitting on the bench, a minibus

Signified: The man in the bank reminds HDP leader Selahattin Demirtaş

Written mentions

Logo and on the left top of the screen with a white color “No, we all win”

Speech

The boy sitting on the bank begins to speak to someone who we can not see his face “I can’t stand the injustice at all. You can say if you can not stand why do you keep silent? I said to myself Selo, do something. I have decided that I will go to university and I will stay human and also will protect the human rights.”

Music

Music is not used.

Noises

The engine sound of the minibus is heard.

2. Name: We all win 2

Time: 01.53

Moving photographic images

Signifier: Miners’ helmets and boots, reeds, caliph Ali figure, class, blackboard, young and old women, people carrying bricks

Signified: Miner is used to emphasize labor and work and also an ordinary person. Tea and the child who covers the sleeping man reminds the value of family. Caliph Ali Picture and dancing woman and man symbolize Alevis who worshipped. Children represent education and the future. Ululating women connote eastern culture.

Written mentions

Logo and on the left top of the screen with a white color “No, we all win”

Speech

In the film, the voice-over synchronized with the images speaks instead of the characters on the screen such as “We are children workers. We are believers. We are children. We are women”.

Music

First an emotional music and then a folk song is heard. The folk song used is the cultural code that reflects the Alevi culture.

Meanings of the signifier and the signified in the advertisements

Signifier	Signified
Miner’s helmet and yellow boots	Labour and working, low-income citizens
Reeds and costumes of the dancing people	Alevi culture
Students	Education
Ululating women	Eastern culture

**Advertisements of MHP**

1. Name: We promised

Time: 01.26

Moving photographic images

Signifier: Devlet Bahçeli, children, Turkish flag, mosque, Atatürk

Signified: The Turkish flag is used to emphasize the national feelings. The mosque at the background is a religious symbol.

Written mentions

During the film the words dubbing by the voice-over are constantly visible on the screen. Studies have shown that the titles and slogans of 3-5 words convey the message more quickly and also it becomes difficult to read the verbal messages consist of more than 8-10 words (Becer, 2011: 202). So it might be said that all words appearing on the screen reduce the effect of them.

At the end of the film logo and photograph of the leader of MHP Devlet Bahçeli and a text with white colour as “We promised for this country, it is irrevocable” on a black background

Speech

The voice-over is an enthusiastic male voice. We see crowded people images accompanying the words “Now is not the time to stop, we must come into action”. On the image of Bahçeli writes “Bozkurt must do everything without consideration”. The words of “They’ll see! How to gather the people after the Three Crescent” represent MHP.

At the end we heard the words “Our source is nation, our decision is yes” from Bahçeli’s own voice. The messages are positive and there are no any comparison.

Music & Noises

Music and other noises are not used.

Meanings of the signifier and the signified in the advertisements

Signifier	Signified
Turkish flag	Patriotism and emphasis on national feelings
Mosque	Religious belief, Islam
Atatürk	Republic, heroism

CONCLUSION

Television, an audiovisual tool, is a common medium for both commercial and political advertising. Although studies on the effects of television advertising on agenda-setting and voting behavior revealed conflicting results, still it might be said that television which a tool can reach the audiences at all ages in almost every house, has a strong influence.

In Turkey, where the duration of daily television watching is considerably high, political parties use television advertisements to reach out to a large number of people and convey their messages in a prompt way. Before the constitutional amendment referendum, all the parties have prepared and featured television advertisements. In these advertisements, explicit and implicit messages are included to influence voters' decision.

It is seen that in the referendum advertisement films which were analyzed within the framework of semiotic analysis elements of Metz, the parties frequently used social and cultural signs. It might be said that actions and projects are emphasized in AK Parti advertisements and also it is important to show the players as ordinary people. In the ads, the use of cultural codes is more frequent and effective. Children and Atatürk figures stand out in CHP advertisements to emphasize the history and future. It can be said that HDP's ads are dramatically more impressive but inadequate to give a message on the referendum. There is no remarkable or memorable story in MHP's advertisements. Also it might be said that there are too much writings and it causes the viewer's attention to be distracted.

ABSTRACT

Sprego is a programming approach in spreadsheet environments, which is firmly supported by unplugged and semi-unplugged tools for better comprehension. In the present paper we provide details of how authentic webpage-tables support real world problem solving and serve as semi-unplugged tools.

The “Computer Science Unplugged” method is generally accepted in communicating the great ideas of computer science. However, we have found that the variation and the right proportion of unplugged and semi-unplugged tools can serve these great ideas also satisfy students’ eagerness for digital contents and tools. In this context we must clarify the misconception that both programming and end-user activities start when the computer is switched on. Beyond this, we provide details of our experience on how data management and end-user programming in spreadsheet environments can be introduced and supported with semi-unplugged tools.

Along with previously suggested ideas, we have found that teaching algorithms and programming in spreadsheet environments are both equally possible, but less demanding than ‘classical’ programming. To carry out coding in spreadsheets, we developed the Sprego – Spreadsheet Lego – high mathability programming approach and language. The semi-unplugged tools, which we rely on heavily in Sprego, are authentic data arranged in tables – primarily downloaded from the Internet and/or collected by students. The authentic tables allow both teachers and students to make a deep analysis of the content and structure of the data, to recognize data types, convert files, formulate tasks and problems based on the data, and finally to discuss and debug the problem solving processes and solutions. Most of these processes can be supported by providing the tables in printed form – either on paper or on digital devices –, prior to or alongside the coding process. One further feature of Sprego is the extensive use of composite functions. With this other semi-unplugged approach the discussion and debugging of solutions are strongly supported and it allows students to share the great ideas of computer sciences, and to develop computational thinking and algorithmic skills.

INTRODUCTION

“Spreadsheets are everywhere in modern business, from the smallest organisations to the largest and most complex.”
 (ICAEW [SCF], 2016)

It is wildly accepted that spreadsheets are pervasive, particularly among finance users (ICAEW [SCF], 2016); however, recent research in education has proved that (1) spreadsheets can be used in much wider contexts (Kadijevic, 2013; Angeli, 2013; Csernoch, 2017), (2) education and training can start from early ages in school (Csernoch, 2016; Biró & Csernoch, 2017a), and (3) they are programming interfaces (Hubwieser, 2004; Schneider, 2004, 2005; Zsakó, 2006; Elliott, 2007; Wakeling, 2007; Sestoft, 2011; Csernoch, 2014, 2017; Csernoch & Biró, 2015, 2017b).

Beyond the opportunities contained within spreadsheets, we are faced with several problems related to both their use and the way they are taught. The consequences of inappropriate spreadsheet use in finance is wildly researched and analyzed, due to the serious losses originating from erroneous spreadsheet documents ([Horror Stories], 2017; Panko, 2013, 2015; Panko & Port, 2013). One of the reasons for this failure is clearly stated in the Spreadsheet Competency Framework (SCF): “Spreadsheet skills are often learned ad hoc – almost two-thirds of Excel Community users are self-taught – and many users are unaware of their own true competency. Novices are generally overconfident; experts tend to sell themselves short.” (ICAEW [SCF], 2016). Among several other reasons it has been shown (Panko, 2013, 2015; Panko & Port, 2013; Kadijevic 2013; Kruger & Dunning, 1999) that spreadsheet education is almost invisible to ICT professionals and computer sciences (CS) and/or thought to involve boring routine tasks in general educational contexts (Gove, 2012, 2014). These misconceptions would

explain the poorly developed and utilized spreadsheet documents and their negatives consequences. Recognizing the lack of spreadsheet competences, again in a financial context, the ICAEW have published the “Twenty principles for good spreadsheet practice”, the second edition of it (ICAEW [20 Principles], 2016), and the “Spreadsheet competency framework. A structure for classifying spreadsheet ability in finance professionals.” (ICAEW [SCF], 2016). These documents are to be warmly welcomed since they provide the bases for further research in spreadsheet competences.

However, we have found that the ICAEW documents support neither the programming aspect of spreadsheets nor the development of computational thinking (Wing, 2006). They rather focus on the tools within these frameworks and support the idea that typical spreadsheet users just want to use a power tool, with the craft coming later. This is the “classical” and wildly accepted approach to spreadsheets, where software is primarily taught with a technocentric and decontextualized focus (Angeli, 2013). In view of all these misconceptions, we have published the Edu-Edition of the Spreadsheet Competency Framework (E²SCF, Csernoch & Biró, 2017c), where the focus is on the development of computational thinking, high-mathability computer problem solving, and knowledge transfer – in general, the future competences of the digital world (Davies et al., 2011).

Within the framework of the E²SCF we and our colleagues have developed several unplugged (Csernoch, 2016; Csernoch & Biró, 2017a) and semi-unplugged tools (Csapó & Sebestyén, 2015) to introduce spreadsheet programming in schools. In the present paper we focus on several semi-unplugged tools to support real world problem solving in spreadsheet programming. These are primarily based on authentic tables whose sources are webpages containing tables or imitations of tables and/or the private collections of students/teachers.

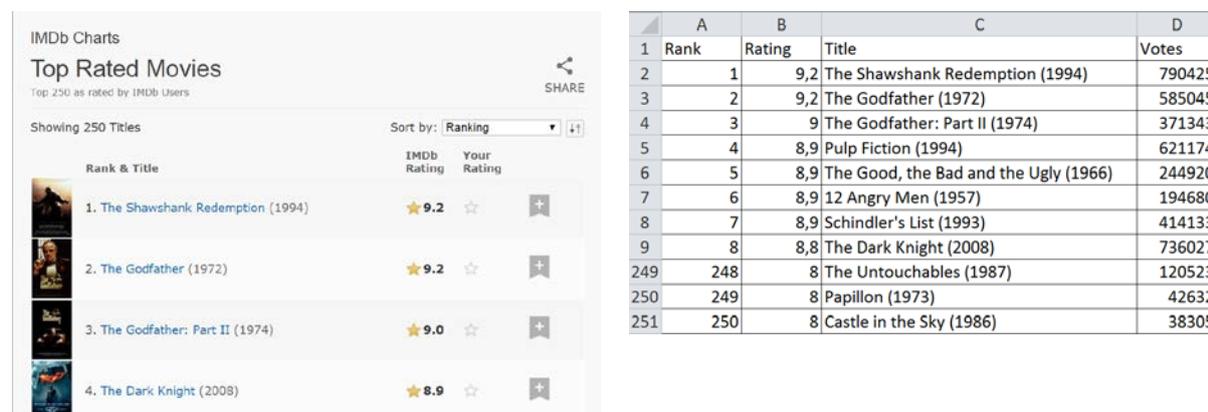

AUTHENTIC TABLES FOR SPREADSHEET PROGRAMMING

As mentioned in the previous section, one of the main reasons for spreadsheet failures is a lack of motivation. Students are not interested in mindless and decontextualized data; they prefer contexts which are interesting and sources of real information retrieval. In the following we present webpages, their converted spreadsheet versions, tasks and games developed on these tables, and examples of the webpage→spreadsheet conversion (W→S).

One further advantage of using authentic tables as a data source is that this approach extensively supports knowledge transfer: (1) the boring act of typing is replaced by handling files of various formats, which is one of the crucial elements of ICT studies, (2) the normalization of the tables leads to basic database management knowledge, (3) the conversion process requires algorithmic skills, which are the bases for further studies in ICT and computer sciences, especially in programming, and (4) through the contexts of these tables a close link is built with other sciences and subjects.

TABLE EXAMPLES

One of students’ favorite subjects is digital media, and within this framework they are interested in movies, music, and video games. We have found that they frequently use the IMDB (Internet Movie Database) charts, so we introduced one of these tables into our spreadsheet classes ([IMDB], 2013). However, the recently available webpage contains one fewer column (Figure 1, left), so we use an older version, downloaded in 2013 which is available in our collection of Sprego tables ([Sprego tables], 2017; Figure 1, right; Figure 8).

	A	B	C	D
1	Rank	Rating	Title	Votes
2	1	9,2	The Shawshank Redemption (1994)	790425
3	2	9,2	The Godfather (1972)	585045

Figure 1: The IMDB Top Rated Movies webpage (retrieved in 2017, left) and its spreadsheet version (retrieved in 2013, right).

In recent years students have become interested in the subject of healthy and nutritious foods, weight gain and obesity, and so they like to see calorie tables (Figure 2, Figure 9). Another favorite source of data and information are local food webpages (Figure 14 – Figure 16).

The figure shows two representations of a calories table. On the left is a screenshot of a webpage titled 'Apéritifs (pour 100 g)' with a list of items and their calorie counts. On the right is a normalized spreadsheet version of the same data.

	B	C
1	Categories/Foods	Calories
2	Apéritifs (pour 100 g)	
3	Apéricube La Vache qui rit (à l'unité)	16 calories
4	Bretzel (à l'unité 15 g)	80 calories

772	Tarte (pommes)	300 calories
773	Triscottes	390 calories

Figure 2: The Les calories webpage (left) and its normalized spreadsheet version (right).

The most frequently searched and eagerly received contents include tables dealing with countries, and their statistical extremes (the largest, the highest, the smallest, etc.), data which is not obvious and/or is unique (complete lists of various subjects, war losses, expenses, life expectancy rates, etc.), as well as lottery tables, and various board games ([Sprego tables], 2017). In the present paper the “Countries of the World” and the “World Heritage Sites” tables are introduced. The Countries table is retrievable from the Hungarian school leaving exams ([Countries], 2004; [Sprego tables], 2017; Figure 3), primarily prepared as a source for database management but serving our purposes just as well. Originally, it contains the name, the continent, the area, and the population (divided by thousand) of each country. In the modified version an index field was added to the table to clearly demonstrate the difference between the spreadsheet row numbers and the indexes of items of vectors. In our practice we refer to this semi-unplugged version as “countries_printed” – printed on screen, not on paper – (Figure 3), since we use it for manual data retrieval, building and checking algorithms, and debugging.

	A	B	C	D	E	F
1	index	Country	Continent	Capital	Area	Population (1000)
2	1	Afghanistan	Asia	Kabul	647500	27756
3	2	Albania	Europe	Tirana	28748	3545
4	3	Algeria	Africa	Algiers	2381740	32278

7	6	Angola	Africa	Luanda	1246700	10593
8	7	Anguilla	Amerika	The Valley	102	12
234	233	Yugoslavia	Europe	Belgrade	102350	10657
235	234	Zambia	Africa	Lusaka	752614	9959
236	235	Zimbabwe	Africa	Harare	390580	11377

Figure 3: The “countries_printed” semi-unplugged version of the Countries table.

In close connection with the Countries table, one of the most interesting tables is the World Heritage List, which contains data of heritage sites (Figure 4) in seven fields of various data types. Beyond its valuable content, the process of converting the table involves various elements of ICT (Figure 12), and as such supports knowledge transfer, which is one of our main concerns in relation to students’ future competences (Davies et al., 2011).

Figure 4: The table of the World Heritage Site webpage (left) and its converted spreadsheet version (right).

Sports tables are also great favorites. For the present paper we selected an ATP table ([ATP], 2015; Figure 5 and Figure 6), which is generally accepted by both girls and boys. The content of the table offers a wide range of information retrieval tasks, deals with various data types, and the conversion process is extremely challenging and leads to webpage development and design. The details of the conversion are beyond the scope of the present paper; however, similar to the Heritage table, the question of the automated data type recognition in spreadsheets is mentioned in the corresponding section (Figure 13).

Figure 6: The converted version of the ATP Scores & Stats 2015 table.

As mentioned above, local food outlets are popular among our students. The selected webpage is one of the leading pastry shops in our hometown so everyone in our close environment knows it ([Cakes], 2017). The webpage turned out to be one of our best resources since it is convertible either with spreadsheets or word processors and fundamental algorithms can be taught alongside the conversion processes (the conversion process is detailed in the “SEMI-AUTOMATED W→S CONVERSION” section of the present paper).

Figure 7: The Cakes (Torták) webpage of a local pastry shop (left) and its converted version in a spreadsheet table (right).

TASKS AND GAMES

Our novel method for computer supported real world problem solving in spreadsheets is based on the effective and efficient methodologies used in other subjects, especially mathematics and programming, further developed to create an introductory end-user programming environment and approach, and was introduced as Sprego programming – Spreadsheet Lego – in 2014 (Csernoch, 2014). Consequently, in Sprego problem solving starts with data analysis. Since young students are much more competent with strings than numbers we have found that introductory tasks should be based on strings rather than on numerical problems, which is the “classical” approach to spreadsheets (ICAEW [SCF], 2016; Kalchman & Koedinger, 2005; Blanton & Kaput, 2011; Section TEACHING MATERIALS).

All the selected tables contain text fields but among them the IMDB serves as the best introductory table. In the IMDB table it is obvious that in the converted version of column C contains two data of different types, so they have to be separated and displayed in two columns. (The details of the solution are beyond the scope of the present paper; however, it is available in one of our previously published papers (Csernoch & Biró, 2016).) Similar tasks can be formulated either in the IMDB or in the other data tables. In the Cakes table (Figure 7) the Torta field has two types of data – the name and the product code –, although in some cases the code is missing. In the ATP table (Figure 6) the names of the doubles winners can be separated, while handling the currencies is a challenging problem, suitable for advanced users.

252							
253	The number of movies released between 1994 and 2000 is 36.				The Untouchables		
254	The Untouchables was released in 1987.						

Figure 8: The normalized IMDB table and two tasks based on the new data table. Task 1: The number of movies released between two years. The years are the input values of the task, provided by the user in cells G2 and G3 and the output is a sentence with the two years and the calculated number. Task 2: A title is selected from the combobox and the formula calculates the year and displays it in a whole sentence.

Once these data are separated – the titles and the years in the IMDB table –, in addition to string problems, all the converted tables can be used for counting and searching problems (Csernoch & Biró, 2016). Two of these tasks are introduced in Figure 8 in rows 253 and 254. These two problems are rather for intermediate users; consequently, for novices simpler, and for advanced users, more complex tasks can be formulated.

The Calories table – retrieved from the Les calories webpage – holds two columns of data. In the first column the categories and the foods are listed, while in the second we have an empty string and calories, respectively (Figure 2, categories are highlighted in green). With these data we can create a spreadsheet calories calculator (Figure 9). The calculator uses categories as major items. Each category contains a combobox and a slide bar. A combobox lists all the foods in the respective category derived from the data table. The slide bar is an additional object to each category, where we can select the amount of food. Based on these data the calculator displays the calories for each selected food, adds them, and displays the sumproduct in cell I774. One further feature of the calculator is the ability to set a limit. If the sumproduct, based on the calories of the selected items and the amount, exceeds the limit, the cell changes its color.

Figure 9: A spreadsheet calories calculator, based on the table of the Les-calories webpage.

The “country-capital quiz” can be used in geography classes but its creation requires several fundamental programming algorithms which are better handled in ICT and/or CS classes. Based on the original “searching in vector problem” several different tasks can be formulated and introduced in classes. In the present paper one of the most advanced versions is presented, where various spreadsheet tools are applied: a combobox for selecting the country, an IF() function for varying the output text in cell H4, a formula to calculate the capital of the selected country (various versions of the MATCH(), INDEX(), and INDEX(MATCH()) functions), a concatenation operator or function for creating the sentence of strings and calculated values, and conditional formatting to color the content of cell H4 according to the user’s answer in H6.

	H	I	H

3	
4	Ajjaj!
5	
6	Budapest

Figure 10: A “country-capital quiz” based on the Countries table. The country selected from the combobox (left), text (capital city) is typed in H6. If the answer is correct a whole sentence is displayed in green; if not, an error message in red is displayed in cell H4; if H6 is empty, H4 is also left empty.

SEMI-AUTOMATED W→S CONVERSION

The conversion process of the webpages might seem a one-step process since spreadsheets open webpages. However, we have experienced in several cases that these tables are manipulated: neither the table nor the paragraph structure is clear. Beyond these hidden errors, it is obvious that the differences in the syntax and in the language setup of spreadsheets and operating systems, along with the automated data recognition, might result in serious data losses (e.g. see Figure 12 and Figure 13).

A version independent conversion process officially requires nothing more than the opening of the webpage in a spreadsheet and then that it is saved in spreadsheet format. However, this method only works in theory, since the additional objects, formats, and the automated data type recognition of spreadsheets might result in a chaotic table and/or data losses, respectively (Figure 12 and Figure 13). To get rid of the additional objects and formats a text file would serve best. However, in several cases we have to apply more software which can create the text file but does not change the content (Figure 11). Word processing programs were found to be the most convenient for our purposes. Considering all these points, the major steps of the conversion process are mapped in Figure 11. We are aware of the “user friendly” but limited or less-limited conversion options of the different spreadsheets versions, but our goal is to present a less software-dependent, general purpose algorithm of the process.

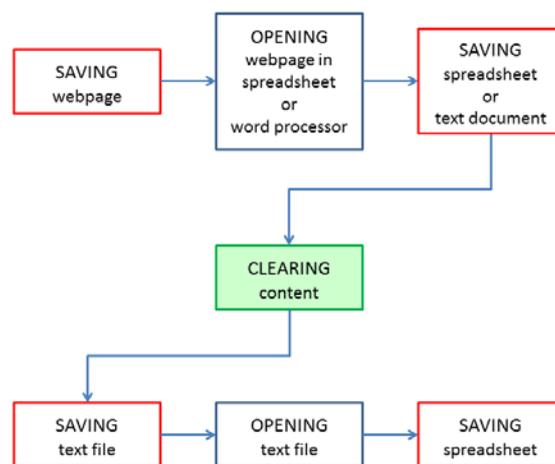

Figure 11: The major steps of the webpage→spreadsheet (W→S) conversion process.

As is shown in Figure 11, the algorithm of the conversion process is primarily concerned with handling different file types with the Open and the Save As commands. However, the “Clearing content” step is unique to each document and in most cases requires well developed algorithmic skills. The complexity of the document and the algorithm on which the webpage is built formulate the algorithm. In several cases the clearing phase is broken down into smaller units, and can be inserted between any of the [opening, saving] blocks and repeated various times.

This method of the conversion is semi-automated in the sense that the major commands are carried out manually, while each step is automated and as such can be applied to a clearly defined section of the data. In word processors the clearing is primarily carried out with the Replace command (Figure 12) and/or with the table→tabulator→table conversions (Figure 15 and Figure 16), while in spreadsheets formulas have to be created to handle the data conversion (for further details see the “*Conversion with spreadsheet formulas*” section of the present paper; Csernoch, 2014).

Figure 12: The World Heritage page is opened in English (left), opened/imported in European (middle) spreadsheets without intervention, and opened and cleared in a word processor – the commas were removed with a Replace command (right).

In Figure 12 in an English spreadsheet all the small numbers – less than 1000 – are recognized as numbers, while the others with commas are converted to strings but no data are lost. In the European version the numbers with one comma are divided by 1000 while the others are converted to strings, and the small numbers are converted properly to numbers. The English version can be handled in spreadsheets since the commas can be removed either by the Replace command or the SUBSTITUTE() function and then the data can be converted into numbers (Csernoch, 2014; Csernoch & Biró, 2016). Due to the loss of data, the European version cannot be handled in spreadsheets without first creating the text file in a word processor. By opening the table in a word processor in the Property column the commas can be replaced with the empty string. Following the replacement the table has to be converted into a text file, which can be opened in spreadsheets. While creating the text file we have to take into account the fact that the table contains several non-ASCII characters; consequently, the encoding has to be changed to Unicode.

Figure 13: The ATP text file opened in a spreadsheet allows automated data type recognition. In column I the conversion of the currency leads to a loss of data. In cells I8, I15, and I65 the original values are replaced by their 1000th; beyond this, in I65 the value is rounded.

To stop the automated data type conversion we have to open the text file in a spreadsheet, and in the “Text Import Wizard” we can change the General data type to Text (Step 3). With this option all the data in the selected column is converted to text (Figure 6).

Conversion with spreadsheet formulas

The conversion of the Cakes webpage ([Cakes], 2017; Figure 14) can be carried out both in spreadsheets and word processors. Both of them have their own algorithms, and the choice made is based on the pedagogical aims of the task.

14	RENDELHETŐ	57 Lekváros kardinális torta - KT044	3.500 Ft	3 500 Ft
15		58 Karamellás csoki mousse torta	3.800 Ft	3 800 Ft

Figure 14: The Cakes webpage opened and cleared in a word processor (left) and converted into a normalized table with spreadsheet functions (right). The version shown has three columns: column B: cake and code (optional) – data type: string –, column C: price – data type: string –, column D: price – data type: number –, and the non-significant data are removed – strings: “A termék adatai »”, “RENDELHETŐ”, and the empty string.

All the conversions start with data analysis, as follows (Figure 14).

The features of the spreadsheet table:

- each cake occupies 5 rows
- the 1st row of the block holds the name of the cake (for advanced users: occasionally, the code of the cake), data type: string
- the 2nd row of the block holds the price of the cake, data type: originally string but should be converted to number (currency)
- the other rows can be ignored
- the original position of the cakes and prices can be calculated from the row number of the new position
- all the prices contain a dot, a “SpaceFt” string, and a Space character at the end of the string
- at the end of the names there is a Space character

The algorithm of the spreadsheet conversion:

- calculating the row number of the new position: n
- calculating the original position of the cakes/prices: $(n-2) \times 5 + 1$ or $(n-2) \times 5 + 2$
- displaying the cakes/prices
- converting the prices to numbers
 - calculating the length of the string
 - calculating the length of the number
 - displaying the numbers from the left of the string
 - substituting the dot with the empty string
 - converting the string to number
- formatting the currency

The coding of the spreadsheet conversion with Sprego:

- {=ROW() }
- {=(ROW()-2)*5+1 }
- {=INDEX(A2:A284,(ROW()-2)*5+1)}

The coding of the string → number conversion with Sprego:

- {=LEN(C2:C58)}
- {=LEN(C2:C58)-4}
- {=LEFT(C2:C58,LEN(C2:C58)-4)}
- {=SUBSTITUTE(LEFT(C2:C58,LEN(C2:C58)-4),".","")}
- {=SUBSTITUTE(LEFT(C2:C58,LEN(C2:C58)-4),".","")*1}

Conversion with a word processor

Figure 15: The Cakes table opened in a word processor (left), the 5-line blocks converted into a 5-column table, in which 3 columns are deleted (middle), and the characters removed from the numbers (right)

The algorithm of the word processor conversion:

- the text (Figure 15, left) is converted into a 5-column table
- 3 columns with the unnecessary data are deleted (Figure 15, middle)
- dots are removed from the numbers
- the “nonbrakingSpaceFtSpace” string is removed (Figure 15, right)

The coding of the string → number conversion in word processor:

- From Text to Table, the number of columns set to 5, Separator character: ¶
- 3 columns are deleted (Figure 15, middle)
- the column of numbers is selected and dots are replaced with nothing
- the column of numbers is selected and the “non-braking-SpaceFtSpace” strings are replaced with nothing (Figure 15, right)
- From Table to Text, the separator character is Tab
- the “SpaceTab” string in converted to Tab (Figure 16, left)
- Save as text file, code: Unicode (UTF-8)

CONCLUSIONS

Our present paper offers and refers to various semi-unplugged tools introduced in our classroom practice to support Sprego programming. Sprego – Spreadsheet Lego – is a programming approach in spreadsheet environments, using those tools available in user-friendly interfaces which support programming, algorithm building, the development of computational thinking, computer supported problem solving, and knowledge transfer, all of which are the competences of the future.

One of the primary features of Sprego is that it focuses on real world problem solving and as such requires various authentic contents organized into tables. The main source of the tables is the Internet or the private collections of students and/or teachers. In the present paper we have provided examples of tables retrieved from webpages which were found to be interesting and motivating for students. The most popular tables contain data relating to extremes, local food outlets, board games, and sports, but any special data table would be appropriate for Sprego if it contains real world data and students are interested in it.

In addition to presenting the tables, we dealt with their conversion, the advantages and disadvantages of the automated data type recognition of spreadsheets, and how we can handle these problems. A conversion of a webpage-table is detailed, where both the spreadsheet and the word processor solutions presented. However, we

must emphasize that the form in which a table is presented in the class plays a fundamental role in teaching end-user programming and algorithms. It is always part of a teacher's competence to select the version of the table which best suits the students' interests and the pedagogical aims of the classes.

SHOOTING SHORT FILM AS AN APPLICATION OF VALUES EDUCATION

Mustafa SOZEN
Akdeniz University
Fine Arts Faculty, Cinema-TV. Department
sozen@akdeniz.edu.tr

ABSTRACT

For societies to continue their existence, that they transfer values they've got to the next generations is kind of an obligation. Thus, the values education subject is one of the problematics carrying importance socially. Values include basic rules arranging social structure and human relations. Society determines this with rules, dynamics of which individuals forming it identify consciously or unconsciously by coming together within a long time period. One of processes making children a part of social life is that they get ethical / aesthetic values. In getting these values artistic studies are quite effective. When dealt with in its ethical context, values that steer life of individuals, that act as rules, that have different levels of importance are in question. In aesthetic context, acquiring the qualification of perceiving life more deeply is aimed. The rise to the upper levels in life discipline desired to be acquired to individuals can be provided more qualitatively through aesthetical viewpoints. The ability of realizing details in natural and artificial environment, also defined as aesthetic awareness, is gained to children by directing them to study on details. Individual freedom is available in aesthetic education. With belief, concepts of creative and design, the personal experiences and narrative values develop. In this study, the "Young Planes Short Film Contest" run between the primary, secondary and high school students in the frame of "Values Education" by Antalya National Education Directorate and the relevant results and evaluations take place.

Key Words: Student, Values Education, Artistic Studies, Aesthetic Gains, Expectations

INTRODUCTION

Since at the present the fast changing science and technology have become one of the significant parts of daily life, values and life style through which contemporary human lives have started to undergo quick change. It becomes apparent that education should keep pace with this quick change for qualified individuals to be grown up.

Today, the major point put forward in information based economy society is that individuals become qualified in terms of knowledge. This situation being an objective requirement, in education period, mostly creates an undesired result leading to excessive focusing on academic success and exams and to neglecting value transfers. National Education Ministry has also started to put into practice a model education application providing awareness and internalization of values, within formal education process, as a way to overcome this problem. He defined this under the title "Values Education".

Values Education is an open attempt model for education about developing and realizing the determined values. In this sense, it is possible to define "Values Education" as the sum of processes towards forming the individual's self-respect, helping him respect usual values such as honesty, righteousness and justice.

The expression 'value', when taken in most general sense, is accepted as the individual's the best and the most suitable judgment process. When looked at in this sense, it can be said that the facts called "values" are the sum of thoughts affecting life of the person and given importance in his life (Doğanay, 2006: 258).

When dealt with from the morality perspective, the "values" concept can be classified as social values, individual values and family values. And the process in which values produced by a social structure are acquired to individuals of that society is expressed as "values education".

The whole of the values education concept is part of a wider development in the way developing human as "whole human" including his cultural, political and moral sides. In this context, it is possible to define the values education as the criterion of true, good and appropriate changes which can be seen in the individual's thought, attitude and behaviors. Individuals adopt values of the society, in which they have lived, from past to present and apply decisions they take in consequence of interpreting these values logically while making their choices.

Even if it is difficult to make a full description of the value concept in universal size, -in general- it can be defined as common position and viewpoints such as justice, equity, love, industriousness, hospitality and honesty.

The definition of value: common thought, aim, basic moral principles or beliefs accepted by the majority of its members as true and essential in order to provide and maintain a social group or society's own entity, unity, running and continuity. Properties of values can be shown by itemizing as below (MEB, 2005b: 87):

1. Values are the unifying facts adopted by the society or individuals,
2. Criteria considered to have met social needs of the society and to be available for goodness of individuals,
3. Judgments not only concerned with conscious but also feeling and excitement,
4. Values are instincts taking place inside the individual and directing the behaviour,
5. The difference of values from norms is that it has more general and abstract attribution,

Value involves norm as well. Values differ from social norms in three ways: While value refers to a behavior or the ultimate state of existence, social norm only refers to one behavior. While a value oversteps the bounds of particular situations, social norm is an order to behave in a certain way in a certain situation.

It should be stated that no universal answer is available for the question "Which values". True qualities may vary according to society. When looked at general aims of the Turkish National Education system, many values which must be gained to students draw the attention. It is possible to identify these values, each of which has the same importance, in alphabetical order: 1) Justice, 2) Peace, 3) Solidarity, 4) Righteousness, 5) Honesty, 6) Tolerance, 7) Protecting and Developing Cultural Values, 8) Self-Confidence, 9) Self-Respect, 10) Patience, 11) Respect, 12) Love, 13) Responsibility, 14) Collectivism, 15) Patriotism, 16) Helpfulness, 17) Innovative.

To put artistic studies being one of the most important institutions socializing individuals and preparing them for life into practice by loading an important duty within formal education comes to the forefront as a true strategy of education in this field.

In the schools, in the scope of artistic studies, to teach values clearly stated or not stated consequently contributes to their ethical/aesthetic developments and positively affects their character and self senses. In short, artistic studies are one of important and effective institutions in gaining value to the student.

RELATIONSHIP BETWEEN ARTISTIC STUDIES AND VALUES EDUCATION

Numerous academic studies made in education field show that artistic studies made in the scope of values education in the last years could assume important roles in education. Because artistic studies help ethical values be adopted permanently as an important education input as well as creating aesthetic liking development in students.

"Art" studies is essentially a manner of telling, but telling is a pattern and process of expressing. So, for individual freedom and objectivity to come out, it is recommended a particular importance be given especially to artistic studies. Artistic studies, in essence, also carry the characteristic of being facts having educational qualities. Things the students have revealed in artistic studies –mostly- include indirect correlations with their feeling and thought lives. Students take, get and gain something from it according to the pattern, direction, scope and level of the art they engage in. Due to only these reasons, it is seen that the importance of artistic studies is great. In other words, life styles, view of life and events of students making artistic studies change and their self-confidence even better strengthens and their power of design develops no matter which area of life be.

Artistic applications are both mind and feeling driven narrative patterns. Artistic applications greatly contribute to the individual by rendering his learning process efficient, facilitating his learning through "doing and living", helping him find his personality, be a creative and productive individual, establish positive social interaction with others, in short, develop with all his sides.

Cinema, which has a very different place among art branches in human life, is a narrative channel –since it is an education tool- that can create significant effects on individuals physically, mentally and psychologically in addition to its various functions. It is an accepted reality that the students making studies towards shooting film will be individuals who gain aesthetic emotions, have more creative thinking abilities, become more productive and self confident, try to change their environment positively. So applications made in this direction in the frame of values education gain importance.

If values education is transformed into a structure only giving importance to the formation and development of ethical/moral values thought, the intellectual basis where the concept locates gets big harm and the actual aim of education goes away. The values education which has been made in this way transforms into a context of static lesson and may consequently carry the risk of forming a shape in which the given homework and practices are

performed and taking a good grade is aimed, instead of gaining values in time. One of ways of performing values in education is to be able to use true stories in that different values can be utilized. Values having abstract attributions can make one reach true outcomes when stories that have been transformed into the filmic language become concrete in the mind of children and are reflected. These kinds of studies towards setting values can provide an advance in children's ability of interpreting and questioning about things being right and wrong.

The expected benefit from students performing applications towards shooting film is, in essence, the adoption and internalisation of the desired moral/ethical values and acquirements brought through making group study as well. Because while working in groups the individuals can canalize their energy more easily and tend to stay more close to the understanding of discipline and cooperation. Namely, it is a detected reality that activities made with a group help the individual learn social and moral skills, acting in harmony and develop skills of working. Moreover, in such a study medium, the individuals who have grown up in different societies and had different values recognize each other; and in this recognition period, they get the opportunity of indirectly transferring the values they've got to each other and of evaluating the value the other has got by recognizing it.

While the values that have transformed into a filmic story present the feeling or thought, which is desired to be reflected, to the other students, each student watching this follows the film through his own cultural codes, and interprets and makes sense of events and characters in the film via his own semantic world. As a result of this encounter of the audience with the film, tastes and colors cognitively and emotionally affecting the mental world of the audience come out and new images occur in them.

YOUNG PLANES SHORT FILM CONTEST AND VALUES EDUCATION

The Antalya City National Education Directorate has performed a series of artistic activities in the frame of Values Education program since 2011. As part of this activity, it has started an application under the title "Young Planes Short Film Contest" since 2013. It should be declared that this application is made only in Antalya city in Turkey.

This contest, which was arranged only for high school students in the first two years, has been arranged including the primary and secondary school students this year. The activity, the third of which was made and in which every category of education competed in itself, drew an unexpected level of attention from schools and a great number of films attended the contest.

"Young Planes Short Film Contest" carries significant tendencies in two aspects. First, a title like Education of Values coming to the forefront in education at the last years composes a presentation by involving artistic forms as well; second, this is stated with cinema being the most striking manifestation tools of our young century.

In our day when a dizzying advance lived in technology reveals new ways of narration in cultural/artistic ground, "visual" expression that generally corresponded to the painting art before increasingly becomes rich and finds a life area for itself in different media. For example, the short film fact, which fast becomes widespread by the support of computer programs being easily accessible and applicable, – being too easy to be made by everyone – quickly becomes widespread in the young through its structure open to trial-and-error and its application area convenient to harmonizing the technique and thought.

In the light of all these developments, Antalya National Education Directorate started an activity attempt under the title Young Planes Short Film Contest, with a greatly appropriate decision, three years ago and put it into practice strongly. It should be emphasized that this activity has assumed an important function like adding a new one to the titles meant in the introduction part. This was the argument "Cinema most fits Antalya!". In other words, in a city where the Golden Orange, which is the most powerful artistic platform of Turkish Cinema for the total 51 years, is arranged, to be able to perform the Young Planes Short Film Contest is a quite conspicuous situation. Therefore it should also be stated that the young movie makers of tomorrow can come out and the related benefits can be got as other positive sides of contest (1).

As a concrete example of this positive position, that in 'Values Olympiad' arranged by National Education Ministry, the Kepez Religious Secondary School students in Antalya have become Turkey's number one in short film branch can be given. In the contest arranged with the theme 'righteousness, keeping word, trust, compassion and sharing', the sixth grade students, all 13 years old, Melih Duman, Salim Güraksu and Halil İbrahim Sevinç have got Antalya's championship firstly and then Turkey's championship with the short film they shot up on the 'compassion' theme. The directing, scriptwriting, shooting and acting of the film, which was prepared under the guidance of Turkish teacher of the school, were carried out by students. In that about 10 minutes short film who shooting and montage lasted for a week, the student stackled with a compassion feeling of a person who aim

stake things, which are desired yearningly by a leukemia patient child, to the child staying at hospital and longing for outside a lot.

Statements of Halil İbrahim Sevinç, who carried out the shooting of the film, about the film and subject reflect a concrete explanation of this application. Mr. Sevinç tell about the process: "We expected together to be Antalya's champion, but never to be champion among 81 cities of Turkey. We were joyed and got excited at hearing his... I learnt shooting (cameraman ship) by the help of my teacher. I had never used before. Shooting was hard. The message we wanted to give was showing mercy and taking mercy from our friends and family against difficulties".

GENERAL POINTS

The biggest change standing out in 2015 Young Planes Contest this year was that the primary and secondary schools were included to the contest. This was a risky decision because aside from "easy accessibility" stated above, the fact that the short film is also an artistic discipline shouldn't have been ignored. However, when checked on the selection especially coming from secondary schools, it was seen that a quite surprising outcome occurred. Because incoming films were carrying cinematographic qualities beyond expected apart from less number of bad examples.

It is a known reality that in films having time period not exceeding ten minutes, producing film in a wide semantic field like concepts in the context of Values Education is not that easy. These students have brought along quite successful solutions, within the frame of their own limited knowledge, to the fields such as scenario, shooting techniques, montage, music and cast management about each of them books of lots of pages could be written.

The essential aspect of the issue is that via these studies, to what extent moral values take place in social group in which the students live and what the relevant conditions are and that they struggle to give visual shape in the way that has turned to an expression by drawing attention to topics they wish or things they want to be visible.

In this context, it can be said that with artistic interpretations brought to concepts such as "Love", "Respect", "Honesty" and "Solidarity", the Young Planes Contest has moved its objective much more upward. It is possible to easily state in the end of the third year that numerous qualified students, who are equipped with artistic sensitivity and bear cinema emotion inside them, are available among both primary and secondary and high school students. Speaking for myself, I was impressed by that "violence" phenomenon being one of major issues of today was referred to in short films in the activity where I took place in the jury. As it is understood, students from every generation draw attention to this concept they faced in both within the family and in the society, warn the seniors and refer to a totally different world. Among concepts which have been handled and practiced following violence fact are facts like sharing, companionship, self-confidence and respect to diversity. It is seen that much higher quality short films produced by the students who have formed their own language will produce will come out if necessary substructure is supplied in schools.

EVALUATION OF CONTEST

It should be stated that to which film and for what the championship award has been given from the perspective of both contest and values education: The short film called "Echo" that was directed by Arda Ayna from Konyaaltı Gazi Mustafa Kemal Primary School was deemed worthy to the championship award because he successfully applied technical properties of a short film while he tackled with, via a critical approach, the vanishing of the concepts such as love and respect finding their expression in Values Education and with that violence produces violence.

Just as in the primary schools category, the work called "Bail" directed by Burak Şahin from Kaş Gömbe Secondary School won an award also with the effect of excellence of the protagonist Mustafa Yasin Oran because it inquired, with a great technical mastery and a critical approach, the violence theme it handled; in addition, the wonderful performance of the actor was awarded in particular.

The short film called "Point of View" made by Gizem Deniz from ATSO Fine Arts High School became first because it revealed, with a unique style, the Self Confidence and Respect to Diversity themes and also he skillfully gave place to different narrative styles and techniques (animation).

As a general evaluation of this contest, the thing remaining in memories is that how images are formed in terms of which meaning is assigned to which value. It is very possible to be able to see as the biggest sign of that the cinematic frames largely accomplished the mission of such a contest by integrating with the moment when the eyes of the child, who bring love into the forefront for more livable world, twinkle.

RESULT

The aim of the Values Education Project tends to enhance the application of these values by individuals in their behaviors in daily lives. This education, which is given from the primary education to the high school, is of significant role in the internalization of moral values by new generations.

The positive effects of the artistic studies performed within the frame of this education are seen on behaviors of the students. The children growing up in information age both in technical and artistic and aesthetic context access to information easily within the diversity and affluence of the communication instruments and in the plurality of new knowledge resources in contemporary intellectual level. This process develops the sensitivity of freedom and objectivity, and this establishes the fundamental plane in artistic studies made by students.

Art work is an education area based on its own aims and also an effective tool of education that improves creativity of the student, gives him the opportunity for expressing himself and recognizing his environment. Art works help one develop the problem solving power and boost the competence in communication, cooperation, learning, investigation, healthy life and production.

It's a fact that especially children are affected more by violence, the increased social problems, the lack of respect to each other and intolerance. In many countries, the mother, father and educationalists have arrived at a consensus that this problem forming a danger can be solved with the values education. For solving this kind of social problems, in school values should be acquired to students through funny, affective and striking examples within each lesson.

The interaction of concepts of ethic and aesthetic is a known fact from the ancient Greek philosophers to the present. In this context, aesthetic studies have a major carrier quality in forming ethical values. Therefore the 1st Young Planes Short Film Contest was arranged in the scope of Antalya Values Education by Antalya City National Education Directorate in 2013, and the second in 2014 and the third in 2015.

With the contest, it was aimed the students' conveying their thoughts into a film in the context of the reflection of values such as giving importance to the family unity, the solidarity-helpfulness, sensitivity, honesty, tolerance, respect, love, responsibility, patriotism, being democratic and freedom.

These values were reflected successfully by students in the films made in the shape of individual narration and motion study. 152 films from 122 schools throughout Antalya attended the 3rd Young Planes Short Film Contest. In the films firstly violence and then values such as solidarity-helpfulness, sensitivity, honesty, tolerance, respect, love, responsibility, patriotism, being democratic and freedom were given place.

Among these films 19 films were deemed worthy to award in terms of their various attributions. The jury deemed 87 actor/actress students, 19 director students and 20 consultant students worthy to award. Giving that great numbers of awards in the contest has the aim of both evaluating efforts of students and also encouraging them and -likely- opening their first ways in tending to cinema art.

Footnote

(1). I served as jury in the first, second and third short film contests. So I got the data to be able to make comment and evaluation at first hand over aims and outcomes.

ÖZET

Bu araştırma, öğretmen adaylarının STK'lara ilişkin algılarını belirlemek üzere geçerli ve güvenilir bir ölçek geliştirmeyi amaçlamaktadır. Araştırma tarama modelinde yürütülen betimsel ve nicel bir çalışmadır. Araştırmanın çalışma grubunu, eğitim fakültesinde öğrenim gören 498 öğretmen adayı oluşturmaktadır. Oluşturulan taslak ölçeğin geçerlik analizi açımlayıcı faktör analizi ve madde-toplam korelasyonlarının; güvenilirlik analizi ise içtutarlılık ve kararlılık katsayılarının incelenmesi ile test edilmiştir. Araştırma sonunda Sivil Toplum Kuruluşu Algısı Ölçeği'nin (STKAÖ) iki faktör altında toplanmış 28 maddeden oluştuğu belirlenmiştir. Ölçeğin KMO değeri 0,938; Bartlett Testi değerleri $\chi^2=5974,723$; $sd=378$; $p<0,000$ 'dır. Ölçek kapsamına alınan maddeler, toplam varyansın %47,553'ünü açıklamaktadır. Ölçeğin her bir maddesi ile madde-faktör toplam puanlar arasındaki düzeltilmiş korelasyon değerleri pozitif ve anlamlıdır ($p<.001$). Cronbach Alpha güvenilirlik katsayısı olarak hesaplanan ölçeğin iç tutarlılık katsayısı 0,891'dir. STKAÖ'ndeki maddelerin yest-tekrar test yöntemi ile hesaplanana kararlılık katsayıları pozitif ve anlamlıdır ($p<.001$).

Anahtar Kelimeler: Sivil toplum kuruluşu, algı, ölçek, geçerlik ve güvenilirlik

THE VALIDITY AND RELIABILITY STUDY OF THE PERCEPTION OF CIVIL SOCIETY ORGANIZATIONS SCALE

ABSTRACT

This research aims to develop a valid and reliable scale to determine the perceptions of prospective teachers to Civil Society Organizations (CSOs). The study group is composed of 498 prospective teachers. Validity analysis of the scale includes explanatory factor analysis and item-total correlations; The reliability analysis was tested by examining the internal consistency and stability coefficients. At the end of the research, it was determined that the Perception of Civil Society Organizations Scale (PCSOS) was composed of 28 items, which were collected under two factors. The BMD of your scale is 0.938; Bartlett Test values $\chi^2= 5974,723$; $sd = 378$; $p <0.000$. The items covered by the scale explain 47,553% of the total variance. Corrected correlations between each item of the scale and item-factor total scores are positive and significant. The Cronbach Alpha reliability coefficient is 0.891. Stability coefficients calculated by test-retest method of the items in PCSOS are positive and significant.

Keywords: Civil society organization, perception, scale, validity, reliability

GİRİŞ

Sivillik, sivilleşme ve sivil toplum kuruluşu (STK) kavramları, özellikle demokrasi kültürünün tüm dünyaya yayılması ile birlikte demokratikleşme kavramına ve demokrasi kültürüne paralel olarak sıklıkla kullanılmaya başlamıştır (Gündüz ve Kaya, 2014; Tutar, Tutar ve Erkan, 2012; Karakuş, 2006; Balkaya, 2015; Jonaski, 1998; Young, 1999). STK kavramına ilişkin yapılan tanımlamalar (TDK, 2017; Gündüz ve Kaya, 2014) ve alanyazında STK'ların amaç, işlev ve kapsamına ilişkin yapılan açıklamalar incelendiğinde “vatandaşların ortak bakış, ortak çıkar, ortak duyarlılık, ortak talep vb. temelinde gönüllü olarak bir araya gelerek, devletin hukuki, idari, üretici ve kültürel organlarının dışındaki alanda meydana getirdikleri dernek vakıf, sendika, sivil girişim, platform, ilişki ağı

¹ Bu çalışma, Ahi Evran Üniversitesi Bilimsel Araştırma Projeleri (BAP) Birimi tarafından desteklenmiştir. (Proje No: EGT.A3.17.010).

gibi adlarla tanımlanan yapılara ve etkinliklere STK” olarak tanımlamak mümkündür (Gündüz ve Kaya, 2014; Karakuş, 2006:28).

STK’lar üzerine yazılmış eserler (Akşit, Serdar ve Tabakoğlu, 2003; Keyman, 2015; Young, 1999). medyada yer alan haberler ve yorumlar (URL-1; URL-2) özellikle son yıllarda gerek bölgesel ya da ulusal gerekse uluslararası bir çok konuda önemli etkileri bulunan kuruluşlar olarak rol aldıkları; sosyal, siyasal, ekonomik ve kültürel durumlara müdahale edebilen ve yön verebilen kuruluşlar oldukları konusunda bilim insanları, düşünür ve siyaset insanları arasında genel bir kabulün olduğunu göstermektedir (Gündüz ve Kaya, 2014; Aytekin, 2013; Karakuş, 2006; Tutar, Tutar ve Erkan, 2012; İğci, 2008).

Sivil kültürün göstergeleri olan medenilik, uygarlık, nezaket, çoğulculuk, demokrasi, esneklik, üretkenlik, şablonlardan ve önyargılardan uzaklık, özgür irade, yasallık gibi kavramlar, kendilerini STK’lar eliyle müşahhaslaştırır ve toplumun hizmetine sunarlar (Uluç, 2012; Cohen, Jean ve Arato, 1992; Erkan, 2012; Jonaski, 1998). Bu özelliklerin STK’lar aracılığıyla egemen olmasının toplumda siyasal, sosyal, kültürel ve ekonomik açılardan önemli katkılar sunması beklenebilir (Uluç, 2012; Aytekin, 2013).

Sivilleşmenin ve onun somut göstergeleri olan STK’ların toplumu oluşturan bireylerde önemli ve etkin bir konuma gelmesi, öncelikle bir kültürleme ve eğitim sorunudur. Eğitim kurumları olan okullarda bireylerin, sivil toplum kültürüne ve STK’lara ilişkin olumlu bir algının oluşması gerekmektedir. Bu algının bir taraftan STK’ları güçlendirircesini diğer taraftan da STK’ların toplumdaki gelişmelere öncülük etmesi ve hızlandırmasını beraberinde getirmesi beklenebilir.

Türkiye’de ve dünyada STK sayıları, ülke nüfusları ve STK’ların üye sayılarına ilişkin küçük çaplı da olsa bir tarama yapıldığında Türkiye’nin gelişmiş ülkelere göre çok gerilerde bulunduğu dikkati çekmektedir. Örneğin Türkiye’de 1990’lı yıllarda 26.000 civarında olan STK sayısının 2011 yılında 89.578’e yükselmiş; 2013 yılında 96.359’a ulaşmıştır. Dernekler Genel Müdürlüğü tarafından yapılan “uluslararası Sivil Toplum Araştırması Raporu”na göre 2013 yılı Türkiye’nin 75.627.384 olan nüfusuna oranlandığında 784 kişiye bir STK düştüğü belirlenmiştir (URL-1; URL-2).

Genel olarak STK sayısında sayısal bir artış gözlenmekle birlikte bu artışın, gelişmiş ülkelerle mukayese edildiğinde hem STK sayısı hem de üye sayısı ile STK başına düşen vatandaş sayısının çok gerilerde bulunduğu dikkati çekmektedir. Nitekim 2013 yılı itibarıyla STK sayısı 80.327.900 nüfuslu Almanya’da 580.298; 312.638.863 nüfuslu ABD’de 1.580.436; 56.075.912 nüfuslu İngiltere’de yalnızca hayır kurumu sayısı 163.163; 33.476.688 nüfuslu Kanada’da 165.000; 9.976.062 nüfuslu Macaristan’da 70.000 STK bulunduğu belirtilmektedir. Türkiye, nüfusa oranlandığında bu ülkelerin çok gerisinde kaldığı görülmektedir (İçişleri Bakanlığı Dernekler Dairesi Başkanlığı, 2013, s.138).

Bu veriler genel olarak değerlendirildiğinde gelişmiş ülkelere göre Türkiye’de gerek STK sayısı gerekse bu STK’larda üye olarak görev alan birey sayısının ülke nüfusuna oranı dikkate alındığında Türkiye’de STK’ların niceliği, niteliği ve üye sayıları açısından iyi bir görüntü vermediği açıkça görülmektedir. Bu durum demokratik ve sivil kültürün toplumsal tabana yayılması ve benimsenmesi durumu bir sorun olarak değerlendirilecekse Türkiye’de bu konuda açık ve belirgin bir sorunun bulunduğu söylenebilir.

Bu sorunun arkasında yatan ana etkenin ise Türk toplumunda sivil toplum kültürü ve STK’ların önemi ve gerekliliği ile ilgili algı sorununun yattığı söylenebilir. Bu sorunun nedenleri, dünyada uygulanan çözüm önerileri gibi sorunlar irdelenip giderilmediği sürece Türkiye’nin toplum ve ülke olarak sivilleşmesi ve demokratikleşmesi, dünyada ülkelerin gelişmesinde çok önemli ve etkin aktörler olarak rol alan STK’lardan bu doğrultuda Türkiye’de de yararlanmasının mümkün olmayacağı söylenebilir. Bu sorunun nedenlerinin teşhis edilmesi yönünde belki de ilk yapılması gereken, Türk toplumunun zihin ve gönül hafızasında STK’lara ilişkin nasıl bir algının olduğunu belirlemek olmalıdır. Bu çerçevede algının belirlenmesine dönük geçerli ve güvenilir bir ölçme aracının geliştirilmesi önem arz etmektedir. Bu araştırma, bu konuyu temel problem olarak almıştır.

Araştırmanın Amacı

Bu araştırma, geleceğin kültür yayıcısı olacak olan öğretmen adaylarının STK’lara ilişkin nasıl bir algılarının bulunduğunu belirlemek üzere bir ölçme aracı geliştirmek amacıyla yapılmıştır. Böylelikle, bu ölçek yardımıyla yapılacak tespitler doğrultusunda gerek farklı araştırmaların yapılmasına zemin hazırlamak, gerekse araştırma sonuçlarına göre alınabilecek tedbirlerin amaç ve içeriğinin belirlenmesi için veri temin etmek üzere geçerli ve güvenilir bir veri toplama aracı geliştirmek amaçlanmıştır.

YÖNTEM

Çalışma Grubu

Bu araştırmanın çalışma grubunu; 2016-2017 güz yarıyılında Ahi Evran Üniversitesi Eğitim Fakültesinin farklı bölümlerinde öğrenim gören 498 öğrenci oluşturmaktadır. Bu çalışma grubu üzerinde çalışılması, sivil kültürü topluma yayma açısından en büyük sorumluluğun öğretmenlere düştüğünün düşünülmesinden kaynaklanmıştır. Öğrencilerin bölümlerine ve cinsiyetlerine göre dağılımı Tablo 1’de özetlenmiştir.

Tablo 1. Çalışma grubunun bölüm ve cinsiyet değişkenine göre dağılımları

Bölümler	Erkek	Kız	Toplam
Sınıf Eğitimi (SE)	26	38	64
Okulöncesi Öğretmenliği (OÖÖ)	4	59	63
Sosyal Bilgiler Öğretmenliği (SBÖ)	28	36	64
Türkçe Öğretmenliği (TÖ)	16	45	63
Psikolojik Danışmanlık ve Rehberlik (PDR)	17	47	64
Bilgisayar ve Öğretim Teknolojileri Öğretmenliği (BÖTE)	24	30	55
Fen Bilgisi Öğretmenliği (FBÖ)	25	37	63
Matematik Öğretmenliği (MÖ)	17	44	61
Toplam*	157	336	493

* Öğrencilerin 157’si erkek, 336’sı kız, 5’i ise cinsiyetini belirtmemiştir. Toplam 498 öğrenci üzerinde çalışma yapılmıştır.

Ölçeğin Geliştirilme Süreci

Ölçeğin geliştirilmesi sürecinde ilk olarak alanyazın taraması ve öğrencilerle görüşmeler yapılmış ve sivil toplum kuruluşlarını nasıl algıladıkları ya da değerlendirdikleri ile ilgili madde listesi oluşturulmuştur. Oluşturulan liste; öğrencilerin sivil toplum kuruluşları hakkındaki algılarını ve değerlendirmelerini alacak ifade tarzına dönüştürülmüş ve karşlarına, “(0) Kesinlikle katılmıyorum”, “(1) Katılmıyorum”, “(2) Kısmen katılıyorum”, “(3) Katılıyorum” ve “(4) Kesinlikle katılıyorum” seçenekleri yerleştirilmiştir.

Taslak ölçek; iki dil uzmanına, iki eğitimbilim uzmanına içerik, ifade ve anlatım, imla ve noktalama hataları yönünden incelenmiştir. Gerekli düzeltmeler yapılarak 37 maddelik taslak ölçek oluşturulmuştur. Taslak ölçek çalışma grubuna uygulanmıştır. Toplanan veriler üzerinde SPSS 15.00 yardımıyla ölçeğin geçerlik ve güvenilirlik analizleri yapılmıştır.

Ölçekle toplanan veriler üzerinde geçerlik analizleri için (1) yapı geçerliği ve (2) madde ayırt edicilik gücü analizleri yapılmıştır. Yapı geçerliği için açımlayıcı faktör analizi tekniği kullanılmıştır. Madde ayırt ediciliği analizi için ise madde-toplam korelasyonu incelemesi yapılmıştır. Ölçeğin güvenilirlik düzeyi (1) iç tutarlılık ve (2) kararlık ölçüm testleri ile incelenmiştir.

Veriler üzerinde yapılan geçerlik ve güvenilirlik analizleri ile elde edilen bulgular aşağıda sunulmuştur.

BULGULAR

Ölçeğin Geçerliğine İlişkin Bulgular

Sivil Toplum Kuruluşu Algı Ölçeği’nin (STKAÖ)’nin geçerlik analizleri çerçevesinde yapı geçerliği için açımlayıcı faktör analizi ve madde ayırt ediciliği (madde-toplam korelasyonu) incelemeleri yapılmıştır.

1. Yapı geçerliği

Açımlayıcı faktör analizine ilişkin bulgular

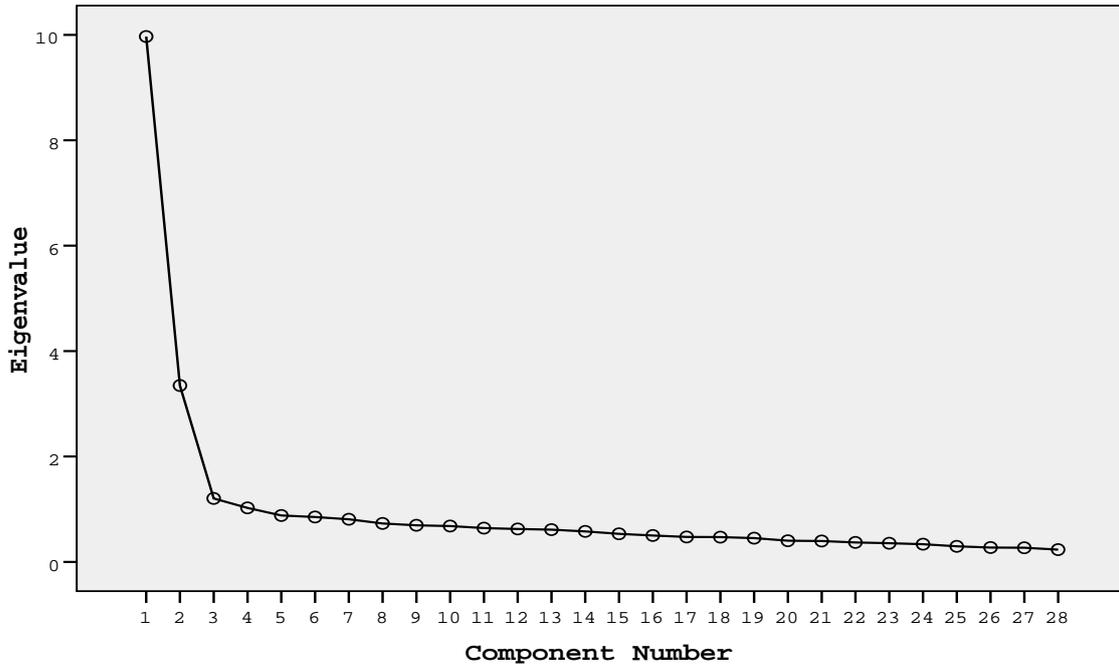

Ölçeğin yapı geçerliğini test etmek üzere yapılan KMO ve Bartlett test analizleri sonunda KMO= 0,936; Bartlett testi değeri ise $\chi^2=6626,998$; $sd=561$ ($p=0,000$) olarak belirlenmiş; 37 maddelik ölçek üzerinde faktör analizi yapılmasına karar verilmiştir (Büyüköztürk, 2012). Faktörleştirme tekniği olarak “Temel Bileşenler Analizi” ve “Varimax Dik Döndürme Tekniği” uygulanmıştır. Faktör yükleri 0,30’un altında olan ya da farklı faktörlerdeki yükleri arasında 0,100’den az olan 9 madde ölçekten atılarak analizler yinelenmiştir (Büyüköztürk, 2012; Eroğlu, 2008).

Ölçekte kalan toplam 28 madde, iki faktör altında toplanmıştır. 28 maddelik ölçeğin KMO değeri 0,938; Bartlett Testi değerleri $\chi^2=5974,723$; $sd=378$; $p<0,000$ ’dır. Ölçekte kalan maddelerin faktör yükleri 0,492 ile 0,764 arasında değişmektedir. Ölçek kapsamına alınan maddeler, toplam varyansın %47,553’ünü açıklamaktadır.

Davranış bilimleri açısından açıklanan varyans miktarının %40 olması yeterlidir (Büyüköztürk, 2012; Eroğlu, 2008).

Daha sonra, faktörlerdeki maddelerin içerikleri incelenerek faktör adları verilmiştir. “Olumlu Yargı” adının verildiği faktör altında 21 madde, “Olumsuz Yargı” adının verildiği faktör altında 7 madde toplanmıştır. Bu durum, özdeğerlere göre çizilen Şekil 1’de görülmektedir.

Scree Plot

Şekil 1. Sivil Toplum Kuruluşu Algısı Ölçeği özdeğer faktör grafiği

Ölçekte kalan toplam 28 maddenin faktörlere göre yükleri ile faktörlerin özdeğerleri ve varyansı açıklama miktarlarına ilişkin bulgular Tablo 1’de sunulmuştur.

Tablo 1. Ölçeğin faktör analizi sonuçları

Faktör	Maddeler	F1	F2
Olumlu Yargı Faktörü	Yapmış oldukları faaliyetlerle toplumsal gelişmede önemli rol oynayan kuruluşlardır.	,736	,004
	Katılımcı uygulamaların yapıldığı gönüllü kuruluşlardır.	,730	-,105
	Ortak amaçları olan insanları bir araya getiren kuruluşlardır.	,725	-,046
	Birey ve toplumun demokratikleşmesine önemli katkılar sunan kuruluşlardır.	,725	-,051
	Yapmış oldukları etkinlik ve faaliyetleriyle, ilgili oldukları konularda toplumu bilinçlendiren kuruluşlardır.	,723	-,087
	Toplumu farklı yönlerden eğitmek ve bilinçlendirmek için var olan kuruluşlardır.	,722	-,051
	Toplumsal uzlaşmaya ve sosyal bütünleşmeye katkıda bulunan kuruluşlardır.	,715	-,036
	Dayanışmayı artırmaya yarayan kuruluşlardır.	,704	-,116
	Kişilerin, kendi düşüncelerini duyurmak ve savunmak için bir araya geldikleri kuruluşlardır.	,693	-,009
	Toplum içindeki grupların ekonomik ve sosyal hayata katılımını sağlayan kuruluşlardır.	,693	-,092
	Toplumdan aldığı güçle topluma hizmet eden kuruluşlardır.	,683	-,012
	Toplumda yaşanan sorunlara çözümler üretmek için gayret sarf eden kuruluşlardır.	,679	-,104
	Siyasal ve sosyal etkileşim için fırsatlar oluşturan kuruluşlardır.	,672	,020
	İnsanları yalnızlıktan kurtaran ve toplumsal dayanışmayı sağlayan kuruluşlardır.	,671	,009

	Devletin ulaşamadığı noktalara ulaşip topluma yarar sağlayan kuruluşlardır.	,665	,123
	İnsan kaynağından daha etkin yararlanabilmeyi sağlayan kuruluşlardır	,655	,105
	Varoluş nedeni ve görev tanımları net ve herkes tarafından bilinen şeffaf kuruluşlardır.	,654	,097
	Demokrasiyi güçlendiren ve demokrasi temelinde yükselen kuruluşlardır.	,638	,057
	Gönüllülük esasıyla hareket eden kuruluşlardır.	,593	-,119
	İhtiyaç sahiplerine ekonomik ve sosyal destek vermek amacıyla oluşturulan kuruluşlardır.	,572	,189
	Devlet ile vatandaş arasında aracılık yapan kuruluşlardır.	,567	,217
Genel Varyansa Katkı Miktarı: %35,590		Özdeğeri: 9,965	
Olumsuz Yargı	Siyasal iktidarı ele geçirerek toplumun diğer kesimleri üzerinde egemenlik sağlamayı amaçlayan kuruluşlardır.	-,032	,764
	Grup ve sınıfların güç gösterisi yapmak üzere çatışma zemini olarak gördükleri kuruluşlardır.	,038	,744
	Var olan bir otoritenin, partinin, cemaatin veya görüşün gölgesinde türeyen kuruluşlardır.	-,047	,735
	İnsanların masum duygularının sömürüldüğü ve istismar edildiği kuruluşlardır.	-,264	,702
	Ekonomik kaynakların kontrolsüz ve düzensiz harcandığı kuruluşlardır.	-,234	,645
	Devletten ayrı hareket edebilen, gerekirse muhalefet edebilen kuruluşlardır.	,214	,570
	Kamuoyu oluşturarak devlet politikalarını etkileyen ve denetleyen kuruluşlardır.	,146	,492
	Varyansa Katkı Miktarı: %11,963	Özdeğeri: 3,350	

Tablo 1’de görüldüğü gibi ölçeğin Olumlu Yargı Faktörü yükleri 0,567 ile 0,736 arasında olan 21 maddeyi içermektedir. Faktörün öz değeri 9,965; genel varyansa katkısı ise %35,590’dır. Olumsuz Yargı Faktörü ise yükleri 0,492 ile 0,764 olan 7 maddeyi içermektedir. Faktörün öz değeri 3,350; genel varyansa katkısı ise %11,963’dür.

2. Madde ayırt ediciliği

Klasik Test Kuramı’na (KTK) göre korelasyon katsayısı şeklinde hesaplanan ayırtedicilik değeri (r değeri), -1 ile 1 arasında değer almaktadır. Düşük r değerine sahip soruların incelenmesi ve gerekli ise testten çıkarılması gerekmektedir (Crocker ve Algina, 1986). KTK parametrelerine yapılan en önemli eleştiri, seçilen örneklemde kolaylıkla etkilenmeleridir (Hambleton ve Jones, 1993). Bu sebeple bu çalışmada KTK’na bağlı parametre değerleri yerine, faktörlerin içerik olarak olumlu ve olumsuz önermelerden oluşması nedeniyle Düzeltilmiş Madde-Faktör Toplam Korelasyon değerleri (DeVellis, 2003; Pallant, 2007) hesaplanmış ve Tablo 3’de sunulmuştur:

Tablo 3. Madde-faktör puanları düzeltilmiş korelasyon analizi sonuçları

Olumlu Yargı		Olumsuz Yargı	
M. No	r	M. No	r
1	,732(**)	12	,679(**)
2	,723(**)	13	,673(**)
3	,724(**)	14	,674(**)
4	,712(**)	15	,664(**)
5	,715(**)	16	,650(**)
6	,713(**)	17	,650(**)
7	,712(**)	18	,640(**)
8	,703(**)	19	,599(**)
9	,684(**)	20	,588(**)
10	,683(**)	21	,579(**)
11	,673(**)		

N=448-498; **= $p < 0,01$

Tablo 3’te görüldüğü gibi maddelerin düzeltilmiş madde-faktör korelasyon katsayıları Olumlu Yargı Faktörü için 0,579 ile 0,732; Olumsuz Yargı Faktörü için ise 0,517 ile 0,745 arasında değerler almıştır. Düzeltilmiş korelasyon katsayılarının 0,20’den yüksek olması bir maddenin, ölçeğin genel amacına anlamlı düzeyde hizmet edebildiği anlamına gelmektedir (Pallant, 2007). Faktörlerin içerikleri itibarıyla olumlu ve olumsuz önermelerden oluşması nedeniyle madde-faktör toplam korelasyon katsayıları hesaplanmış; böylelikle her bir maddenin, içinde yer aldığı faktörün amacına ne düzeyde hizmet ettiği belirlenmeye çalışılmıştır. Buna göre her bir maddenin, içinde yer

aldığı faktörün; böylelikle de ölçeğin genel amacına anlamlı düzeyde hizmet ettiği söylenebilir.

Ölçeğin ölçüt geçerliliği

Ölçeğin ölçüt geçerliliğini saptamak amacıyla, ilgili alanyazın taraması yapılmış; içerik ve amaç yönüyle benzer bir ölçek bulunamadığından benzer ölçekler geçerliliği hesaplanamamıştır.

Ölçeğin Güvenirliğine İlişkin Bulgular

Ölçeğin güvenirliliğini hesaplamak üzere veriler üzerinde iç tutarlılık ve kararlılık analizleri yapılmıştır.

1. İç tutarlılık düzeyi

Toplam 28 madde ve 2 faktörden oluşan ölçeğin güvenirlilik analizi Cronbach alpha katsayısı formülü kullanılarak yapılmıştır. Faktörlere ve ölçeğin geneline ilişkin güvenirlilik değerleri Tablo 4’te özetlenmiştir:

Faktörler	Madde Sayısı	Cronbach alpha
Olumlu Yargı	21	0,940
Olumsuz Yargı	7	0,796
STKAÖ	28	0,891

Tablo 4’te görüldüğü üzere Cronbach alpha güvenirlilik katsayıları Olumlu Yargı Faktörü için 0,940; Olumsuz Yargı Faktörü için 0,796; ATKAÖ’nin geneli için ise 0,891 olarak belirlenmiştir. Buna göre, ölçeğin güvenilir (tutarlı) ölçümler yapabildiği söylenebilir (Büyüköztürk, 2012; Balcı, 2009).

2. Kararlı ölçüm yapabilme özelliği

Ölçeğin kararlılık düzeyi, test tekrar test yöntemi uygulanarak hesaplanmıştır. Bilindiği üzere güvenilir bir ölçme aracının, kararlı ölçümler yapabilmesi gerekmektedir (Balcı, 2009). Ölçeğin 28 maddelik formu, 160 öğrenciye beş hafta sonra tekrar uygulanmıştır. İki uygulamada elde edilen puanların ilişkisi incelenmiştir. Bulgular Tablo 5’de özetlenmiştir.

Olumlu Yargı		Olumsuz Yargı	
M. No	r	M. No	r
1	0,525(**)	12	0,444(**)
2	0,570(**)	13	0,625(**)
3	0,549(**)	14	0,640(**)
4	0,650(**)	15	0,578(**)
5	0,663(**)	16	0,612(**)
6	0,592(**)	17	0,522(**)
7	0,721(**)	18	0,615(**)
8	0,575(**)	19	0,575(**)
9	0,480(**)	20	0,635(**)
10	0,575(**)	21	0,522(**)
11	0,615(**)		
		22	0,484(**)
		23	0,575(**)
		24	0,395(**)
		25	0,420(**)
		26	0,523(**)
		27	0,422(**)
		28	0,420(**)

N: 137; **= $p < 0,01$

Tablo 5’de ölçekteki maddelerin test-tekrar test korelasyon katsayılarının Olumlu Yargı Faktörü için 0,444 ile 0,721; Olumsuz Yargı Faktörü için ise 0,420 ile 0,575 arasında değiştiği ve her bir ilişkinin anlamlı ve pozitif olduğu görülmektedir ($p < 0,01$). Buna göre ölçeğin kararlı ölçümler yapabildiği söylenebilir (Büyüköztürk, 2012; Balcı, 2009).

SONUÇ VE TARTIŞMA

Bu çalışmada, eğitim fakültesinin farklı bölümlerinde öğrenim gören öğrencilerin (öğretmen adaylarının) STK’lara ilişkin algılarını belirlemede kullanılabilecek bir ölçek geliştirmek amaçlanmıştır. “Sivil Toplum Kuruluşu Algısı Ölçeği (STKAÖ)” adı verilen ölçek, beş basamaklı likert tipi bir ölçek olup iki faktör altında toplanabilen 28 maddeden oluşmaktadır.

Faktörlerde yer alan maddelerin her biri; verilen önermeye katılma/kabul etme düzeyini yansıtan “(0) Kesinlikle katılmıyorum, (1) Katılmıyorum, (2) Kısmen katılıyorum, (3) Katılıyorum, (4) Tamamen katılıyorum” şeklinde

derecelenmiştir. İlgili maddelerin içerdiği önermeye katılma düzeyleri, algılarının niteliğini belirlediği anlamına geleceği varsayılmıştır. Faktörlerdeki madde sayısının farklı olması nedeniyle, standart puana dönüştürebilmek, ölçekten/faktörden elde edilen ham puanları, aşağıdaki formülden yararlanarak en düşüğü 20 ve en yükseği 100 puan olacak şekilde yapılandırılmak ve anlamlandırmak mümkündür:

$$X_{\text{standart.puan}} = \frac{X_{\text{faktörhampuan}}}{\text{Fak. Mad. Say.}} \times 20$$

Her Bir Faktör İçin Puan Aralığı (100 Üzerinden)	Anlamı (Olumlu ya da Olumsuz)	Aritmetik Ortalama Aralığı
20-35	Çok Düşük	0,00 – 0,80
36-51	Düşük	0,81 – 1,60
52-67	Orta	1,61 – 2,40
68-83	Yüksek	2,41 – 3,20
84-100	Çok Yüksek	3,21 – 4,00

Ölçeğin geçerliği; (1) açımlayıcı faktör analizi ve (2) ayırt edicilik analizi amacıyla madde toplam korelasyonunun hesaplanması yoluyla test edilmiştir.

Açımlayıcı faktör analizi sonuçlarına göre STKAÖ toplam 28 madde ve iki faktörden oluşmaktadır. Faktörlerden; Olumlu Yargı Faktörü 21 madde, Olumsuz Yargı Faktörü ise 7 maddeyi içermektedir. Olumlu Yargı Faktörü STK'lara ilişkin olumlu önermeleri, Olumsuz Yargı Faktörü ise olumsuz önermeleri içermektedir. Faktörlerdeki maddelerin faktör yükleri, özdeğerleri ve varyansı açıklama oranları, ölçeğin yapı geçerliğine sahip olduğunu göstermiştir Büyüköztürk, 2012; Eroğlu, 2008).

Ölçekte yer alan maddelerin her birinin, ölçülmeye çalışılan özellikleri ne düzeyde ölçebildiğini belirlemek üzere veriler üzerinde madde-toplam puanları düzeltilmiş korelasyon katsayıları hesaplanmıştır. Ancak faktörlerin biri olumlu diğeri ise olumsuz önermeleri içermesi nedeniyle her bir maddenin amaca ne düzeyde hizmet ettiğini belirlemek üzere madde-faktör puanları hesaplanmıştır. Ölçeğin her bir maddesi ile faktör toplam puanlar arasındaki düzeltilmiş korelasyon değerleri Olumlu Yargı Faktöründeki maddeler için 0,579 ile 0,732; Olumsuz Yargı Faktörü için ise 0,517 ile 0,745 arasında değişmektedir. Her bir ilişki, pozitif ve anlamlı düzeydedir ($p < ,001$). Buna göre ölçekte yer alan her bir maddenin, içinde yer aldığı faktör ile ölçülmek istenen özelliği ölçebilme amacına anlamlı düzeyde hizmet ettiği ve her bir maddenin istenilen düzeyde ayırt edici olduğu söylenebilir (Pallant, 2007; Balci, 2009).

Ölçeğin ölçüt geçerliliğini saptamak amacıyla, ilgili alanyazın taraması yapılmış; içerik ve amaç yönüyle benzer bir ölçek bulunamadığından benzer ölçekler geçerliliği hesaplanamamıştır.

Cronbach Alpha güvenilirlik katsayısı olarak hesaplanan ölçeğin faktörlere göre iç tutarlılık düzeyleri Olumlu Yargı Faktörü için 0,940; Olumsuz Yargı Faktörü için 0,796; STKAÖ'nin geneli için ise 0,891'dir. Cronbach alpha iç tutarlılık katsayısının 0,70 ve yukarı olması, güvenilirlik için yeterli kabul edilmektedir (Büyüköztürk, 2012; Gorsuch, 1983). Bu değerler çerçevesinde hem her bir faktörün hem de ölçeğin genelinin güvenilir ölçümler yapabildiği söylenebilir.

STKAÖ'ndeki maddelerin kararlı ölçüm yapabilme özellikleri test-tekrar test yöntemi ile hesaplanmıştır. Maddelerin kararlılık katsayıları 0,420 ile 0,721 arasında değerler almıştır. Bu ilişkilerin tamamı pozitif ve $p < 0,001$ düzeyinde anlamlıdır. Buna göre, ölçekte yer alan her bir madde, zamana göre değişmezlik yönüyle kararlı ölçümler yapabilmektedir (Gorsuch, 1983; Büyüköztürk, 2012).

Sonuç olarak STKAÖ'nin, bireylerin sivil toplum kuruluşlarına ilişkin algılarının belirlenmesinde kullanılabilecek geçerli ve güvenilir bir ölçek olduğu söylenebilir. Diğer taraftan bu ölçeğin, ortaöğretim ve yükseköğretim kurumlarının farklı bölümleri ile farklı meslek gruplarında yönetici ve çalışan olarak görev yapan kişilerin sivil toplum kuruluşlarına ilişkin algılarının belirlenmesi için de kullanılması önerilebilir. Bununla birlikte, farklı kesimler üzerinde uygulanması durumunda ölçeğin geçerlik ve güvenilirlik analizlerinin tekrar yapılmasının yararlı olacağı belirtilmelidir.

ABSTRACT

The rapid advances in communications and information technologies have been altering the old traditional structures and habits in a radical way. One of the leading structures within this transformation process is the media and its political practices. Media as a factor influencing politics and/or political orientations has been a dominant subject of debate within media studies. The formats of political action by political actors has been going through a transformation on both formal and informal contexts in accordance with contemporary conditions. In addition to communicating political messages with traditional methods, techniques and tools, social media's new possibilities are being used effectively. Taking into consideration the widespread use of social media by politicians around the world, this study aims to evaluate Instagram as a new information dissemination and dialogue environment by examining the official Instagram accounts of the four political parties represented in the Grand National Assembly of Turkey. Our examination period is the last month before the April 16, 2017 Constitution Referendum, since in pre-electoral periods the political messages on behalf of all involved parties are being increased.

GİRİŞ

Kitle iletişim araçları ve geleneksel medya, halkı belirli bir biçimde etkilemek isteyen toplumdaki farklı unsurlar tarafından her zaman kullanılmıģ bir güç aracı olarak varlığını devam ettirmektedir. Bununla birlikte, politikacılar ve siyasi partiler, mesajlarını halkın bilişsel, duyuşsal ve davranışsal sistemlerine yönlendirebilmek ve onları etkileyebilmek amacıyla yeni ve alışılmıģın dışındaki yöntemlere her zaman ihtiyaç duymaktadırlar. Günümüzde internet ve sosyal medya ise böylesi bir ihtiyacın karşılanmasındaki en önemli araçlar haline gelmiştir.

Teknolojinin gelişimiyle artan iletişim olanakları, dünyanın her yerinde olduğu gibi Türkiye’de de siyasal iletişimin uygulanma biçimini bir hayli değiştirdi. Facebook, Twitter, Instagram, Youtube gibi sosyal medya uygulamaları sunduğu yeni olanak ve yöntemler sayesinde siyasal iletişim uygulamalarının modernizasyonunu sağladı (Carpenter, 2010). Dünyanın heryerindeki politikacılar yeni nesil iletişim teknolojilerinin sunduğu olanaklardan yararlanarak yeni kampanya stratejileri geliştirmekte, yeni fon kaynakları oluşturmakta ve seçmenlerine ilişkin yeni bilgi toplama yöntemlerini kullanmaktadır. Bu yöntemlerin hemen hemen tamamı dijital iletişimin, web 2.0’ın ve mobil teknolojilerin birer sonucu olarak karşımıza çıkmaktadır. Yeni iletişim teknolojilerinin yarattığı imkanları kullanarak ortaya çıkan bu yeni tarz siyaset yapma olgusu 2008 yılında ABD’de yapılan Başkanlık seçimlerinde oldukça belirginleşmiştir. Demokrat Parti adayı Barack Obama’nın sosyal ağları diğer geleneksel yöntemlerden çok daha fazla ve efektif biçimde kullanması seçimleri kazanmasında etkili olmuştur. Obama’nın bu başarısından sonra diğer dünya liderleri de bu alana ağırlık vererek siyasal kampanyalarını bu mecraaya yönlendirmişlerdir. Fakat öte yandan, yeni iletişim teknolojilerinin siyasal iletişimde kullanım pratikleri demokratik ve katılımcı toplum umutlarını arttırırken diğer yandan da birtakım toplumsal kaygıları tetiklemektedir.

Son günlerin popüler sosyal medya uygulaması Instagram ise artan kullanıcı sayısı nedeniyle online siyasal kampanyalar için yeni bir mecra olma özelliği taşımaktadır. Bu çalışma, dünyanın dört bir yanındaki siyasetçiler tarafından sosyal medyanın yaygın bir şekilde kullanılmasını göz önüne alarak, Türkiye Büyük Millet Meclisi'nde (TBMM) temsil edilen ve resmi Instagram hesabına sahip olan üç siyasi partinin hesaplarını inceleyerek Instagram'ı yeni bir bilgi yayma ve diyalog ortamı olarak değerlendirmeyi amaçlamaktadır. Çalışma, seçim öncesi dönemlerde siyasal mesajların artması nedeniyle, 16 Nisan 2017 Anayasa Referandumu'ndan önceki son bir aylık dönemde TBMM'de temsil edilen Adalet ve Kalkınma Partisi (AK Parti), Milliyetçi Hareket Partisi (MHP) ve Halkların Demokratik Partisi (HDP)'nin resmi Instagram hesaplarını kapsamaktadır.

SIYASAL İLETİŞİM

Demokrasilerin en temel kriterlerinden bir tanesi, sistemi yürütecek olan ya da temsil ve idare edecek olan kişilerin, sistemin tartışmasız en temel unsuru olan yurttaşlar yani halk tarafından seçilmesidir. Temsilci adaylarının bu noktadaki geleneksel yöntemleri ise kendilerini seçecek olan kitleye kendilerini en doğru biçimde anlatmaları, tanıtmalarıdır. Genel oy hakkının kitlelere verilmesiyle birlikte başlamış olan bu tanıtım faaliyetleri, günümüzde "siyasal iletişim" süreci olarak adlandırılmaktadır. Siyasal iletişim bir aktarım süreci olarak iletilerin ve baskıların gözle görülebilir şekilde eşit olmayanlardan diğerlerine nakli şeklinde tanımlanabilmektedir (Tokgöz, 2008; Köker, 2007).

Siyasal İletişim kavramı, İletişim Sözlüğü'nde "Siyasal süreçlerle iletişim süreçleri arasındaki ilişkileri ele alan araştırmalardan oluşan, disiplinler arası bir akademik alan." (Mutlu, 1994) olarak tanımlanmaktadır. Siyasal iletişim, toplumun farklı kesimlerinin ve güç; iktidar odaklarının ortak bir zeminde uzlaştırılması olarak tanımlanan "siyaset" ve ortak simgeler oluşturma ve bunların üzerinde diyalektik bir anlaşmaya varma süreci olarak izah edilen "iletişim" kavramlarının birleşmesinden doğmaktadır (Oktay, 2002: 7). Bir başka tanımlamada Perloff kavramı, "kamu siyasetinin yürütülmesi ile ilgili olan mesajlar üzerine müzakere etme ve herhangi bir ülkenin lideri, basını ve vatandaşı değişimi tarafından oluşan süreç" şeklinde tanımlamıştır (Perloff, 1998).

Tanımlardan anlaşılacağı üzere, siyaset ilişkisinde öne çıkan iki aktör arasındaki ilişki, siyasal iletişim sürecinde de aynı biçimde devam etmektedir. Yöneten-yönetilen ilişkisinin ortaya çıktığı andan itibaren var olan siyaset, topluluk halinde yaşayan insanları yönetebilme çabasını içermektedir. Yöneten ve yönetilen arasındaki ilişkilerin düzenlenmesi, yönetsel gücün elde tutulma isteği ve süreçle, saraydan (bürokratik aristokrasi oyunlarından) halka;

kitleye; kalabalığa inen siyaset siyasal iletişimin çekirdeğini oluşturmaktadır (Yıldırım, 2012). Siyaset felsefesi ve iletişim biliminden esinlenen, felsefi disiplinden üreyen siyasal iletişim, siyasi fikirler ve teoriler ile politika biliminin başlıca konusunu ve temelini oluşturmaktadır. Bu bağlamda politika bilimi olan "politoloji" politik hareketler, güç (iktidar) edinilmesi ve kullanımı konusunu incelerken siyaset kavramını da kapsar şekilde siyasal sistemler, siyasal davranışlar ve siyasal teoriler alanında araştırma ve açıklamalar sunmaktadır (Kılıçaslan, 2008; Köker, 2007).

Siyaset ve iletişim kavramlarının birbirlerine sıkışıkya bağlı kavramlar olduğuna inanılmaktadır (Akay, 2012). Nasıl ki, iletişim olgu ve sürecinde etkili bir iletişimden söz etmek için tüm öğelerin (verici, alıcı, kanal, mesaj, geri dönüşüm) güçlü olarak çalışması gerekmektedir, iletişim şemsiyesinin disiplinler arası bir türü olan siyasal iletişim için de bu özelliklerin etkili kullanılmaları gerekmektedir (Dalkıran, 1995). Özellikle gelişmiş ülkelerde, siyasal yaşamın vazgeçilmez bir aracı haline gelmiş olan siyasal iletişim, ilk aşamada seçmenin algılayışını etkileyerek, kimi seçmesi, kimi seçmemesi gerektiğini ve yönetim sürecine nasıl katılabilecekleri gibi konularda seçmenlerde bir düşünce oluşmasına yardımcı olup, seçilen ile seçenin arasındaki iyi ilişkilerin artırılması mantığıyla çalışmaktadır. Bir adayın potansiyel seçmenlerine uygunluğunu ortaya koymak, adayı en yüksek sayıdaki seçmen kitesinin ve kitledeki her bir seçmenin tanınmasını sağlamak, rakiplerle ve muhalefetle farkını yaratmak ve minimum araçla, bir kampanyayı kazanarak gerekli olan oy sayısını elde etmek için kullanılan tekniklerin tümü de siyasal iletişim alanının faaliyetleri arasındadır. Siyasal kurumların ve bu kurumların ayakta durmasını sağlayan siyasal ilkelerinin bireyler tarafından kitlelere anlatılması birçok alanda olduğu gibi iletişim unsurlarının devreye sokulması ile mümkündür. İletişimin multi-disipliner yapısı, diğer disiplinlerle kolay organik bağlar kurması, siyaset bilimi ile olan ilişkisinde de aynı uyumluluğu sağlamıştır (Akay, 2012).

Siyasal İletişim çalışmalarının ilk başlangıcı olarak 1950 Amerikan Başkanlık Seçimleri gösterilebilir. Siyasal iletişim tekniklerinin profesyonel anlamda ilk kez kullanıldığı ABD başkanlık seçimlerinde, hemen hemen her kampanya döneminde farklı bir strateji uygulanmıştır. Eisenhower-Stevenson rekabetinde ilk kez televizyon reklamları, Kennedy-Nixon rekabetinde ilk canlı yayın tartışma programı, Carter-Reagan rekabetinde ilk negatif

siyasal reklam, Bush-Dukakis rekabetinde ilk büyük bütçeli reklam kampanyası, Clinton-Dole rekabetinde ilk Internet kullanımı, Barack Obama- John McCain rekabetinde ise ilk kez bir sosyal medya uygulaması siyasal iletişim kampanyası dahilinde kullanılmıştır (Doğan, 2002). Ülkemizdeki ilk siyasal iletişim çalışmalarına ise Türkiye Cumhuriyeti'nin kurucusu Mustafa Kemal Atatürk'ün önderlik ettiği söylenebilir. Ancak, gerek okuma-yazma oranının çok düşük oluşu, gerekse de radyo kullanımının çok sınırlı oluşundan dolayı, siyasal iletişim stratejisi daha çok 'doğrudan anlatım' tabanında gerçekleşmiştir. Uzunca bir süre devam eden tek partili dönem bir yana bırakıldığında 1950 genel seçimlerine iki partinin katılmasıyla halka vaatlerin anlatılma zorunluluğu ortaya çıkmış ve siyasal iletişim, partiler arası bir siyasal rekabette ilk kez kullanılmıştır (Çakan, 2004). Türkiye'de siyasal iletişim uygulamaları açısından 1980'lerde yeni bir döneme girildiği gözlemlenmektedir. Bu tarihe kadar siyasal kampanyalar doğrudan veya dolaylı olarak siyasetçiler tarafından yönlendirilirken bu aşamadan sonra reklam ajansları, kamuoyu araştırma şirketleri gibi siyasal iletişim aktörleri alana dahil olmuş ve siyasal iletişim sürecinin çehresi değişmiştir. Ne var ki geleneksel medya araçları özellikle 2. Dünya Savaşı'ndan günümüze kadar alandaki en önemli araçlar olarak önemini korumuştur. Fakat 20. yy sonları ve 21. yy başlarından itibaren bilgi ve iletişim teknolojilerinde meydana gelen hızlı gelişim ve dönüşüm neticesinde, geleneksel medyayı bitirmese bile onun tahtını sallayacak ve ona çok kuvvetli bir rakip olacak şekilde internet teknolojileri ve sosyal medya devri başlamıştır.

SOSYAL MEDYA VE SİYASAL İLETİŞİM

Medyanın demokratik rejimler için önemi tartışılmazdır. Temel görevlerinden yola çıkarak medyayı, kamuoyu ile iktidar arasında köprü vazifesini gören olgu olarak görebiliriz. Medyanın siyasal iletişim içindeki etkinliği, düşüncelerin ve kanaatlerin kamuoyunda uyandırılması ve harekete geçirilmesi bağlamında hiç de azımsanmayacak ölçüdedir. Medyanın kamuoyuna sunduğu haber ve bilgi bireylerin siyasal davranışlarına etki etmekte ve önemli katkılar sağlamaktadır. Bu etki aynı zamanda siyasal katılmayı da teşvik edebilecek nitelikte olmakta ve böylece siyasal katılma oranını yükseltmektedir (Akay, 2012). Siyasal partiler ve liderler siyasette başarı elde etmek için özellikle siyasal iletişim kampanyalarında medyadan ve medyanın gücünden yararlanmak isterler. Seçmenler özellikle siyasal bağlamda medyanın etkisi altında kalarak, karar verme ve oy verme sürecine aktif olarak katılım göstermektedirler. Medya etkisi altında kalan seçmen tercihi, kimi zaman değişime uğrarken kimi zaman da mevcut halini pekiştirerek devam ettirebilmektedir. Bu nedenle partiler ve liderler seçmeni ikna etmek için özellikle medyanın gücünden yararlanma yoluna gitmektedirler.

Fakat geleneksel medya doğası gereği bir takım zaafllara sahiptir. Geleneksel medya, tek yönlü iletişim sağlar yani insanlara sadece haberi iletir. Kişilerin ise haberlere cevap vermeleri ya da reaksiyon göstermeleri ve bu medya araçlarından edindikleri bilginin doğruluğunu veya güvenilirliğini kontrol etmeleri zordur. Aynı zamanda, bu bilginin manipüle edilmesi ya da bilgiye erişimin engellenmesi hükümetler ve çeşitli otoriteler için kolay bir iştir. Bu durumun aksine, güvenilir ve doğru kaynaklardan bilgi edinme ihtiyacı ve talebi bireyler arasında her geçen gün daha da artmaktadır. Öte yandan, siyasal figürler açısından da geleneksel medya bir takım zaafllara sahiptir. Geleneksel medyanın sınırlı yayım dilimlerinde kendilerine yer bulmak, düşüncelerini ya da kampanyalarını aracısız kitlelere ulaştırabilmek, seçmen kitlesiyle çift yönlü iletişim kurmak bir hayli zordur. Sosyal medya ise diğer birçok alanda olduğu gibi siyasi alanda önemli bir rol oynamaktadır. Bu yeni ortam siyasi partiler ve siyasetçiler tarafından insanları siyasi katılıma yönlendirmek için günümüzde sıklıkla kullanılmaktadır.

Literatürde en çok atıf alan tanımlamalardan biri olan Boyd ve Ellison'nun tanımına göre sosyal medya; "kullanıcıların tamamen veya kısmen açık birer profil oluşturup, ilişkide oldukları insanlar listesi hazırladıkları, sergiledikleri, paylaştıkları ve diğer kullanıcıların profil ve ilişkilerini gözlemleyebildikleri sanal ortamlar"dır (Boyd & Ellison, 2004; 211). Kaplan ve Haenlein ise farklı bir pencereden yaklaşarak sosyal medyayı "kullanıcı tarafından oluşturulan, içerik üretimine ve paylaşımına olanak veren, web 2.0'in ideolojik ve teknolojik temelleri üzerine inşa edilmiş internet tabanlı uygulamalar grubu" biçiminde tanımlamışlardır (Kaplan & Haenlein, 2010; 61). Her iki tanımlamada da benzeşen ve farklılaşan noktalar olsa da tanımlamaların temelini ağ üzerinde çalışan, web 2.0 altyapısına dayalı, etkileşimli uygulamalar oluşturmaktadır.

Sosyal ağların ve sosyal medyanın ortaya çıkışı ve popülaritesi ile binlerce kişinin tek bir bireymiş gibi birbirleriyle iletişim sağlamaları kolaylaşmıştır (Owen & Humphrey, 2010:3). Bunun yanı sıra sosyal paylaşım siteleri yaş, din, politik görüş, hobiler ve ilgi alanları gibi kriterleri göz önüne alarak sınıflandırma ve etiketleme yapabilmektedirler. Bu sınıflandırma ve etiketleme ile gruplar arasında nasıl etkileşimlerin meydana geldiği araştırılabilmektedir (Maranto & Barton, 2010: 36). Dolayısıyla, her ne kadar, farklı sosyal medya

uygulamalarının, hedef kitlesi, kullanım amacı, kullanım biçimi ya da yer aldığı platform farklılık gösterse de temel yapısı genellikle aynı mantık üzerine kurulmaktadır.

Coleman ve Bulumler'e göre (Coleman & Bulumler, 2009) tüm dünyada son yıllarda gözlenen vatandaşların siyaset kurumuna azalan ilgisi ve katılımına, politikacılara olan güvensizliğe bir çözüm olarak siyasetçilerin sosyal medya araçlarını sıklıkla yöneldikleri gözlemlenmektedir. Bunun en temel sebeplerinden birisi ortamın etkileşimli, aracısız ve çift yönlü mimari yapısıdır. Gerek yurttaşlar gerekse siyasetçiler giderek artan biçimde geleneksel medyanın kalın çizgilerinden sıyrılarak bu yeni ortamı siyasal yaşamın bir parçası olarak kabul etmektedir. Bu ortamlara katılım, özellikle seçimler gibi siyasi faaliyetlerin arttığı zamanlarda, doğrudan siyasi bir amaçla kamuoyuyla iletişim kurmak için, büyük bir artış göstermektedir (Burgess & Bruns, 2012). Siyasiler için sosyal medya platformları etkileşimli iletişim kurulabilmesi, siyasetçinin kısa sürede daha geniş kitleye hitap edebilmesi ve onların tepkisini daha rahat ölçebilmesi nedeniyle güçlü bir politik araç haline gelmiştir. Vatandaşlar için ise sosyal medya araçları, görüşlerini daha rahat ifade edebildikleri diğer kişilerin yazılarını veya siyasetçilerin paylaşımlarını yorumlayabildikleri ve cevaplayabildikleri katılımcı ve çok sesli alanlardır.

Carpenter'a göre (Carpenter, 2010) sosyal medya, geleneksel medyaya göre politik iletişimde daha tarafsız bir ortam sunmaktadır. Geleneksel medya araçlarına kolaylıkla sansür uygulanabiliyor olması, bu araçların taraflı yayın yapmak zorunda kalması sorununu ortaya çıkarmaktadır. Öte yandan siyasilerin sosyal medyaya olan ilgisinin bir diğer nedenini de genç kullanıcıların yoğunluğu oluşturmaktadır. Dahlgren'in araştırmasına göre (Dahlgren, 2009), toplam sosyal medya kullanıcılarının %66'sını oy kullanma hakkını elde etmiş 18-25 yaş arası gençler oluşturmaktadır. Dahlgren bu rakamın siyasetçiler açısından ciddi bir oy potansiyeli olarak algılandığını ve sosyal medyaya karşı şüpheyi yaklaşan siyasileri bile ikna ettiğini vurgulamaktadır.

2000'li yıllardan itibaren özellikle web 2.0 teknolojisine geçilmesiyle birlikte siyasiler tarafından keşfedilen sosyal ağ dünyası, 2008'deki ABD Başkanlık seçimleri ile doruk noktasına ulaşarak bu alanda bir kırılmaya neden olmuştur. Demokrat Parti adayı Obama'nın sosyal ağları seçim kampanyası boyunca rakibi McCain'den çok daha etkin kullandığı, özellikle Twitter üzerinden kampanyasını yöneterek rakibinin iddalarına karşı anlık twitler atarak cevaplar vermesi kullanılan siyasal iletişim stratejisi açısından önemli noktalar (Kellner, 2011). Borins ise 2008 seçimlerinin takipçi ve bağış miktarlarını incelediği araştırmasında hem Facebook arkadaş sayısında, hem Youtube izlenme sayısında hem de web sitelerinin tekil ziyaretçi sayısında Obama'nın, rakibi McCain'in 4 katından fazla bir sayıya ulaştığını tespit etmiştir. Yine aynı şekilde McCain 201 milyon dolar bağış toplarken, Obama'nın offline bağışları 156 milyon dolar civarındadır (Borins, 2011). Obama'nın ekibi online da 500 milyon dolar bağış toplamışlardır. Borins'e göre iki aday arasında fark yaratan unsur Obama'nın etkin biçimde kullanırken McCain'in hiç kullanmadığı sosyal medyadır.

Bir Siyasal İletişim Aracı Olarak Instagram

Instagram, 2010 yılının son çeyreğinde Kevin Systrom ve Mike Krieger tarafından kurulan ve eskinin Polaroid'i ile dijitalin etkilerini bir araya getiren fotoğraf ve video paylaşımının hızlı ve popüler bir aracı olarak ortaya çıkmış mobil bir uygulamadır. İlk yıllarda sadece IOS üzerinden ücretsiz olarak kullanılmaya başlanan Instagram, 2012 yılında Android işletim sistemine sahip akıllı telefonlarda da kullanılmaya başlanmıştır. Instagram'da fotoğraf çekip, onlara filtre uygulanmasının yanı sıra, çekilen fotoğrafların diğer sosyal ağlarda paylaşılması da mümkündür. İlk çıktığı yıllarda kullanıcılara sadece fotoğraf çekme ve paylaşma imkanı sunan Instagram, daha sonra özellikleri arasına video çekimini de eklemiştir. Oldukça ilgi çeken bu yenilik ciddi bir talep görmüş ve sadece 24 saatte 5 milyon video Instagram'a yüklenmiştir (Çetinkaya, Cılızoğlu, 2016, s. 169). Açıldığı Ekim 2010 tarihinden bu yana günlük ortalama 70 milyon fotoğraf, 300 milyon aktif kullanıcı ve toplamda paylaşılmış 30 milyar fotoğraf ile benzer uygulamalar arasında lider konumdadır (Instagram 2016). 2012 Nisan ayında 1 Milyar Dolar'a Facebook tarafından satın alınan Instagram'ın Brandwatch verilerine göre 400 Milyon kullanıcısı bulunmaktadır. Kullanıcılarının %60'ı günde en az bir kez Instagram uygulamasını ziyaret ederken, toplam internet kullanıcılarının %30'unun da Instagram hesabı olduğu belirtilmektedir (Brandwatch Instagram Stats 2016).

Salomon'a göre Instagram, diğer sosyal ağlara kıyasla daha genç ve çeşitli bir hedef kitleye hitap etmektedir. Bunun yanı sıra Instagram'ın genç kitleler tarafından yoğun olarak tercih ediliyor olması, son dönemde uygulama üzerinden farklı faaliyetlerin gerçekleştirilmesine de aracılık etmektedir (Salomon, 2013, s.408). Instagram'da daha fazla insana ulaşmanın en etkin yolu yolu "hashtag" kullanmaktır. Popüler hashtag'ler her zaman ilgi çekmektedir. #love, #instagood, #tweegram, #photooftheday vs gibi hashtag'lar yoluyla görselinizi etiketleyebilir ve ilgilenen insanların ekranına düşmesi sağlanabilmektedir (Çetinkaya, Cılızoğlu, 2016, s. 170).

Bu çalışmanın konusunu oluşturan Instagram da kendi doğasına, kullanım hedefine ve algoritmasına yönelik bir takım farklılıklar taşısa da tanımlamalardaki sosyal medya platformlarının genel özellikleriyle uyumludur. Instagram'ın en temel özelliği hem fotoğraf hem video hem de yazılı içeriğe izin veren yondeşik mimari yapısıdır. Bu sayede her türlü görsel içeriğin rahatça üretildiği ve iletilebildiği bir ortam özelliğindedir. Instagram'ın bir siyasal iletişim aracı olarak farkedilmesi Twitter ve Facebook'a göre biraz daha fazla zaman almıştır. Bu anlamda mecrayı fark edip kullananlar ise yine Obama ve ekibidir. Zamanın başkanı Obama ve Maliye Bakanı Mitt Romney ilk Instagram hesabı açan siyasilerdir. Romney'in dijital medya danışmanı Zac Moffat bu platformda olmalarını "birileri başka yöne bakarken biz halkın baktığı yerde olmak istedik." şeklinde özetlemektedir. Moffat'a göre Instagram konuşmanın farklı bir dilidir ve siyasal mesajların görsel öğelerle birleştirilerek iletmesi yazılı metinlere göre çok daha hızlıdır (Andersen, 2012). Benzer biçimde iletişim stratejisti William Johnson da biraz ironik de olsa Instagram'ın tam da siyaset için uygun platform olduğu görüşünde. Ona göre, (Johnson, 2015) "Siyaset düşünce işi. Oysa instagramda duygular var ve siyasiler insanların düşünmesinden çok duygularıyla hareket etmelerini isterler. Instagram duyguları tetiklemek için ideal bir alan."

Bugün ulusal ve uluslararası siyasal arenada birçok liderin Instagram hesabı sahibi olduğu görülmektedir. Bu mecrayı etkin biçimde kullanan siyasal liderler arasında Donald Trump, Angela Merkel, Recep Tayyip Erdoğan, Justin Trudeau, Emmanuel Macron, Xi Jinping sayılabilir. Türkiye'de ise Cumhurbaşkanı Erdoğan dışında Kemal Kılıçdaroğlu, Devlet Bahçeli, Selahattin Demirtaş ve temsil ettikleri siyasal partilerin ayrı ayrı Instagram hesapları bulunmaktadır.

Resim 1: Siyasal Liderlerin Instagram Hesap Örnekleri

TÜRK SİYASİ PARTİLERİNİN NİSAN 2017 REFERANDUM SÜRECİNDE INSTAGRAM KULLANIMI ÜZERİNE BİR ARAŞTIRMA

Araştırmanın Amacı

Siyasal iletişimin geniş anlamı ile en çok kullanıldığı yer, siyasal partilerdir. Siyasal partilerin yapısında yer alan çeşitli birimlerde görev alan, siyasal kimliği olan herkes, farklı düzeylerde olmak üzere birer "siyasal aktör"dür. Siyasal partiler, siyasal bir amaçla, halkı yönetmek üzere ortaya çıkan örgütlü gruplardır. Dolayısıyla, siyasal partilerin yaptıkları tüm faaliyetlerde, kurdukları tüm ilişkilerde siyasal çıkar aranır. Bundan ötürü siyasal partilerin yapacakları her türlü iletişim, siyasal iletişimin en geniş anlamı ile de olsa siyasal iletişim tanımı içerisinde yerini alır. Siyasal partilerin halka yönelik yaptıkları her türlü faaliyet siyasal iletişim içeriklidir. Seçim sırasında yapılan iletişim ise siyasal niteliği itibarıyla en üst noktaya çıkmaktadır (Akay, 2012). Bu haliyle siyasal partiler siyasal iletişimin tüm strateji ve fonksiyonlarıyla kullanıldığı alanlar olarak göze çarpmaktadır. Instagram ise mevcut kullanıcı sayısı ile en çok tercih edilen sosyal medya uygulamaları arasında en üst sıralardadır. 2017 ilk çeyrek rakamlarına göre 700 M. aktif kullanıcıya sahip olan Instagram bu haliyle 313 M.'lük Twitter'ı geride bırakmıştır. Günde 200 M. kullanıcının hikayelerini paylaştığı Instagram aynı zamanda tüm internet kullanıcılarının %20'sini oluşturmaktadır (Instagram Stats, 2017). Türkiye'de ise Instagram 12.242.850 kişi ve toplam internet kullanıcıları arasındaki %34'lük payı ile önemli bir sosyal ağ konumundadır.

Altı yıllık bir sürede bu denli büyüme sağlayan Instagram sadece bireylerin değil markaların, işletmelerin ve aynı zamanda siyasal iletişim çalışmalarının da dikkatini çekmektedir.

Bu bilgiler ışığında çalışmanın amacı seçmen kitlelerine en hızlı ve doğru kanaldan ulaşmak isteyen, mesajlarını paylaşmak isteyen ve seçmenlerini dinlemek isteyen siyasal partilerin Instagramı nasıl ve hangi şekilde kullandıklarını tespit ederek alan literatürüne katkı sağlamaktır. Daha öncesinde, içinde yer aldığı kitle iletişim mecralarının özellikleriyle şekillenen geleneksel uygulamanın bu mecrada evrildiği biçime dair betimleyici bir kavramsallaştırma çabasıdır. Diğer bir deyişle; çalışma kapsamında Instagram'da yapılan siyasal iletişime dair faaliyetlerin geleneksel mecralardan farklı noktaları ortaya konulacak ve ürün yerleştirmenin bu platform çerçevesinde bir tanımı yapılacaktır. Bu bilgiler ışığında bu çalışma şu temel araştırma soruları üzerine yapılmıştır:

- Siyasi partilerin Instagram'daki siyasal iletişim çalışmalarının görsel unsurları nelerdir?
- Siyasi partilerin Instagram'daki siyasal iletişim çalışmalarının metinsel unsurları nelerdir?
- Siyasi partilerin Instagram'daki siyasal iletişim çalışmalarında verdikleri içerikler Nisan 2017 Referandum mesajlarıyla uyumlu mudur?

Araştırmanın Yöntemi

Araştırmanın amacına uygun olarak elde edilen verinin incelenmesinde nicel araştırma yöntemlerinden biri olan içerik analizi kullanılmıştır. İçerik analizi, araştırma evrenini oluşturan metin yığınından seçilen ve bütünü temsil etme niteliğine sahip bir örneklemin incelenmesi ve içeriğin önceden belirlenen değişkenlerden oluşan bir kategori sistemine göre sınıflandırılması olarak ifade edilebilir (Wimmer & Dominick, 2007). Hâlihazırdaki çalışmada içerik analizi yönteminin seçilmesinin sebebi ise Instagram'ın bir sosyal ağ olarak kullanıcılarına görsel ve metinsel bir retorik yaratma imkânı sunması ve bu retorik üzerinden bir hikâye anlatıcısı görevi üstlenmesidir. Instagram'da paylaşılan içerik görsel ve metinsel olmak üzere iki temel bileşenden oluşmaktadır. Görsel bileşen ile kastedilen fotoğraf ve fotoğrafın içinde yer alan interaktivite unsurları (tag, lokasyon, vb.), metinsel bileşen ise fotoğrafın altında yer alan metin ve interaktivite unsurlarıdır (mention, hashtag, vb.). Bu çerçevede; analiz birimi, siyasi partilerin her bir Instagram paylaşımını oluşturan görsel ve metinsel bütün olarak belirlenmiştir.

Çalışma, seçim öncesi dönemlerde siyasal mesajların artması nedeniyle 16 Nisan 2017'de gerçekleştirilen Anayasa Referandumu öncesi son bir aylık dönemi kapsamaktadır. Çalışmada TBMM'de temsil edilen ve resmi Instagram hesabı bulunan üç siyasi partinin Instagram hesapları araştırmanın evrenini oluşturmaktadır. Bu partiler Adalet ve Kalkınma Partisi- Ak Parti (@akparti), Milliyetçi Hareket Partisi – MHP (@milliyetcihareketpartisi) ve Halkların Demokratik Partisi – HDP (@hdpgenelmerkezi)'dir. Bu hesapların tümü Instagram tarafından verilen “gerçek hesap” (Verified Account) etiketine sahiptir. TBMM'deki bir diğer parti olan Cumhuriyet Halk Partisi'nin resmi Instagram hesabı bulunmadığı için çalışmaya dahil edilmemiştir. Çalışma kapsamında 16 Mart 2017-16 Nisan 2017 tarihleri arasında, evrende yer alan 3 siyasi partinin paylaştığı toplam 313 Instagram paylaşımı incelenmiş, kodlanmış ve içerik analizine tabi tutulmuştur.

Bulgular

Çalışmaya konu olan 3 siyasi partinin genel hesap bilgilerine bakıldığında Instagram platformunu ilk keşfeden ve hesap açan partinin MHP olduğu görülmektedir. MHP, Nisan 2013'te Instagram hesabını açarken HDP 2014'te Ak Parti ise 2016 yılında, rakiplerinden çok sonra platforma girmiştir. En geç platforma giren parti Ak Parti olmasına rağmen en fazla takipçiye de Ak Parti sahiptir. Ak Parti'nin toplam 344 Bin takipçisi olduğu görülmektedir. Fakat takip ettiği hesap sayısı en az olan parti de Ak Parti'dir. Ak Parti sadece 2 hesabı takip etmektedir. Bunlar Cumhurbaşkanı Recep Tayyip Erdoğan (@rterdogan) ve Başbakan Binali Yıldırım'a (@tc_basbakan) ait resmi hesaplardır. HDP ise 286 Bin'lik takipçi kitlesi yanında en fazla kişiyi de takip eden hesap konumundadır. HDP 15 farklı hesabı takip etmektedir. Bunlar arasında parti liderleri, milletvekilleri, Özgürlük ve Demokrasi Partisi ve Yunanistan (@syriaofficial) ile Güney Kıbrıs Rum Kesimi'nden (@akel1926) birer siyasi parti bulunmaktadır. HDP ve AK Parti Resmi web sitelerinden Instagram hesaplarına bağlantı verirken, MHP buna gerek duymamıştır. Hesapların iletişim bilgilerini içeren (bio) bölümünde ise HDP sadece web sayfasına bağlantı paylaşırken, AK Parti hem web hem de parti genel merkezinin adresini, MHP ise genel merkez telefon numarası ile web adresini paylaşmıştır. Tabloda bir diğer dikkat çekici detay ise çalışmaya konu olan 16 Mart 2017 ile 16 Nisan 2017 tarihleri arasındaki paylaşımların yoğunluğu ve genel toplama oranıdır.

Platforma en geç giren AK Parti toplam 405 paylaşımın 98'ini bu dönemde gerçekleştirmiştir. Paylaşımın toplama oranı ise %24.1'dir. MHP'de bu oran %5.7 iken HDP'de ise %10.2'dir (Bkz Tablo 1).

	Hesap Açılma Tarihi	Web Sitesinde Instagram Bağlantısı	İletişim Bilgisi	Toplam Takipçi	Toplam Takip Edilen	Toplam Gönderi	15 Nisan Arası Gönderi Sayısı	Mart-15 Gönderi	Toplam Gön./İlgili Dön. %
Ak Parti	2016 Temmuz	√	web adres	344.000	2	405	98		24,1
MHP	2013 Nisan	X	web + tel.	281.000	4	1421	81		5,7
HDP	2014 Şubat	√	web	286.000	15	1304	134		10,2

Tablo 1: Siyasi Partilerin Genel Instagram Performansları

Instagram görsel temelli bir uygulama olması nedeniyle görselliğin tüm unsurlarına imkan verecek içerikler kullanılabilir. Program aynı zamanda kullanıcıya video ve fotoğraflar üzerinde belirli şablon filtreler yardımıyla oynama/değiştirme imkanı da sunmaktadır. Platforma sadece fotoğraf yüklenebildiği gibi, daha önce çekilmiş videolar da eklenebilmektedir. Tüm bu fonksiyonlara rağmen MHP'nin %97,6'lık gibi büyük bir oranla sadece fotoğraf kullandığı ve toplamda sadece 2 adet işitsel video paylaştığı tespit edilmiştir. Benzer biçimde HDP'de %61,2'lik bir oranla fotoğrafa yönelirken, %24,7'lik oranla işitsel video kullanmıştır. Bu alandaki en dikkat çekici parti AK Parti'dir. AK Parti sadece 5 adet sessiz video kullanırken diğer tüm fonksiyonlardan eşit oranda yararlanma yoluna gitmiş, platformun tüm çeşitliliğini içeriklerine yansıtmıştır. Parti 31 adet fotoğraf kullanırken, 30 adet işitsel görsel içerik ve 32 tane de işitsel video paylaşmıştır (Bkz. Tablo 2).

	Ak Parti		MHP		HDP	
	f	%	f	%	f	%
Görsel / Fotoğraf	31	31,6	79	97,6	82	61,2
İşitsel + Görsel	30	30,6			16	11,9
Video (Sessiz)	5	5,2			3	2,2
İşitsel + Video	32	32,6	2	2,4	33	24,7
Toplam	98	100	81	100	134	100

Tablo 2: Siyasi Partilerin İçerik Kullanma Biçimi

Görsel / Fotoğraf öğelerinin kullanımına bakıldığında AK Parti ve MHP'de lider odaklı içeriklerin sıklıkla kullanıldığı görülürken HDP'nin %39'luk oranla Halk/Destekçi/Seçmen içeriklerine yer verdiği %34,3'lük oranla da her iki eş başkanının görselini kullandığı tespit edilmiştir. Dikkati çeken bir başka nokta Instagram'da çalışmaya konu olan hiçbir partinin Instagram'a özel görsel/fotoğraf içeriği hazırlamamış olmasıdır. Kullanılan tüm içerikler başka mecralar için üretilmiş içeriklerdir (Bkz. Tablo 3). Öte yandan İçerikten bağımsız olarak hiçbir görselde Instagram fonksiyonu olan filtre de kullanılmamıştır.

	Görsel / Fotoğraf					
	Ak Parti		MHP		HDP	
	f	%	f	%	f	%
Miting Görüntüsü / Meydan Konuşması	7	22,5	19	24	21	25,6
Instagram İçin Özel Hazırlanmış İçerik						
Parti Gazete İlanı/Reklamı	2	6,4	3	3,7		
Fotoğraf Kolajı			1	1,5		
Etkinlik Daveti / Duyuru	2	6,4			1	1,2
Lider (ler) Odaklı Fotoğraf	12	39	38	48,1	28	34,3
Etkinlik/Açılış Fotoğrafı	5	16,1	8	10,1		

Halk/Seçmen/Destekçi Fotoğrafi	3	9,6	10	12,6	32	39
Toplam	31	100	79	100	82	100

Tablo 3: Siyasi Partilerin Görsel / Fotoğraf Paylaşımlarının İçerik Analizi

Siyasi partilerin video (sessiz) paylaşımlarının içeriklerine bakıldığında AK Parti'nin toplam 5 görüntüsü bulunduğu saptanmıştır. HDP ise kullandığı 3 sessiz görüntüyü de parti liderlerine ayırmıştır. MHP ise bu kategoride hiçbir içerik kullanmamıştır. (Bkz. Tablo 4).

	Video (Sessiz)					
	Ak Parti		MHP		HDP	
	f	%	f	%	f	%
Miting Görüntüsü / Meydan Konuşması	3	60				
Instagram İçin Özel Hazırlanmış İçerik						
Parti Gazete İlanı/Reklamı						
Etkinlik Daveti / Duyuru	1	20				
Lider (ler) Odaklı Hareketli Görüntü					3	100
Etkinlik/Açılış Fotoğrafi	1	20				
Halk/Seçmen/Destekçi Görüntüsü						
Toplam	5	100			3	100

Tablo 4: Siyasi Partilerin Video (Sessiz) Paylaşımlarının İçerik Analizi

Partilerin İşitsel + Görüntü kategorisinde MHP'nin yine hiçbir içerik kullanmaması dikkat çekicidir. AK Parti ise 30 içerik üretmiştir. Bu içeriklerin 12 tanesi halk/seçmen/destekçi görüntülerinden oluşmaktadır. Bu alandaki diğer bir yoğunluk ise 9 adet ile lider odaklı görüntülerde gerçekleşmektedir. HDP ise toplam 16 içerik kullanmış, bunların neredeyse yarısını liderlerine ayırmıştır (Bkz Tablo 5).

	İşitsel + Görsel					
	Ak Parti		MHP		HDP	
	f	%	f	%	f	%
Miting Görüntüsü / Meydan Konuşması	6	20			1	6,25
Instagram İçin Özel Hazırlanmış İçerik						
Parti Gazete İlanı/Reklamı						
Etkinlik Daveti / Duyuru						
Lider (ler) Odaklı Hareketli Görüntü	9	30			8	50
Etkinlik/Açılış Fotoğrafi	3	10				
Halk/Seçmen/Destekçi Görüntüsü	12	40			7	43,75
Toplam	30	100			16	100

Tablo 5: Siyasi Partilerin İşitsel + Görsel Paylaşımlarının İçerik Analizi

Siyasi partilerin işitsel + video kategorisine bakıldığında MHP'nin sadece 2 içerik ürettiği ve bunların da parti liderinin grup konuşmalarından oluştuğu gözlenmiştir. AK Parti ise bir aylık süre içinde bu alanda toplam 32 içerik üretmiştir. Bu içeriklerin %43'lük büyük bir bölümü partinin TV reklamlarından oluşmaktadır. İçeriklerdeki bir diğer yoğunluk ise %21 ile miting meydanlarına aittir. HDP ise aynı süre zarfında 33 içerik üretmiştir ve bu içeriklerin %36'sını parti liderinin meclis grup konuşması oluştururken %27'sini ise miting görüntüleri oluşturmaktadır. Bu kategoride de hiçbir siyasi parti Instagrama ve doğasına uygun içerik üretmemiştir (Bkz. Tablo 6).

	İşitsel + Video					
	Ak Parti		MHP		HDP	
	f	%	f	%	f	%
Miting Görüntüsü / Meydan Konuşması	7	21,8			9	27,2
Meclis Grup Konuşması	4	12,5	2	100	12	36,3

Instagram İçin Özel Hazırlanmış İçerik					
Etkinlik Daveti / Duyuru					
Lider (ler) Odaklı Video	5	15,6			
Etkinlik/Açılış Görüntüleri	2	6,25			
Halk/Seçmen/Destekçi Görüntüsü					
TV Reklamı	14	43,75	7	15,1	
Toplam	32	100	2	100	33

Tablo 6: Siyasi Partilerin İşitsel + Video Paylaşımlarının İçerik Analizi

İşitsel öğelerin kullanıldığı içeriklere bakıldığında MHP'nin sadece 2 videosunda parti liderinin konuşması göze çarpmaktadır. Bu alandaki en zayıf içerikler MHP'ye aittir. MHP içeriklerinin %90'nı fotoğraflardan oluşmaktadır. Diğer partilerin işitsel öğeler barındıran içeriklerinin dengeli dağıldığı söylenebilir. AK Parti %29 oranında referandum süreci için hazırlattığı "EVET" kampanyası müziklerini kullanırken, HDP'nin "HAYIR" kampanyası için hazırlattığı içerikleri işitsel kategoride kullanma oranı %16'dır. Buna karşın HDP'nin bu alandaki en yoğun işitsel kullanımı fondaki doğal ses kullanımınıdır. Dikkat çekici bir diğer unsur ise partilerin referandum süreci boyunca popüler yerli / yabancı müziklere içeriklerinde hiç yer vermemesidir (Bkz. Tablo 7).

	İşitsel içerikler					
	Ak Parti		MHP		HDP	
	f	%	f	%	f	%
Resmi Parti Müziği	10	16,1				
Popüler Yerli Müzik						
Popüler Yabancı Müzik						
Seçmen/Destekçi Konuşması/Sesi	12	19,3			13	20,4
DSF (Doğal Ses Fonda)	9	14,5			17	34,6
Referandum İçin Hazırlanan Müzik/Şarkı	18	29			8	16,3
Parti Lideri Konuşması/Sesi	13	20,9	2	100	11	22,4
Toplam	62	100	2	100	49	100

Tablo 7: Siyasi Partilerin İşitsel Öğeler İçeren Paylaşımlarının Analizi

Siyasi partilerin 16 Nisan 2016 Anayasa Referandumu'na ilişkin yürüttükleri Evet / Hayır kampanyaları çerçevesinde ürettikleri içerikler kategorisinde sınıflandırmaya ilgili tarih aralığı içinde paylaşılan tüm içerikler dahil edilmiştir. Paylaşılan içeriğin herhangi bir yerinde, görsel ya da işitsel olarak, kampanyanın ana teması olan evet veya hayır ifadelerinden biri aranmıştır. Buna göre AK Parti 16 Mart – 16 Nisan 2017 tarihleri arasında paylaştığı toplam 98 içeriğin % 83,6'sında evet sloganını işitsel veya görsel olarak kullanmıştır. Evet kampanyasına destek verdiğini açıklayan MHP'de bu oran %62,9 iken, hayır kampanyası yürüten HDP'de ise bu oran %76,1 olarak gerçekleşmiştir. Bu verilerden hareketle referandum süreci boyunca Instagram'ı kampanyanın bir unsuru olarak en etkin biçimde kullanan partinin AK Parti olduğunu söylemek mümkündür (Bkz. Tablo 8).

	EVET / HAYIR Temalı Görsel + İşitsel İçerikler					
	Ak Parti		MHP		HDP	
	f	%	f	%	f	%
HAYIR					102	76,1
EVET	82	83,6	51	62,9		
Toplam	98	100	81	100	134	100

Tablo 8: Siyasi Partilerin EVET / HAYIR Temalı Görsel/İşitsel İçerik Paylaşımlarının Analizi

Instagram'ın belirgin özelliklerinden biri olan hashtagler ise AK Parti ve HDP tarafından oldukça sık kullanılmıştır. AK Parti içeriklerinin %79,9'unda hashtag kullanırken HDP ise %84,6'sında hashtag kullanma yoluna gitmiştir. AK Parti'nin hashtagleri içeriğin temasına göre değişiklik gösterirken en sık kullandığı

hashtagler #evet, #TümkalbimleEVET, #rterdogan, #binaliyıldırım, #akparti, #tabiikiEVET şeklinde gerçekleşmiştir. HDP ise yine içerik temasına göre farklı hashtag kullanma yoluna gitmiş ve sıklıkla kullandığı hastagler #demirtas, #baydemir, #HAYIR, #hayıroyukullanacağım, #mutlakakazanacağız, #hayırlıgunler ifadelerinden oluşmaktadır. MHP ise en az hashtag kullanan parti görünümündedir. MHP, toplam 81 paylaşımın sadece 6 tanesinde hastag kullanmıştır. Bunlar, #erzurum, #kayseri, #elazığevetdiyor ve #evet ifadelerinden oluşmaktadır.

SONUÇ

Siyasi partilerin Instagram’da gerçekleştirdiği siyasal iletişim çalışmalarına bakıldığında geleneksel siyasal iletişim çalışmaları ile pek çok noktada benzer görsel karakteristiğe sahip olduğu görülmektedir. Partiler geleneksel mecralarda siyasal iletişim çalışmalarını hangi temeller üzerinde yürütüyorsa bir sosyal ağ sitesi olan Instagram’da da benzer karakteristiğe sahip çalışmalar sergilemektedir. Oysa Instagram ağ yapısı ve fonksiyonları gereği birçok farklı yenilik imkanı tanımaktadır. Fakat mevcut durum itibarıyla, bir sosyal ağ sitesi olan Instagram üzerinde en fazla görünürlüğe sahip partinin AK parti olduğu tespit edilmiştir.

Öte yandan, çalışmada siyasi partilerin internet, web 2.0 ve sosyal medyanın temel bileşenlerinden olan etkileşim üzerine hiçbir çalışma yapmadıkları gözlenmiştir. Hiçbir siyasi partinin toplam 313 Instagram mesajının hiçbirinde takipçilerinden gelen mentionları yanıtlamadıkları tespit edilmiştir. Mention üzerinden etkileşim geleneksel medyanın sahip olmadığı bir imkandır ve takipçiler ya da potansiyel seçmeler için parti ile yakın iletişim kurmanın önemli bir bileşenidir. Mecra farketmeksizin etkili bir siyasal iletişim kampanyasının en önemli koşullarından birisi potansiyel seçmenlerle diyalog kurmaktır. Oysa, çift yönlü iletişime izin veren bir uygulama olan Instagram’ın çoğunlukla tek yönlü olarak, gelişmiş bir “duyuru panosu” olarak kullanıldığından söz etmek mümkündür.

Etkileşim ile ilintili bir diğer kavram da iletişim sürecinin çift yönlü akmasını sağlayan takip etme ve edilme sistemidir. Geleneksel mecralar doğrusal ve tek yönlü iletişim sunarlar. Sözü olanın konuştuğu ve diğerlerinin pasif dinleyicilerden oluştuğu bu düzen, geleneksel siyasetin de en büyük sorunlarından biridir. Oysa günümüzde hemen hemen bütün siyasi partilerin mesajları seçmeni dinleyecekleri vaadi üzerine kurulmaktadır. Sosyal ağlar ise seçmenin dinlenebileceği etkileşimli alanlardan biridir. Araştırma verilerine göre, yüzbinlerce takipçi olan üç siyasi partinin takip ettiği kişi sayısı toplamı sadece 21’dir.

Çalışmada dikkat çeken bir diğer unsur siyasi partilerin Instagram’ın özellik ve fonksiyonlarına uygun içerik üretmedikleridir. Sosyal mecralar kendi doğaları gereğince kullanıldıklarında daha etkili olabilen araçlardır. Özellikle siyasi partilerin yayınladıkları hareketli görüntüler ya TV için çekilmiş, çoğu kötü (uzak, bulanık, odağı belirsiz) görüntüye sahip videolardan ya da amatör cep telefonu çekimlerinden oluşmaktadır. Hiçbir partinin video paylaşımlarında profesyonel prodüksiyon ekiplerinden yararlanmadığı tespit edilmiştir. Bu tarz hesaplardan beklenen özellikle o platform için çekilmiş özel görüntülerin servis edilmesidir. Sosyal ağlarda dikkati çeken önemli konulardan biri de hashtag kullanımınıdır. Hashtagler hem paylaşılan görüntünün ilgili daha fazla kişiye ulaşmasına hem de konuya ilgi duyan kişilerin rahatlıkla içeriğe ulaşmasına yardımcı olan etiketlerdir. Elde edilen verilere göre 3 siyasi partinin toplam hashtag kullanma oranı %57’dir. Kullanılan hashtaglerin ise gönderi içeriğiyle uyumsuzluğu dikkat çekicidir. Bir çok paylaşımında içeriği tasvir etmekten ziyade kampanya sloganının tekrar edilmesi yoluna gidildiği tespit edilmiştir.

Sonuç olarak Nisan 2017 Anayasa Referandum’u özelinde siyasi partilerin Instagram hesaplarını, mecranın özellikleri ve olanaklarına uygun bir şekilde başarılı ve etkili bir şekilde kullandıklarını söylemek zordur. Özellikle, partilerin yurttaşlarla etkileşime girmemesi, tek yönlü bir duyuru panosu gibi ortamı kullanmaları önemli bir saptamadır. Bu da sosyal medya ve yurttaş katılımı konusundaki olanakların ve potansiyellerin siyasi partiler tarafından göz ardı edilmesi anlamına gelmektedir.

ABSTRACT

In the past decade or so, Twitter has been integrated in the classroom practice, in line with the rise of social networking sites and their popularity with students. Many studies conducted on the use of Twitter in the classroom have verified its beneficial effects in improving learners' motivation, engagement and learning. This small-scale study, which adopted a mixed-method approach, reports students' perceptions on the use of Twitter in two different literature in English subjects – one considered as a skill-based subject whereas one is a content-based subject. Data gathered through analyses of students' tweets and a survey questionnaire administered found that 1) students were more active Tweeting in the content-based subject and that 2) students were less comfortable sharing their thoughts and ideas in Twitter in the skill-based subject. These findings imply that the nature of a course has an impact on the students' willingness and perceptions of the use of Twitter. Suggestions are forwarded for future applications of Twitter in the literature classroom.

INTRODUCTION

Since its introduction to the Malaysian digital market in 2006, Twitter has experienced substantial growth, with more than 3.5 million users sending out about 5.4 million tweets per day (Sakawee, 2014). This is not surprising considering Malaysia is a digitally active nation, with 21.5 million people out of its 31.5 population registered as internet users (Malaysian Digital Association, 2016, p. 2). EY Asia Pacific (2016) reported that 91% of internet users have smartphones, 72% use laptops and notebooks and 60% use personal and desktop computers (p. 5). Besides seeking information (90.1%), 80% of internet users participate in social networks on a daily basis (Malaysia Communication and Multimedia Commission, 2016, p. 8), with 52% of those currently using social media are using Twitter (EY Asia Pacific, 2016, p. 28). As of 2016, Twitter is the 6th most popular social networking site in Malaysia (Malaysia Communication and Multimedia Commission, 2016, p. 33).

In the past decade or so, Twitter has been integrated in the classroom practice worldwide, in line with the rise of social networking sites as well as their popularity with tertiary students, who are generally known as "Gen Y" (aged 18 to 34 years old). Research on the use of Twitter in education has also increased. Tang and Hew (2017, p. 101) reported six ways in which Twitter is used in education: 1) capture and representation 2) communication 3) collaboration 4) class organization 5) reflection and 6) assessment. The contexts for using Twitter in higher education are broad and diverse; it is used across many subject disciplines like language, history, economics and accounting, but not literature (Tang & Hew, 2017, p. 100). Its proven benefits include enhancing learning/academic outcomes (Lackovic, Learnly, Lowe & Lowe, 2017; Lowe & Laffey, 2011); increasing student engagement (Evans, 2014; Feliz, Ricoy & Feliz, 2013; Park, 2013; Junco, Heiberger & Loken, 2010) and promoting communication/interaction (Chawinga, 2016; Elavsky, Mislán & Elavsky, 2011; Rinaldo, Tapp & Laveries, 2011). However, barriers and challenges such as students' skepticism on its use as a learning tool (Lackovic, Learnly, Lowe & Lowe, 2017; Lowe & Laffey, 2011); students' reservation about mixing academic and social spheres (Lackovic, Learnly, Lowe & Lowe, 2017; Osgerby & Rush, 2015); and technological limitations (Lackovic, Learnly, Lowe & Lowe, 2017; Chawinga, 2016) have also been reported. These studies reveal that Twitter as a learning support tool in the classroom has varied success rates and students' perceptions and attitudes toward Twitter showed mixed results.

Research on Twitter's use in tertiary education in Malaysia however, is scant even though education-related Twitter accounts such as Malaysia Edu Hub, My Mentor Study and Teach for Malaysia are plenty. One research on Twitter reported a low level of Twitter usage at a community college (Hamidon et. al., 2013).

In view of these findings, and considering 34.3% of internet users are in the tertiary sector (Malaysia Communication and Multimedia Commission, 2016, p. 19) and Gen Y are the most digitally active in Malaysia, spending 15 hours per day on digital devices (EY Asia Pacific, 2016, p. 20), more studies are needed to investigate the potential of Twitter as a learning tool in Malaysian higher education, particularly in the literature classroom.

THE STUDY

The research conducted was primarily a classroom action research, with the aim to improve teaching practice. Two research questions guided this study: 1) How did students in two different literature in English courses use Twitter? 2) How did students in these two courses perceive Twitter as an educational tool?

This study employed a mixed-method approach. Data collection involved: 1) analyses of students' tweets 2) survey questionnaires (administered to the students at the beginning and end of research), 3) interviews with the students. To identify how students use Twitter in their respective courses, a qualitative content analysis was carried out, which involved a close reading of the students' tweets by two raters who then coded and grouped the tweets into different categories. To determine students' perceptions on the use of Twitter as part of their course work, a structured, Likert-scale questionnaire was used.

This study was implemented over a period of twenty-eight weeks (in two different semesters), involving two literature (in English) courses at Universiti Putra Malaysia. The first course is a research methodology (in literature) course (henceforth, RM), a skill-based course that enrolled 29 third-year undergraduates majoring in English literature. The course covered the content, form and style of academic papers in literature, including basic research strategies using both text and electronic sources directly applicable to literary studies. At the end of the course, students were expected to be able to compose bibliographic research relevant to literary topics, and write and present a research proposal. Twitter was made one of the course works. The main reasons for incorporating Twitter in the class were to extend their learning of literary research methods and to provide support for their research project.

The second course is a Malaysian literature in English course (henceforth, MLIE), a content-based course that enrolled 25 third-year undergraduates majoring in Teaching English as a Second Language. The course provided an overview of Malaysian literature in English as a genre in literary studies. At the end of the course, students were expected to be able to identify major writers, explain common themes and issues in selected texts, as well as discuss critically major issues in relation to the establishment and recognition of Malaysian literature in English. Twitter was made one of the course works. The main reasons for incorporating Twitter in the class were to extend their learning of Malaysian literature in English and to provide a platform for discussion.

At the beginning of the semester, students were asked to create new Twitter accounts specifically for their respective courses. These accounts were made accessible to the instructor and those registered for the courses. Some of the students had already had their own Twitter accounts and cited varied reasons for using Twitter such as to seek information related to their interests, to connect with other people and to get entertainment. No time limit was imposed to the students – they could tweet anytime, anywhere, and not necessarily in the classroom. Students were required to tweet comments or questions on course contents and activities such as weekly class issues or assignment-related topics at least twice a week. If the instructor saw no one tweeting, she would post tweets to motivate the students to tweet or initiate discussion.

FINDINGS AND DISCUSSION

Students' use of Twitter

At the end of the semester, RM recorded a total of 575 tweets. MLIE, on the other hand, recorded a total of 1107 tweets. On average, over a period of 14 weeks, a student tweeted about 19.8 tweets for RM and 44.3 tweets for MLIE.

Based on the qualitative analyses of students' responses, 14 categories of tweets were identified for RM and 11 categories were identified for MLIE. Table 1 represents the categories of responses elicited in RM whereas Table 2 represents the categories of responses elicited in MLIE.

Table 1: Types of Tweets in RM

No.	Type of Tweets	Example	Number of Tweets	Percentage of Tweets
1	Answer prompt by instructor	Teacher: Have you thought of a	104	18.08

		research topic? Student1: What's exactly on my mind right now: The Color Purple- The Bluest Eye – Psychoanalytical criticism.		
2	Retweet/Favourite		14	2.43
3	Share thoughts about own research	Student2: I'm just thinking of doing a comparison between Sing to the Dawn and Girl from The Coast.	42	7.3
4	Ask info/clarification (general)	Student3: Do we use the feminist criticism if we're looking into oppression/exploitation of children/young adult?	21	3.65
5	Ask info/clarification (teacher)	Student3: @Teacher Is there an angle I can delve into regarding the characters' voices? The silenced & The Silencer?	25	4.35
6	Ask info/clarification (friend)	Sudent4: @Student5 So u r using what lens? I'm using the feminist lens.	4	0.7
7	Share info (link/visual/tweet)		9	1.57
8	Give opinion on friend's tweet/question	Student6: Anyone know the format to omit letter from a word? Example: 'safer' to 'safe' Student5: @Student6 change the whole word by using [] I think.	42	7.3
9	Thank teacher/friend for their opinion/help	Student7: @Student3 I'm probably in the right path then. Lol. Thank u @Student3.	20	3.48
10	Summarize week's lesson	Student8: We will not get anything by plagiarism. It shows that you only know how to take other's, rather than produce yours.	49	8.52
11	Divert from prompt	Teacher: Have you thought of a research topic? Student9: I'm always contemplating on the subject, Was Shakespeare real?	3	0.52
12	Responding to teacher's feedback	Student10: @Teacher Yes! Its'getting clearer! & it helps us to accomplish our lit. rev. Thanks for being patient and teaching us fromA- Z.	125	21.73
13	Responding to friend's feedback	Student11: @Student12 Apparently, there's a handful of us interested in the same topic, haha.	77	13.39
14	Miscellaneous	Student13: Tbh, I am disappointed with myself. Rip my literature & gender assignment. Working hard on research methods, Allah ease!	40	6.99
		Total	575	100

Table 2: Types of Tweets in MLIE

No.	Type of Tweets	Example	Number of Tweets	Percentage of Tweets
1	Share thoughts on literature (general)	Student1M: For me, in writing poems, we let out our emotions by creating something beautiful and meaningful.	53	4.8
2	Share thoughts on particular literary texts	Student1M: As I reread The Happening in the Bungalow, I can assume the author wants people to think that there's hope for unity during that time...	414	37.4
3	Share thoughts on MLIE	Student2M: MLIE writers consist of many races and religion. It is a good platform to know the issues that are brought up by these people regarding M'sia.	170	15.3
4	Prompt a discussion (by asking question)	Student2M: What kinds of issue do most writers of MLIE write? Is it the identity, culture or the social hierachy in M'sia?	25	2.3
5	Answer a teacher's/friend's prompt (once)	Student4M: Exactly, I've been thinking of the same too. People can't even tell what is his race or how does he look like. In response to: Student 3M: Tok Said is the 'wild rumour' himself. Does he even exist? #ScorpionOrchid	232	21
6	Respond to teacher/friend's prompt (thread)	Student3M: Tok Said is the 'wild rumour' himself. Does he even exist? #ScorpionOrchid (This initial tweet generated a discussion thread).	51	4.6
7	Share thoughts on class activities	Student5M: The first assignment has been a learning experience.	27	2.4
8	Retweet/favourite somebody else's tweet (friend/teacher)		18	1.6
9	Share information (tweet/visual/link/media)		20	1.8
10	Share thoughts on life-lessons (relate to life)	Student6M: I think friends consist of multiracial people was a rare sight back then as it is now. That's what I think after reading the novel. #ScorpionOrchid	93	8.4
11	Ask for information/clarification (from teacher)	Student7M: Hello Miss! Do we have to start tweeting this week or the following week?	4	0.4
		Total	1107	100

Out of 14 categories of Tweets identified for RM, 4 categories were found to be superficial and irrelevant to the course (miscellaneous/ thanking others for help, summary of weekly lessons, diverting from prompts given). This means that 19.51% of the tweets were superficial responses. Only 10 categories were related to the course. For MLIE, all 11 categories were found to be relevant to the course.

It was found that for RM, nearly 40% of tweets were prompted by the instructor whereas for MLIE, none of the discussion was prompted by the instructor but the instructor responded to students' tweets. In fact, 25 of MLIE students' tweets prompted discussion threads. The low number and quality of tweets seem to imply that RM students struggled to participate on Twitter. The same was not observed among MLIE students.

Students' Perceptions of Twitter as an Educational Tool

Students' perception of Twitter was determined through a structured, Likert-scale questionnaire, administered at the end of the semester. Table 3 presents the findings:

Table 3: Students' perception of using Twitter (in percentages)

No.	Items	RM	MLIE
1.	Twitter is fun as a coursework.	SA: 6.9% A: 10.3% 17.2%	SA: 24% A: 36% 60%
2.	Twitter provides a new experience in learning.	SA: 20.7% A: 20.7% 41.4%	SA: 24% A: 52% 76%
3.	I use Twitter because it is part of my coursework.	SA: 34.5% A: 24.1% 58.6%	SA: 36% A: 32% 68%
4.	Twitter helps extend what I have learnt in class.	SA: 0% A: 34.5% 34.5%	SA: 28% A: 48% 76%
5.	Twitter helps me to clarify topics or concepts that I do not understand in class.	SA: 6.9% A: 27.6% 34.5%	SA: 8% A: 40% 48%
6.	Twitter is more suitable for networking and not for learning.	SA: 20.7% A: 31% 51.7%	SD: 56% D: 4% 60%
7.	I learnt a lot of things about the course through Twitter.	SA: 3.4% A: 17.2% 20.6%	SA: 8% A: 24% 32%
8.	I feel more engaged with the course through Twitter.	SD: 13.8% D: 24.1% 37.9%	SD: 0% D: 25% 25%
9.	Twitter provides me with valuable support in learning.	SA: 10.3% A: 13.8% 24.1%	SA: 8% A: 64% 72%
10.	Using Twitter is a hassle.	SA: 24.1% A: 13.8% 37.9%	SA: 0% A: 4% 4%
11.	I prefer to consult the teacher using Twitter rather than face-to-face.	SD: 17.2% D: 31% 48.2%	SD: 4% D: 36% 40%

It was found that MLIE students perceived Twitter as an educational tool more positively than the RM students, which perhaps explains their frequent use of Twitter. It was found that a higher percentage of RM students

disagreed with the use of Twitter as a learning tool. In fact, nearly 40% of them found the use of Twitter a hassle.

Generally, it was found that MLIE students found Twitter supportive of their learning, compared to RM. 72% of MLIE students agreed that Twitter provided them with valuable support in learning. Only 24.1% of RM students, on the other hand, agreed that Twitter is supportive of their learning. 76% of MLIE students agreed that Twitter helped extend what they have learnt in class and 60% agreed that Twitter helped to clarify topics or concepts that they did not understand in class. Perhaps because of its familiarity or relevance to the students (students study and debate texts that are contextualised locally), certain course content for the course allows them to share their thoughts, experiences and reflections on Twitter.

On the other hand, RM students did not seem to find Twitter supportive of their learning. Only 34.5% of RM students agreed that Twitter helped extend what they have learnt in class and that Twitter helped to clarify topics or concepts that they did not understand in class. These findings seem to suggest that unfamiliarity with or uncertainty about literary research may have impacted the RM students' participation in Twitter. Furthermore, RM is a skill-based course. Perhaps, because of this, students did not see the value of discussing 'the how-tos' on Twitter. Based on the findings, it can be concluded that the nature of the course (content-based vs. skill based) may have affected Twitter use. It is perhaps much easier to discuss or share 'content' rather than 'skills' on Twitter.

Students' experience on Twitter prior to the study may also be a factor in influencing students to use Twitter in the respective courses. Table 4 summarizes students' experience of Twitter prior to the study:

Table 4: Students' experience of Twitter Use Prior to the Study

RM	MLIE
15 (out of 29) or 51.7% students had their own Twitter accounts.	16 (out of 25) or 64% students had their own Twitter accounts.
15 students had their own Twitter accounts for 1 year or more.	10 students had their own Twitter accounts for more than 3 years.
5 (out of 15) students were active users.	6 students had their own Twitter accounts for 1 year or more.
14 others never had Twitter accounts.	9 (out of 16) students were active users.
	8 other never had Twitter accounts.

It was found that a higher number of MLIE students were active on Twitter prior to the study. As they were familiar with Twitter use, these students could have less inhibitions about using Twitter in their literature course. This shows that prior experience or familiarity with using Twitter as a social medium may have influenced students to use and perception of Twitter for classroom purposes. This, however, contradicts findings by Lackovic, Learnly, Lowe and Lowe (2017).

IMPLICATIONS AND SUGGESTIONS FOR FUTURE RESEARCH

From this study, it can be implied that the nature of a course could have an impact on the students' use of technological tool like Twitter. If a course is a content-based course, like MLIE, students would be less hesitant to use Twitter as learning is organized around the content or information that students could easily have knowledge of and relate to. A skill-based course like RM would to some extent dampen the students' motivation to use Twitter because the development of students' skills require time and until students master these skills, there was not much they could share, learn or contribute through Twitter.

Prior to using a technological tool like Twitter, students' prior experience or familiarity with the tool also need to be considered. This is supported by McCallum, Price and Whiteford (2009) who found that familiarity with a specific classroom activity has an impact on students' perception and the perceived value of the activity. When supporting students' learning of a course that they are not familiar with, it is perhaps advisable to use a tool that students are familiar with. Ranked sixth in Malaysia's list of popular social media, Twitter may not really be the preferred tool. It is perhaps advisable to use a tool that students are more familiar with, for example Facebook. It

is also a good idea to check students' perception of a technological tool before using it in class, as found in the study by Wynn (2013).

CONCLUSION

The use of Twitter across literature courses may yield different results. This study shows that the adoption of Twitter as a learning tool hinges on the nature of the course and students' familiarity with Twitter. Findings from this study suggest that perhaps Twitter is more relevant and practical for content-based courses rather than skill-based courses.

SOCIAL BOTS: ACT LIKE A HUMAN, THINK LIKE A BOT

Birgit Oberer

birgit.oberer@gmail.com

Alptekin Erkollar

erkollar@sakarya.edu.tr

ABSTRACT

A social bot is a piece of software designed to have a presence on the Internet, especially on social media. Bots are algorithms acting on social media networks, engineered to achieve some purpose, and programmed to appear as real people on social networks, tweeting, having followers and using matching Facebook accounts. They are designed to make something appear to be happening that is not, appearing like persons to promote specific messages. Spammers use social bots to promote content to convince someone to do somethings. In this study it is analyzed for which purposes social bots are used today, how easy it is to create them, how they work, what kind of threats might be posed by social bots, how the 'bots effect' works, how to protect users against them and what the future holds. The results of this study revealed that like each technology, social bots are neutral. They can be used for good or bad. Social bots are a mass communication device, used to promote messages; it is another form of advertising. Some social bots are designed for marketers to sell products and services or to attract users to new websites. Other types of social bots are more malicious and might disseminate misinformation, which might harm users and could lead to serious consequences, since and individual's social network has become of key factor in his decision making processes.

SOCIAL COMPETENCE, HOPE FOR THE SUCCESS AND PARTICIPATION IN POPULAR CULTURE OF POLISH STUDENTS OF EDUCATION AND SPECIAL EDUCATION

Kamil KURACKI, PhD
Department of Pedagogical Therapy
The Maria Grzegorzewska University, Warsaw, Poland,
kkuracki@aps.edu.pl, kamillo17@wp.pl

ABSTRACT

The article presents the results of research conducted in the years 2016-2017 among bachelor and masters students of education and special education in Poland. The results of the study include data focusing on the psychosocial functioning of students (N=150), in particular, the relationship between social competence, hope for the success and participation in selected areas of pop culture, such as: social networking, new media and technologies, television programs, e.g. talent shows, popular literature etc.

Key words: Hope, Social Competence, Culture, Special Education

INTRODUCTION

CONCEPTUAL FRAMEWORK AND BACKGROUND

The phenomenon of convergence of old and new media, as well as development of new technologies and social media, i.e. Facebook, YouTube, Instagram, blogs, etc. (Sosnowski, 2012; cf. Feliciak, Danielewicz, Halawa et al., 2010), along with the ever-presence of the so-called temples of consumption (Ritzer, 2001), stimulate the research on the participation of young people in pop culture and the role of pop culture in shaping their psychosocial resources. More and more often, the literature discusses the educational potential of popular culture and its place in the pedagogical space (Anioł, 2016). Nowadays, it is easy to see that social discourse is on the ground of popular culture. The study indicates that pop culture, with its universality and openness, playing a crucial role in the identity building of the teenagers (Melosik, 2014) and the functioning of young adults (Zagórska, 2004).

The use of some popular culture products (e.g. social networking sites, popular literature etc.) seems to provide opportunities for establishing contacts, shaping self-presentation, and for developing knowledge and skills (e.g. new media, Internet) (Kuracki, 2016). Consequently, it is likely that it can be significantly associated with social functioning, reinforce self-confidence and expectation for future professional success. It is especially important, because according to 75% of college graduates in EU, social ability to work with other employees, clear information, ability to critically evaluate one's own ideas, and ability to use information technology and the Internet are the most useful competences in the workplace (Żyra, 2013). Social competences are essential for coping with social situations and solving professional and educational problems and achieving social cohesion (Jeruszka, 2016). Furthermore, the development of skills in the use of modern technologies, as well as the improvement of foreign language skills, can be an important part of the process of shaping the sense of success of future teachers (Lebuda, 2014). Persons with a high level of hope for success (according to Snyder theory: confidence in having the skills to succeed) find less difficulty in the decision-making process (Zaleszczyk, Kot, 2015) and more constructively and actively cope with difficulties (Qiu, Li, 2008). Moreover, high levels of hope for success are associated with high level of quality of life (Turosz, 2011). Because the pop culture is a natural development space of the contemporary young people and pedagogical studies are special time in shaping the personal and social competencies of students (Klimkowska, Dudak, 2012), it seems especially important to explore the issue in the context of relations between participation in the space of pop culture, social competence and hope for success, useful for functioning in the teacher's role, exhibited by the students of education and special education. It is an area that has not been subjected yet to a complex, multifaceted research.

RESEARCH

The main goal of the research was to study the level of social competence, hope for success and the activity of Polish bachelor and master students in selected areas of pop culture, as well as establishing relations between the aforementioned variables. With this set goal, the following research questions have been formulated: 1. What is the frequency of the bachelor and master students' of education and special education participation in the selected areas of the pop culture? 2. Do any differences exist between the levels of social competence, hope for success and activity in selected areas of the pop culture in Polish bachelor and master students of education and special

education, and if yes, then what are they? and 3. Are there any relations between the participation in selected areas of the pop culture and social competence, hope for success in the studied group of students, and if yes, then what kind of?

In the studies carried out through the diagnostic survey, three research tools were used: Social Competence Questionnaire (KKS) A. Matczak (2007), The Hope Scale (KNS) by C. R. Snyder in M. Łaguna, J. Trzebiński, M. Zięba Polish adaptation (2005) and a questionnaire for the studies of the participation of students in the areas of the pop culture, developed by K. Kuracki. The study group consisted of 150 bachelor and master students of education and special education (135 women and 15 men) from Poland. The age of the students was between 20 and 26 years ($M=21.80$, $SD=1.447$). Half of the respondents were students of the Bachelor program and half of the Masters program.

RESULTS

In the studies, it was shown, that the students' participation in the pop culture relies mostly on using social networking sites like Facebook, Twitter, MySpace, Instagram, etc., and on using new media and technologies (tablets, smartphones, smartwatches). Frequent and very frequent activity in those fields was declared by over 80% and over 70-80%, respectively on both level of studies. The areas in which the Polish students of education and special education participation was much less frequent were: watching entertainment programs like the talent shows, spending free time in shopping malls, reading popular literature (both on the bachelor and masters program). In each of those fields, a frequent and very frequent activity was declared by no more than 24% of the study groups (Table 1).

Table 1: Frequency of participation of students of education and special education (N=150) in selected areas of the pop culture

Analyses carried out with the t-Student test show two statistically relevant differences in the levels of hope for the success of bachelor and masters students, both in the total results and factor I -strong will - agentic thoughts. The mean result in the total result (TR) obtained by the students of bachelor program ($M=47.96$; $SD=5.634$) was much higher than the mean result obtained by the students of masters program ($M=45.28$; $SD=5.254$), $t_{(148)}=3.013$, $p<0.01$. What is more, the mean result in the Factor I obtained by the students of bachelor program ($M=23.36$; $SD=3.319$) was much higher than the mean result obtained by the students of masters program ($M=21.60$; $SD=3.393$), $t_{(148)}=3.211$, $p<0.01$. (Table2).

Table 2: Differences in average levels of hope for success (KNS)- total result (TR), Factor I: strong will- agentic thoughts and Factor II: ability to find solutions- pathway thoughts, in the group of Bachelor Program students (N=75) and Master Program Students (N=75)

No statistically relevant results have been obtained between the studied groups in the case of the levels of social competence, both in total results, as well as in sub-scales of intimacy, social exposure, and assertiveness (Table 3.)

Table 3: Differences in average levels of social competences (KKS) – total result (TR), components: intimacy (I), social exposure (ES), assertiveness (A) in the group of Bachelor Program students (N=75) and Master Program Students (N=75)

There was a relevant difference, however, between bachelor and masters students in relation to the participation in the pop culture. As the analysis with the t-Student test indicated, the mean result in the area of electronic media and new technology usage obtained by the masters students ($M=4.36$; $SD=1.135$) was much higher than the mean result obtained by the bachelors students ($M=3.88$; $SD=1.219$), $t_{(148)}=-2.496$, $p < 0.05$. Masters students of education and special education show a much higher activity in the area of usage of such devices as tablets, smartphones, smartwatches and electronic boards. In other areas of participation in the pop culture, no significant differences between the groups have been observed (table 4).

Table 4: Differences in average frequency of participation Bachelor Program students (N=75) and Master Program students (N=75) in selected areas of the pop culture

In the group of bachelor students, weak and moderate positive correlations have been demonstrated between using social networking and hope for the success - with the total result ($r=.664$; $p < 0.01$), factor 1, understood as the strong will- agentic thoughts ($r=.546$; $p < 0.01$), and factor 2, understood as the ability to find solutions-pathway thoughts ($r=.609$; $p < 0.01$), as well as weak positive correlations between using social networking sites and social competences - with the total result ($r=.345$; $p < 0.01$) and its components, i.e. intimacy ($r=.254$; $p < 0.05$), social exposure ($r=.247$; $p < 0.05$) and assertiveness ($r=.345$; $p < 0.01$). In the same study group weak positive correlations have been demonstrated between using new media and technologies and hope for the

success- with the total result ($r=.330$; $p<0.01$), factor 1 ($r=.321$; $p<0.01$) and factor 2 ($r=.250$; $p<0.05$), as well as between using new media and technologies and social competence - with the general result ($r=.234$; $p<0.05$). In the group of masters students weak positive correlations have been demonstrated between using new media and technologies and social competence-intimacy ($r=.239$; $p<0,05$). Analogically, only in the group of masters students weak positive correlations have been demonstrated between reading popular literature (e.g. fantasy, science fiction, thriller, criminal-sensational and romance), and social competence - total results ($r=.288$ $p<0.05$), intimacy ($r=.414$, $p<0.01$), social exposure ($r=.328$, $p<0.01$). What is more, in the group of masters students weak and moderate negative correlations have been demonstrated between watching entertainment programs like talent shows and hope for the success- with the total results ($r=-.324$; $p<0.01$), factor 1 ($r=-.252$; $p<0.01$), factor 2 ($r=-.310$; $p<0.01$) as well as between watching entertainment programs and social competences - the general result ($r=-.594$; $p<0.01$), intimacy ($r=-.446$; $p<0.01$), social exposure ($r=-.675$; $p<0.01$) and assertiveness ($r=-.387$; $p<0.01$). In the same study group moderate negative correlations have also been demonstrated between spending free time in shopping malls, galleries and social competences - the general result ($r=-.428$; $p<0.01$), social exposure ($r=-.484$; $p<0.01$) and assertiveness ($r=-.404$; $p<0.01$), whereas weak and moderate negative correlations have been demonstrated between spending free time in shopping galleries and hope for the success - total result ($r=-.296$; $p<0.01$) and factor 1 ($r=-.434$; $p<0.01$). In the study group of bachelor students weak negative correlation was revealed only between spending free time in shopping galleries and social competences-intimacy ($r=-.318$; $p<0.01$) No statistically relevant relations have been found between the other variables (Table 5).

Table 5: r-Pearson's correlations between participation in selected areas of the pop culture and variables: hope for success (KNS)-total result (KNS TR), factor I (KNS F1), factor II (KNS F2) and social competences – total result (KKS TR), components: intimacy (KKS I), social exposure (KKS ES), assertiveness (KKS A) in a group of Bachelor Program students (N=75) and Master Program Students (N=75)

CONCLUSION

The study showed that the bachelor and masters students of education and special education actively participate in the pop culture, especially in the areas connected to using social networking sites and new media and technologies. Apart from a more frequent use of new media by masters students, the level of studies does not differentiate the frequency of using the products of pop culture by the students of education. However, the

bachelor students present higher level of hope for the success. This may be because they are at the beginning of a career (compared masters students), maybe they are more optimistic, or because they have not had yet the opportunity to experience first professional training. The study has demonstrated that there are positive correlations (from weak to moderate) between active participation in the pop culture and psychosocial performance of the student of education and special education in the context of presented social competences and hope for the success. Those relations are especially visible in the areas of using social networking sites, using new media and technologies (bachelor students), and reading popular literature (masters students). On the basis of the obtained results, it can be concluded that smart technologies and social media are an important space for social interactions in which young people (mainly at the beginning of the studies) can test their social competences and shape new ones, especially their assertiveness and the ability to handle situations requiring self-presentation and resilience to increased attention and interest from other people. On the other hand, the higher the level of social competence of bachelor students, the more active their participation in the selected areas of the pop culture. Furthermore, the reading of pop culture literature, may be related to the process of identification with literary heroes, as a result of which social heroes' behavior is modeled, such as courage or coping skills. The behavior of literary heroes can help build a sense of confidence inspire hope in the reader. Thus, changes in the attitudes and behaviors of the reader may arise, especially in the reader with a high literary maturity. Thus, changes in the attitudes and behaviors of the reader may arise, especially in the reader with a high literary maturity. It can be assumed that such maturity increases with age, therefore correlations occur in the group of masters students. The study has also demonstrated that there are negative correlations (from weak to moderate) between active participation in the pop culture and psychosocial performance of the student of education and special education in the context of presented social competences and hope for the success. Those relations are especially visible in the areas of watching programs like talent show (mainly masters students), and spending free time in shopping galleries (masters students). It can be assumed that these types of activities are conducive only to wasting leisure time, promoting a consumer lifestyle and learning claims. What's more, watching talent shows can teach young people to criticize, ridicule, manipulate, and show that on the road to success, it's worth being controversial and provocative. Therefore, it seems that the results appear to provide positive data on the image of future educators.

SUGGESTIONS FOR FUTURE RESEARCH

Obtained results can be a contribution to further, more in depth studies focused on searching for determinants of the attractiveness of selected areas of pop culture to the student of education and other fields of studies, and for the directions of indicated relations between students' participation in the pop culture and discussed aspects of their functioning.

SOCIAL INNOVATION IN SMALL SCHOOLS IN THAILAND

Thanakorn SRIWIPHAT^{1*} and Dawruwan THAWINKARN²

Faculty of Education, Khon Kaen University, Thailand

*thanakorns@kkumail.com

ABSTRACT

The purpose of this research were to studies the component of social innovation and application of social innovation process applied in educational management of small schools in Thailand. Data was collected by 3 methods were using: 1) documentary analysis of 120 documentary sources; 2) in-depth interview with 7 experts in social innovation; and 3) field studies in the 5 schools model that Thailand awarded best small school are the best practice. The research found that: Social innovation in small schools consisting in 4 elements are 1) change by social; 2) product of concrete; 3) means of creative; and 4) support the participation of the society. The process of creating social innovation has 4 stages: 1) analysis of the need and problem of the society; 2) the development of solutions to the problem and need of society; 3) to evaluate the effectiveness; and 4) increasing the level of efficiency of the social innovation. The process of leading social innovation includes: 1) change ideas and build special strategy wisely; 2) actions to accelerate the success; 3) to raise the innovation with the exchange extensively. At the same time with the development and change the system of social innovation better.

Keywords: Social Innovation, Small School, Educational Management

INTRODUCTION

Social innovation is a rather new notion within the educational arena in Thailand. Ideally, a goal of education is to correct social problems. Accordingly, schools should be able to simultaneously respond to social change while directing their students to be social innovators for the betterment of society. To achieve this objective, schools must begin by making changes in their way of thinking and working. Pravet Wasi (2013) noted that to be able to strengthen community with innovation, an effective education system should first be fostered. Educational organizations are widely networked and can create immense social change. Social innovation is a principle that involves generating changes that meet the particular needs of a society. It not only increases an organization's internal capacity, but can also help direct a country toward sustainable development. The working principles should be based on society's needs and implemented for the betterment of society. Innovative development involves corporations from all social sectors, while educational bureaus should take the lead in making social change. The application of social innovations in many schools in Thailand set a role model of success for other small schools. Most successful cases of social innovation are associated with big schools due to their ability to exploit better resources, such as money, students, parents, and teachers. With the blessing of these facilities, big schools find it easier to develop social innovation and of course their works are better recognized by the public. However, big schools are only a small portion of the total number of Thai schools. It is estimated that there are 30,717 small schools throughout the nation, among which 15,705 schools reportedly have less than 120 students. Small schools account for 53 percent of Thailand's total number of schools. The number of small schools has been consistently high. The problems observed in small schools are far more complicated than those observed in big ones. The most common problems tend to be related to a lack of teachers, the teaching of non-major area subjects, mixed-level teaching, and an in adequate budget. Government subsidies for Thai schools are calculated based on headcount, so small schools with a very small number of students inevitably get very limited monetary support. Such limitations negatively affect educational efficiency among smaller schools. Moreover, some schools are located in accessible areas, such as on a high mountain or an island. Commuting to schools can thus be very difficult for some students. Teachers lack motivation and frequently relocate. Teachers who remain find it hard to lead learning suitable for student diversity. The curriculum may not reflect the learning needs of the students in that particular area or their local culture. Small schools are generally surrounded by poor communities, making the assembling of resources for school development nearly impossible. These are the disadvantages that impede small schools from achieving their goals.

Praves Wasi (2010) addresses a partial solution to the problems small schools face in Thailand, saying the country needs a bottom-up revolution. Thailand is traditionally considered a direct cause-effect society, where identifying the cause of a problem can lead to a direct way of solving it. Given that Thai society has recently become much more complex, however, solving social problems is far more complicated than in the past, which is why the development of social innovation can help strengthen society. Integrating social sectors can help to solve intricate social problems holistically. The Area-Function-Participation (AFP) concept is deemed appropriate for present-

day problem-solving. For sustainable results, problems existing in a specific area should initially be solved by all local stakeholders. This concept is consistent with the late King Bhumibol's suggestion for rural development to the extent that he initiated the philosophy in Thailand that the problem-solving process should be matched with the locality of the problem. Each social problem is associated with its own geo-social base, and the entrenched cultures, which are diversified regionally, help to make each problem distinctive from others (Sumet Tuntivechakul, 2006). The late King Bhumibol used to refer to his way of social problem-solving as "bursting from inside," meaning development should start from individuals' awareness of a problem (The Office of Economic and Social Development Commission, 2011, 2014). Accordingly, the Basic Education Office's second term of educational reform enforces that a 21st century learning style should be achieved by training students to be social innovators who can make society better for all. In order to achieve these educational goals, or so as to navigate their schools toward their intended goals, school directors and teachers should be trained on how to create social innovation within their schools. Social innovation is a tool for the development of human resources, effective educational management, and school reform. Gold & Brown (2003) and Ewington et al. (2008) suggest triggering the success of small schools with the creation of new projects. Devotion and pride is strengthened among small school stakeholders when school members are able to develop projects and innovations of their own. Mano Chundee (2013) suggests that necessities for turning small schools into professional learning communities are the creation of a vision, mission and strategy; personnel development; knowledge management ; appropriate applications of technology; systematic administration; and academic leadership. Moreover, it is suggested that throughout their work process, school staff should apply the concept of MANO to their work ethic policies: Move Together, Awareness, Never Do Alone, and One for All and All for One.

Despite the fact that small schools have undergone many programs to increase adequacy in education, a good proportion of them have struggled to develop innovations suitable for solving their own unique problems. Any outstanding success in these schools has tended to be based on social patronage, which induces other small schools to follow this fashion of success. Small schools must overcome a number of burdens in order to offer the best learning opportunities for their students. The efforts of these small schools are clearly admirable, as they help in bridging the educational gaps between small and big schools in order to create equal learning opportunities, as described in the National Education Act. Small schools' needs for development deserve everyone's devotion, as nationwide, these schools are the learning hubs for the majority of the people living in the country. Suffice it to say that the development of small schools is also the development of the lives of rural people. Therefore, this research aimed to investigate components of social innovation, how social innovations are developed, and how they are applied toward the development process of small schools. The findings from this research are expected to provide clues for small school development.

RESEARCH OBJECTIVES

1. To investigate the components social innovation developed in small schools.
2. To study the process by which social innovations are developed and applied to small school development.

LITERATURE REVIEW

Principles of social innovation

Paves Wasi (2002) defines social innovation as a type of development based on social interaction that increases the potential for a balanced dynamic. In other words, it creates a harmonious and peaceful community. This understanding of social innovation, however, is quite abstract and may not be applicable to defining developmental research. Mumford (2002) defines social innovation as the development and application of working principles to easing problems relating to society, culture, the economy, and the environment. Mulgan et al. (2007) maintain that social innovation infers new schools of thought that have been developed via different methods and that can be beneficial in some way.

In addition to the definitions above, social innovation has been referred to as the ability to innovate. The International Forum for Social Innovation (2007) states that social innovation refers to the ability to create new social behaviors which help individuals to transform themselves and their work performance. At an individual level, each member of society should be able make positive change in society. Phills et al. (2008) says social innovation is a process for discovering new thoughts and the application of those new thoughts to solving society's multi-dimensional problems. Kesselring & Leitner (2008) explain social innovation as the convergence between how society's problems are reflected in society and the solutions for those problems, as the need to solve a problem and the objectives of problem solving practices transpire simultaneously and interdependently. This idea is

consistent with that held by Hochgerner (2009), who says that innovation is a result of commitment to solving social problems. Therefore, the innovation itself resembles the overall structure of the community. The term social innovation is defined by Dawson & Daniel (2010) as an attempt to create social change, extending beyond economic change. Social innovation in a particular area is derived from a sociological perspective. Julie Caulier-Grice (2010) explains that social innovation is a method and principle that should be implemented in response to the needs of a society to provide better education and a better environment. On the other hand, social innovation is a new concept within the field of social development. Edgington (2010) says that social innovation provides a foundation for sustainable social development. The Young Foundation (2012) and European Commission (2013) share similar conclusions, namely that social innovation provides a new set of methods for social betterment, which can manifest in a variety of forms, such as a new product, a type of service, or a marketing model or process that encourages an optimal exploitation of resources. Social innovation leads to social integration, as all members of society are exposed to the same social pressures and need to collaborate in order to figure out how to make their community a better place to live. Alakeson & et al. (2003) say that social interaction advances similar behavioral changes in many members of a society, leading to a major change in the society as a whole. The following factors are deemed supportive to social innovation.

- 1) The forming of repeated habits
- 2) Strong incentives for transformation
- 3) A spontaneous response to problems
- 4) The amplifying of ideas for change

The new pattern of interactions that emerge cannot be predicted or controlled, as shown in Table 1

Table 1: Comparison of the three origins of social innovations (AlongkornKootragoo, 2010)

Item List	Generated from planning	Generated from entrepreneurs	Generated from simultaneous and interdependent contexts
Stream	-Top-down administration -Based on a centralized plan -Built according to previous schemes	-Initiated by local leaders -Based on vision and considerations relating to a particular area -Can be a new idea or built according to one of the previous schemes	-Bottom-up method -Generated from sub-group interaction -A totally new idea
Baseline	-External organizations are dominating over a local administration	-Individual local leaders are empowered with decision-making authority -Able to make or shape decisions	-Innovation is launched under simultaneous and interdependent contexts
Key factors	-Planning and monitoring	-Leadership	-Interaction
Envoy/generator	-Government bureaus	-Social entrepreneurs	-Community

Defining innovation can be complicated, as novelty is involved, which is a phenomenon difficult to verify. Many considerations must be taken into account when judging levels of novelty. For example, "To what degree should an innovation create something new?" While a simple question, the answer is rather ambiguous, as an innovation can be new in one manner while remaining old in another. Defining the novelty of an innovation can be complicated even within the same area it is introduced, as that innovation would have been introduced to the area some time before.

From an academic perspective, Rogers (2003) proposes innovation evaluation based on an innovation's actual value rather than on its novelty. A particular innovation's novelty is vague and contingent on individuals and their community's perceptions of it. Good social innovation, however, should be able to trigger positive changes in a community. Innovation itself may occur as one of two forms of change: a) incremental innovation or b) radical innovation. The first type of innovation is a diffusion of an existing innovation by redeveloping it or building on it before applying it to problem solving.

In summary, social innovation involves thoughts, processes, or social products that are built from social collaboration. It is used for directing society toward its goals and sets a learning and development model that aims to involve public collaboration in social development. Innovation should incorporate change making by the public, yielding to production, employment of a creative working process, and encouragement of public participation.

RESEARCH METHOD

This qualitative research had three phases of data collection, as follows.

- 1) The researcher reviewed 120 documents relating to social innovation to obtain data on components of social innovation. The simple random sampling method was used to select the papers reviewed for this research.
- 2) The researcher conducted in-depth interviews with 7 social innovation experts, including school directors, academics, and researchers involved in social innovation development.
- 3) Data were collected from 5 small schools that had been awarded national prizes and that had been named master schools with impressive social innovations. The schools were selected using purposive sampling in order to ensure they represented the values of good social innovation within schools and to confirm that they had been able to introduce positive changes within their communities.

The data collection process involved field data collection, decoding of the school's successful practices, interviewing of school stakeholders, and summarizing the data, with the purpose of offering recommendations for social innovation development in small schools.

RESULTS AND DISCUSSION

Findings on social innovation in small schools

This research revealed four components of social innovation in small schools in Thailand, namely: 1) Change is initiated by the community. Changes are triggered by existing problems at the school level which lead to a desire to solve those problems. 2) Innovations yield abstract results, meaning they are able to creatively bring the public into the school's development process, and their successful application creates a learning model for other small schools on which to base their own development. 3) Innovations are creative. Creativity in this case refers to the degree to which the innovations are made attractive enough to impel positive interactions among people in schools, leading to the achievement of sustainable school development. 4) Innovations promote social participation and new patterns of interaction. The public's involvement in school development increases the schools' capacity for assembling resources, and helps the schools to clarify policies and their role in the community. The findings described above were gathered from the related literature and were corroborated by empirical evidence gathered from observing the small school research sample to the extent that the small schools, with community support, were able to develop outstanding innovations. Conscientious administration by school directors was also observed to play a key role in social innovation. The components of social innovation observed in this research were similar to those proposed by Lynden (2014), who says that social innovation consists of 3 factors, namely *change by community*, *change by intervention*, and *change by a new work process*. Each of these components is described below.

1) *Change by community* refers to a process of social transformation initiated due to a community's desire for change. People in the community are well-informed about the change and anticipate the value that it brings. Therefore, they take part in making that change happen.

2) *Change by intervention* refers to social innovation resulting in a new product. A product can be either concrete or abstract if it meets the needs of a changing society and its people. A product resulting from social innovation can be interventions, services, or even a new process of production. These products may be brand new inventions or simply the refurbishing of old products with some additional adjustments to increase effectiveness.

3) *Change by a new work process* is another type of outcome of social innovation and refers to the development of an innovative process. Changes in a work process can include the correcting of relationship patterns among co-workers or the redistribution of positions resulting in more effective work, by replacing a worker who does not meet the standards of a task with a more qualified person. Work process changes can also involve creating a new department to take care of certain tasks that require special attention. Social innovation should lead to the creation of new needs and new work strategies to help achieve a new set of goals.

Findings on the development and application of social innovation toward education management in small schools

The development process for a social innovation was found to consist of four major steps: 1) Conducting a social needs analysis, 2) Finding solutions for correcting social problems, 3) Evaluating the solutions, and 4) Improving

efficiency levels of the social innovation. This research found that social support is crucial for the development of a social innovation. Praves Wasi (2013) proposes a theory called, “triangle that moves the mountain,” which focuses on three important factors for the success of social change, namely 1) knowledge, 2) social movement, and 3) authority and policy link. This theory stresses that in order to achieve a demanding task that is hard to complete, practitioners should learn to exploit more knowledge, social movements, and support from the government, applying such resources toward performing the task. Working on a complicated task can be highly demanding; figuratively, it can be as hard as trying to move a mountain. Based on this theory, knowledge, social movement, and government authority should be used as “levers” to propel toward a better society, as illustrated in Figure 1

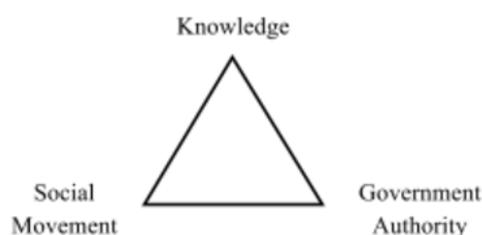

Figure1: Triangle that Moves the Mountain (Praves Wasi, 2013)

Observations made through this research show the applications of social innovations in small schools to have 3 steps: 1) notion change and smart strategy, 2) implementation, and 3) raising the innovative standard. These three steps can be achieved via interaction with other schools and via the school’s struggle to improve innovation. Similar observations have been made by the European Commission (2013), under which applications of social innovation are divided into 3 steps: 1) making conceptual changes and creating smart strategies, 2) implementing for success, and 3) raising and disseminating innovation standards. These 3 main steps account for 10 sub-techniques which describe how social innovations are applied in small schools: 1) shopping for ideas, which involves reading and exploring innovations that are effective for a particular setting, 2) creating and developing innovations of one’s own, 3) consulting with experts to obtain their clear input and to speculate on the outcomes of ongoing innovation, 4) developing strategy and planning for innovation specialization, 5) searching out collaboration in applying innovations (this may involve conducting trainings for people in the community on the work process for different innovations), 6) improving innovation efficiency, 7) developing innovation specifications according to for whom it is intended, 8) classifying types of social innovation and doing research, 9) zoning of the areas in which each of the innovations will be applied, and 10) doing cross-regional innovative integration, conducting international innovation exchanges, creating borderless exchange, and exploiting innovations.

CONCLUSION

The component of social innovation and application of social innovation process applied in educational management of small schools in Thailand. Social innovation in small schools consisting in 4 elements are 1) change by social; 2) product of concrete; 3) means of creative; and 4) support the participation of the society. The process of creating social innovation has 4 stages: 1) analysis of the need and problem of the society; 2) the development of solutions to the problem and need of society; 3) to evaluate the effectiveness; and 4) increasing the level of efficiency of the social innovation. The process of leading social innovation includes: 1) change ideas and build special strategy wisely; 2) actions to accelerate the success; 3) to raise the innovation with the exchange extensively. At the same time with the development and change the system of social innovation better. Although process of social innovation is different among area, some common steps can be extracted. The research also found that social innovation changes overtime. At least four forms of social innovation can be identified along the process of social innovation. social innovation process is a pattern of procedures and actions that relate to the creation phase, integrations phase, and expansion phase of social innovation. Social innovation is evolvable. It is in the abstract form when it first emerges. If the key conditions are provided, social innovation will change gradually to be more concrete form. After achieving the highest concrete form, social innovation tends to transform to be in an abstract form again. Most social innovation depends largely on people's actions. Put another way, steps in changing social innovation from the most abstract to the most concrete is social innovation process. This research could contribute to a better understanding of social innovation, and could be a solid base either for practicing or for researching this subject in the future.

SOCIAL MEDIA AND ACADEMIC PERFORMANCE: A CROSS-CULTURAL STUDY

Fernando del Ama

fernando.gonzalo@aurak.ac.ae

Jose Carlos del Ama

delamaj@ccsu.edu

The explosion of social media has become one of the most relevant phenomena in the post-modern world. Social media have become a necessary reference in practically all the communication contexts (interpersonal, group communication, professional communication, mass communication). The phenomenon is raising concerns among educators and pedagogues. There is a sense of urgency in studying how the constant presence of social media in the students' life may affect their cultural habits, their mental health, and most importantly their academic performance. Our study focuses on this last aspect. The project is a common effort of two researchers working on different cultural and academic environments. Dr. José Carlos del Ama is professor of communication sciences at Central Connecticut State University (USA), Dr. Fernando del Ama is associate professor at the Department of Architecture in the School of Engineering of the American University of Ras Al Khaimah (UEA).

The study has two well defined goals. First of all, we want to study the depth of the penetration of social media in our students' life. To this end, we explore the amount of time and the frequency of social media usage, as well as the preferred platforms. Then, we analyze the correlation of these variables with our student's academic performance. As indicators of students' performance we use their self-reported GPA, their school attitude, their academic values and finally the willingness to put effort in school's tasks.

The findings of our study give us reasons to be concerned. Both, amount of time and frequency of use seem to negatively correlate with all the factors associated with academic performance.

SOSYAL BİLGİLER DERSİNDE TEKNOLOJİ KULLANIMI VE HIPER METİN-HİPER ORTAM

Nusret KOCA

nkoca@aku.edu.tr

Mustafa Toklu

mustafa.toklu@outlook.com

Teknolojideki hızlı ve tüm alanları etkileyen gelişmeler hiç şüphesiz eğitim alını etkilemekte ve teknolojinin eğitimin gereksinimlerinden etkilenmesine neden olmaktadır. Eğitim alanındaki teknolojik gelişmeler ise özellikle Sosyal Bilgiler dersine çok hızlı bir şekilde yansımakta ve kendini ciddi şekilde belli etmektedir. Sosyal Bilgiler dersi eğitimde teknolojiden yararlanma alanı en geniş derslerden birisidir. Öğrenme-öğretme süreçlerinde aktif olarak kullanılan tüm teknolojik araç ve gereçler Sosyal Bilgiler dersinde de rahatlıkla kullanılabilmekte ve öğrenme-öğretme süreçleri canlı tutulmaya çalışılmaktadır. Eğitime ve Sosyal Bilgiler dersine farklı bakış açıları getiren en yeni uygulamalardan birisi ise hiper metin ve hiper ortam olarak görülebilir. Son yıllarda bilgisayar kullanımının artması ve daha etkili bir şekilde eğitimde nasıl kullanılabileceği sorusu gün geçtikçe hiper metin ve hiper ortam uygulamalarına olan talebi artırmış ve bu yeni teknolojinin gelişmesine neden olmuştur. Hiper metinler dijital hale dönüştürülmüş, etkileşimli metinler olarak tanımlanırlar. Hiper metinler, bilgisayar ekranı üzerinden sunulan dijital ortamlardır. Metinler arasında sınırsız bir bağ bulunmaktadır. Büyük bir bilgi havuzu sunmakta ve hızlı erişim için çok sık kullanılmakta olan bir yöntemdir. Bu sistemde öğrenci öğrenme kaynağından kendi ilgi, hız ve gereksinimleri doğrultusunda yararlanır, sistemi istediği gibi yönlendirebilir. Hiper ortam ise hiper metin yapısının geliştirilmesiyle ortaya çıkan bir yapıdır. Hiper ortamda metin bağlantılarına ilave olarak grafik, ses, video, animasyon gibi farklı kaynaklara da bu bağlantılarla hızlı bir şekilde erişilebilmektedir. Bu sistemlerde bilgiler sadece yazı olarak değil, çeşitli şekillerde de sunulabilmektedir.

Bu çalışmada amaç gelişen teknolojinin sayesinde faydalanılan bilgisayardan daha etkili bir şekilde nasıl faydalanılır sorusunun cevabı olarak hiper metin ve hiper ortamın anlatılması ve hiper metin-hiper ortamın etkili bir şekilde Sosyal Bilgiler dersinde kullanımının yaygınlaştırılmasını sağlamaktır.

SOSYAL BİLGİLER LİSANS ÖĞRENCİLERİNİN HARİTA OKURYAZARLIKLARININ İNCELENMESİ (Gazi Üniversitesi Örneği)

Selman ABLAK¹

Bülent AKSOY²

Özet

Bu araştırmanın amacı, sosyal bilgiler lisans öğrencilerinin harita okuryazarlık düzeylerini çeşitli değişkenler açısından incelemektir. Araştırma tarama modelinde gerçekleştirilmiştir. Araştırmada veri toplama aracı olarak Koç ve Demir (2014) tarafından geliştirilen Developing Valid and Reliable Map Literacy Scale isimli harita okuryazarlık ölçeği uygulanmıştır. Araştırma, 2015-2016 öğretim yılında Gazi Üniversitesi, Gazi Eğitim Fakültesi Sosyal Bilgiler Eğitimi Anabilim dalında öğrenim gören 221 öğrenci üzerinde gerçekleştirilmiştir. Araştırmanın alt problemlerinin çözümlenmesinde; t-testi ve tek yönlü varyans analizi (One Way ANOVA) kullanılmıştır. Araştırma sonuçlarına göre, araştırmaya katılan lisans öğrencilerinin harita bilgisi ve becerileri testi toplam puanları yaş, CBS eğitimi alma durumu, günlük yaşamda harita kullanma sıklık düzeyi, harita kullanma amacı değişkenlerine göre farklılaşmazken; cinsiyet, sınıf, doğal ortamdaki çeşitli aktivitelere katılma düzeyi ve coğrafya dersine ilgi düzeyi değişkenlerine göre farklılık göstermiştir. Scheffe Post Hoch testi sonuçlarına göre söz konusu farklılıklar; erkek öğrenciler, 3. ve 4. sınıf öğrencileri, aktivitelere fazla katılan öğrenciler ve coğrafya dersine çok fazla ilgi duyan öğrenciler lehine bulunmuştur.

Sosyal bilgiler lisans öğrencilerin harita uygulamalarına yönelik yeterli ölçeği puanları yaş ve CBS eğitimi alma durumu değişkenlerine göre farklılaşmazken; cinsiyet, sınıf, günlük yaşamda harita kullanma sıklık düzeyi, harita kullanma amacı, doğal ortamdaki çeşitli aktivitelere katılma düzeyi ve coğrafya dersine ilgi düzeyi değişkenlerine göre farklılık göstermiştir. Çoklu karşılaştırma testi sonuçlarına göre söz konusu farklılıklar; erkek öğrenciler, 3. sınıf öğrencileri, günlük yaşamda çok fazla harita kullanan öğrenciler, doğal ortamdaki aktivitelere fazla katılan öğrenciler, ders çalışırken harita kullanan öğrenciler ve coğrafya dersine çok fazla ilgi duyan öğrenciler lehine bulunmuştur. Araştırma sonuçlarına göre sosyal bilgiler lisans öğrencilerinin harita okuryazarlıklarının geliştirilmesi için harita ile ilgili zorunlu ve seçmeli dersler konulması önerilmektedir.

Anahtar kelimeler: Harita okuryazarlığı, harita becerisi, sosyal bilgiler öğretimi

Abstract

The purpose of this study is to examine undergraduate social sciences students' map literacy levels in terms of various variables. Survey model was employed in this study. Developing Valid and Reliable Map Literacy Scale, which was developed by Koç and Demir (2014), was used for collecting data. The study was conducted on 221 students studying at the Division of Social Sciences Education at Faculty of Education of Gazi University in the 2015-2016 academic year. T-test and one-way ANOVA were used for solving the sub-problems of the research. The research results show that the participating undergraduate students' total map knowledge and skills test scores do not differ by age, status of receiving GIS training, the frequency of using maps in the daily life, and the purpose of using maps whereas they differ by gender, grade, the level of participation in various activities in the natural environment, and the level of interest in the geography course. According to the Scheffe post-hoc test results, these differences are in favor of the male students, third and fourth graders, the students having a high level of participation in activities, and the students having a very high level of interest in the geography course.

The undergraduate social studies students' scores obtained from the Competence in Map Practices Scale do not differ by age and the status of receiving GIS training whereas they differ by gender, grade, the frequency of using maps in the daily life, the purpose of using maps, the level of participation in various activities in the natural environment, and the level of interest in the geography course. According to the multiple comparison test results, these differences are in favor of the male students, third graders, the students using maps in the daily life very frequently, the students having a level of participation in the activities in the natural environment, the students using maps while studying, and the students having a very high level of interest in the geography course. Based on the research results, it is recommended to put compulsory and elective courses in the curriculum for map literacy of undergraduate social sciences students to be improved.

Keywords: Map literacy, map skills, social sciences teaching

1. GİRİŞ

Haritalar, günlük yaşantıda geniş bir kullanım alanına sahiptir. Turistik geziler, dersler, bilimsel çalışmalar, yön bulma, konum ve koordinat belirleme, uzaklık ve alan hesaplama, fiziki özellikleri yorumlama, mekânsal planlama vb. konuda pek çok amaçla kullanılmaktadır (Tümertekin ve Özgüç, 2000). Haritalar neyi ifade eder? Coğrafyanın masum bir fotoğrafını mı, bilimsel bir temsili mi, yoksa zihnimizin imgelerini mi? Haritalar olmasaydı yaşadığımız yerin imgesini yaratmakta zorlanabilirdik. Örneğin, Fransa'nın dairesel Türkiye'nin dikdörtgene benzediğini nasıl bilebilirdik? Bu nedenle haritalar zihnimizin, coğrafya bilimi ve diğer bilimlerin ayrılmaz bir parçasıdır (Ünlü, M., Üçışık, S., Özey, R., 2002; Demiralp, 2006; Kızılçaoğlu, 2007; Koç, 2008; Sönmez, 2010; Aksoy, 2013; Koç ve Karatekin, 2015; Aksoy, Kılıçoğlu ve Ablak, 2015).

Harita, mekânsal olay, olgu ve özelliklerin belirli bir ölçüğe göre küçültülerek düzlem üzerinde gösterilmesidir. Başka bir tanıma göre harita; yeryüzünde ya da diğer gök cisimlerinde yer alan, doğal ya da beşeri olgu, olay ve objelerin (orman, nehir, yerleşme,

ticaret, turizm vb.) veya mekansal ilişkisi bulunan konuların (hava kirliliği, gelir dağılımı, yağış oranı vb.) belirli bir ölçek dahilinde, birtakım kartografik kurallar uygulanarak iki veya üç boyutlu bir yüzey (kağıt, cam, bilgisayar ekranı, kabartma yüzey vb.) üzerine aktarılmasıdır (www.hgk.mil.tr). Harita görsel bir betimleme aracıdır. Gösterim gücü olarak haritaların keşfedilmesi, disiplinler arası, güçlü ve önemli bir bağ oluşturmuştur (Mac Eachren, 2004; Akt: Koç, 2008).

Harita becerileri ve harita okuryazarlığı coğrafya öğretimindeki bu çalışmaların önemli bir kısmını oluşturmaktadır. Harita becerilerinin kategorize edilmesi ile ilgili araştırmalara literatürde sıkça rastlanmaktadır. Harita becerileri ile ilgili literatür incelendiğinde McClure (1992) ve Weeden (1997)'in sınıflandırması dikkati çeker. McClure (1992)'un yaptığı sınıflandırmanın daha ayrıntılı olduğu belirlenmiştir. McClure (1992) harita becerilerini somuttan soyuta doğru; 1) Sembollerini Anlama ve Yorumlama Becerisi, 2) Profil Çıkarma Becerisi: Profil çıkarma becerisi, 3)Yön Bulma Becerisi, 4) Uzaklık, Alan ve Eğim Ölçme Becerisi, 5) Konum ve Koordinat Belirleme Becerisi, 6) Ölçek Kullanma Becerisi, 7) Taslak Harita Oluşturma ve Fiziksel Özellikleri Tanımlama Becerisi ve 8) Harita okuma ve Yorumlama Becerisi şeklinde sınıflandırmıştır. Weeden (1997) ise harita becerilerini; 1) Harita kullanma, 2) Harita yapma, 3) Harita okuma ve 4) Harita yorumlama şeklinde kategorize etmektedir.

Okuryazarlık ise, genel olarak belli bir alanda iyi eğitilmiş olma veya belli bir alanla ilgili geniş bir bilgi birikimine sahip olma anlamında kullanılmaktadır”(McBride, 2011, Akt: Çiftçi ve Koç, 2016).

Harita okuryazarlığı, harita kullanımı olarak nitelendirilmekte ve harita kullanımı da üç kategoriye ayrılmaktadır Bu kategoriler harita okuma, harita analizi ve harita yorumlamadan oluşmaktadır (Buckley, Muehrcke ve Muehrcke, 1978). Olson (1976) basitten zora doğru; tek tek sembol özelliklerinin karşılaştırılması, bir bütün olarak haritadaki sembol gruplarının özelliklerini tanıma ve karar almada veya sembollere dayalı bilgiyi yorumlayarak haritaları bilgiyi yapılandırma bir araç olarak kullanma olmak üzere üç seviyede harita okumayı düzenlemiştir. Clarke (2003)'e göre harita okuryazarlığı haritaları günlük yaşamda kullanma ve haritaları anlama yeteneğidir. Harita okuryazarlığı bilgi, anlama, uygulama, analiz, sentez ve değerlendirme basamaklarından oluşur (Koç ve Çiftçi, 2016).

Harita okuryazarlığı ve harita becerileri konusunda literatürde çeşitli araştırmalar yer alır (Buckley, Muehrcke&Muehrcke, 2011; Clarke, 2003; Carswell 1971; Catling 1998; Gerber ve Wilson, 1989; Gilmartin ve Patton 1984; Ünlü, Üçışık ve Özey 2002, Demiralp 2006, Kızılçaoğlu 2007, Golledge, Marsh, ve Battersby, 2008; Liben ve Downs, 1989; MacEachren, 2004; McClure, 1992; Richard B. Schultz Joseph J. Kerski ve Todd C. Patterson, 2008; Weeden, 1997; White, 1995; Wiegand, 2006; Wood, 1992; Koç 2008; Koç 2010; Aksoy, 2013; Koç ve Karatekin, 2015; Aksoy, Kılıçoğlu ve Ablak, 2015; Çiftçi ve Koç, 2016).

Literatürde bireylerin harita okuryazarlık düzeylerini belirlemeye yönelik Jongwon ve Bednarz (2012) ile Koç ve Demir (2014)'in geliştirdiği ölçek çalışmaları bulunmaktadır (Çiftçi ve Koç, 2016).

Araştırmanın Amacı

Bu araştırmanın amacı, sosyal bilgiler lisans öğrencilerinin harita okuryazarlık düzeylerini çeşitli değişkenler açısından incelemektir.

2. YÖNTEM

2.1. Araştırmanın Modeli

Bu çalışmada tarama modeli kullanılmıştır. Tarama (survey) araştırması bir grubun belirli özelliklerini belirlemek için verilerin toplanmasını amaçlayan çalışmalardır (Büyüköztürk ve diğerleri, 2009). Karasar (1999)'a göre tarama modelleri geçmişte ya da halen var olan bir durumu var olduğu şekliyle betimlemeyi amaçlayan araştırma yaklaşımlarıdır.

2.2. Çalışma Grubu

Araştırmanın çalışma grubunu 2015-2016 eğitim öğretim bahar döneminde Gazi Üniversitesi Sosyal Bilimler Eğitimi Anabilim Dalı'nda öğrenim gören 221 öğretmen adayı oluşturmaktadır.

Araştırmaya katılan sosyal bilgiler öğretmen adaylarının %57.9'u kadın, 42.1'i erkektir. Katılımcıların %15.4'ü 1. sınıf, %25.3'ü 2. sınıf, %31.7'si 3. sınıf ve %27.6'sı 4. sınıf lisans öğrencilerinden oluşmaktadır.

2.3. Veri Toplama Aracı

Sosyal bilgiler lisans öğrencilerinin harita okuryazarlık düzeylerini belirlemek amacıyla Koç ve Demir (2014) tarafından geliştirilen harita okuryazarlık ölçeği kullanılmıştır. Harita okuryazarlık ölçeği; harita bilgi ve beceri testi ve harita yeterlik (haritalarla işlem yapabilme, haritaları okuma ve yorumlama, taslak harita çizebilme ve haritaları kullanma) olarak isimlendirilmiş toplam beş boyuttan oluşmaktadır. 23 maddeden oluşan harita bilgisi testinin KR₂₀ güvenirlik katsayısı 0.76; 5'li likert türünde yapılandırılmış ve 4 (dört) maddeden oluşan haritalarla işlem yapabilme boyutunun Cronbach Alpha kat sayısı 0.834 hesaplanmıştır. 9 (dokuz) maddeden oluşan haritaları okuma ve yorumlama boyutunun Cronbach Alpha katsayısı 0.885; 3 (üç) maddeden oluşan taslak harita çizebilme boyutunun Cronbach Alpha katsayısı 0.807 ve 8 (sekiz) maddeden oluşan harita kullanma boyutunun Cronbach Alpha katsayısı 0.850 olarak belirlenmiştir (Koç ve Demir, 2014).

2.4. Verilerin Analizi

Araştırmada istatistiksel analizler SPSS 22 (Statistical Package for Social Science for Personal Computers) programı kullanılarak yapılmıştır. Öğretmen adaylarının harita okuryazarlığını oluşturan bilgi-beceri ve yeterlik boyutları ile bağımsız değişkenler arasında İlişkisiz Örneklem İçin t-Testi; İlişkisiz Örneklem İçin Tek Yönlü Varyans Analizi testi (ANOVA) yapılmıştır. Bu çalışmada verilerin çözümlenmesinde, harita yeterlik boyutunu oluşturan dört alt boyutun toplam puanı alınarak analizler yapılmıştır.

3. BULGULAR VE YORUM

3.1. Sosyal Bilimler Lisans Öğrencilerinin Kullandıkları Harita Türlerine İlişkin Bulgular ve Yorum

Sınıf öğretmeni adaylarının kullandıkları harita türlerine ilişkin betimsel veriler Tablo 1’de verilmiştir.

Tablo1. Sosyal Bilgiler Lisans Öğrencilerinin Kullandıkları Harita Türlerine İlişkin Betimsel Veriler

Harita Türleri	N	%
Yol Haritaları	50	22,6
Şehir İmar Planları	1	,5
Fiziki Haritalar	91	41,2
Siyasi Haritalar	38	17,2
Turizm Haritaları	4	1,8
Dijital Harita Uygulamaları	29	13,1
Diğer	8	3,6
Toplam	221	100,0

Tablo 1’deki bulgulara göre araştırmaya katılan sosyal bilgiler öğretmen adaylarının en çok kullandıkları harita türlerinin fiziki haritalar (%41,2), yol haritaları (%22,6) ve siyasi haritalar (%17,2) olduğu söylenebilir. Sosyal bilgiler öğretmen adaylarının diğer harita türlerini (Şehir imar planları, Turizm haritaları ve Dijital harita uygulamaları ve diğer haritalar) ise daha az kullandıkları belirlenmiştir.

3.2. Sosyal Bilgiler Lisans Öğrencilerinin Harita Okuryazarlığı Puanlarının Cinsiyete Göre Farklılığına İlişkin Bulgular ve Yorum

Sosyal bilgiler lisans öğrencilerinin harita okuryazarlığı puanlarının cinsiyete göre farklılık gösterip göstermediğini belirlemek için ilişkisiz örneklem için t testi yapılmıştır. Analiz sonuçları Tablo 2’te verilmiştir.

Tablo 2. Sosyal Bilgiler Öğretmen Adaylarının Harita Okuryazarlığı Puanlarının Cinsiyet Değişkenine Göre Farklılığı İçin t- Testi Sonuçları

Boyut	Cinsiyet	N	\bar{X}	S	sd	t	p
Bilgi ve Beceri	Kadın	128	8,46	3,83	219	-2,048	,042
	Erkek	93	9,59	4,24			
Harita Yeterlik	Kadın	128	77,84	16,87	219	-1,742	,083
	Erkek	93	81,91	17,52			

Tablo 2’teki bulgulara göre harita okuryazarlığının, bilgi ve beceri alt boyutunda [$t_{(219)} = -2,048$; $p < ,05$] cinsiyet değişkenine göre erkek öğretmen adayları lehine anlamlı bir farklılık olduğu söylenebilir.

Sosyal bilgiler lisans öğrencilerinin harita okuryazarlığı harita yeterlik boyutuna ilişkin puanları cinsiyet değişkenine göre anlamlı bir farklılık göstermemiştir [$t_{(219)} = -1,742$; $p > ,05$] Bu bulguya göre erkek ve kadın öğretmen adaylarının harita yeterlik düzeyleri benzer bulunmuştur.

3.3. Sosyal Bilgiler Lisans Öğrencilerinin Harita Okuryazarlığı Puanlarının Sınıf Değişkenine Göre Farklılığına İlişkin Bulgular ve Yorum

Sosyal bilgiler lisans öğrencilerinin harita okuryazarlığı puanlarının sınıfa göre anlamlı bir farklılık gösterip göstermediğini belirlemek için ilişkisiz örneklem için tek yönlü varyans analizi yapılmıştır. Analiz sonuçları Tablo 3’te verilmiştir.

Tablo 3. Sosyal Bilgiler Öğretmen Adaylarının Harita Okuryazarlığı Puanlarının Sınıf Değişkenine Göre Farklılığı İçin Tek Yönlü Varyans Analizi (ANOVA) Sonuçları

Boyut	Sınıf	N	\bar{X}	S	F	p	FarkScheffe
Bilgi ve Beceri	1.sınıf	34	8,17	3,14	18,664	,000	1-3
	2. sınıf	53	6,35	3,95			
	3. sınıf	70	11,21	3,88			
	4. sınıf	61	8,98	3,23			
Harita Yeterlik	1.sınıf	34	79,55	18,94	,200	,896	
	2. sınıf	56	78,64	19,48			
	3. sınıf	70	80,81	15,52			
	4. sınıf	61	78,95	16,20			

Tablo 3'deki bulgulara göre harita okuryazarlığının, bilgi ve beceri alt boyutunda [$F_{(3-214)} = 18,664$; $p < ,05$] sınıf değişkenine göre 3. Sınıfta öğrenim gören öğretmen adayları lehine anlamlı bir farklılık bulunmuştur. Yine 1. ve 4. Sınıf öğrencilerinin harita bilgi ve beceri düzeyleri 2. Sınıf öğrencilerinden daha yüksek bulunmuştur.

Sosyal bilgiler öğretmen adaylarının harita okuryazarlığı harita yeterlik boyutuna ilişkin puanları sınıf değişkenine göre anlamlı bir farklılık göstermemiştir [$F_{(3-217)} = ,200$; $p > ,05$]. Başka bir anlatımla katılımcıların harita yeterlikleri benzer bulunmuştur.

3.4. Sosyal Bilgiler Lisans Öğrencilerinin Harita Okuryazarlığı Puanlarının Harita Kullanma Sıklığına Göre Farklılığına İlişkin Bulgular ve Yorumlar

Sosyal bilgiler lisans öğrencilerinin harita okuryazarlığı puanlarının harita kullanma sıklığına göre anlamlı bir farklılık gösterip göstermediğini belirlemek için ilişkisiz örneklem için tek yönlü varyans analizi yapılmıştır. Analiz sonuçları Tablo 4'te verilmiştir.

Tablo 4. Sosyal Bilgiler Lisans Öğrencilerinin Harita Okuryazarlığı Puanlarının Harita Kullanma Sıklığı Değişkenine Göre Farklılığı İçin Tek Yönlü Varyans Analizi (ANOVA) Sonuçları

Boyut	Harita kullanma sıklığı	N	\bar{X}	S	F	p	FarkScheffe
Bilgi ve Beceri	Hiç	18	7,94	3,26	,775	,509	
	Çok az	112	8,88	4,02			
	Orta	75	9,04	4,10			
	Çok	13	10,15	4,82			
Harita Yeterlik	Hiç	18	68,27	16,63	8,589	,000	1-3
	Çok az	114	77,75	15,52			
	Orta	76	82,00	17,98			
	Çok	13	96,69	13,45			

Tablo 4'deki bulgulara göre harita okuryazarlığının, bilgi ve beceri boyutunda [$F_{(3-214)} = ,775$; $p > ,05$] harita kullanma sıklığı değişkenine göre anlamlı bir farklılık bulunmamıştır.

Sosyal bilgiler lisans öğrencilerinin harita okuryazarlığı harita yeterlik boyutuna ilişkin puanları harita kullanma sıklığı değişkenine göre haritayı çok kullanan ve orta düzeyde kullananlar lehine anlamlı farklılıklar göstermiştir [$F_{(3-217)} = 8,589$; $p < ,05$]. Bu bulgu harita kullanma sıklığı arttıkça harita yeterlik düzeyinin de arttığı şeklinde yorumlanabilir.

3.5. Sosyal Bilgiler Lisans Öğrencilerinin Harita Okuryazarlığı Puanlarının Doğal Ortamda Aktivitelere Katılma Sıklığına Göre Farklılığına İlişkin Bulgular ve Yorumlar

Sosyal bilgiler lisans öğrencilerinin harita okuryazarlığı puanlarının doğal ortamda aktivitelere katılma sıklığına göre anlamlı bir farklılık gösterip göstermediğini belirlemek için ilişkisiz örneklem için tek yönlü varyans analizi yapılmıştır. Analiz sonuçları Tablo 5'te verilmiştir.

Tablo 5. Sosyal Bilgiler Lisans Öğrencilerinin Harita Okuryazarlığı Puanlarının Doğal Ortamda Aktivitelere Katılma Sıklığı Değişkenine Göre Farklılığı İçin Tek Yönlü Varyans Analizi (ANOVA) Sonuçları

Boyut	Aktivite katılma sıklığı	N	\bar{X}	S	F	p	Fark Scheffe
Bilgi ve Beceri	Hiç	112	8,38	3,68	2,940	,034	1-4
	Çok az	79	9,29	4,26			
	Orta	21	9,48	3,94			
	Çok	6	12,83	5,74			
Harita Yeterlik	Hiç	112	76,17	16,31	3,975	,009	1-3
	Çok az	80	81,40	17,83			
	Orta	23	87,86	15,12			
	Çok	6	86,16	20,85			

Tablo 5'deki bulgulara göre harita okuryazarlığının, bilgi ve beceri boyutunda [$F_{(3-214)} = 2,940$; $p < ,05$] doğal ortamda aktivitelere katılma sıklığı değişkenine göre anlamlı bir farklılık bulunmuştur. Çoklu karşılaştırma testi sonuçlarına göre söz konusu farklılık doğal ortamda çok fazla bulunan öğretmen adayları ile hiç bulunmayanlar arasında çok fazla bulunan öğretmen adayları lehine bulunmuştur. Bu bulgu doğal ortamda bulunma sıklığı arttıkça sosyal bilgiler lisans öğrencilerinin harita bilgi ve becerilerinin arttığı şeklinde yorumlanabilir.

Sosyal bilgiler öğretmen adaylarının harita okuryazarlığı harita yeterlik boyutuna ilişkin puanları doğal ortamda aktivitelere katılma sıklığı değişkenine göre orta düzeyde katılım gösterenler ile hiç katılmayanlar arasında orta düzeyde katılanlar lehine anlamlı farklılıklar bulunmuştur [$F_{(3-217)} = 3,975$; $p < ,05$]. Bu bulgu harita aktivitelere katılım arttıkça harita yeterlik düzeyinin de arttığı şeklinde yorumlanabilir.

3.6. Sosyal Bilgiler Lisans Öğrencilerinin Harita Okuryazarlığı Puanlarının Doğal Ortamda Aktivitelere Katılma Sıklığına Göre Farklılığına İlişkin Bulgular ve Yorumlar

Sosyal bilgiler lisans öğrencilerinin harita okuryazarlığı puanlarının doğal ortamda aktivitelere katılma sıklığına göre anlamlı bir farklılık gösterip göstermediğini belirlemek için ilişkisiz örneklem için tek yönlü varyans analizi yapılmıştır. Analiz sonuçları Tablo 6'da verilmiştir.

Tablo 6. Sosyal Bilgiler lisans Öğrencilerinin Harita Okuryazarlığı Puanlarının Harita Kullanma Amacı Değişkenine Göre Farklılığı İçin Tek Yönlü Varyans Analizi (ANOVA) Sonuçları

Boyut	Harita Kullanma Amacı	N	\bar{X}	S	F	p
Bilgi ve Beceri	Turistik seyahatlerde	13	8,92	5,02	,005	,999
	Konum ve yön belirlemede	83	8,97	3,96		
	Akademik çalışmalarında	9	9,11	5,81		
	Ders çalışırken	112	8,94	3,85		
Harita Yeterlik	Turistik seyahatlerde	13	73,46	20,32	2,538	,058
	Konum ve yön belirlemede	84	83,33	17,44		
	Akademik çalışmalarında	9	79,22	26,20		
	Ders çalışırken	114	77,38	15,51		

Tablo 6'daki bulgulara göre harita okuryazarlığının, bilgi ve beceri boyutunda [$F_{(3-213)} = ,005$; $p > ,05$] harita kullanma amacı değişkenine göre anlamlı bir farklılık göstermemiştir.

Sosyal bilgiler öğretmen adaylarının harita okuryazarlığı harita yeterlik boyutuna ilişkin puanlarında harita kullanma amacı değişkenine göre farklılık bulunmamıştır [$F_{(3-216)} = 2,538$; $p > ,05$].

3.7. Sosyal Bilgiler Öğretmen Adaylarının Harita Okuryazarlığı Puanlarının Coğrafyaya Duydukları İlgi Düzeyine Göre Farklılığına İlişkin Bulgular ve Yorum

Sosyal bilgiler lisans öğrencilerinin harita okuryazarlığı puanlarının coğrafyaya duydukları ilgi düzeyine göre anlamlı bir farklılık gösterip göstermediğini belirlemek için tek yönlü varyans analizi yapılmıştır. Analiz sonuçları Tablo 7'de verilmiştir.

Tablo 7. Sosyal Bilgiler Lisans Öğrencilerinin Harita Okuryazarlığı Puanlarının Coğrafyaya İlgi Düzeyi Değişkenine Göre Farklılığı İçin Tek Yönlü Varyans Analizi (ANOVA) Sonuçları

Boyut	Coğrafyaya İlgi	N	\bar{X}	S	F	p	Fark Scheffe
Bilgi ve Beceri	Hiç	9	6,77	2,43	3,395	,019	2-4
	Çok az	31	7,70	3,34			
	Orta	122	8,88	3,89			
	Çok fazla	56	10,0	74,59			
Harita Yeterlik	Hiç	9	66,33	21,27	23,275	,000	1-4
	Çok az	31	65,09	14,58			2-3

Orta	124	78,76	14,80	2-4
Çok fazla	57	91,22	14,91	3-4

Tablo 7'deki bulgulara göre harita okuryazarlığının, bilgi ve beceri boyutunda [$F_{(3-214)} = 3,395$; $p < .05$] coğrafyaya ilgi düzeyi değişkenine göre anlamlı bir farklılık bulunmuştur. Scheffe çoklu karşılaştırma testi sonuçlarına göre, coğrafyaya çok ilgi duyan öğretmen adayları ile orta düzeyde ilgi duyan öğretmen adayları arasında çok ilgi duyan öğretmen adayları lehine anlamlı farklılıklar bulunmuştur. Bu bulgu coğrafyaya ilgi düzeyi yüksek öğretmen adaylarının harita bilgi ve becerilerinin daha iyi olduğu şeklinde yorumlanabilir.

Sosyal bilgiler öğretmen adaylarının harita okuryazarlığı harita yeterlik boyutuna ilişkin puanları coğrafyaya ilgi düzeyi değişkenine göre anlamlı farklılık göstermiştir [$F_{(3-217)} = 23,275$; $p < .05$]. Farkın hangi gruplar arasında olduğunu belirlemek amacıyla yapılan Scheffe testi sonuçlarına göre, coğrafyaya çok ilgi duyan öğretmen adayları ile hiç ilgi duymayan, çok az ve orta düzeyde ilgi duyan öğretmen adayları arasında çok ilgi duyan öğretmen adayları lehine anlamlı farklılıklar bulunmuştur.

Bu bulguya göre coğrafya disiplinine ilgi düzeyi arttıkça öğretmen adaylarının harita okuryazarlık düzeylerinin de arttığı söylenebilir.

4. TARTIŞMA, SONUÇ VE ÖNERİLER

4.1. Tartışma ve Sonuç

Araştırma sonuçlarına göre araştırmaya katılan sosyal bilgiler lisans öğrencilerinin en çok kullandıkları harita türlerinin fiziki haritalar (%41,2), yol haritaları (%22,6) ve siyasi haritalar (%17,2) olduğu söylenebilir. Bu bulgu Koç ve Karatekin (2015), Çifçive Koç (2016)'nin ulaştığı sonuçlara benzerlik göstermektedir.

Araştırma sonuçları harita okuryazarlığının, bilgi ve beceri alt boyutunda cinsiyet değişkenine göre erkek öğretmen adayları lehine anlamlı bir farklılık olduğunu; harita yeterlik boyutunda ise cinsiyet değişkenine göre anlamlı bir farklılık bulunmadığını ortaya koymuştur.

Araştırma sonuçlarına göre harita okuryazarlığının, bilgi ve beceri alt boyutunda sınıf değişkenine göre 3. Sınıfta öğrenim gören öğretmen adayları lehine anlamlı şekilde farklılaşırken; harita yeterlik boyutuna ilişkin puanları sınıf değişkenine göre benzer bulunmuştur.

Araştırma sonuçlarına göre harita okuryazarlığının, bilgi ve beceri boyutunda harita kullanma sıklığı değişkenine göre anlamlı bir farklılığa rastlanmazken; Harita yeterlik boyutuna ilişkin puanları harita kullanma sıklığı değişkenine göre haritayı çok kullanan ve orta düzeyde kullananlar lehine anlamlı farklılıklar göstermiştir.

Araştırma sonuçlarına göre harita okuryazarlığının, bilgi ve beceri boyutunda doğal ortamda aktivitelere katılma sıklığı değişkenine göre doğal ortamda çok fazla bulunan öğretmen adayları lehine farklılıklar bulunmuştur.

Harita yeterlik boyutuna ilişkin puanlarda doğal ortamda aktivitelere orta düzeyde katılanlar lehine anlamlı farklılıklar bulunmuştur. Çifçive Koç (2016)'da benzer sonuçlar bulunmuştur.

Araştırma sonuçlarına göre sosyal bilgiler lisans öğrencilerinin harita okuryazarlığının, bilgi-beceri ve harita yeterlik boyutuna ilişkin puanlarında harita kullanma amacı değişkenine göre farklılık bulunmamıştır.

Araştırma sonuçlarına göre harita okuryazarlığının, bilgi ve beceri boyutunda coğrafyaya ilgi düzeyi değişkenine göre coğrafyaya çok ilgi duyan öğretmen adayları lehine anlamlı farklılıklar bulunmuştur. Yine benzer şekilde sosyal bilgiler öğretmen adaylarının harita okuryazarlığı harita yeterlik boyutuna ilişkin puanları coğrafyaya ilgi düzeyi değişkenine göre coğrafyaya çok ilgi duyan ve orta düzeyde ilgi duyan öğretmen adayları lehine anlamlı farklılıklar bulunmuştur. Coğrafya disiplinine ilgi düzeyi arttıkça öğretmen adaylarının harita okuryazarlık düzeylerinin de arttığı sonucu Koç ve Karatekin (2015) ve Çifçive Koç (2016) sonuçları ile benzerlik göstermektedir.

4.2. Öneriler

Araştırma sonuçlarına göre sosyal bilgiler lisans öğrencilerinin harita okuryazarlık düzeylerinin geliştirilmesi için sosyal bilgiler lisans programına harita ile ilgili zorunlu ve seçmeli dersler konulması önerilmektedir.

Lisans öğrencilerinin harita okuryazarlığı ile ilgili bilgi-beceri ve yeterlikleri kazanabilmek için coğrafya derslerinin işleniş sırasında harita kullanımını alışkanlık haline getirmesi gerektiği önerilmektedir.

Arazi çalışmasına katılan lisans öğrencilerinin harita okuryazarlık düzeyleri daha yüksek bulunmuştur. Bu nedenle arazi çalışmalarında kartografik materyalin daha fazla kullanılması gerektiği önerilmektedir.

ÖZET

Sosyal medyayı kullanmaya harcanan zaman arttıkça anksiyete belirtilerinin arttığı gözlemlenmiştir. Bu çalışmada üniversite öğrencilerinde sosyal medya ağları kullanımı ve sıklığının sosyal görünüm anksiyetesiyle olan ilişkisinin belirlenmesi amaçlanmıştır. Araştırma verileri, 18 yaş ve üzeri, üniversitede farklı bölümlerde eğitim gören, çalışmaya katılmayı kabul eden, 347 gönüllü öğrenci ile görüşülerek yüz yüze anket yöntemi ile toplanmıştır. Veri toplama aracı olarak araştırmacılar tarafından oluşturulan veri toplama anket formu içinde sosyal görünüş anksiyetesi ölçeği kullanılmıştır. Veriler SPSS istatistik programında değerlendirilmiştir. Çalışmaya katılan 265(%77.3) kadın, 78(%22.7) erkeğin yaş ortalaması 20.4 ± 1.7 (min 18, max 31) olup öğrencilerin 113'ü (%32.9) Sakarya Üniversitesi(SAU) Tıp Fakültesinde, 89'u (%25.9) SAU Sağlık Hizmetleri Meslek Yüksek Okulu Tıbbi Laboratuvar, 59'u (%17.2) Çocuk Gelişimi, 50'si (%14.6) Tıbbi Dökümantasyon, 21'i (%6.1) Yaşlı Bakım, 8'i (%2.3) İlk Yardım, birer öğrenci de (%0.3) Sınıf Öğretmenliği, Optisyenlik ve Fizyoterapi bölümlerinde öğrenim görmekteydi. Öğrencilerin en çok kullandıkları sosyal ağ instagram (%50.4) iken, %0.3'ü sosyal medya kullanmadığını bildirmiştir. Katılımcıların %47.6'sı sosyal ağlarını sürekli veya günde 10 kereden fazla kontrol ettiğini, %32.4'ü sosyal medyada paylaştıkları fotoğrafların ne kadar beğeni aldığını önemseydiğini, %56.3'ü güzel bir arkadaşı ile çekindiği fotoğrafı paylaşmayı tercih ettiğini, %18.7'si çektikleri resimleri üzerinde düzenlemeler yapmadan paylaşmadığını, %44.6'sı ancak üzerinde düzenlemeler yaptıktan sonra resimlerini beğendiğini belirtmişlerdir. Sosyal görünüş anksiyete ölçeğinde; %8.7'si dış görünüşü ile ilgili kendisini rahat hissetmediğini, %47.2'si fotoğraf çekimi sırasında kendisini gergin hissettiğini, %21.3'ü görünüşü nedeniyle insanların kendisini beğenmeyeceği, %11.1'i görünüşünün yaşamını zorlaştıracağı, %9.3'ü görünüşünden dolayı insanların kendisiyle vakit geçirmek istemeyecekleri kaygısı taşıdığını, %13.4'ü insanlarla konuşurken görünüşünden dolayı gerginlik yaşadığını belirtmişlerdir. Yapılan çalışmada, üniversite öğrencilerinin sosyal medyayı etkin olarak kullandıkları ve kendilerini ifade etme alanı olarak ne kadar önemli olduğu görülmektedir. Bu hali ile sosyal medyada insanların nasıl görüldüğü önemli olmaya başlamış, görünüşü ile de yargılanması sonrasında kişinin sosyal görünüm anksiyetesinde artma kaçınılmaz olmuştur.

Anahtar kelimeler: Sosyal medya ağları, Facebook, Twitter, Instagram, Youtube, sosyal görünüm anksiyetesi

ABSTRACT

As the time spent for using social media increased, anxiety symptoms were observed to increase as well. This study aimed to identify the relationship between the usage and frequency of social media networks and social appearance anxiety in university students. The research data was collected through face-to-face survey method with 347 volunteer students who were 18-year-old or over, studying in different departments of the university and accepted to participate in the study. As the data collection tool, the social appearance anxiety scale in the data collection survey form created by the researchers was used. The data was assessed with the SPSS statistical program. The mean age of 265 (77.3%) female and 78 (22.7%) male study participants was 20.4 ± 1.7 years (min 18 years- max 31 years). 113 (32.9%) of the students were studying in the faculty of medicine in Sakarya University(SAU), 89 (25.9%) in Medical Laboratory in SAU Health Services Vocational High School, 59 (17.2%) in Child Development, 50 (14.6%) in Medical Documentation, 21 (6.1%) in Geriatric Care, 8 (2.3%) in First Aid and 1 student (0.3%) in each of the following departments; Primary School Teaching, Optician and Physiotherapy departments. The most commonly used social network reported by the students was Instagram (% 50.4) whereas 0.3% of them reported that they did not use the social media. Of the participants, 47.6% stated that they checked their social networks constantly or more than 10 times a day, 32.4% stated that they cared about how much the photos shared by them in social media were liked, 56.3% stated that they preferred to share their photos taken with a good looking friend, 18.7% stated that they did not share their photo without editing it, 44.6% stated that they only liked their photos after they made editions on them. In the social appearance anxiety scale, % 8.7% of them stated that they did not feel comfortable about their external appearance, 47.2% of them stated that they felt nervous while their photos were taken, % 21.3 of them stated to have the anxiety that people would not like him/her because of their appearance, 11.1% of them stated to have the anxiety that their appearance would make their life difficult, 9.3% of them stated to have the anxiety that people would not like to spend time with them due their appearance and 13.4% of them said that they were experiencing nervousness while talking with people because of their appearance. In the conducted study, it was clearly observed that university students used social media effectively

and how important it was as a field of self-expression. As is, how people looked in the social media started to be important and the increase in the social appearance anxiety became inevitable after being judged with the appearance.

Key words: Social media networks, Facebook, Twitter, Instagram, You tube, social appearance anxiety.

Özet

İnsanoğlunun sosyal ve toplumsal hayatında en önemli konulardan birisi olan güvenlik, toplumsallaşma ile birlikte önemini daha da artırmıştır. Toplu yaşam ile ortaya çıkan suç olgusu insanların güvenliğe ihtiyacını da çoğaltmıştır.

Suçun insan hayatına girmesinden sonra suçun önlenmesi, önlenmesine yönelik tedbirler oluşturulması suçun oluşması halinde ise bir daha aynı suçun meydana gelmemesi amacıyla suçun işlenmesi sonucu uygulanacak yaptırımlara yönelik asırlar boyu çalışmalar yapılmıştır.

İlk çağlardan itibaren geliştirilmeye çalışılan bu yaptırımlar suç türlerinin artmasıyla beraber çeşitlenerek günümüz ceza hukuku ve ceza kanunlarına kadar dayanmıştır.

Suçta yönelik, devletlerce, bazen de toplumlarca konulan bu yaptırımlara karşın suç olgusu da günden güne değişmiş basit adi suçlar dediğimiz hırsızlık ve dolandırıcılıktan, resmi belgede sahtecilik, siber suçlar gibi daha uzmanlık gerektiren suçlara kadar uzanmıştır.

Günümüzün en aktif iletişim sistemi olarak sayılan sosyal ya da yeni medya ise insanlara sunduğu kolay, çift yönlü iletişim ve bilgiye ulaşılabilirlik gibi sınırsız imkânları sayesinde suçun oluşumuna da etki edebilmektedir.

Çalışmada üzerinde duracağımız fuhuş konusuyla özellikle kendi ceza kanunlarımızı baz aldığımızda tek başına suç olarak sayılmazken fuhuş konusuna aracılık, teşvik ve yer

temini suç olarak işlenmiştir. Bu nedenle sosyal medyanın bilgiye daha kolay ulaşılabilirlik imkânından, suç işlemeye yönelik (Fuhşa aracılık, teşvik ve yer temini) insanların nasıl yararlandığı üzerinde durularak sonraki çalışmalar için bir katkı sağlanmaya çalışılmıştır.

Anahtar kelimeler: Fuhuş, suç, yaptırım, ceza hukuku.

Giriş

Suç, Türk Dil Kurumu Büyük Sözlüğünde törelere, ahlak kurallarına aykırı davranış ve yasalara aykırı davranış, cürüm, olarak iki şekilde tanımlanmıştır (TDK, 2017).

İlk iki insan olan Adem ve Havva'nın yaratılmasıyla birlikte insanoğlunun yaşam serüvenine dahil olan suç olgusu, Havva'nın yasaklı elmayı yiyerek ilk suçu işlemesinden (Bakara, 25) günümüzde yüzlerce çeşitli şekle bürünmüştür.

Peki suç nedir? "Suç bir insan davranışıdır, ancak suç olarak tanımlanan davranışlar gerçekleştirildiklerinde toplumsal barışı tehdit ederler. Dolayısıyla toplumsal yaşamın barışçı bir biçimde sürdürülebilmesi için hangi davranışların yapılması hangi davranışların yapılmaması gerektiğinin belirlenmesi gerekir" (Gönenç, 2013'ten aktaran Coştan, 2014).

İnsanlık tarihinin her döneminde büyük bir sorun olan suç, artık olağan hale gelmiştir. Vahşice işlenen bir cinayet, çocuğa yönelik cinsel saldırı, kadına karşı şiddet gibi medya tarafından özel ilgi gösterilen olaylar haricinde meydana gelen suçlar, en iyi ihtimal ile akşam TV bültenlerinde birkaç dakika ile bahsedilmektedir. Gazetelerde üçüncü sayfa haberi olarak yazılmakta ve çoğu zaman polis, savcılık ve benzeri kurumların tutanaklarından başka bir yerde adı geçmemektedir (Yayla ve Kaşlı, 2016).

Genel anlamda suç olayı; mekân, zaman, tür, kurban ve mağdur boyutlarından meydana gelmektedir. Fakat tüm bu boyutların bir arada yer alması ile oluşan suç olayının gerçekleşmesinde kişiyi suça iten sosyal, ekonomik ve biyolojik nedenler de oldukça etkilidir. Bu nedenle oluşumunda birçok faktörün etkili olduğu suç olaylarını, kavramın çok

boyutluluğu nedeniyle, sosyoloji, psikoloji, yönetim, hukuk, kriminoloji ve coğrafya gibi çeşitli disiplinler kendi yöntemleri içinde ele almaktadır (Ünsal, 2015).

Öyle ki, bireysel olarak kavramsallaşan suç, zamanla toplu (örgütsel), planlı, nitelikli, kasten, taksirli gibi çeşitli sıfatlar alarak insanlar tarafından işlenir hale gelmiştir.

İnsanoğlunun güvenlik içinde yaşama ihtiyacı insanlık tarihi ile birlikte başlar. Güvenlik eski çağlardan itibaren insanlığın üzerinde durduğu ve bu konuda çeşitli yöntemler geliştirdiği en temel olguların başında gelir. Eski çağlardaki insanların mağaralarda yaşamaya başlaması, iklimden korunma kadar güvenlik endişesi gerekçesiyle tercih ettiği bir durumdur. Eski Yunan ve Roma'da ekonomik gelişme sonucunda toprak sahibi ve tüccarların zenginleşerek ülkenin kontrolünü eline geçirmesi ve güvenliği sağlamak amacıyla kentlerin duvarlarla çevrenmesi ve kaleler yapılması yine güvenlik gereksiniminin insanlık için önemini gösteren örneklerdir (Es ve Ateş 2004'ten aktaran, Gökulu, 2010). Başka ihtiyaçlarının yanında özellikle güvenlik içinde yaşama, saldırılardan korunma ihtiyacı insanları bir araya getirmiş ve toplumu oluşturmuştur. İnsanoğlunun toplumsal hayata geçişiyle birlikte suçun insanlar ve toplum üzerinde oluşturduğu tahribatı engellemek amacıyla çeşitli yollar aranmaya başlanmış ve bulunan her önleyici tedbirin karşılığında da yine insanoğlu suçu farklı bir biçimde işleme yoluna gitmiştir.

Çeşitli yollarla işlenen suçlar alınan tedbirlere rağmen her boşluktan yararlanarak adam yaralamadan öldürmeye, hırsızlıktan dolandırıcılığa, tecavülden gaspa, bilişim suçlarından kaçakçılığa kadar yeni suç alanları yaratmıştır.

Suçla mücadele edebilmek amacıyla ise, her ülke kendi içerisinde bir ceza hukuku oluşturmuş ve suça uygulanacak ceza türlerini kanunlaştırarak ceza kanununu ortaya çıkarmıştır. Devletin hukuk düzeninin bir kolu olan ceza hukuku, failin kişiliğine göre değişebilen cezai sonuçlarla (müeyyide) yasaklanan hukuka aykırı fiilleri (suçları) öngören hukuk normlarının bütünü olarak tanımlanır. Ceza hukuku içerisinde hazırlanan ceza

kanunlarıysa, bireyin hak ve özgürlüklerine derin biçimde müdahale eden yaptırımları içermektedir.

Bunca suç çeşitliliği içerisinde devletler ceza hukuk sistemlerinde yalnızca suçun ne olduğuna değil neden olduğuna ve nasıl yapıldığına da odaklanarak, suçun işlenmesinden sonra ki sürede de suçlu olana uygulanacak cezai yaptırımları ona göre değerlendirerek, suçun önlenmesine dair tedbir almaya çalışmaktadır. Unutulmamalıdır ki, insanları suçtan uzaklaştıran olgulardan biri de bu cezai yaptırımlardır.

Çalışma konusu olan fuhuş ise her ülkede farklı değerlendirilmektedir. Kimi ülkeler fuhuşu bir suç olarak kabul edip yasaklarken hatta idam ile cezalandırırken, kimi ülkeler ise devlet kontrolünde bazı bölgeler ya da ikametlerde olmak koşuluyla yapılmasına izin vermiş bazı ülkeler ise suç olarak görmemiştir.

Ülkemizde ise fuhşa yönelik adli bir ceza uygulanmamakla beraber Türk Ceza Kanununun 227. Maddesinde “Fuhşa teşvik, aracılık ve yer temini” suç olarak düzenlenmiş ve karşılığında cezai müeyyideler öngörülmüştür.

Madde metninde, kişilerin ve özellikle çocukların fuhşa teşviki, sürüklenmesi fiillerinin hangi koşullarda suç oluşturduğu hususunda düzenlemeler yapılmıştır. Bu düzenlemeler yapılırken, Türkiye'nin fuhuşla mücadele ile ilgili olarak milletlerarası sözleşmelerden kaynaklanan yükümlülükleri göz önünde bulundurulmuştur.

Medya denildiğinde ise ilk akla gelen kelimeler genellikle gazete, dergi, radyo ve televizyon olmaktadır. Bu ortamları geleneksel medya olarak belirtmekteyiz. Ancak teknolojik yenilikler ve özellikle internetle birlikte biçim değişikliği söz konusu olmaktadır. Geleneksel ve yeni medya arasındaki farklar üzerine birçok çalışma yer almaktadır (Yengin, 2012).

Günümüzde özellikle teknolojik yenilikler vasıtasıyla dijitallik, etkileşimlilik, hipermetinlilik, ve modülerlik bileşenleri medyanın yeni sıfatını almasını sağlamaktadır. Bu

bileşenleriyle yeni medya, bireyleri ve toplumları yönlendirme, kontrol etme, düşündürme ve etkileme gücüne sahiptir. Neye inanacağımız yeni medyayı yönetenler tarafından seçilmekte ve kitlelere sunulmaktadır. Gelecekte medya eskisiyle yenisiyle yoluna devam edecektir. Buradaki en önemli sorun bizlerin neyi, kime nasıl inanacağımızdır (Yengin, 2012).

Çalışmanın merkez noktası olan sosyal medya, günümüzün en popüler konularının başında geliyor. Sosyal medya ve web 2.0 terimleri geçtiğimiz yıllarda; bloglar, mikrobloglar, sosyal ağ siteleri veya video/görüntü/dosya paylaşım platformları veya wikileri gibi Dünya Çapında Ağ (www) uygulamalarının çeşitlerini açıklamada popüler hale geldi (Saraçoğlu ve Kalaycı, 2014, s. 49).

Başer (2014) ise, sosyal medyanın ne olup olmadığına ve neyin sosyal medya tanımında ele alınması gerektiğine yönelik uygulayıcılar ve akademisyenler tarafında çoğu zaman bir belirsizlik bulunduğunu sosyal medya kavramının çoğunlukla da Web 2.0 ve kullanıcı üretimi içerik tanımlamalarıyla iç içe geçtiğini belirtmektedir.

Sosyal medya, teknoloji, telekomünikasyon ve sosyal iletişimin, kelimeler, görseller, ses dosyaları yolu ile sağlandığı bir yapıya sahiptir. İnsanlar hikâyelerini ve tecrübelerini bu bağlamda paylaştığı bir çerçeveye de sahiptir.

Kaplan ve Haenlein'in (2010) tespitine göre ise Sosyal Medya; "Web 2.0 üzerinde ideolojik ve teknolojik içeriklerin, yapılanmaların kullanıcı merkezli bir şekilde üretilmesine ve geliştirilmesine izin veren internet tabanlı uygulamaların bütününe" denilmektedir (Kaplan ve Haenlein, 2010'dan aktaran Dağıtmaç, 2015).

Sosyal medya ile ilgili diğer yazarların tanımlarına baktığımız zaman:

- Sosyal medya ve sosyal yazılımlar "tüm geleneksel ticari kurum ve kuruluşların çerçevesinin dışında paylaşma, birleriyle ortaklık yapma ve kolektif eylemde yer alma yeteneklerimizi artıran" araçlardır (Shirky, 2008'den aktaran Saraçoğlu ve Kalaycı, 2014).

- Medya ile ilişkili olan belirgin bir “sosyal” kelimesi, platformların kullanıcı merkezli olduğunu belirtmektedir ve katılımcılı teriminin insan ortaklaşmasına vurgu yapması gibi o da komünal faaliyetlere olanak sağlamaktadır. Gerçekten de, sosyal medya insan ilişkilerinin çevrim içi kolaylaştırıcısı veya güçlendiricisi, sosyal değer olarak bağlanabilirliği teşvik eden insanlar ağı olarak görülebilir (van Dijk, 2013’ten aktaran Saraçoğlu ve Kalaycı, 2014).

- Web’in ilk on yılında veya varlığından bugüne (1990’lardan 2000’lerin ilk on yılının başı veya ortasına değin) web siteleri ayrı bahçeler gibi olma eğilimindedir. Web 2.0 kolektif bir arsa gibidir. Bireyler kendi bahçelerine sahip olmak yerine, paylaşılan bir alanda işbirliğiyle çalışmak için bir araya gelmişlerdir. Web 2.0’ın kalbinde çevrimiçi sitelerin ve hizmetlerin, potansiyel ortakların ağlarını daha çok kabul ettikçe daha da kuvvetlendirdikleri fikri vardır. Yaratma ve yapma kültürünün ortaya çıkmasıyla ve kendi medya kültürümüzü üretmeyle ve yaymayla nitelendirilir, şeyleri bir araya getirir ve sosyal boyut içerir ve bizi diğer insanlarla sosyal ve fiziksel dünyaya bağlar (Gaunlett, 2011’den aktaran Saraçoğlu ve Kalaycı, 2014).

- Sosyal medya araçları “profil unsurlarına, kişiler ve bu kişiler arasındaki etkileşime” kişisel iletişim ve özel olarak hiç kimseye gönderilmeyen mesajların yayın modeli arasındaki ayrımı bulanıklaştırıcı özelliklere sahiptir. Sosyal medya kişisel iletişim ve kamusal medya arasındaki bir yakınsamayı belirtir (Sherman, 2012’den aktaran Saraçoğlu ve Kalaycı, 2014).

Görüldüğü gibi sosyal medya ile ilgili tanımlamaların hepsinin ortak noktası sosyal medyanın kişiler arası çevrimiçi iletişime tanıdığı olanaklar etrafında toplanmaktadır. Bununla birlikte sosyal medyanın geleneksel medyadan farklı yanları da yine araştırmacılar tarafından çalışma konusu edilmiştir.

Sosyal medyayı (yüz yüze iletişim de dahil) geleneksel medyadan ayırt eden özellikler, Rice'a (1987) göre şunlardır:

Yeni medya halihazırda şu özellikleri birleştirdiği ölçüde yenidir;

1- Hesaplama (ki sözcüklerin veya diğer verilerin çağrışımları aracılığıyla yeniden düzenlenmesi örneğindeki gibi içeriğin işlenmesine ve haber gruplarında söyleşme zincirleri yaratılması örneğindeki gibi iletişimin yapılaştırılmasına imkan verir)

2- Telekomünikasyon şebekeleri (ki bunlar birbirlerinden çok uzaktaki insanlara erişim ve bağlantı imkanı sunar)

3- İçeriğin sayısallaşması (ki dağıtım şebekelerinden aktarıma, içeriğin veri olarak yeniden üretilebilirliğine ve metin, ses ve görüntü gibi çok sayıda tarzın bütünleşmesine ve sunumuna imkan verir) (Rice, 1987'den aktaran Mutlu, 2012)

Peki sosyal medyada içerik insanlar tarafından üretiliyor, insanlar tarafından paylaşılıyor ve insanlar tarafından karşılıklı çift yönlü iletişime olanak tanıyor sosyal medyada suç üretilebilir mi? Fuhşa teşvik, aracılık ve yer temini Türk Ceza Kanununda suç olarak düzenlenmiş ise, günümüzde bir fenomen haline gelen, hayatımızda vazgeçilmez bir hal alan, günlük hayatımızda her an ulaşabildiğimiz eğlenceden iletişime, bilgiye ulaşımdan bankacılık borsa gibi her işimizi yapabildiğimiz yeni medya acaba fuhşa aracılık ederek suç işlemekte midir?

Araştırmanın Amacı

Önce bilgisayar daha sonra internet ve son olarak da web 2.0 ile birlikte hayatımıza giren sosyal medya günümüzün çoğunu içerisinde geçirdiğimiz hatta sosyal hayatımızın neredeyse tamamı haline gelen bir sanal dünyadır. Normal yaşantımıza göre daha rahat görüşlerimizi ifade edebildiğimiz, farklı kimlik ve kişiliklere büründüğümüz daha çok kuralsızlaştığımız bir o kadar da metalaştırıldığımız bir dünya.

İnternet ağının bilgisayarları birbirine bağlayarak iletişim kurulmasını sağladığı gibi sosyal ağlar da günümüzde bireyleri zaman ve mekandan bağımsız olarak birbirlerine bağlamaktadır. Çeşitli sebeplerle sosyal ağlarda var olan bireyler bu platformlara kayıt olabilmek adına sistemin istediği bilgileri vermekten çekinmemektedir (Erbaşlar, 2013'den aktaran Erdal ve Altun, 2016).

Son birkaç yılda özellikle “sosyal medya” ve “web 2.0” terimlerinin hayatımıza bu denli etki etmesi, günlük yaşantımızın seyrini değiştirecek bir güce kavuşması ve “Sosyal” kelimesinin “sosyal medya” terimi içinde belirgin bir şekilde yer almasıyla birlikte şu soru akıllara geldi: Sosyal medyada sosyal olan ne?

“Web 2.0” terimini dile kazandıran O'Reilly, web 2.0'nin temel niteliklerini şöyle sıralamaktadır: Radikal merkezsizleşme, radikal güven, yayıncılık yerine katılımcılık, katılımcı olarak kullanıcılar, zengin kullanıcı deneyimi, uzun kuyruk, bir platform olarak web, kişinin kendi verilerini kontrol etmesi, veriyi yeniden karıştırma, kolektif zeka, tutumlar, daha çok kullanıcı ile daha iyi yazılım, oyun, belirsiz kullanıcı davranışlarıdır (Fuchs, 2014'ten aktaran Saraçoğlu ve Kalaycı, 2016).

Tarihsel ve sosyolojik olarak baktığımızda suç olgusu, suç ile mücadele de önemini korumaktadır. Toplumdaki bireylerin birbirleriyle uyum içinde varlıklarını sürdürebilmeleri için, herkesin tabi olacağı bir takım kuralların geçerli olması elzemdir. Kuralların toplumu birliktelik boyutunda uyumlu kılması toplumsal yapının devamı açısından önemlidir. Bu nedenle kurallar toplumsal alanın her aşamasında kendini göstermiştir. Bu kurallar ise gerek yazılı yani formel (Anayasa, kanun, yönetmelik gibi) gerekse sözlü yani informel (Örf, adet, gelenek, değerler gibi) geçmişten bugüne süreç içinde meydana gelen kanaatlerin kaynaklığında şekillenmiştir (Yaman ve Acar, 2016).

Günümüz literatüründe suçlar hem hazırlanış hem işleniş hem de sonuç bakımından çok çeşitlilik göstermektedir. Suçların bu denli çoğalmasına karşın her geçen gün suçlarla

mücadele için toplumlar nazarında devletler yeni stratejiler belirlemiş ve yeni yaptırımlar ortaya koymuştur. Ancak suçun işlenmesi karşılığındaki maddi ya da manevi getiri de insanları yeni suç işleme tekniklerine ve yeni suç alanlarına yöneltmiştir.

Tarihin en eski mesleklerinden biri olarak kabul edilen, bununla birlikte ahlaka aykırı bulunarak kimi ülkelerde yasaklanıp çok ağır yaptırımlar uygulanan kimi ülkelerin bazı bölgelerinde serbest bırakılan fuhuş suçu ise ülkemizdeki kanunlarda, teşvik etmek, aracılık etmek ve yer temin etmek şeklinde ayrı ayrı adlandırılarak cezai müeyyidelere konu edilmiştir.

İşte son dönemde hayatımızın vazgeçilmezi haline gelen olumlu yanlarının yanında olumsuz yanları da bulunan sosyal medyanın bu olumsuz yanlarından birisi de kullanılarak suçun daha ulaşılabilir hale getirilmesidir. Bu çerçevede fuhuş dediğimiz olgunun yeni medyada nasıl yer bulduğu ve hangi medya platformlarının kullanıldığı anket kullanılarak istatistiksel bilgiler ışığında yorumlanmaya çalışılacaktır.

Araştırmanın Önemi

İnternetin artık cebimizde bulunan akıllı telefonlara ya da tablet bilgisayarlara kadar girmesinden sonra artık her an çevrimiçi durumdayız. İnternetin en büyük gözdesi, eğlence, bilgi, arkadaşlık gibi sosyal hayatımıza yön veren nerdeyse tüm olgulara muktedir bir olgu olan sosyal medya ise etrafımızı tamamıyla kuşatmış bulunmakta. Çalışırken, seyahat ederken, yemek yerken, tuvaletteyken hatta ailemizle birlikteyken kendimizi alıkoyamadığımız bir fenomen, “Sosyal medya” son dönemde etkililiği, geçerliliği ve ulaşımı nedeniyle herkes tarafından ve her iş için tercih edilmektedir. Bilgi için kullanan öğrenci ve akademisyenler, ihale takibi için kullanan iş adamları, arkadaş bulmak, sosyalleşmek için kullanan gençler... 7’den 70’e herkes tarafından kullanılan sosyal medya çocuklar ve gençler için olduğu kadar yetişkin ve yaşlılar için de erkekler için olduğu kadar kadınlar için de aydın ve elitler olduğu kadar en cahil için de kullanılabilir şekilde basit tasarlanmıştır.

Tabi sosyal medyanın bu kadar basit tasarlanmış olması, herkes için ulaşılabilir ve çevrimiçi olması iyi niyetli insanlar kadar kötü niyetli insanlarından dikkatini çekmektedir. Suçlu diyebileceğimiz kişilerce suçun niteliğine göre en hızlı en kolay yolu bulmak çok önemlidir. Sosyal medyanın tanıdığı bu imkânlar ise özellikle çalışmamızda değineceğimiz fuhuş suçunun işlenmesinde sunduğu olanaklar bakımından irdelenecektir.

İnsanoğlu yaradılışı ile birlikte çoğalmaya, çoğalmayla birlikte toplu yaşamaya, toplu yaşamayla birlikte ise toplumsallaşmaya başladı. Bu süreçte beslenme ve beslenmeyi sağlayan üretim birincil derecede önemliken zamanla güvenlik sorunları yani suç ortaya çıktı. İnsanın sosyal çevresinden başlayarak, psikolojik etkenler, ekonomik gerekçeler, kalıtsal rahatsızlıklar, aile yapısı, madde bağımlılığı ve fiziksel ihtiyaçlarının birçoğu suçların oluşmasına neden olurken güvenlik ihtiyacının ortaya çıkması ile toplumlar belli normları hayata geçirerek suçla mücadele etmeye başladı. Ancak toplumsal normlar ve daha sonraları ortaya çıkan yazılı kanunlar ve yaptırımlar suçun işlenmesini engellemedi.

Psikolojik, sosyolojik, ekonomik ya da fiziksel nedenler insanları sürekli olarak suça teşvik etmiş ve önceleri basit suçlarla başlayan bu süreç modern çağda suçlarında çeşitlenmesine ve suç yollarının da artmasına neden olmuştur.

Her dönem kendi suçunu yaratmış her yenilik kendi suç şekli ile gelmiştir. Çoğalma ile kavga, yaralama ve cinayet, üretim ve mülkiyet ile hırsızlık, paranın icadı ile dolandırıcılık, bürokrasi ile resmi belgede sahtecilik ve nihayet internet ile siber suçlar...

Fuhuş bilindiği üzere evli olmayan insanlar arasında heteroseksüel ya da homoseksüel şekilde (lezbiyen, gay vb.) iki ya da daha fazla kişinin grup olarak iştirak ettiği para karşılığı cinsel birlikteliktir. Fuhuş suçunun niteliği gereği ahlak kavramına ters düştüğü için insanlar bu suçu işleyecek - tabiri caizse - suç ortağı bulmak için çeşitli yollar aramaktadır. Şehrin belli yerlerinde cadde kenarlarında, belli randevu evlerinde bu suç işlenmektedir. Ancak fuhuş

bir suç olduđu kadar bir alışveriş olarak görüldüğü için insanlar farklı sunum biçimleri, farklı reklam yöntemleri ile kendilerine müşteri temin etmektedirler.

İşte bu nedenle bu çalışma ceza kanunumuzda Fuhşa teşvik, aracılık ya da yer temini olarak nitelik kazandırılan fuhuş suçunun pazarlamacılar – pazarlananlar – müşteriler üçgeninde, bir fenomen olan sosyal medyanın suçun işlenmesine nasıl aracılık ettiği konusunda ileride yapılacak çalışmalara bir katkı sağlaması açısından önemlidir.

Problem Cümlesi

Sosyal medya'nın fuhuş suçunun işlenmesine etkisi?

Alt Problemler

1. Gelir durumunun insanların para karşılığı cinsel birliktelik için sosyal medyayı kullanmasına etkisi?
2. Ailedeki kişi sayısının insanların para karşılığı cinsel birliktelik için sosyal medyayı kullanmasına etkisi?
3. Eğitim durumunun insanların para karşılığı cinsel birliktelik için sosyal medyayı kullanmasına etkisi?
4. Yaşın insanların para karşılığı cinsel birliktelik için sosyal medyayı kullanmasına etkisi?
5. Medeni durumun insanların para karşılığı cinsel birliktelik için sosyal medyayı kullanmasına etkisi?

Varsayımlar

1. Sosyal medya fuhuş için kullanıcılara imkan bulunmaktadır.
2. Sosyal medya fuhuş için seçenekler sunmaktadır.
3. Sosyal medya fuhuş suçuna aracılık etmektedir.

Evren

Çalışmada evren olarak 04.04.2017 ile 30.04.2017 tarihleri arasında Ankara ilinde yaşayan 18 – 35 yaş arası 176 erkek şahıs alınmıştır.

Örneklem

Yine bu çalışmada örneklem olarak Ankara ilinde 04.04.2017 ile 30.04.2017 tarihleri arasında Ankara ilinde yaşayan 18 – 35 yaş arası 176 erkek şahıstan gönüllü ve rastgele 80 şahıs tercih edilmiştir.

Veri Toplama Aracı

Çalışmada veri toplama aracı olarak anket tekniği kullanılacaktır.

Tablo 1. Cronbach Alfa iç tutarlık katsayısı ve İki Yarı Test Güvenirlik Analizi

Sonuçları				
	n	Madde Sayısı	Cronbach Alfa iç tutarlık katsayısı	İki yarı arasındaki korelasyon
Sosyal Medyanın Fuhşa Aracılığı	80	15	0.86	0.63

Ölçeğin güvenilirliğini belirlemek amacıyla Cronbach Alfa iç tutarlık katsayısı hesaplanmıştır. Yapılan işlem sonucunda sosyal medyanın fuhşa aracılığını ölçmek amacıyla kullandığımız ölçme aracının güvenilirlik katsayısı 0.86 olarak bulunmuştur. Ölçeğin iki yarı güvenilirliğini hesaplamak amacıyla ölçme aracındaki çift numaralı maddeler ile tek numaralı maddeler arasındaki korelasyon değerine bakılmıştır. Bu işlem sonucunda ölçeğin iki yarı güvenilirlik katsayısı 0.63 bulunmuştur. Tüm bu değerler ölçeğin oldukça güvenilir olduğunu göstermektedir.

Veri Analizi

Verilerin analizinde SPSS analiz programında yüzde, tekniği kullanılmıştır.

Tanımlamalar

Fuhuş: Para karşılığında cinsel ilişkiye girme.

Müeyyide: Yaptırım.

Yöntem

Sosyal medya'nın suça aracılığı: Ankara ili fuhuş örneği konulu çalışma da veri elde edilecek araştırma tekniklerinden anket yöntemi tercih edildiği için araştırma yöntemi olarak “nicel araştırma yöntemi” ile çalışılacaktır.

Araştırma deseninin nitel ya da nicel olması çalışmanın giriş bölümünde başlayan problem cümlesi, sorular ve hipotezlerin biçimlenmesi ile şekillenmektedir. Örnek olarak, problem cümlesi hipotezle biten bir araştırma ancak niceliksel bir desen olabilir. Eğer problem cümlesi araştırma soruları ile biterse bu sefer araştırma deseni soruların karakterine göre nicel ya da nitel olabilmektedir ve bu durumda hangi araştırma deseninin uygulanacağına araştırmacının karar vermesi gerekmektedir.

Nicel araştırma genellikle fizik, kimya, biyoloji gibi doğa bilimlerinin yanında sosyal bilimlerde de yoğun bir şekilde kullanılmaktadır. Daha çok sayısal veriler ve istatistiklere dayanan nicel araştırma yöntemi diğer araştırma yöntemlerine nazaran kendine has özellikler barındırmaktadır.

Nicel araştırma yöntemlerinin tipik özellikleri şu şekildedir;

- Ölçüm ve sayısallaştırma (örn. Elde edilen bilgi ve veri sayıya dönüştürme) esastır. Ölçümün doğruluğu ve kesinliği aranır.
- Davranışa odaklanır (örn. İnsanların ne dediği ve ne yaptığı).
- Bu bilimsel yaklaşım, doğa bilimindeki aynı genel ilkelere bağlıdır.
- Daha önceden var olan teori, fikir ve kavramların test edildiği tümdengelim mantığı kabul edilmiştir.
- Araştırma sürecinin ilk başlarında araştırma deseni detaylı olarak daha öncesinden belirlenmiştir.

- Ölçümün geçerliđi (istenen ölçümü göstermesi) ve güvenilirliđi (zaman içinde farklı gözlemler ile tutarlı olması) önemlidir.
- Yöntemin detaylı tanımı yapılır; böylece çalışmanın çođaltması yapılabilir (aynı çalışma tekrar edilebilir böylece bulgular kontrol edilebilir).
- Verilerin istatistiksel analizi beklenir.
- Bulguların genellenmesi aranır (daha geniş grupların örneđi olması için çalışılan katılımcıların örneklemelerini gerektiren çođunlukla istatistiksel genellenebilirlik formunda).
- Tarafsızlık aranır, araştırmacı ve katılımcılar arasındaki mesafe korunur.
- Standartlaşma için kontrol ve dođruluk aranır. Bu genellikle bağlamsızlaştırmayı içerir (örn. Bağlamda araştırılan durumu ayıklama ya da bağlamın muhtemel etkilerini göz ardı etmek). İstenilen standartlaşmayı yakalamak için biraz yapaylıđa gereksinim duyulabilir.
- Deđerlerden bađımsız ve tarafsız bir pozisyon aranır.

Nicel araştırma paradigması tarihsel olarak pozitivizm ile yakından ilişkilidir (Robson, 2015'den çeviren Nayır, 2015).

Kuramsal Çerçeve

“Sosyal medya'nın suça aracılıđı: Fuhuş” konulu çalışmada temel alınacak kuram olarak kullanımlar ve doyumlar kuramı tercih edilmiştir. Çünkü kullanımlar ve doyumlar kuramı izler kitle üyelerinin kendileri için en doyurucu olan kitle iletişim içeriklerini şöyle ya da böyle etkin biçimde aradıkları varsayımına dayanan bir iletişim modelidir.

Geleneksel etki araştırmalarının “iletişim araçlarının insanlara ne yaptıđı” şeklinde formüle edilen temel sorusu yerine “insanların iletişim araçlarıyla ne yaptıđı” sorusunu koyan ve böylelikle araştırma sorunsalını araç ya da mesajdan izler kitleye kaydıran işlevselci bir

iletiřim araları yaklařımıdır aynı zamanda kullanımlar ve doyumlar kuramı (Katz, 1959'dan aktaran, Mutlu, 2012).

Kullanımlar ve doyumlar yaklařımı asıl olarak Elihu Katz'ın arařtırmalarına ve alıřmalarına dayanır. Katz'a gre, insanların toplumsal ve psikolojik kkenli ihtiyaları vardır. Bu ihtiyalar sonucunda insanlar, medyadan ve diđer kaynaklardan bu ihtiyalarını gidermek iin birtakım beklentilere girerler (Yaylagl, 2006).

Bu ihtiya ve beklentilerini gidermek iin medya ieriklerini kullanırlar. Bu kullanmanın sonucunda izleyicinin ihtiyaı giderilmiř yani ihtiya doyurulmuř dolayısıyla izleyiciler ihtiyaları ynnde medya ieriklerini kullanarak doyuma ulařmıř olurlar. Bu yaklařımda medya ieriđi ile izleyici arasında iřlevsel bir iliřki olduđu kabul edilir.

McQuail'in (1969) belirttiđi gibi, kitle iletiřim aralarının bireyler zerindeki etkilerini aıklamaya alıřan uyarı-tepki modelinin, kitle iletiřimine maruz kalan bireyler zerinde kitle iletiřiminin dolaysız etkilerini ortaya koymada yetersiz kalması, yeni arayıřlara neden olmuřtur. Bu yeni arařtırmalar, zellikle dinleyici – okuyucu kitlesinin kim olduđu, kitle iletiřim aralarından faydalanmak iin ne yaptığı, ne istediđi ve sonuta ne elde ettiđi; yani kitle iletiřim aralarının istek ve beklentilere cevap verip vermediđi gibi sorular, arařtırmaların odak noktasını oluřtırmaya bařlamıřtır (McQuail, 1969'dan aktaran Gke, 2002).

Kurama gre insanlar gereksinimlerini gidermeye alıřırlar. Doyum iin kullandıkları aralardan bazıları da kitle iletiřim aralarıdır. Bu aralar ve araların rnleri arasında gereksinimleri karřılamak iin seme yaparlar. Bu maksatlı etkinlikler sonucu gereksinimler giderilir ve gerginlikler azaltılır.

Bu yaklařımın kkenleri Herzog'un (1944) radyolarda yayınlanan arkası yarın (soap opera) dizilerinin zellikle ev kadınıları tarafından nasıl kullanıldıđı, onlara ne tr doyumlar

sağladığı ve onların beklentilerine ne ölçüde yanıt verdiğiine ilişkin araştırmasında bulunmaktadır (Herzog, 1944'ten aktaran Mutlu, 2012).

Kullanımlar ve doyumlar yaklaşımı kitle iletişim sürecindeki gönderici kategorisini ikincil plana iterken, izleyicinin gereksinim ve güdülerini ön plana çıkarır. İzler kitle bu yaklaşımda iletişim araçlarını belli gereksinimlerini doyumak amacıyla kullanan bir kategori olarak formüle edilmektedir. Kullanımlar ve doyumlar modeli şu soruyla formüle edilmiştir: Gereksinimlerin doyumuna ve başka (çoğu kez amaçlanmamış) sonuçlara yol açan nedir? İletişim araçlarını farklı biçimlerde kullanmaya neden olan, kitle iletişim araçlarından ve diğer kaynaklardan beklentileri üreten gereksinimlerin toplumsal ve psikolojik kökenleri nelerdir? (Mutlu, 2012).

Kullanımlar ve doyumlar yaklaşımı izleyicilerin gereksinimlerine göre iletişim araçlarını ve içeriklerini seçtiklerini ve kendi etkilerini kendileri aradığı görüşünü, kısaca “aktif izleyici” savını getirmiştir. Buna göre, insanlar basit bir şekilde davranma yerine -, çevrelerine etki yapan aktif ajanlar olarak kabul edilir. Bu ajanlar etkinlikleri seçme yolları arasından amaçlarına uygun tercih tercihler yapma gücüne sahiptirler. İletişim alanında kişi kendi enformasyonunun yaratıcısıdır (Alemdar ve Erdoğan, 2005).

Kuram, gereksinimlerin doyumunu, iletişim araçlarının kullanım örüntülerini, iletişim araçlarından beklentilerin neler olduğunu ve bu beklentileri üreten gereksinimleri, toplumsal ve psikolojik kökenleriyle çözümlenmeyi amaçlamaktadır.

Kullanımlar ve doyumlar yaklaşımının, iletişim kuramına insan unsurunu sokmuş olduğu sıklıkla öne sürülür. Bu abartılı bir görüş gibi görünmekle birlikte, kullanımlar ve doyumlar modeli gerçekten de daha önceki iletişim kuramlarına oranla çok daha olumlu, psikolojik ve toplumsal olarak tanımlanması zorunlu bir izleyici imgesi sunmaktadır.

Etki araştırmalarının giderek kısırlaşması ve başarısızlığı bu yeni yaklaşımın kısa zamanda yaygınlaşmasına yol açtı. 1950 sonlarıyla 1970'lere kadar “kullanımlar ve

doyumlar” yaklaşımı İngiltere ve Amerika Birleşik Devletleri’ndeki iletişim çalışmalarında hayli etkili oldu. Bu yaklaşım, kitle iletişim sürecinde izler kitleyi önemli ve etkin bir kategori olarak öne çıkarmak suretiyle iletişim araştırmalarında farklı bir gelişmeyi temsil etmektedir.

Ne var ki bu yaklaşımın bazı belirgin yetersizlikleri de vardır. Bunlardan ilki ve en önemlisi, insanların toplumsal dünya tarafından biçimlendirilmeleri ve belirlenmelerine karşın, iletişim mesajları karşısında birden yetkin bir “seçme” ve “biçimlendirme” yetisine kavuşmalarıdır. Böylelikle iletişim araçları kullanımlar ve doyumlar formülünde en zayıf ideolojik etkenlerden biri haline gelmektedir.

Oysa Stuart Hall’un belirttiği gibi farklı gereksinimlerin farklı bireyler için farklı türsel biçimlerde karşılanıyor olduğu iddiası, mesajların (toplumun sınıf, toplumsal cinsiyet ve kurumsal yapıları içinde) kod açılarının, bazı anlamların “toplumun tahakkümcü yapısı içinde yapılaşmış olmasını” sağlama aldığı gerçeğini göz ardı eder.

Demek ki, izler kitle üyeleri mutlak güce sahip anlam üreticileri olarak kavramlaştırılmazlar. Bir başka sorun, bu yaklaşımın iletişim araçlarını tamamı ile işlevsel bir etkene indirgemesi, kitle iletişim deneyimini salt “doyum” anıyla kısıtlamasıdır. Böylelikle izler kitle bir dizi gereksinime, mesaj da bir dizi doyuma indirgenmiş olur. Ayrıca bu yaklaşım aşırı atomcu ve ruhbilimsel olmakla, yapısal çelişiklere ve alt kültürel farklılıklara aldırılmazlıkla eleştirilmektedir (Mutlu, 2012).

Literatür Taraması

Yaşadığımız çağda insanların hayatına inanılmaz derecede etki eden internet ve internetin yine hayatımıza katarak artık bir ihtiyaç haline getirdiği sosyal medya...

Sağladığı kolaylık, ulaşılabilirlik ve çevrimiçi iletişim ile insanların ilgisini çeken ve insanlara eğlenme, zaman geçirme ve ismi gibi sosyalleşme fırsatları sunan sosyal medya’nın art niyetli insanlar tarafından suç amaçlı kullanılarak fuhuş suçuna aracılık ettiğine yönelik bu makalede yapılan literatür taramasında öncelikli olarak sosyal medya kavramı hakkında

Solmaz, Tekin, Herzem ve Demir'in (2013) yaptığı çalışmada, sosyal medyanın, kullanıcılara enformasyon, düşünce, ilgi ve bilgi paylaşım imkânı tanıyarak karşılıklı etkileşim yaratan çevrimiçi araçlar ve web siteleri için ortak kullanılan bir terim (Sayımer, 2008'den aktaran Solmaz vd., 2013) olduğu değerlendirilmiştir.

Öte yandan sosyal medya kavramı, yine bilginin, farklı düşüncelerin ve deneyimlerin kamu oluşumlu web sitelerince paylaşımına olanak sağlayan ve internet dünyasını hızla hayatımıza yerleştiren bir uygulama, internet ve sosyal medya kullanımı üzerine bir uygulama alanıdır (Weinberg, 2009'dan aktaran Solmaz vd., 2013) şeklinde tanımlanmıştır.

Sosyal medya, isminde medya olmasına rağmen geleneksel medyadan farklı özelliklere sahiptir. Özgünlüğünü yaratan en önemli farklılığı, herhangi bir kişinin sosyal medyanın içeriğini yaratabilmesi, yorumda bulunabilmesi ve katkı sağlayabilmesidir (Scott, 2010'dan aktaran Solmaz vd., 2013). Geleneksel medyanın aksine sosyal medya en yüksek derecede paylaşımın gerçekleştiği, online medyanın yeni bir türü olarak fırsatlar sunduğu en yeni fikirlerden biridir (Vural ve Bat 2010'dan aktaran Solmaz vd., 2013).

İkinci olarak Erol ve Hassan'ın (2013) sosyal medya ile ilgili araştırması literatür taramasında ele alınmıştır. Erol ve Hassan'a (2013) göre, sosyal medya; çevrimiçi iletişim, kolay ulaşılabilirlik, gibi insanlara düşüncelerini paylaştığı ve okuduğu blogları, şirket destekli tartışma ve sohbet sitelerini, müşterilerin birbirleri ile iletişim kurabilecekleri elektronik postaları, ürün veya hizmetlerin bilgilerine ulaşabilecekleri siteleri ve forumları, fotoğraf, ses, görüntü ve filmlerin paylaşılacağı bloglar ve sosyal paylaşım sitelerini de içerisine alan geniş bir internet ortamından oluşmaktadır (Mangold ve Faulds, 2009'dan aktaran Erol ve Hassan,2013).

Gençlerin sosyal medyayı daha çok iletişim kurmak amacıyla kullanması yanında farklı amaçlarının da olduğunu belirten Erol ve Hassan (2013) Sosyal medya kullanım amaçlarına bakıldığında iletişim kurmak dışında, deneyimlerin paylaşılması, oyun oynamak,

kişilerarası ilişkiler geliştirmek, alışveriş amaçlı kullanım, bilgi edinme ve paylaşma gibi amaçları da içerisinde barındırdığını belirtmiştir.

Sosyal medyanın yukarıda belirtilen özellikleri dışında çekicilik, eğlendirme, vakit geçirmek, haber verme, haberdar olma, farkındalık yaratma, gündem ve kamuoyu oluşturma, diğerini merak gibi pek çok etken, sosyal medyayı çekici hale getirmiştir.

Kullanım amaçları bu kadar çok boyutlu iken sosyal medyanın bireylere ve topluma olan etkisi de göz önünde bulundurmaya gerektirmektedir. Bu konuda çalışma yapan Alav (2015) Sosyal medya ile; birey, toplumsal yapının hücrelerini oluşturduğu gibi diğer hücreli yapılarını da etkileyebilmekte olduğunu, sosyal medya vasıtası ile dünyanın herhangi bir yerindeki yerel bir haber, önem derecesine göre yerellikten ulusallığa ulusallıktan da evrensel boyuta anında/eş zamanlı olarak dünya toplumlarının kamuoylarına taşınabildiğini ifade etmektedir.

Öte yandan çalışmalarında sosyal medyanın tehlikeli yanlarına da değinen Alav'a göre (2015), sosyal medya her ne kadar avantaj ve çekici bir yapıda olsa da beraberinde dezavantaj ve tehlikeleri de taşımaktadır. Bunlar; açık ve örtük/gizli mesajların sunulması, suç ve terör örgütlerinin sosyal medya içinde yapılanması, zararlı ve yasaklı maddelerin (uyuşturucu vb.) satılması, sunulması, alıştırılması ve fuhuşu teşvik etmek gibi tehlikelerdir. Sosyal medya bireyleri kısmen mutlu etse de diğer taraftan bireyi gerçek topluma karşı ötekileştirmekte ve bireyi yalnızlaştırarak ailesine ve yaşadığı topluma yabancılaştırmaktadır. Sosyal medyanın teşhirci ve narsis yönü ise bireyleri sağlıklı toplum ortamından uzaklaştırmakta, suçun ve tehlikenin içine çekebilmektedir.

Sosyal medya diğer medyalar gibi ötekileşmeyi yaratmaya çalışır ise o zaman sosyal medya gerçek amacından çıkarak birey ve toplumu kaos ortamına sürükler ve bu ciddi bir tehlikedir (Alav, 2015). Haber, geleneksel medyada sınırlandırılarak sunulmasına karşın sosyal medya yarattığı sınırsız ve özgür ortamla her türlü tehlikeye açıktır.

Sosyal medya üzerine çalışan diğer arařtırmacılardan Eren ve Aydın (2014) ise, sosyal medyanın, bireyleri, grupları, toplumu yani kamuoyunu belli bir tutum ve davranıřa yönlendirme ve ikna edebilme konusunda inanılmaz fırsatlar sunduđunu, toplumu dizayn etmek için internet bađlantılı bir bilgisayar veya cep telefonunun yeterli olup, bu yolla geniř kitleleri manipüle edebildiđini ifade etmiřlerdir.

Her ne kadar bireylere bilgi ve iletiřim alanında geniř özgürlükler sunsa da, sosyal medya, tehlikeli bilgilerin belli bir denetim süzgecinden geçirilmeksizin paylařılmasına aracılık etmesi nedeniyle, toplumsal düzen, istikrar, güvenlik (Eren ve Aydın, 2014) ve ahlak ağılarından büyük riskler de tařımaktadır. Sosyal medya suç örgütleri ya da bireysel olarak kötü niyetli insanların elinde, özellikle çocuklar ve yeterli tecrübeye sahip olmayan gençler söz konusu olduđunda, bu risklerin daha fazla ön plana çıktıđı görölmektedir.

Sosyal medyanın tehlikeli noktalarından belki de en önemlisi suça ya da suçun oluřmasına imkan tanınmasıdır. Sürdürülebilir bir gelişme için en önemli gereksinimlerden biri güvenli bir ortamın sađlanmasıdır. Güvensiz bir ortamda gelişme olamayacağı gibi, gelişmemiş ortamlar da güvenli olmamaktadır. Suç denilen olgu ile ilgili olarak yapılan literatür taramasında Alacakaptan (1975) yaptıđı çalışmada suç kavramına değinirken, “iřlendiđinin kesinleşmesi halinde bir cezanın ve diđer bazı tedbirlerin uygulanmasını gerektiren suçun ne olduđu sorunu, yalnız hukukçuları deđil, sosyolog ve kriminologları da ilgilendirmiş bir sorundur” demektedir. Bunun nedeni, suçun, adı geçen bilim dallarının da inceleme alanına girmesidir.

Suç, hukukî bir olay olduđu kadar sosyolojik, psikolojik ve kriminolojik bir olaydır, ve konunun bu yönlerini ele alan bilim adamları, suçu, yalnız kendilerini ilgilendiren yönden tanımlamaya kalkıřmışlar ve bu nedenle hukukî tanımlar yanında sosyolojik ve kriminolojik tanımlar da yer almıştır.

Bunların tümüne işaret etmek, tümünü gözden geçirmek mümkün değildir. Zaten suç hukukî bir olay olarak inceleyeceğimize göre böyle geniş bir inceleme zorunlu olmaktan da uzaktır (Alacakaptan, 1975)

Yine Alacakaptan (1975) çalışmasında suç kavramını tam anlamıyla tanımlayabilmek için öncelikle suçun unsurlarına ve fonksiyonlarına bakmanın gerekli olduğunu ifade etmiştir.

Bu noktada başka bir araştırmacı olan Yıldırım (2014) çalışmasında, bir davranışın suç sayılabilmesi için maddilik, manevilik ve kanunilik unsurlarına sahip olması gerektiğini belirterek unsurları şu şekilde açıklamıştır: Suçun maddi unsurunu hareket oluşturmaktadır. Hareket unsuru bir yapma veya yapmama davranışdır. Bir davranışı yapma ya da yapmama suçun maddi unsurunu oluşturabilir. Suçun manevi unsuru suçlunun kastı veya kusurudur. Suçlu, kanun tarafından suç olarak tanımlanmış bir davranışı bilerek ve isteyerek yaparsa bu davranışın kasıtlı olduğunu gösterir. Kusur ise yapılan davranışın meydana getireceği zararları öngörememe durumudur. Son olarak suçun kanunilik unsuru ise; “kanunsuz suç ve ceza olmaz” prensibine dayanmaktadır. Herhangi bir suç tanımına girmeyen bir davranış suç olarak kabul edilemez (Aslan,1991’den aktaran Yıldırım, 2014).

Yine Yıldırım (2014) suçun fonksiyonları konusunda olumlu ve olumsuz fonksiyonlar olarak ayırma gitmiş ve olumsuz fonksiyonları, suçluluğun toplumda yaygın olarak görülmesinin var olan normların yıpranmasına yol açacağına ve bu durumun beraberinde sosyal çözülme getirebileceğine değinmiştir. Ekonomik ve sosyal kalkınma için gerekli olan kaynakların suçların önüne geçilmesi için kullanılmasının gelişmeyi yavaşlatacağı, suçların artması ile bireyler arasında güvensizlik oluşacağını ve bunun günlük hayatı olumsuz yönde etkileyeceğini belirtmiştir.

Suçun unsurları ve olumsuz fonksiyonları kadar suçun oluş nedenleri de suç kavramını tanımlamak ve anlamak açısından önemlidir. Bu hususta Temurçin ve Yakar’a (2013) göre, Suçu oluşturan fiiller toplumdan topluma ve aynı toplumda zaman içinde farklılık gösterebilir.

“Herhangi bir suçun dört farklı boyutu vardır. Bunlar yasa, suçlu, mağdur ve yerdir. Yer, onlara göre, zaman ve mekânda diğer üç boyutun etkileştiği ve suçun meydana geldiği farklı bir lokasyondur” (Herbert ve Hyde, 1985’ten aktaran Temurçin ve Yakar, 2013). Suçun oluş nedeni, faili (işleyeni), mağduru, mekânı, zamanı, yöntemi, çeşidi olmak üzere belirli özelliklere sahiptir. Bunlardan; kişiyi suç işlemeye iten sosyal, ekonomik, biyolojik vb. faktörler ve şartlar, oluş nedenini; kişi veya kişiler işleyeni; suçtan etkilenen kişi veya kurumlar mağduru; işlendiği yer mekânı; yıl, ay, gün, saat gibi unsurlar zamanı; işleniş şekli yöntemi, tipi ise çeşidini ortaya çıkarttığını ifade etmişlerdir.

Suçun çeşitleri ise günden güne armış, ekonomik yapının değişmesi, sosyal hayatın dönüşümü, teknolojik gelişmeler ve eğitim düzeyinin farklılaşması suçun ve suç çeşitliliğinin sebepleri arasında yer almıştır.

Suç ile ilgili diğer bir araştırmacı Kahya (2015) çalışmasında suçla ilgili olarak suçun fırsat teorisini irdelemiş ve Bu teoriye göre suçun gerçek nedeninin fırsatlar olduğunu belirtmiştir. Felson ve Clarke (1998) suç fırsatları teorisinin on temel prensibini belirlemişlerdir. Bunlardan biri de bazı ürünlerin, oldukça baştan çıkarıcı suç fırsatları sunmasıdır. Potansiyel suç hedefleri, ürünün değeri, piyasadaki erişilebilirliği, kolayca taşınabilirliği, görünürlüğü, talebin yoğunluğuna göre belirlenmektedir. Bir ürün, bu sayılan özellikleri üzerinde taşıdığı sürece suça konu olmaktadır (Felson ve Clarke, 1998’den aktaran Kahya, 2015).

Öte yandan Kahya (2015) bireylerin, kendi çıkarlarını diğer insanların çıkarlarının önünde görebilmekte ve acı veren her şeyden uzaklaşırken zevk duyduklarının ardından da koşmakta olduğunu, insanların, bu saiklerle hareket etmesini rasyonellik olarak izah etmektedir. Ona göre, birey, suç işlemeyen önce işleyeceği suçtan elde edeceği kar ve haz ile yakalanması halinde uğrayacağı zarar arasında basit bir hesap yapmakta ve bireyin suçtan elde edeceği tat, yakalanması halinde alacağı ceza nedeniyle acılaşmayacaksa birey suçu

işlenebilir görmektedir. Birey, suç işlemeden önce risk analizi yapmakta ve kaybedecekleri, elde edeceği kazanç yanında daha düşük kalıyorsa rasyonel bir tercih yaparak suçlu davranışta bulunabilmektedir (Cornish and Clarke, 1986'dan aktaran Kahya, 2015). Toparlayacak olursak, suç, topluma zarar verdiği ya da tehlikeli olduğu kanun koyucu tarafından kabul edilen ve belirtilen eylem, davranış, tavır ve harekettir.

Çalışma konusu asıl araştırma noktası ise suç türlerinde biri olarak görülen anca kanun koyucular tarafından suç olarak değerlendirilmeyerek yasalarda ancak farklı şekillerde işlendiğinde (teşvik, aracılık ve yer temini şeklinde) suça dönüşen fuhuşla ilgili olarak Türk Ceza Kanunu madde 227 (TBMM, 2004) şöyle demektedir:

Bir kimseyi fuhşa teşvik eden, bunun yolunu kolaylaştıran ya da fuhuş için aracılık eden veya yer temin eden kişi, iki yıldan dört yıla kadar hapis ve üç bin güne kadar adlî para cezası ile cezalandırılır. Fuhşa sürüklenen kişinin kazancından yararlanılarak kısmen veya tamamen geçiminin sağlanması, fuhşa teşvik sayılır.

Çokar ve Kayar (2011) ise yaptıkları çalışmada, fuhuşu karar verme yetisi olan yetişkinler arasında para veya mal karşılığında ve herhangi bir zor kullanma olmadan gerçekleştirilen cinsel hizmet alışverişi olarak tanımlamakta ve sokak fahişeliğini, eskort hizmetlerini, telefon arkadaşlığı hizmetlerini, pornografi yıldızlığını, erotik dans ve erotik masaj hizmetlerini fuhuş kapsamında değerlendirmektedir.

Öte yanda TCK'de yer alan söz konusu maddeye atıfta bulunarak, teşvik sözcüğü özendirme vurgusu yapan bir sözcük olmasına karşın yasada fuhuş yapanın kazancından yararlanılmasının da fuhşa teşvik kapsamında tanımlandığını belirtmişlerdir. Seks işçiliği tahmin edildiğinden daha organize bir iştir ve seks işçisine işini yaparken bazı kişilerin destek vermesi veya yardım sağlaması her zaman seks işçisinin sömürüldüğü anlamına gelmez. Müşterilerin temin edilmesi ve iş saatlerinin ayarlanması da başlı başına bir iş haline gelebilir. Müşterilerin temininde güvenlik unsurunu gözetecek, müşteri seçimini doğru yapacak ve seks

işçisinin bu anlamda güvenliğinin ve sağlığının korunmasını destekleyecek elemanların fuhşa aracı olmakla suçlanarak cezalandırılması doğru değildir (Çokar ve Kayar, 2011) diyerek kanuna farklı bir bakış açısı getirmişlerdir.

Fuhuş konusu ile incelediğimiz son çalışmada Açıkalın (2008), tarihsel süreçte fuhuş olgusunun meşrulaştırılması doğrultusunda ileri sürülen en etkili olmuş mitin fuhşun her toplum ve çağda kaçınılmazlığının ileri sürülmesinde kendini bulmakta olduğunu belirtmekte ve diğer bir deyişle, fuhşun var olmasının toplumlar için son derece işlevsel olduğu ve fuhuş ortadan kaldırılsa toplumsal düzende ciddi aksaklıklar olacağı iddiasının bu olguyu sıradanlaştırma ve normalleştirme görevi görmekte olduğunu ifade etmektedir.

Fuhşun normalleştirilmesi ve çok önemli bir toplumsal işlev üstlendiği savı beraberinde kadının cinsel bir meta olarak görülmesini de normalleştirmekte ve sıradanlaştırmaktadır. Kadının bir nesne haline getirilmesinin görünümülerinden biri olarak fuhuş olgusu, Bourdieu'nun kavramını kullanarak ifade edecek olursak tam bir “eril tahakküm” alanıdır (Bourdieu, 2001'den aktaran Açıkalın, 2008). Ataerkil yargının kararıyla, fuhuş yapan kadının damgalanıp toplumdan dışlanmasına, buna karşın fuhşun kurumsallaştırılmasına varan ve erkek için, dokunulmazlık zırhıyla meşru bir alan olarak ilan edilmiş erkeğin iktidar alanlarından biridir. Fuhuş ve fahişe kavramlarının temelinde yatan “azgın, utanmaz (kadın)” (Nişanyan, 2003'ten aktaran Açıkalın, 2008) tanımı, fuhşun da bu şehvetin doyurulması amacıyla yapıldığı sonucunu doğurmaktadır.

Açıkalın'a (2008) göre, cinsel hizmetlerin çeşitli biçimlerle ekonomik getiri aracı olarak kullanıldığı bir alan olarak fuhuş sektörü, sosyo-ekonomik bunalımlar, göç ve hızla gelişen internet ağı gibi sebeplerle genişleyerek, küreselleşen bir yapı arz etmektedir .

Bulgular

Tablo 2. Aylık geliriniz ne kadar?

		Frequency	Percent	ValidPercent	CumulativePercent
Valid	0-1000 TL	10	12,5	12,5	12,5
	1001-2000 TL	29	36,3	36,3	48,8
	2001-3000 TL	17	21,3	21,3	70,0
	3001-4000 TL	15	18,8	18,8	88,8
	4000 TL üzeri	9	11,3	11,3	100,0
	Total	80	100,0	100,0	

Aylık gelir miktarı ile ilgili Tablo 2'e bakıldığında, araştırmaya katılan bireylerin %12,5'inin (n=10) 0-1000 TL, %36,3'ünün (n=29) geliri 1001-2000 TL, %21,3'ünün (n=17) geliri 2001-3000 TL, %18,8'inin (n=15) geliri 3001-4000 TL ve %11,3'ünün (n=9) geliri 4000 TL üzerindedir.

Tablo 3. Aileniz kaç kişiden oluşmaktadır?

		Frequency	Percent	ValidPercent	CumulativePercent
Valid	1-2 birey	18	22,5	22,5	22,5
	3-4 birey	38	47,5	47,5	70,0
	5-6 birey	15	18,8	18,8	88,8
	7-8 birey	5	6,3	6,3	95,0
	9+ birey	4	5,0	5,0	100,0
	Total	80	100,0	100,0	

Ailede yer alan birey sayısı ile ilgili Tablo 3 incelendiği zaman; araştırmaya katılan bireylerin %22,5'inin (n=18) ailesi 1-2 bireyden, %47,5'inin (n=38) ailesi 3-4 bireyden, %18,8'inin (n=15) ailesi 5-6 bireyden, %6,3'ünün (n=5) ailesi 7-8 bireyden ve %5'inin (n=4) ailesi 9 ve daha fazla bireyden oluşmaktadır.

Tablo 4. Eğitim durumunuz nedir?

		Frequency	Percent	ValidPercent	CumulativePercent
Valid	İlkokul	3	3,8	3,8	3,8
	Ortaokul	13	16,3	16,3	20,0
	Lise	21	26,3	26,3	46,3
	Lisans	35	43,8	43,8	90,0
	Lisansüstü	8	10,0	10,0	100,0
	Total	80	100,0	100,0	

Eğitim durumu ile ilgili Tablo 4 incelendiği zaman, araştırmaya katılan bireylerin %3,8'i (n=3) ilkokul mezunu, %16,3'ü (n=13) ortaokul mezunu, %26,3'ü (n=21) lise mezunu, %43,8'i (n=35) lisans mezunu ve %10'u (n=8) lisansüstü eğitim mezunudur.

Tablo 5. Yaşınız

		Frequency	Percent	ValidPercent	CumulativePercent
Valid	18-21 yaş	5	6,3	6,3	6,3
	22-24 yaş	17	21,3	21,3	27,5
	25-27 yaş	11	13,8	13,8	41,3
	28-30 yaş	24	30,0	30,0	71,3
	31 ve üzeri	23	28,7	28,7	100,0
	Total	80	100,0	100,0	

Araştırmaya katılan bireylerin yaşı ile ilgili Tablo 5 incelendiği zaman, bireylerin %6,3'ü (n=5) 18-21 yaşında, %21,3'ü (n=17) 22-24 yaşında, %13,8'i (n=11) 25-27 yaşında, %30'u (n=24) 28-30 yaşında ve %28,7'si (n=23) 31 yaş ve üzerindedir.

Tablo 6. Evli misiniz ?

		Frequency	Percent	ValidPercent	CumulativePercent
Valid	Hayır	38	47,5	47,5	47,5
	Evet	42	52,5	52,5	100,0
Total		80	100,0	100,0	

Medeni durumla ilgili Tablo 6 incelendiği zaman, araştırmaya katılan bireylerin %52,5'i (n=42) evliyken %47,5'i (n=38) bekarıdır.

Tablo 7. Daha önce para karşılığı cinsel birliktelik yaşadınız mı ?

		Frequency	Percent	ValidPercent	CumulativePercent
Valid	Hayır	37	46,3	46,3	46,3
	Evet	43	53,8	53,8	100,0
Total		80	100,0	100,0	

“Daha önce para karşılığı cinsel birliktelik yaşadınız mı ?” sorusu ile ilgili Tablo 7 incelendiği zaman bireylerin %53,8'i (n=43) evet, %46,3'ü (n=37) hayır cevabını vermiştir.

Tablo 8. Para karşılığı cinsel birliktelik için sosyal medyadan yararlandınız mı ?

		Frequency	Percent	ValidPercent	CumulativePercent
Valid	Hayır	56	70,0	70,0	70,0
	Evet	24	30,0	30,0	100,0
Total		80	100,0	100,0	

“Para karşılığı cinsel birliktelik için sosyal medyadan yararlandınız mı ?” sorusu ile ilgili Tablo 8 incelendiği zaman bireylerin %30'u (n=24) evet, %70'i (n=56) hayır cevabını vermiştir.

Tablo 9. Sosyal medya para karşılığı cinsel birliktelik için güvenilir mi ?

		Frequency	Percent	ValidPercent	CumulativePercent
Valid	Hayır	52	65,0	65,0	65,0
	Evet	28	35,0	35,0	100,0
Total		80	100,0	100,0	

“Sosyal medya para karşılığı cinsel birliktelik için güvenilir mi ?” sorusu ile ilgili Tablo 9 incelendiği zaman bireylerin %35’i (n=28) evet, %65’i (n=52) hayır cevabını vermiştir.

Tablo 10. Para karşılığı cinsel birliktelik amacıyla sosyal medyayı tercih eder misiniz ?

		Frequency	Percent	ValidPercent	CumulativePercent
Valid	Hayır	41	51,2	51,2	51,2
	Evet	39	48,8	48,8	100,0
Total		80	100,0	100,0	

“Para karşılığı cinsel birliktelik amacıyla sosyal medyayı tercih eder misiniz ?” sorusu ile ilgili Tablo 10 incelendiği zaman bireylerin %48,8’i (n=39) evet, %51,2’si (n=41) hayır cevabını vermiştir

Tablo 11. Sosyal medyada para karşılığı cinsel birliktelik imkanı var mı ?

		Frequency	Percent	ValidPercent	CumulativePercent
Valid	Hayır	11	13,8	13,8	13,8
	Evet	69	86,3	86,3	100,0
Total		80	100,0	100,0	

“Sosyal medyada para karşılığı cinsel birliktelik imkanı var mı ?” sorusu ile ilgili Tablo 11 incelendiği zaman %86,3’ü (n=69) evet, %13,8’i (n=11) hayır cevabını vermiştir.

Tablo 12. Para karşılığı çok fazla cinsel ilişki yaşadınız mı ?

		Frequency	Percent	ValidPercent	CumulativePercent
Valid	Hayır	65	81,3	81,3	81,3
	Evet	15	18,8	18,8	100,0
Total		80	100,0	100,0	

“Para karşılığı çok fazla cinsel ilişki yaşadınız mı ?” sorusu ile ilgili Tablo 12 incelendiği zaman bireylerin %18,8’i (n=15) evet, %81,3’ü (n=65) hayır cevabını vermiştir.

Tablo 13. Sosyal medya para karşılığı cinsel birliktelik için seçenek sunmakta mıdır ?

		Frequency	Percent	ValidPercent	CumulativePercent
Valid	Hayır	11	13,8	13,8	13,8
	Evet	69	86,3	86,3	100,0
Total		80	100,0	100,0	

“Sosyal medya para karşılığı cinsel birliktelik için seçenek sunmakta mıdır ?” sorusu ile ilgili Tablo 13 incelendiği zaman bireylerin %86,3’i (n=69) evet, %13,8’i (n=11) hayır cevabını vermiştir.

Tablo 14. Para karşılığı cinsel birliktelikte sosyal medyada risk daha mı azdır ?

		Frequency	Percent	ValidPercent	CumulativePercent
Valid	Hayır	59	73,8	73,8	73,8
	Evet	21	26,3	26,3	100,0
Total		80	100,0	100,0	

“Para karşılığı cinsel birliktelikte sosyal medyada risk daha mı azdır ?” sorusu ile ilgili Tablo 14 incelendiği zaman bireylerin %26,3’ü (n=21) evet, %73,8’i (n=59) hayır cevabını vermiştir.

Tablo 15. Sosyal medya para karşılığı cinsel birliktelik için uygun ortam yaratmakta mıdır ?

		Frequency	Percent	ValidPercent	CumulativePercent
Valid	Hayır	17	21,3	21,3	21,3
	Evet	63	78,8	78,8	100,0
Total		80	100,0	100,0	

“Sosyal medya para karşılığı cinsel birliktelik için uygun ortam yaratmakta mıdır ?”

sorusu ile ilgili Tablo 15 incelendiği zaman bireylerin %78,8’i (n=63) evet, %21,3’ü (n=17) hayır cevabını vermiştir.

“Sosyal medya para karşılığı cinsel birliktelik için aracılık yapmakta mıdır ?” sorusu

ile ilgili Tablo 19 incelendiği zaman bireylerin %90’ı (n=72) evet, %10’u (n=8) hayır cevabını vermiştir.

Sonuç

Sosyal medya’nın etkinliği, suçun cazibesi ve fuhuş... İnsanlık ile başlayan suçun günümüzde çok farklı türlerde işlenebilir hale gelmesi ve hayatın her alanına giren internet, dolayısıyla sosyal medyanın suç işlemeye yatkın, art niyetli insanlar için iştah kabartıcı olması bu çalışmanın yapılmasına yönelik bir fikir oluşturarak diğer suç çeşitlerine nazaran yapılması daha kolay ve anlık olan, hatta ceza kanunlarınca suç sayılmayan fuhşun, yasalardaki şekli ile “teşvik, aracılık ve yer temini” sağlanarak sosyal medya tarafından suç işlenip işlenilmediği yönünde bir araştırma yapılmıştır.

Çalışma sonunda araştırmanın gerek literatür taraması gerek anket çalışması sonucunda, 11., 13. ve 19. maddelerde yer alan sorulara, 19.madde olan “*Sosyal medya para karşılığı cinsel birliktelik için aracılık yapmakta mıdır?*” maddesine katılımcıların %90’ı tarafından, 11.madde olan “*Sosyal medyada para karşılığı cinsel birliktelik imkânı var mı?*” ve 13.madde olan “*Sosyal medya para karşılığı cinsel birliktelik için seçenek sunmakta mıdır?*” maddelerine katılımcıların %86.3’ü tarafından verilen “evet” yanıtı cevapların oranına bakıldığında sosyal medya’nın fuhuş suçuna aracılık ettiği yönündeki varsayımı, desteklemektedir.

Günümüzde sosyal medyanın toplumsal normlar açısından bu kadar tartışılır hale gelmesi akla sosyal medya üzerinden başka sıkıntılarla karşılaşp karşılaşamayacağımızı getirmeye başlamıştır. Araştırmanın ortaya koyduğu rakamlar bu tedirginliğin haklılık payı olabileceğini göstermektedir. Artık yalnızca eğlence ve iletişim gibi saf hizmetin dışında kötü niyetli insanların sosyal medyayı nasıl kullanılabileceği bu çalışma ile ortaya konulmaya çalışılmıştır. Bu konuda yapılabilecek yaptırımlar başka bir araştırmanın konusu olmakla birlikte, daha büyük bir örneklem grubuna yapılacak anket, görüşme ve gözlem tekniklerinin kullanıldığı araştırma için bu çalışmada elde edilen veriler bir başlangıç olabilir.

ABSTRACT

We submit the development of a collaborative sound creation proposal made reality using the Soundcool system from its initial design phase to the scenic performance at the International Festival of Contemporary Music ENSEMS, Valencia (Spain). The "interstellar machine", a transdisciplinary piece whose linking thread is a story, is characterized by hybridization of languages and artistic fusion. It's a piece made possible by the joint work between students of Primary and Secondary Education, a group of experts and musical educators. From a qualitative approach, all the participants were interviewed and the analysis of an audiovisual recorded during the work process of the artistic proposal was carried out. From using data triangulation, the results obtained show indicators related to the hybridization of contemporary art languages, the use of a collaborative didactic methodology and the strategies developed for innovation and creation. The conclusions we came to just confirm a horizontal and participative way of working throughout the proposal, the success of the system used, the interconnection of artistic languages, the promotion of bridges in and outside the classroom or the approach of contemporary music to young people, among others. In addition, it focuses on some aspects of improving teaching technique and the need to continue working on this line.

Keywords: education, improvisation, contemporary music, creativity, video creation, multidisciplinary, Soundcool, art, technology

INTRODUCTION

Musical creation has been socially underrated and we have not fully understood its important role in transforming our society. In our experience as educators and music researchers, it's commonly forgotten - we forget - that the true protagonists of learning are the students. How many times do we place our students in front of musical works, eliminating the possibility of discovering them, recreating them and why not, creating them? How can we expect that by distancing them from their own sound stories will they discover by themselves, as if by magic, the beauty that these contain? Working in this field has led us to generate a type of spectator with a mind unprepared for the new, the adventure of discovering the hidden connections that enclose the works. It is a formalist vision, with a clear absence of rich experiences, which falls on deaf ears since the created connections are, in most cases, too weak to form students that are sensitive to music. It's in our hands to train future creators and, above all, citizens with good judgment and sensitivity who will live in those spaces where music happens. That is why, in the musical area, in all of its educational fields, we have to take new approaches that show us their full potential, placing students at the center of learning and not just as a mere curricular imposition. Likewise, learning music/art and exercising the

creativity opens the mind to new possibilities in other disciplines such as mathematics, physics or engineering.

The "how" above the "what"

Addressing sound as an element of exploration and experimentation allows us to delve into other ways of teaching and learning music. It is the actions and the creative processes what should allow us to reorder the curriculum giving priority to "how they learn" over "what they learn", the latter more oriented to the content of the subject.

The prescriptive character of the Spanish legislative curriculum can not be a liability for the artistic development of young people, and we have the obligation to look for alternatives that will ease the development of their creativity and imagination. As Egan (2008) states:

The impoverished empiricist view of science has squandered its authority to promote in education a type of logical thinking restricted to the forms of thought that appear most clearly to us in children's creative activities. The popularity of this point of view has served to classify the imagination as a "marginal way" of education, with the "adornments of art", music, etc. (p.33)

Using sound as a raw material, disconnected from previous connotations allows us, through the action of students, to establish and build links from their own sonorous experiences and from this stage, make new connections with the musical legacy, creating in the students the habit of feeding their creativity through a "practical necessity" to continue, thus learning in a natural way.

The student, central axis in the processes of creation

From this perspective, we seek to implement strategies that treat our students as creators or co-creators and, with this, to offer new routes using sound creation as the backbone of the curriculum, offering them tools needed to develop their creative capacities.

The pedagogical approach that we defend here contemplates students as active agents, participants, engaged, curious, imaginative and creative, gears that place them before the culture as a permanent, and necessarily collective, a construction where new discourses are woven through interactions Between equals.

By placing students at the center of creative processes we open up a whole range of possibilities for making their learning experience creative and imaginative. The students are the ones who demand, each at their own pace, new learning, built from a practice with a sense of itself.

It is undoubtedly in this type of open creative processes where we generate rhizomatic relations (Deleuze and Guattari, 1977), since they allow to weave and to debate the old and new discourses on the music, giving it sense through the consensus, Through multiple sound narratives that unfold in the interior of all complex creative action.

Viewing every student as an artist, but also, that they view themselves as such, implies assuming a new role within the musical practices generated in the classroom. A role that implies greater responsibility, risk, collaboration, flexibility, resistance to uncertainty, critical reflection ... that leads us to generate a citizen with a wide cultural and artistic competence with a greater chance of developing themselves in a world that's constantly changing and in which we already live And all of this defining art as "A way of thinking, of acquiring and expanding knowledge and that its greatest utility is not to place pieces in a museum, but to help use the imagination." (Camnitzer, 2017: 20).

From classroom to LAB: sound incubators and hybrid territories

According to what we stated above, we believe that the workflows generated in a traditional classroom can not be compared with those that arise when spaces are designed as laboratories with the purpose to experiment. Therefore, we have created the first LAB, a space called MUSICLAB CR-209 in the IES Arabista Ribera, Carcaixent (Valencia). It is the first public secondary education center of the Spanish State, with two laboratories conceived as maker spaces designed entirely to ease musical creation and which has become a reference at a national level.

The LAB seeks the involvement and autonomy of students, who learn by doing, browsing, managing their times and resources in favour of the assigned collective work which is part of a whole, that is the project. It is a place where we encourage initiative and creativity, and where every student brings puts their own ideas and skills to use. Not everyone should do the same, each person freely decides on which part they can be of better use or on which they could add more to their knowledge (Gardner, 2000). The purpose of the distribution of work is to ensure more

horizontal and collaborative practices where the "expert" - this could be the most experienced student - can help the others. It introduces, then, the figure of the student-tutor or mentor, able to make others learn from how he recalls he learned. The space of the teacher disappears in favour of the horizontality of the relations that will deepen co-participation and equality between teacher and students. The teacher can guide when it is required, help, participate, observe, share... Here what must prevail is that respect won is and not imposed, auctoritas against authority.

Figure 1: Students working next to experts in the LAB CR-209 in the IES Arabista Ribera - Carcaixent (València).

As a result, the LABs are conceived as incubators of ideas where the practices and projects that are developed in their interior are intended to be shown beyond the classroom. We need to pass through the walls and transcend the classroom to turn each project into an open window that allows us to share with society the art that teenagers themselves can create; or, to win the public's attention, to be themselves, in a future, a more critical and participative public, contributing with key ideas for a real construction of the culture and therefore assuming the important implications of this type of collective actions, in favour of transforming into a more democratic and modern society, a society of greater quality.

Over time, the LAB has boosted the flow of artists and creators who, from their particular vision of musical creation, have collaborated in the production of projects that have served mainly to provide a fresh vision of the musical world from real experiences and contexts. This type of collaboration brings students closer to a more realistic view of a musician's profession and, above all, helps to integrate new possibilities ranging from the assimilation of new musical styles, composition techniques, group work, event management and marketing to staging and performative elements. Along the way, we are shown multiple connections to the sound that unfold in all directions, connecting different areas of knowledge, using musical creation as a cross-cutting axis to all of them.

A renewed educational view through artistic projects

Placing the student as the protagonist of their learning and offering them the opportunity to create and experiment from a methodology based on project learning is a real challenge for teachers and students, since it involves setting up itineraries or creative routes (Vergara, 2015). Learning is understood as a process of exploration and research, where open minds are a must to organize and build using the information that is collected along the way and that is filtered through our experiences and personal and collective lessons. In the end, this type of approach gives an extraordinary character to the processes, treating them as elements of vital importance in the learning, beyond the final results they generate/lead to.

According to this methodology, each project, sometimes premeditated, other times by pure serendipity, is created with a cross-sectional view that attends a multi-sensorial and multi-expressive education, like the one that can be found easily in art teaching. Searching, finding, paying attentions to these twists or possibilities of connection does

not lead us to dilute the area of music into a sort of "auxiliary area, instead, it is reinforced, as a powerful tool with the capacity to transform society. We are therefore in agreement with Eisner (2002) when he states that "we do not contribute anything to the arts when we try to justify/measure them in terms of their contributions to other fields and relegate it to a merely" auxiliary "subject in relation to other areas of the curriculum. When giving priority to these contributions, the arts are put at the service of purposes that are not distinctively artistic, and in the process lower the value of their unique contributions to the education of young people "(p.146).

As the musicians and educators we are, we defend the idea of offering strategies and tools that give a more renewed and horizontal view of musical learning. In this proposal described below, we immerse the students in a true process of sound creation forming a network together with creators, pedagogues, and experts who work hand in hand to achieve a global artistic project.

DESIGN OF THE INVESTIGATION

Context

The context in which this study is framed is directly related to the premiere of the piece "The interstellar machine". This project brings us a contemporary artistic experience within the program of the contemporary music festival X-ENSEMS, held at the Palau de les Arts in Valencia (Spain). This proposal's main objective was to bring the younger audience closer to new contemporary musical proposals. In this case, the ENSEMS festival, the oldest one in Spain, designed a new space: X_ENSEMS to facilitate a program intended for the younger audience. Improvisation, creation, word and video creation have been the ingredients used in the première of a performative action whose tying thread is a story. Although the unifying element is the sonorous creation, this is not an obstacle for other fertile territories of the limits where disruptions are provoked and achievements that lead to coming up with new ideas and constructions related to other artistic languages.

The interstellar machine is a science-fiction story in which explorers of an advanced civilization build a machine that allows them to travel to different planets visiting their curious inhabitants, producing sounds in real time played by students Of Primary and Secondary Education, along with professional musicians.

In the design of the proposal, we sought a continuous balance between the interests of the students themselves and the growth towards new sound territories. For this to work, special attention was focused on the creation of proposals that would not limit musical styles to work, but rather, and over time, broaden the repertoire of practices and styles, favouring eclectic and plural musical experiences as much as possible.

The Interstellar Machine consists of a text narrated live, in which a lot of languages take part, where the sonorous, the visual and the gestural are intermingled. It serves as an example of hybridization and a strong commitment to the exchange of ideas and of the creation of multidisciplinary contexts that facilitate artistic innovation.

The formation/stage is set up by an orchestra of 41 mobile devices, managed by the real-time collaborative sound creation system, Soundcool. It is a tool to work on music education using technology such as mobile phones, tablets or Kinect, developed by the Universitat Politècnica de València. It is an open and free system available to everyone that makes it possible to take a creative, multidisciplinary approach that creates dialogues around the musical event. Soundcool is being used in several European countries and American universities such as the Carnegie Mellon (USA), a leading university in international music technology, and the Technological Institute of Advanced Studies in Monterrey (Mexico), a leading player in technologies used in art and design internationally.

Soundcool uses the connectivity of mobile devices so they become controllers that allow real-time manipulation of sound. These mobile devices use the Open Sound Control (OSC) protocol and a simple and attractive interface to connect to a central computer through a wifi signal sending the data through an IP address and a different port for each mobile device.

Figure 2: The premiere of The Interstellar Machine in the Palau de les Arts - València.

The result is that every phone or tablet becomes a powerful musical instrument with the ability to control sounds (WAV, AIF, MP3, VST (Virtual Studio Technology), instruments and input effects. Furthermore, it offers creative combinations of digital and analogue sound of any sound source external to the system. Therefore, Soundcool has the ability to integrate the traditional classics with the most advanced technology in music.

Figure 3: Pupils making use of the Soundcool system through their own mobile devices.

The use of this system has been completed by improvising with a sax played by musician Josep Lluís Galiana, who also directed the orchestra, and a piano "soundcool-prepared" played by the teachers Noemy Berbel and María Elena Riaño. The gestures that the narrator of the text, Sergi Moyano (secondary education pupil) made, were modified in real time by the video creator Stefano Scarani through the Macchina Peformativa 10. The technical team consisted of the sound technician Giannino Clemente and Àlex Moreno Garzó, a graphic and audiovisual documenter. The director of the whole project was Adolf Murillo, who also took care of the educational part of Soundcool.

Hypothesis and objectives

We consider two starting hypotheses:

Hypothesis 1: Proposals in which there is a hybridization of artistic languages from a contemporary, collaborative and creative vision facilitate the approach of a young and neophyte audience to this type of music.

Hypothesis 2: Soundcool is a tool that reinforces the hybridization of artistic languages facilitating the participation of young people.

From these we raise the following objectives in the study:

- To know and analyse to what extent these types of hybrid proposals can facilitate a greater acceptance of contemporary music to the young and neophyte public.
- To analyse what elements of contemporary language are reinforced through the development of proposals of this type.
- Analyze if the Soundcool system of collaborative creation facilitates the connection between the different languages that come into play in the proposal.
- To inquire about the strategies carried out during the work process of the proposal.
- Propose new strategies that allow us to continue creating proposals that will help us achieve these objectives.

Method

We took a qualitative approach. We used triangulation as a research strategy, as a control procedure and to ensure the reliability of the results (Denzin, 1970). Among the different types proposed by the authors, we have chosen the triangulation of data, the one that derived from the categorization process, to perform the analysis, obtain the results and finally, draw conclusions. In this case, the data from the three groups of informants allowed us to better understand the reality studied.

Participants

The participants' sample was formed by three distinct groups: students, group of experts, and teachers specialized in musical education.

When selecting students, we only targeted a specific group. We only asked students who had previous experience with Soundcool. It was necessary for the students to know how to use the tool in order to spend time teaching the processes of musical creation. The sample was made up of 25 ten-year-old students who attended 5th-grade Primary School in the CEIP school Carmelo Ripoll (Ontinyent-València) and 16 students aged 15-16 attending 3rd and 4th of Secondary Education and coming from the Secondary Education Institute "Arabista Ribera", Valencia (Spain).

With regard to the group of experts, a sampling was used that Llorente (2008) calls opinionated and determined by the choice of subjects that are important sources of information to dominate the theme approached. It counted on the collaboration of Josep Lluís Galiana, saxophonist musician, an expert in free improvisation and Stefano Scarani, an expert in electronic music and video creation. Both had had previous experiences as creators with children and young people.

Likewise, the third group, formed by the first three authors of the present article, professors specialized in Music Education, Creativity and Technology, was key to successfully carry out the study. Coming from the Universities of Cantabria, the University of the Balearic Islands and the Ministry of Education of the Autonomous Community of Valencia which offered complementary profiles in a form of teamwork.

Instruments

Two instruments were used for data collection:

1. Interviews. We gathered information about the opinions, descriptions and interpretations of the situations lived by the participants. Through the interviews conducted, it was possible to know the perspective of students and experts on the strategies developed throughout the work process in the proposal made. Two individual semi-structured interviews were conducted to each of the experts and a group interview with the students. We recorded all of the interviews.

2. Documentary analysis of the “*Making of*”¹. This audiovisual, recorded during the work process of the artistic proposal, has been an essential instrument as it gathers the voices of all the protagonists. A way of monitoring the study very closely and contributing relevant data to it.

Procedure and phases of work

According to the stated objectives, we describe the process, the work prior to the premiere that tells everything that was developed during the rehearsals and the performative experience during the premiere of the work.

Phase 1. We focus on making changes to the ways in which we can generate creative products. A vision in which the generation of ideas by everyone would influence the final result. We believe that the greater the involvement, the greater the synergy between the involved parties, creators, teachers and students. We visited educational centers generating different workshops of sound creation through the use of Soundcool, a research project directed by the engineer and composer Jorge Sastre. For any teacher or musician interested, this system is free to download, both the computer program and the mobile applications for Android and iPhone. The Soundcool web page gives you access to the software itself, publications, projects, social networks, etc., as well as information on projects, tutorials, etc. Soundcool is a system consisting of a series of modules such as players, real-time microphone sound input, sound effects, virtual instruments, mixers, etc. Which can be interconnected and operating on a Mac or PC. The various modules can be controlled via wifi with mobiles and tablets, facilitating the collaborative creation, and also with the Xbox Kinect video game interface. The text of the story in Catalan was presented, which worked as a creative trigger and catalyst for the first ideas and contributions that were emerging. In the workshops, a sonorous experiment was carried out to build a sound bank used in the final piece, as well as improvisation techniques and management of the Soundcool collaborative creation system.

Phase 2. A session was held with the conductor of the work, the improviser Galiana, and was oriented to the stage set up and the assembly of the different parts of the story. The main idea was to seek the coherence and a global vision of the work by the participating students and to generate knowledge flows between them. The students, at all times, were not viewed as mere content consumers, but as authentic agents of action and protagonists in this construction process. Dialogues, trial-error, doubts, decision-making were some of the issues that emerged at this stage.

Phase 3. The third phase, performative, was developed outside the classroom, in the Palau de les Arts and was divided into two parts. In a first part, the audience could watch the making of the whole process (which had been recorded and edited during phases 1 and 2). Then the concert began and the students, as musicians, went on to the stage to play, create, and offer an experience that was gratifying, exciting and, above all, meaningful.

Phase 4. The interviews were conducted. Each of them, the individual ones as well as the group interviews were made explaining previously the purpose established for this investigation even though all the participants had lived the artistic experience first hand.

The topics or around which the questions were directed at all the participants (experts and students) were:

- The experience as creators in the artistic proposal realized.
- Strategies developed during the work process
- Using Soundcool as a collaborative Tool
- Implications with contemporary music

RESULTS

Each of the interviews was transcribed and read individually by the researchers, and then a joint reflection had place. Using the initially given dimensions, in each transcript units of meaning (words, phrases) emerged, which were later grouped into the following three categories:

- Hybridization of contemporary artistic languages
- Collaborative didactic methodology
- Innovation and creation

¹ Making of access: <https://youtu.be/nVvm7FVM6II>

On the other hand, the comments and observations gathered through the audiovisual "Making of" are fundamental elements of analysis because we believe that by the documenting the work sessions through the perspective of the involved, we can observe fundamental aspects of the learning processes, in this case, in an approximation to the contemporary musical fact.

The main results are presented through a series of tables which include the categories, main indicators and selected fragments:

Table 1: Category: Hybridization of Contemporary Artistic Languages

INDICATORS	FRAGMENT
Fusión of Styles	<i>No contemporary artist, whatever the field may be, can understand creativity without hybridization, participation, interdisciplinarity, heuristics (and there was a lot of this throughout the process), empathy, game, adaptation, exploration, pursuit, interaction, coherence, dialogue with reality, discipline, respect for each other, commitment, honesty, ethics, sincerity, solidarity, generosity ... (Ex).</i>
Links between the school and society	<i>It's a global experience and not a fragmented one (Ed).</i>
Interdisciplinarity	<i>An element of contemporaneity very widespread today is the mix of different styles: contemporary music tends to involve popular music, old music, rock, etc. This freedom, together with the use of multi-instrumental digital tools, allows us to create an important bridge between the personal sphere of each student and what we consider to be academic, presenting an important attractive element of union instead of the classic separation between real life and school (Ex). This interdisciplinarity, to put in the same plane so many activities and tasks, is what I found extremely interesting (Ex). We used the story as a creative detonator because normally, when we, the creators, the musicians, try to make any kind of music the suggestions can come to us by any element or field. As single sound can be a creative element that allows ideas to start a path. A lot of the times it will be through texts and in this case it will be the story that offers us a narrative, as a kind of path, in which we mess with the sound (Ed).</i>

Table 2: Category: Collaborative Didactic Methodology

INDICATORS	FRAGMENT
Shared processes	<i>The experience of total creation, the shared and participatory process, bringing all that to the younger ones is what I liked the most (Ex). They helped us, the older ones. We added the missing sounds (St). We were also there, thanking the two technicians for helping us and it was good to learn technology (St). There was no need to play one alone. It sounded better together. And the applause at the start really motivated us (St). A clear concept that has remained of all this intense and profitable creative process and is that the youngest have discovered that music is many more things than just sound, that all languages are like communicating channels and that, therefore, can be poured into one another. Finally and most importantly, that contemporary creative processes can only be tremendously collaborative (Ex).</i>
Encouraging interpersonal relationships	<i>It has brought us new friendships and we have all gathered to do our best (St).</i>
Gusto por la experiencia	<i>It was a unique experience and I'd like to repeat it (St).</i>
Grupal responsibility	<i>Something important that I learned is that patience is key while rehearsing and performing in a concert. There you learn that you have to wait for your turn to play (St).</i>
Personal autonomy	<i>The important part is that they themselves are understanding that their role is fundamental but they are also listening to the role of others. There is an</i>
Responsibility	
Stepping outside the comfort zone	

	<p><i>enrichment, beyond the artistic part and to learn a series of competences that are going to be necessary to them as well (Ed).</i></p> <p><i>The key element in this didactic methodology is the responsibilities we give to the student, who is involved in the completion of a product that will be presented to the public. They leave the protected environment of the classroom to prove themselves able to do a "real" job; it is the best way to hold a person accountable (Ex).</i></p>
--	---

Table 3: Category: Innovation and Creation Using Soundcool

INDICATORS	FRAGMENT
Technologic innovation	<i>Using contemporary languages in the project creates bridges between artistic languages and academic languages, especially if electronic media is used together with the more traditional media (Ex).</i>
New instruments	<i>It has been a very nice experience since we have learned to do music with a tablet (St).</i>
Openness to other techniques	<i>With Soundcool (and other programs), we can demonstrate how the same device can serve to create rather than be used to a limited extent set by the software; with it, we can prove that we have the power in our hands, we only need to show it. This is not so clear with other more classic tools (Ex).</i>
Experimentation	<i>It's a new kind of music with "strange" sounds. My parents told me that they had never seen anything like that (St).</i>
Improvisation	<i>We were asked to show how we controlled the sounds with our tablets (St).</i> <i>We are going to improvise in real time on the images and the voice of Moyano (narrator). That means that at one point that he is speaking there should sound something related to it ... Look for adjectives to define what kind of sonority. That helps us at the time of recording: here could be pieces of music or sound rhythms, or play with the voices and from them do whatever comes up ... That is recorded, loaded into Soundcool and then played (Ed).</i>
Creation	<i>I had the feeling of playing a different sound, you could play it as you wanted, with a different speed or volume (St).</i> <i>Using the analysis of the text and the image we will improvise (Ex).</i> <i>Each of the older students had a keyboard "piano" which played different sounds. They made music on the spot, they could play several keys at once and they were the basis of everything. We were the complements (St).</i>
Horizontal work	<i>The children will be placed as the generators of the creative process and they themselves will be artists, composers and creators (Ed).</i> <i>We heard reverse palettes, free sounds, thousands of colors, dissonant sounds. We played a battery inside out, an upside down chorus and a machine that sounded like a dinosaur. Others sounded were like maracas, like firecrackers and the doors of a special ship when opened (St).</i> <i>Then there was Mr. Galiana, he played the sax and it was interesting because he made small and big sounds (St).</i> <i>I've found it very powerful and infinite in its possibilities. Thinking of sound as the base and putting it in the center of this creative process is a great revolution, given the current educational model (Ex).</i> <i>One of the most interesting questions of the proposal with the use of Soundcool is horizontal work at the level of artists, professionals, teachers and children of different ages. We are all working on the same level and we will all make a real creation, on the spot (Ed).</i>

It should be noted that there exist other results concerning the needs we still have to cover, results from observing during the processes. We've highlighted the following ones:

The main element that could have been much more developed in this type of proposals is the implication and commitment of the students in each and every one of the parts of the creative process. Students should participate much more actively in the decision making, in the elaboration of musical, visual, literary, sonorous, dramaturgic and scenic materials. I understand that this greater involvement requires more effort and much more time and human and economic resources, but I think that this creative process is extrapolable to any other educational process and to any daily activity (Ex).

I think the next phase is to develop more Soundcool audio and video modules and ease customization of modules not only by developers, but also by student users (Ex).

DISCUSSION AND CONCLUSIONS

The results of this study show how students and professionals can immerse themselves in global artistic projects, exploring paths and strategies in which all are co-creators, in the line argued by Camnitzer (2017). They all agree that the creation during the work process and the performative act itself has been a participative, social, constructive act capable of deploying educational potential through the nexuses and interactions produced among the people, the hybridization of Languages and the possibilities that technology offers us, in this case, using the Soundcool system. This confirms the hypotheses and objectives raised in the research, corroborated by the emerging categories and evidenced by the indicators for each of them.

Thus, in each of the categories we find answers by experts, educators and students, showing a way of working as a team and developing strategies looking at creative processes in a horizontal way, where each and every one of the protagonists is a key player for the project. This type of proposal can be a fundamental factor in the transformation of artistic practices in classrooms. As Scardamalia and Bereiter (2006) affirm, teachers would be experts capable of solving open problems rather than facing changes with routines previously learned.

Likewise, both the youngest and the oldest students have experienced first hand an approach to the sound and the musical language that promotes the use of the technology that we have at our disposal. The perception after the use of Soundcool has been very positive. It is true that this is a punctual experience and the results can not be generalized, but we consider that the realization of new proposals like this one is an interesting way of working in the classrooms, since they can contribute to the acquisition of taste for a contemporary aesthetic and the formation of new young audiences. And, more importantly, to establish connections with the arts, as defended by Eisner (2002).

Through the textual analysis of the story created, both the drawings made by the students and the sounds and music recorded and later manipulated in real time through Soundcool, we have demonstrated that the literary, visual and sonorous languages can be conjugated in a hybridized way. Likewise, the processes and practices carried out during the test phases have been fundamental to the understanding of this form of multidisciplinary work and to cultivate enjoyment in the "making". We believe collaboration has been a key element for this, since it has been present while listening, consensus, participating, contributing ideas and developing other strategies, where everyone has learned from everyone.

However, in spite of the success of the proposal, the results also show some organizational, participatory, technical and resource management issues, which can be improved, and exist probably due to the lack of experiences that have to do with a continuous teaching practice, open to the new challenges related in part, by the advantage that the new learning scenarios offer us. In fact, the current curriculum doesn't promote actions that foster the development of creativity and imagination, fully in line with Egan's (2008) arguments. Researches such as that of Urrutia and Diaz (2013) point to the resistance in the educational systems of the 21st century that still prevent the use of contemporary artistic languages. In the opinion of the aforementioned authors, the role of the musician today is different, as it's the role of the teacher and that of the students.

It's in our hands to reflect on it and dare to start our own actions or, at least, open the doors for new possibilities that exist and that have yet to be traversed. Because each one of them is a challenge and a new opportunity to live and share the music, because we know that the learning processes are favoured by cooperation between many minds, for both cognitive and emotional reasons (Johnson, Johnson, Holubec, 2008, Salomon, 1993).

By synthesizing after having carried out the study, we can conclude:

- The existence of the hybridization of artistic languages through the realization of the project.
- The opportunity to bring contemporary music to a young audience.
- A form of teamwork, horizontal, creative and innovative by experts, educators and students.
- The success of the Soundcool system as a tool for collaborative sound creation and its interconnection with other languages in a real-time staging.
- The promotion of bridges inside and outside the classroom.
- The flexibility required by the protagonists of the project during the trials, cause of the necessary adjustments during the work process.
- A greater acceptance of the contemporary artistic languages by the participating students through practical proposals and in real contexts.
- The need for greater participation in the student's' occasions in decision-making.
- The lack of time and resources that prevented us from deepening more in some aspects.

As we have seen, this type of proposal enhances critical thinking and personal development of each individual. By proposing a group project, each individual underwent a process of self-reflection that allowed them to discover their interests and find out about others. We think that the important thing in this type of proposals is not the final product, but all the connections that we discover and establish until we find a solution that is evaluated by everyone. Working holistically between different disciplines have put into play different skills and knowledge that go beyond the partisan view provided by the unidisciplinary approach. Through the proposal that describes this study we developed a type of contextualized learning from a problematic situation that was provoked in the students and the actors that intervened, a mobilization of conceptual knowledge, procedural skills, values and emotions in a completely integrated way. In order to do this, students became involved in actions such as thinking, planning and doing, but they also became emotionally involved because they are activities linked to authentic contexts that escape the challenge. As Martín (2008) explains, working with others helps us to become aware of one's own cognitive and emotional processes; At the same time, it forces us to agree to define common objectives, to seek strategies to move forward together and reach shared solutions; In short, working together helps us to set our ideas straight and be flexible with the rest of the group.

ACKNOWLEDGMENTS

All this work wouldn't have been possible without the funding of the Carasso Foundation Soundcool ref. 16-AC-2016 and the challenge that the (IVAC) Institut Valencià de Cultura of the Generalitat Valenciana gave us in the commission of the work "The interstellar machine" within the festival ENSEMS, in addition, of its continuous collaboration in the search of strategies to bring the younger audience closer to contemporary languages.

South Korean University Students' Views of Mobile-Assisted Language Learning

Andrea Rakushin LEE
 Department of English Language and Culture
 Konkuk University Glocal Campus
 South Korea
 andrea1216@kku.ac.kr

ABSTRACT

This case study examines South Korean university students' views of the advantages and disadvantages of three popular smartphone apps, Memrise, Duolingo, and Busuu, which aim to improve language proficiency. These three particular apps were chosen based on their popularity and high ratings. Prior to the students choosing an app, the instructor discussed the primary features of each app so that students could choose one that seemed most beneficial to them. Participants included 45 students studying in two English communication classes at a private university in South Korea. Data consisted of an online discussion forum, class discussions, and three focus groups. Students were required to download one app, use it for at least 2 hours, and discuss how they used it as well as their perceptions of the advantages and disadvantages of the app. Overall, students reported being satisfied with the apps, and most expressed interest in using them again. However, they also expanded on disadvantages that frustrated them and decreased their motivation to want to continue using the apps. Students also provided recommendations for how to improve the apps to make them more effective for learning English.

INTRODUCTION

Mobile-assisted language learning (MALL) is becoming a common method for English language learners to practically and efficiently improve their language proficiency. According to Niño (2015) MALL is an “approach to language learning that is enhanced through the use of a handheld device or mobile technology, such as pocket electronic dictionaries, e-books, personal digital assistants (PDAs) MP3 players, and most recently, ultra portable tablet PCs and smartphones” (p. 75). MALL began in the 1980s through telephone feedback sessions for language learners. By the 1990s, telephones were used more extensively for distance education classes. Since the dawn of the 21st century, MALL has vastly improved through myriad technological developments. As handheld device technology advances, it is important to capitalize on the benefits that can be used to increase language skills. Furthermore, in a world that largely demands speed and efficiency, MALL is critical for many learners who desire flexible and effective methods to study language. Additionally, some learners seek nonconventional methods to study language which may seem more enjoyable and less rigid in comparison to traditional forms of studying.

Smartphones are a primary tool for MALL since many people have quick and easy access to them. Through smartphones, people can “surf the Internet, receive and send e-mail, take and edit pictures, or shoot short video clips. Most importantly, users can select, install, and use applications in smartphones” (Yang, 2012, p. 300). According to Poushter (2016), South Korea ranks number one in the world in terms of smartphone use with an estimated 88% of the population using them. Lee (2016) surveyed South Korean young adults from the ages of 18-24 and reported that 100% were using smartphones; additionally, people spend a significant amount of time using smartphones. Therefore, educational applications or apps can be a valuable and practical way to improve English language acquisition.

It is important to learn more about the perceived needs of students to help improve their English communication skills (Niño, 2015). Studies (Chu, 2011; H.-S. Kim, 2014; Kim & Kwon, 2012; Kim & Lee, 2016; Kim, Rueckert, Kim, & Seo, 2013; Ko, 2016; Kwon, 2011) have been conducted in South Korea on the use of smartphone apps to improve English language skills; however, it is important to gain more insight into students' perceptions of the apps. There are also limited studies on South Korean students' views of international smartphone apps that do not specifically target Korean users. Furthermore, as technology advances, it is vital to have current research on students' perceptions since technological tools and resources can quickly become obsolete. Finally, more studies in the English language are needed to aid native English speaking instructors in South Korea who are not conversant in Korean and want to gain more insight into the learning needs of their students.

The purpose of this case study is to explore South Korean university students' views of the advantages and disadvantages of three smartphone apps, Memrise, Duolingo, and Busuu, which focus on language development. These apps were chosen based on their ratings and popularity. By examining the advantages and disadvantages of apps, students and instructors can make more informed decisions and choose an app that is most suitable for achieving learning objectives. South Korea is known for being a fast paced society, and students may not always have ample time to study English through traditional methods. Smartphone apps that focus on English language development can be a convenient and effective way for students to improve their language proficiency. Many South Korean students also do not have enough English language practice outside of the classroom; therefore, MALL can provide additional learning opportunities for students.. The following research questions were used to guide the study:

1. What are South Korean university students' views of the advantages of Memrise, Duolingo, and Busuu?
2. What are South Korean university students' views of the disadvantages of Memrise, Duolingo, and Busuu?
3. What recommendations do South Korean university students have to improve the applications to make them more effective for learning English?

LITERATURE REVIEW

Mobile-Assisted Language Learning

MALL can be used to develop various language skills (Chinnery, 2006; Kang & Kim, 2007; Kukulska-Hulme, 2009; Thornton & Houser, 2005) and also improve students' independent and group learning (Al Aamri, 2011). Students have also reported perceived benefits of MALL (H.-S. Kim, 2011; Nash, 2007; Sharples, 2000). Research has highlighted numerous benefits of MALL based on quantifiable language acquisition improvement; moreover, students have indicated that MALL helped them to develop better language skills. Mobile learning has also increased among students in various countries who are trying to improve their English language proficiency (Abozandah, 2015). As time progresses, MALL technology rapidly improves leading to better capabilities and educational features (Yang, 2012). There are myriad ways to implement MALL activities in language learning contexts. One of the primary benefits of MALL is that learners have the convenience of studying at various times (Miangah & Nezarat, 2012), and mobile devices can be used in most locations (Ko, 2016; Niño, 2015). Kukulska-Hulme (2006) identified several major benefits of MALL which include collaborative practice of the language, quick access, personalized activities, social engagement, and contextual learning based on specific activities. Convenience and practicality have been emphasized in research studies on MALL (Anaraki, 2009; Deng & Shao, 2011). Research has emphasized various benefits of MALL that aid in attaining foreign language proficiency.

Other research studies also highlight the benefits of MALL for language development. Thornton and Houser (2005) studied the use of MALL in English as a Foreign Language (EFL) classes in Japan by examining email correspondence on smartphones, participation in timed vocabulary activities, and the use of video functions to explain idioms. Students indicated that MALL is an effective way to improve English language proficiency. Kiernan and Aizawa (2004) examined the use of MALL with university freshman in an EFL course and also noted that MALL can be an beneficial way for students to increase their English language skills. There can be drawbacks to using MALL though including the cost of using the Internet; additionally, the size of the screen and keypad are typically small (Ko, 2016). Of course, students also may not be satisfied with their learning experience, and language acquisition goals may not be attained through MALL activities. Nevertheless, Abozandah (2015) states, "In general, the effectiveness of these technologies is often times significantly underestimated and there is still a great potential behind mobile learning technologies which is yet to be realized within the classroom" (p. 649). Through technological improvements as well as scholarly and market based research, potential drawbacks of MALL can decrease over time leading to improved language learning experiences.

Smartphone Apps for Language Learning

There are various forms of mobile technology, but the most commonly used for language learning is smartphones (Ko, 2016). Niño (2015) examined students' views of MALL in a foreign language context, not limited to English, and found many benefits to MALL; however, students highlighted that smartphone apps do not include enough speaking and writing activities. Students emphasized that smartphone apps are helpful because they are convenient, include "authentic resources," and "provide fun and interactive progression" (Niño, 2015, p. 83). In terms of smartphone apps, students reported being pleased the most with vocabulary activities (Chen & Chung, 2008; Liu & Jackson, 2008; Stockwell, 2007; Thornton & Houser, 2005) followed by reading, writing, grammar, and translation

activities (Steel, 2012). However, there are barriers that need to be addressed to improve the user's experience including reducing repetitiveness of activities which may decrease motivation, especially with free versions of apps, and some of the vocabulary may not be commonly used in authentic situations (Niño, 2015). Although there are reported disadvantages of using smartphone apps to improve language acquisition, research clearly describes positive experiences that students have had while engaging in language learning activities through the apps.

In South Korea, smartphone apps are becoming a popular way for individuals to improve their English proficiency (H.-S. Kim, 2011). Apps for English language learners generally include a wide range of topics that allow users to participate in specific tasks or activities (Yang, 2012). Yang (2012) evaluated five popular smartphone apps and found that vocabulary was limited, and more activities were needed to help students use previously learned materials. Ko (2016) studied the effects of mobile apps on English listening anxiety and reported that students were pleased overall with their experience using the apps; nonetheless, some reported that they did not like the lack of interaction. Research (e.g. Kim & Kwon, 2012; Ko, 2016) also shows that there is a lack of social interaction activities on smartphone apps geared toward language acquisition. It is essential to include learning activities that give students an opportunity to engage with others to effectively practice the language. H.-S. Kim (2014) studied the effects of using mobile devices in blended learning for English reading comprehension and found that students generally had positive views of MALL. H.-S. Kim's (2014) study used KakaoTalk, which is an interactive messaging system that is very popular for everyday communication among the South Korean populace. Students were assigned English related tasks while using KakaoTalk. Although there were some drawbacks including the inconvenience of typing and the small screen size, students enjoyed the communication practice with peers in English and the convenience of being able to practice anytime and anywhere. O (2014) examined South Korean students' views of MALL in a study which focused on a popular South Korean app called Naver Band. Participants chatted with other classmates in an online community and reported mostly positive views of their experiences. Research on the use of apps in South Korea generally highlights positive experiences and outcomes, especially considering the convenience of apps for language learning. However, disadvantages were also reported and should be considered when implementing smartphone app activities in English language classes to ensure that students' learning needs are met.

METHODOLOGY

This research employed a case study design since the research was limited to two classes at a single university. Gall, Gall, and Borg (2003) define a case study as "the in-depth study of instances of a phenomenon in its natural context and from the perspective of the participants" (p. 436). Various forms of data can be collected in case studies including records, interviews, observations, documents, and artifacts (Yin, 2003). The researcher strove to develop a detailed description of the case based on the data collected (Gall, Gall, & Borg, 2003). Furthermore, the researcher chose a qualitative design to give participants a voice to share their views (Creswell, 2007) about the advantages and disadvantages of each app and to provide recommendations for how the apps can be improved.

PARTICIPANTS AND SETTING

Participants included 45 students studying at a private university in Chungbuk, South Korea during the fall semester of 2016. Purposeful and convenience sampling were used to obtain participants (Creswell, 2007). Most of the students were freshmen and were majoring in English. Students were enrolled in two English communication classes (class one, n=17, class two, n=28) which focused on speaking, listening, reading, and writing development. Students also completed online activities (through the Canvas Learning Management System) including discussion forums where they posted their thoughts about various topics assigned by the instructor. The two face-to-face classes were combined to create one online classroom in which students participated in discussion forums. For this study, participants were assigned a pseudonym to protect their identities. Additional details about the participants (including which online discussion group they participated in and focus group participants were identified) can be found in Appendix A. The instructor, who is also the researcher, is an American citizen. She first began teaching in South Korea in 2006. She has experience teaching face-to-face, blended, and fully online classes.

DATA COLLECTION

Data consisted of an online discussion forum, class discussions, and three focus groups. Students were required to download one app, use it for at least 2 hours, and discuss how they used it as well as their perceptions of the advantages and disadvantages of the app. Prior to the students choosing an app, the instructor discussed the primary features of each app so that students could choose the one that seemed most beneficial to them. The following

questions were asked in the online discussion forum and class discussions. These questions were also used to guide the focus groups, but follow-up questions were asked to learn more about the students' views of the apps.

1. Which app did you choose?
2. What activities did you do?
3. What do you like about the app?
4. What do you dislike about the app?
5. What recommendations do you have to make the app better for learning English?
6. Will you continue using the app? If so, how often do you plan to use it and for how many minutes/hours per day or week?
7. Have you used any other apps to learn English? If so, what did you think about them (good or bad points)?

For the online discussion forum, students wrote 150 words or more about their perceptions of the app that they had chosen. Most students had written significantly more. Students were randomly (through a feature in the Canvas Learning Management System) divided into five groups. By dividing students into groups, there could potentially be more variation in answers, and students were less likely to not repeat or adapt their classmates' responses. The discussion forum activities were open for a month, giving students ample time to complete the task of using an app, write their responses to the questions, and reply to three classmates. Additional data was obtained through the responses to classmates. The class discussions were carried out as two large focus groups in each of the face-to-face classes. Each class discussion lasted about 20 minutes, but prior to each class discussion, students were given the questions to discuss in small groups. This gave them time to consider each question more deeply. The instructor took detailed notes about the students' perspectives during the discussions. There were also three focus groups (one group for each of the apps). There were five participants in the Memrise group, five in the Duolingo group, and three in the Busuu group. The focus groups lasted about 30 minutes each, and detailed notes were taken.

Data Analysis

According to Creswell (2007), in case studies "analysis consists of making a detailed description of the case and its setting" (p. 163). Categorical analysis and aggregation were used to develop key themes from the data (Stake, 1995). After examining the patterns and key themes and concepts that emerged, the researcher strove to develop primary codes. Codes represent common patterns and themes from the data. However, the results also include student responses that were not frequently discussed among participants to get a more complete understanding of the case. An additional coder was used to better ensure that the results provide a holistic and accurate understanding of the case. Moreover, the researcher reviewed the results over the course of several months to confirm that the reported findings were accurate and clearly conveyed the students' perspectives.

RESULTS

Qualitative results of the data are presented in the following order: students' views of Busuu, students' views of Memrise, and students' views of Duolingo. Additional information about the participants, the apps that they chose, the activities that they completed, whether they plan to continue using the app, and if they have used other apps to learn English is included in Appendix A (Tables 1-5). Students' original words are included in the results. Since the students are non-native English speakers, grammar mistakes are commonly found. The researcher thought it was important to preserve the original words of the students though. There were 5 Busuu users, 19 Memrise users, and 21 Duolingo users.

Students' Views of Busuu

According to the students who used Busuu, the primary advantages include having realistic activities, antonym and synonym activities, effective listening activities, the ability to learn other languages, being able to learn English easily, and providing different language proficiency levels. Julia highlighted the overall advantages of Busuu by stating,

The application includes various activities and English conversation phrases. It is helpful in learning English easily and interestingly. The best thing is that there are many questions stage by stage. I could know my English level by solving the problems. Listening to the English conversations was good for speaking exact English pronunciations. Also, I could feel achievement as passing levels.

Of the students who used Busuu, none discussed the same advantages with the exception of being able to learn other languages besides English. Each student provided different examples of advantages, and none were identical.

Based on student responses, the primary disadvantages of Busuu include that some of the activities were hard to complete because the speaking was too fast. In addition, the cost of the app was expensive if they wanted to do activities beyond what is available at no cost. Other disadvantages were highlighted as well. Three students mentioned the need to have an effective voice recording system so that students could determine the accuracy of their speaking and pronunciation. For example, Brooklyn stated,

If this app have speaking system, this will be good for people who want to improve their pronunciation and speaking skills. Actually I want to speak very well, however, when I meet foreigner, my mouth and tongue are frozen, so I can't speak very well.

Three students also mentioned that the app is too childish, and the activities are too basic and are best for new learners of English. Brooklyn emphasized this by stating, "The application was childish, so I thought the application is just about games at the first time, and I wouldn't really improve my English because it's too easy." Two students discussed a heavy emphasis on grammar and stated that they thought that other components of language should be covered more including speaking, listening, reading, and writing. In addition, comments were made that indicated that the grammar activities were boring. Alice expanded on this and stated, "I don't want to study the grammar even in the app because I will use the app in my free time and I want to study practical English, not just grammar." It was important for the students to participate in fun and practical activities. In comparison to the advantages, students discussed more disadvantages and in greater detail.

Students provided recommendations for ways to improve Busuu which include having more grammar activities, including fun games, exposing users to natural expressions, adding various creative elements, and incorporating phonetic symbol practice activities. Some students provided detailed recommendations. According to Jennifer, "Korean students are weak in grammar, so I would put more grammar point. In addition, students can't concentrate in study for a long time, so I would put English words games. Also, I want to add own vocabulary list." Sarah added additional information on the importance of vocabulary acquisition by stating, "I am also interested in learning new words that English speaker use. So I hope this is added." Another example provided by Brooklyn is,

Why people hesitate to learn English is that most of them think English is difficult to learn and English is a boring subject. Making a grammar game or using pictures to explain grammar is a better way to learn English. If the app has these contents, many people will use it.

Most recommendations focused on having engaging, practical, and fun ways to practice English through Busuu. Naturally, some disadvantages could also be viewed as recommendations.

Students' Views of Memrise

Students expanded on various advantages of Memrise. One commonly highlighted point that was discussed by many Memrise users is that they could learn other languages besides English. For example, students mentioned that they could learn Chinese, Japanese, French, German, and other languages that they were interested in learning. In addition, students emphasized that Memrise is beneficial because of the varying levels of difficulty. According to James, "Because all learners have different ability, they need to select the different level. Because this application separates the level, it caught my attention." Students also highlighted the recycling and repetition of vocabulary. They found it beneficial to be able to reuse vocabulary so that the words remain in their memory. Aria said, "The activities in the app are repeated, so it helps to acquire the new words. Especially, there is no time limit for answering quizzes or finishing the activity. I could slowly memorize the words." There were other advantages that were discussed but were not as common as the aforementioned examples. These additional examples of advantages include the following: that the speakers have good pronunciation, the pictures with words are interesting, various activities are provided, beginners can use the app effectively, there are a lot of topics, the translation activities are helpful, and there are good graphics.

A primary disadvantage of Memrise that was highlighted by many students in the results is that there was too much focus on vocabulary. Robert said, "There are many advantage of memorizing the common words of second language, but just memorizing them are not really helpful when we go to their cultures." In addition, students mentioned the importance of having more grammar activities. Victor stated, "Memrise doesn't provide grammar. If I am a English beginner, after learn some words, I will want to make some sentences using words I learned." Moreover, students mentioned that only one answer is accepted when they do translation activities even though there is technically more than one correct answer. Gina said, "If I translate the sentence, there are lots of ways to change the sentence, but they only accept one answer which is standard." Other mentioned disadvantages that were not highlighted as much as the previous examples include the following: the app was sometimes too easy, the

professional version advertising was annoying, there should be more levels, it was a little boring at times, and it used too much phone memory.

Students provided various recommendations for how to improve Memrise. The most emphasized and discussed recommendations include having a detailed level test so that users do not waste time learning things that are too easy or difficult. In addition, students highlighted the importance of speaking activities. Dylan said, "I will improve the speaking part. Because most of student are good in writing and reading." Ethan provided another example, "I would supplement the speaking part. To me, this app is perfect except speaking part. In real life, I think speaking is more important than just reading." James also discussed the importance of speaking while providing a more complete understanding of his views of this app. He stated,

To study the language effectively, I think we have to use the five senses. However, I don't have experience seeing the application that review the speaking. I recommend developer to make recording and checking system of someone's speaking. Through this system, learners can learn pronunciation more quickly.

Students also discussed the importance of engaging with native English speakers. Robert said,

If I am the producer of the app, I would add some functions of chatting with second language people. For example, if I am Korean and I want to learn English as a second language, then I can chat with friends who are living in English cultures and want to learn Korean as a second language. In the result, we can learn the languages and make some international friends in the app.

There was also an emphasis placed on having more grammar activities that are fun since students generally learn grammar from textbooks which they said are not typically interesting or engaging. Other recommendations that were not discussed as much as the previous examples include adding learning through movie scenes, synonym activities, idiom practice, expressions for traveling, language learning tips, phonetic and phonology activities, games and more fun activities, and activities based on foreign television dramas.

Students' Views of Duolingo

The biggest advantage of Duolingo discussed by many students is the "clean" and "good" design. Eight students discussed the effective design which made it easy to navigate and use the program. Several also said because it is more visually appealing, they naturally chose this app over others. Hannah said, "The cuty owl design makes me choose this app at first sight. I think design is very important. The app's design makes me approach easily." In addition, students really valued the goal setting program. According to Charles,

It is very nice app for learning various language. First, implement this app they give the selection like a daily goal and practice time notification. If I finish a daily goal I get a point, but if I do not, I lose a heart symbol. I like this specific goal selection plan.

Another emphasized point is that students could practice different parts of English (listening, speaking, learning words, making sentences, writing, etc.). Emily said, "I could learn many things that I want to learn parts like the verb, interrogative sentence, preposition, conjunction, time and date, etc. And I could repeat things so it was easier." Students also emphasized that they could learn other languages. Students discussed myriad advantages of Duolingo. Some advantages that were discussed but were not emphasized as much as the previous examples include the following: the app provides an easy way to memorize new English words, the word arrangement activities are helpful, the matching words and meanings activities were fun, there are a variety of topics, the point system is motivating, and the speakers' pronunciation is good and easy to understand.

Students discussed a wide range of disadvantages of Duolingo. The most emphasized disadvantages include that grammar explanations are needed even if there are just simple explanations. Students were able to practice grammar activities but could not always understand what they had learned. Students also discussed the importance of having a more detailed level testing system since the placement test seemed too basic to them. According to Liam, "First I had a level test. It's very easy to me so I could solved very quickly and then studying very basic word and grammar, but it's very basic... so easy to me." Students also discussed the importance of having more difficult activities. Timothy expanded on this by stating,

The app is a great assistive tool for the novice, but hard to recommend people who are already achieved an intermediate level of language. So I suggest corpus system into this learning app to provide various types and usage of language.

As a result of having easy activities, many students stated that they felt bored at times and that it is important to have more challenging activities to stay engaged. Students also highlighted that they could learn other languages through this program but could only study them through English directions and explanations rather than their native language.

Students provided varying recommendations for how to improve Duolingo. One of the most common recommendations is to have television clips for learning natural phrases. For example, Gina said, "It is a good idea to have short video of American TV shows. I sometimes watch British drama and American movies without subtitles. It really helps me to study English and know about their own expression and speaking." Jennifer also said that her high school teachers recommended English movies and dramas without subtitles for learning English. She said that it helped her improve her listening skills. Other recommendations that were discussed include having more grammar activities and conversation practice for everyday life. In addition, students mentioned the following recommendations, but these were only discussed by individual students, including having more games, current event and news activities, asking questions to users around the world, providing frequently used expressions by native speakers and opportunities to talk with native speakers, and including more general speaking activities. Furthermore, students sometimes stated that there was too much repetition at times which created some boredom.

DISCUSSION

The results provide a comprehensive picture of the students' perceptions of Busuu, Duolingo, and Memrise including results that were commonly stated as well as examples that were not highlighted as much to get a more complete understanding of the case as a whole. Students tended to be pleased overall with their experiences using the apps and could clearly expand on various advantages of each app. Due to the limited number of Busuu users, the amount of data collected was much more limited in comparison to the data collected on Memrise and Duolingo. However, even with a limited number of Busuu users, similarities in the results emerged. A primary advantage discussed by many students regardless of which app was chosen is that they could learn other languages through the app. This was an unexpected result since the study focused on the students' views of the apps for English language learning. Perhaps some of the activities seemed too mundane or easy for the students who had already studied English for many years. Most of the students indicated during previous class activities that they were not proficient in other languages, so basic drills and activities in other languages may have been perceived as more interesting or effective for them.

Students seemed satisfied with the apps and discussed a wide range of advantages. The results of this study align with other research studies (e.g. H.-S. Kim, 2011; Nash, 2007; Sharples, 2000) that report perceived benefits of MALL. Overall, many students were pleased with vocabulary activities. This supports Chen and Chung (2008), Liu and Jackson (2008), Stockwell (2007), and Thornton and Houser's (2005) research which reported that students were highly satisfied with vocabulary activities that they completed while using apps for language acquisition. Students who used Busuu did not highlight vocabulary as much as the Memrise and Duolingo users, but they still discussed the advantages of having antonym and synonym activities. Perhaps if there had been more Busuu users, there may have been additional responses about the benefits of vocabulary exercises. Memrise users especially focused on the advantage of being able to learn vocabulary through various activities which helped them to recall and remember new words. Duolingo users also discussed the benefit of vocabulary activities by stating that students could easily remember new words. Broader descriptions of valuable vocabulary activities were also discussed. Memrise users provided the most detailed responses about the benefits of Memrise; this could be attributed to Memrise's emphasis on vocabulary acquisition though.

Students also discussed feeling satisfied with the apps and stated that the activities were generally engaging and fun. Various examples of advantages of each app were discussed, but it is critical to highlight commonalities in the data so that instructors can consider the most frequently mentioned advantages when choosing possible apps to use in the classroom or as homework activities. Some of the reported advantages were also seen as disadvantages to some students though. For example, although vocabulary was generally seen as a benefit, many Memrise users stated that there was too much focus on vocabulary and that the vocabulary that they learned was not used in practical ways. In addition, most students felt that their chosen app was engaging and fun, but some reported that it is important to add more interesting and fun activities to motivate the users. Furthermore, some students stated that activities were too easy, whereas others stated that the activities were an appropriate level or even too difficult. It would be helpful if instructors could provide more personalized feedback to students about suitable apps based on individual student's levels. It is critical for apps to be an appropriate level for students. If the activities are too difficult, students may lose motivation and feel frustrated. Conversely, if the activities are too easy, students may feel bored and lose the desire to continue using the app.

Although the students discussed many positive aspects of the apps, there were clearly disadvantages that were also stressed. Furthermore, students provided recommendations for ways to improve the apps. One key point that was highlighted among users of each app is the lack of social interaction. This was also discussed by Ko (2016) and Kim and Kwon (2012) who researched South Korean students' use of MALL. In the present study, students expressed an interest in being able to connect with users around the world and to especially be able to talk with other native speakers. This is something that app developers could consider more to better meet the needs of language learners. Of course users would need to pay for language tutoring or personalized content, but users could connect with other app users around the world at no cost. Language exchange chat rooms could also be made available, so that students can talk with various users through voice or chatting functions. Niño (2015) also pointed out that sometimes repetitiveness of activities can cause boredom among students which was also evident in this study since students expanded on examples of repetitive activities that resulted in losing motivation and general interest in using the app. There were various disadvantages discussed, but it is important to highlight common themes that emerged which may be the most pressing problems based on the students' perceptions.

Beyond the specific disadvantages of each individual app, there were also some overall problems related to not having enough smartphone memory, using too much data or not having access to wifi, and that smartphone batteries died quickly by using the apps. Ko (2016) discussed the cost of using the Internet through data; although students did not specifically discuss data costs, they did mention using too much data or not having regular wifi access. By using too much data, they may have needed to upgrade their smartphone plan and reduce other activities that required data. Students may have reported other general advantages and disadvantages of MALL, but since this study primarily focused on three specific apps, students may have not thought about broader concepts. Broad advantages of MALL such as convenience of being able to study at any time (Miangah & Nezarat, 2012) and any place (Ko, 2016; Niño, 2015) were not described by the students; however, the research centered more on specific advantages and disadvantages of individual apps rather than broad pros and cons that could be applied to MALL in general.

CONCLUSION

This paper examines South Korean university students' views of three popular apps, Busuu, Memrise, and Duolingo, that are used for improving English proficiency. Overall, students reported being satisfied with the apps, and many stated that they will use the apps again in the future. Nevertheless, the students also discussed disadvantages and provided various recommendations for how to improve the apps. The results of this study are beneficial to English language teachers, students, smartphone app users, as well as smartphone app developers. There are many pedagogical benefits to using MALL and more specifically smartphone apps to supplement EFL and other foreign language classes. It is critical to have efficient and effective methods to study English and other languages. In South Korea in particular, students often seek practical and efficient ways to study English. Smartphone apps provide a quick and easy way to study English, and students discussed many of the benefits that these apps provide. However, it is also essential to examine disadvantages of apps more carefully to ensure that the learning needs of users are met. Just because the apps are practical and easy to access, does not necessarily mean that they help the students to improve their English. It is also critical to provide guidance and direction about appropriate apps for each student's level. Users may become frustrated if the app activities are too difficult; likewise, activities that are perceived as too easy may frustrate some users and make them feel as if they are wasting their time.

As technology evolves, there will be more sophisticated and advanced forms of mobile technology. It is important that smartphone apps include diverse activities to improve integrated language learning. A study by YBM Sisa found that about half of smartphone users in South Korea had studied English for about 30 minutes per week on their smartphone (Jeong, 2011). In a country that emphasizes the importance of English proficiency in academic settings and the job market, it is critical for individuals to improve their language skills. It is also important for instructors to share the benefits as well as drawbacks of smartphone apps to students so that they can choose an app that they perceive as most beneficial to them. MALL can be especially useful to students preparing for English language standardized examinations that can help them retain vocabulary as well as other parts of the language. Although there are some deficiencies in terms of practical activities, students can also improve their English language proficiency by regularly completing app activities. Students provided numerous recommendations for how to improve each app, and some provided similar recommendations. Although all of these recommendations may not be feasible or cost effective, certainly some of the recommendations should be considered for improving the apps to make them more suitable for learners.

There are several limitations of this research. The instructor let the students choose any one of the three apps that was of interest to them. Far more students chose Memrise and Duolingo over Busuu. In addition, the results of this study cannot be generalized. Students also may not have been able to clearly express their thoughts in English. Future research should examine instructors' perceptions of the apps with an emphasis being placed on advantages and disadvantages. When advantages significantly outweigh disadvantages, this makes the learning more practical and effective for students who are trying to improve their English. In addition, quantitative data can be collected to obtain data that includes evaluative criteria for apps that students have used. In addition, it would be helpful to include a few more popular apps and have students test out each one for several weeks over the course of a semester. MALL is still a relatively new field, so it is critical to continue building on the body of literature and provide educators and students with more guidance on how to choose an app that best meets their learning needs.

<Table 1>
Participant Characteristics: Discussion Group 1 (n=6 females; n=2 males): 8 Total
Memrise: n=4, Duolingo: n=4, Busuu: n=1
Focus Group Participant*

Pseudonym	Gender	Chosen App	Activities Completed	Plan to Continue Using the App	Other Apps Used for Learning English
Sarah	Female	Duolingo	-Matched words and meanings; arranged words to make correct sentences	Yes- at least 3 times per week for 30 min.	Catch It
Jennifer*	Female	Busuu	-Arranged sentences and listened to words; chose correct words	Yes- 4 days a week and for 30 min.	An English Word app
Lisa*	Female	Duolingo	-Learned words and phrases; chose words or phrases; reviewed through a test	Yes- every day for at least 30 min.	Yes- similar apps
Kelly	Female	Duolingo	-Worked on different activities to improve her level	Yes- at least 2 times per week for 1 hour	None
Gina	Female	Memrise	-Took a level test; studied plural forms, animals, and idioms	Yes- once a week	English vocabulary app
Alice*	Female	Duolingo	-Completed level test; did listening, writing, & matching sentence activities	Yes- in her free time	None
Jacob	Male	Memrise	-Did speed games	No	None
Justin*	Male	Memrise	-Learned new vocabulary	Maybe- in his free time	None
John	Male	Memrise	-Completed a beginner course; learned vocabulary	Maybe- 20 minutes a day	None

<Table 2>
Participant Characteristics: Discussion Group 2 (n=2 females; n=7 males): 9 Total
Memrise: n=3, Duolingo: n=5, Busuu: n=1
Focus Group Participant*

Participant	Gender	Chosen App	Activities Completed	Plan to Continue Using App	Other Apps Used for Learning English
Tina	Female	Duolingo	-Learned about various topics; did grammar activities	Yes- but for another language (German) not English	Learn English Grammar
James*	Male	Memrise	-Answered questions; completed reading activities	Yes- at night before going to bed	None
Kyle	Male	Memrise	-Studied basic vocabulary & pronunciation	No- too many distractions on his phone	None
Kenny*	Male	Busuu	-Answered questions; did fill in	No	Translator app

the blank vocabulary					
Tommy*	Male	Duolingo	-Did level testing; set daily goal; completed grammar activities	Maybe- 5-10 minutes a day	None
Andy	Male	Memrise	-Did listening & matching activities	Maybe- when he has a break or before bed	Dictionary apps
George	Male	Duolingo	-Did level testing & basic activities	Maybe- for 10 to 15 minutes a day	Duolingo (already used)
Hannah	Female	Duolingo	-Did a writing and listening test	Yes- when she commutes to school	None
Timothy	Male	Duolingo	-Studied different basic topics	Yes- when he has free time	None

<Table 3>
Participant Characteristics: Discussion Group 3 (n=4 females; n=5 males): 9 Total
Memrise: n=5, Duolingo: n=3, Busuu: n=1
Focus Group Participant*

Participant	Gender	Chosen App	Activities Completed	Plan to Continue Using App	Other Apps Used for Learning English
Mike	Male	Memrise	-Did TOEIC vocabulary practice	Yes- but for Chinese not English	Push English
Meredith	Female	Memrise	-Completed beginner English activities	Maybe- but she wants to study Japanese or Chinese instead	None
Joseph*	Male	Memrise	-Did grammar activities; learned basic greetings	No- but maybe for Chinese	None
Julia	Female	Busuu	-Did pronunciation activities; practiced everyday conversation phrases	Yes- in her free time	English proverb app
Lilly	Female	Memrise	-Learned new vocabulary words; determined word meaning	No- too limited	Global English Speaking (from Naver)
Victor	Male	Memrise	-Studied basic English vocabulary; did TOEIC vocabulary activities	Yes- for English and Japanese	Yes in high school
Cecily	Female	Duolingo	-Wrote sentences that she heard; chose the word that she heard	Yes- early in the morning by using the app's alarm function	English vocabulary app
Charles	Male	Duolingo	-Set a daily goal; practiced activities to reach the goal	No- too boring	Korean EBS (Educational Broadcasting Service) app
Jason	Male	Duolingo	-Completed grammar activities	No- prefer traditional learning	None

<Table 4>
Participant Characteristics: Discussion Group 4 (n=3 females; n=6 males): 9 Total
Memrise: n=4, Duolingo: n=5
Focus Group Participant*

Participant	Gender	Chosen App	Activities Completed	Plan to Continue Using App	Other Apps Used for Learning English
Emily	Female	Duolingo	-Completed level testing; learned basic English vocabulary and tenses	Maybe- using the alarm system	Dictionaries and translators
Robert*	Male	Memrise	-Studied vocabulary;	Yes- but for Japanese and	None

Stephanie*	Female	Duolingo	took quizzes -Took a placement test; practiced foundational studies	French Yes- for 10 minutes a day	None
David*	Male	Memrise	-Learned simple vocabulary; did review activities	Yes- 10 minutes before going to bed	Finally Speak
Liam*	Male	Duolingo	-Completed level testing; studied basic grammar and vocabulary	Yes- a few times a day for a short period	None
Benjamin	Male	Memrise	-Did vocabulary practice	No	None
Emma	Female	Memrise	-Learned new vocabulary; practiced listening	Yes- every week day	None
Ethan	Male	Duolingo	-Completed level testing; English vocabulary activities	Yes- in his spare time	None
Oliver	Male	Duolingo	-Did grammar activities	Yes- when he has nothing to do	Korean EBS (Educational Broadcasting System) app

<Table 5>

Participant Characteristics: Discussion Group 5 (n=7 females; n=2 males): 9 Total

Memrise: n=3, Duolingo: n=4, Busuu: n=2

Focus Group Participant*

Participant	Gender	Chosen App	Activities Completed	Plan to Continue Using App	Other Apps Used for Learning English
Ava	Female	Busuu	-Did vocabulary activities	No- too many other things to check on phone (distracting)	Blinkers app
Amelia	Female	Duolingo	-Did sentence correction; completed translation & pronunciation activities	Probably not (lack of motivation)	Naver Dictionary
Bethany	Female	Duolingo	-Did vocabulary activities	No (she will have too many grammar questions)	None
Brooklyn*	Female	Busuu	-Did word activities & grammar game	Yes- and for Spanish as well	None
Dylan*	Male	Memrise	-Learned new vocabulary	Yes- good for communication	None
Sebastian	Male	Duolingo	-Translated words; did speaking & picture identification activities	Yes- while commuting	None
Chloe	Female	Duolingo	-Completed vocabulary quizzes	Yes- 15 minutes per day	Mother Tongue English Listening app
Victoria*	Female	Memrise	-Solved puzzles; did translation activities	Yes- in her free time	Dictionary app
Aria	Female	Memrise	-Did vocabulary exercises; took quizzes	Yes- two activities per day	None

SPOR BİLİMLERİ FAKÜLTESİ ÖĞRENCİLERİNİN OLİMPİYAT OYUNLARI HAKKINDAKİ BİLGİ DÜZEYLERİNİN VE GÖRÜŞLERİNİN DEĞERLENDİRİLMESİ

Salih ERDEN¹, Süleyman ŞAHİN²

²Gençlik Hizmetleri ve Spor İl Müdürü, Bursa, ssahin16@gmail.com

ÖZET

Bu çalışmanın amacı Spor Bilimleri Fakültesi Öğrencilerinin Olimpiyat Oyunları hakkındaki görüş ve değerlendirmelerinin belirlenmesidir. Bu amaçla 22 maddelik bir anket formu, U.Ü. Spor Bilimleri Fakültesinde okuyan 52 bayan 65 erkek olmak üzere toplam 117 Öğrenciye uygulanmıştır.

Anket sonuçlarına göre katılımcılar büyük çoğunlukla olimpiyat halkalarının ne anlama geldiğini açıklayabileceğini söylerken, CIO ve TMOK başkanlarının isimlerini bilme ve olimpiyat tarihi hakkında bilgi sahibi olma konusunda aynı başarıyı gösterememişlerdir. Yine katılımcıların çoğunluğu, bir gün İstanbul'da olimpiyatların yapılacağına inandıklarını belirtirken, İstanbul'un Olimpiyatları gerçekleştirecek nitelikli olimpik tesislere sahipliği açısından yeterli olmadığı görüşündedirler. Ayrıca katılımcıların çoğunluğu TMOK'un verimli çalışmadığını düşünürken, spor federasyonlarının da yeterli altyapı çalışmalarını yapmadıklarını belirtmişlerdir. “Ülkemizde spor medyasının futbol ağırlıklı bir yayın politikası gerçekleştirmesi diğer amatör olimpik spor branşlarının olimpiyatlarda yeterince başarı kazanamamasında önemli bir etkidir” görüşüne katılımcılar % 79,5 gibi yüksek bir oranda katılmışlardır.

Çalışma bulguları doğrultusunda özellikle Spor eğitimi yapan kurumların olimpiyat tarihi ve olimpik çalışma yapan kuruluşların faaliyetleri ile ilgili daha fazla bilgilendirilmeleri, ülkemizde kalıcı spor politikalarının ve yasal düzenlemelerin öncelikle uygulamaya sokulması, olimpiyat oyunlarının İstanbul'a verilmesi yönünde mutlaka etkili olacaktır. Bununla beraber başta TMOK olmak üzere Beden eğitimi ve spor eğitimi veren kurumların ve spor federasyonlarının çalışmalarını daha güçlü ve somut hale getirmeleri, olimpik bilgilerin ilkokuldan başlayarak eğitim süreçlerinin her döneminde verilmesi ve Olimpizm konularının daha etkin bir şekilde uygulanması bu konulardaki tutum ve davranışları da olumlu yönde etkileyecektir.

Anahtar Kelimeler: Olimpiyat Oyunları, Olimpizm, TMOK

ASSESSMENT OF KNOWLEDGE LEVELS AND OPINIONS STUDENTS OF SPORT SCIENCES FACULTY OF ABOUT OLYMPIC GAMES

ABSTRACT

The purpose of this study is to determine the opinions and evaluations about Olympic Games of the students of the Faculty of Sports Sciences. For this purpose, a 22-item questionnaire was applied and a total of 117 students, 52 female and 65 male, were trained in the teaching and coaching departments of Uludağ University Sports Sciences Faculty.

According to the results of this questionnaire even though most of the students were confident about being able to explain what Olympic rings, they could not Show the same success with naming the presidents of IOC and TOC nor the history of the Olympics. The majority of the participants also stated that one day they believed that

the Olympics would be held in Istanbul but also Istanbul is not sufficient in terms of owning qualified Olympic facilities to carry the Olympics.

In addition, most of the participants thought that Turkish Olympic Committee did not work efficiently, but also stated that sports federations did not have sufficient infrastructure works. National sport press's football centered publications hinders other sport branches not to be able to be successful in the Olympics` has been accepted by the %79, 5 of the attendees.

On the other hand ratio of the attendees that believes that one day Olympics will be held in Istanbul, is %66.7 and the ratio of students who think that success rate of Turkey in 2020 Olympics will increase is %55.6. Giving more information about the Olympic history and the activities of the institutions that make the Olympic work in the direction of the study findings, especially the institutions that are training in sports, and putting the lasting sports policies and legal regulations into practice in our country will absolutely effective in giving the Olympic games to Istanbul.

Together with this, especially the Turkish Olympic Committee, the institutions that provide physical education and sports education and sports federations should make their work stronger and more concrete, Giving olympic information in every period of the education process starting from primary school and applying Olympic subjects more effectively will affect the attitudes and behaviors in these issues positively.

Key Words: Olympic Games, Olympism, TMOK

GİRİŞ

Ülkemizde beden eğitimi öğretmeni yetiştiren kurumların, 1932 yılında Ankara'da Gazi Eğitim Enstitüsü'ne bağlı Beden Eğitimi Bölümü'nün açılması ile faaliyete geçtiğini görüyoruz. Daha sonraları, 1966 yılında İstanbul'da, 1970 yılında İzmir ve Diyarbakır'da Eğitim Enstitüleri'ne bağlı Beden Eğitimi bölümleri, 1974 yılında ise Ankara, İstanbul ve Manisa'da olmak üzere 3 tane Spor Akademisi açılmıştır. 1977 yılında da Ege Üniversitesi Beden Eğitimi ve Spor Yüksek Okulu öğrenime başlamıştır. 1982 yılında 2547 sayılı YÖK yasası ile beden eğitimi ve spor eğitimi veren tüm kurumlar, üniversitelerin eğitim Fakülteleri'ne bağlı Beden Eğitimi ve Spor Bölümü adı altında toplanmıştır. 1992 yılından itibaren ise bölümlerin yanı sıra rektörlüklere bağlı Beden Eğitimi ve Spor Yüksekokulları kuruldu. 2010 yılından sonra da bu okullar Spor Bilimleri Fakültelerine dönüştürülmeye başlamıştır. Uludağ Üniversitesi Eğitim Fakültesi bünyesinde bulunan Beden Eğitimi ve Spor Bölümü ise 2013 yılında Spor Bilimleri Fakültesine dönüşerek eğitim öğretimine devam etmektedir.

Gerek spor bilimleri fakültelerinde gerekse Beden Eğitimi ve Spor Yüksek Okullarında Beden Eğitimi ve Spor Tarihi iki kredi zorunlu ders olarak okutulmaktadır. Bu derslerin müfredatlarında olimpiyat oyunları tarihi de bir bölüm olarak okutulmaktadır. Ayrıca bazı üniversiteler "Olimpizm" adı altında seçmeli ders de okutmaktadırlar.

Dünyanın en önemli şehirleri günümüzün en büyük spor organizasyonlarından biri olan Olimpiyat Oyunları'nı kendi kentlerinde yapabilmek için, ekonomik, kültürel ve siyasi alanda birbirleri ile büyük bir yarış içerisinde. Uluslararası Olimpiyat Komitesi Olimpiyat Oyunlarına aday olan şehri yıllar süren titiz inceleme ve takip sonucunda belirlemektedir.

İlki 1896 yılında Atina'da sadece Averoff stadyumu ve yanındaki bir hangarda yapılan olimpiyat oyunlarına 9 spor dalında 13 ülkeden 311 sporcu katılırken, bugün olimpiyat düzenleyecek bir kentin, yüzbinlerce seyirci ve on binlerce sporcunun spor tesisi, barınma, ulaşım, sosyal aktiviteler, sağlık gibi birçok ihtiyacını da karşılaması gerekiyor (Fişek, 1980). 19.y.y da Olimpia'da yapılan kazılar ve araştırmalar, yalnız eski kutsal ve eğitsel

tesisleri meydana çıkarmakla kalmamış, modern olimpiya oyunlarının yolunun açılmasına ve daha ziyade bu fikri daha bilinçli tarzda ele alınmasına yardım etmiştir (Alpman,1972). Pierre de Coubertin, 25 Kasım 1892'de, Olimpiyat Oyunları'nı yeniden canlandırmak düşüncesini ilk kez ortaya attığı zaman, tasarısı iyi karşılanmakla birlikte kuşkulara da yol açtı. Bu tasarının gerçekleştirilebileceğini pek az kimse düşünüyordu. Oyunların yeniden kurulmasını kararlaştıran 23 Temmuz 1894 kongresinden sonra bile, alt edilmesi gereken güçlüklerin sayısı, yakın bir gelecekte yeniden doğuşa izin vermeyecek kadar çok görünüyordu. Pierre de Coubertin'in, Olimpiyat Oyunları'nı yeniden canlandırmaktaki amacı neydi? Ortaçağ'ın ve Yunanistan'ın iki büyük spor dönemini izleyen gerilemeden duyduğu kaygıyla modern spor hareketinin sürüp gitmesini güvence altına almak istiyordu. Coubertin «Bugün modern toplumlarımızın yaşaması için çok gerekli olan sporda yenileşme hareketinin sürüp gitmesinin en iyi, hatta tek güvencesi bu uluslararasılıktır. Henüz hiç bir yerde, spor yarımından emin değildir. Hiç olmazsa, dünya çevresinde olimpiyat meşalesi şehirden şehire koşuyor ve Uzak Doğu'ya kadar uzanıyor. Herhangi bir yerde bir bitkinlik mi görüldü? Genç uluslar, meşaleyi düşürmeğe hazır gevşek ellerden almak için atılacaklar hemen. Böylece spor alevi sönmekten kurtarılmış olacak. İşte bu amaçla yeniden kurduğum Olimpiyat Oyunları'nı kaybolmuş revakları yeniden kurmakla böbürlenmek için değil» demiştir (Gillet 1975).

Ülkemizde de Olimpiyat Oyunlarının birçok kesim tarafından arzu ve merak ile İstanbul ilinde organize edilmesi beklenmektedir. Türkiye Milli Olimpiyat komitesi başkanlığı yapmış olan Sinan Erdem, “İstanbul’un Olimpiyat adaylığı ve Olimpiyat Projesinin, hem sporun bir yaşam tarzı olarak gençlerimizin felsefelerinde işgal edeceği yer ile, hem de gerçekten önemli sıkıntıları olan İstanbul’un sorunlarının çözümüne vesile teşkil ederek yakın gelecekte yaşanabilir bir dünya kentine dönüşmesine yardımcı olmasıyla, ülke ekonomisine getireceği büyük katkılarla, spordan öte kazanımları olan, çok önemli bir mega proje” olduğunu ifade etmektedir (Erdem, 1997).

Birçok yararının olduğuna inanılan olimpiyat oyunlarına ev sahipliği yapmak arzusu kuşkusuz birçok insanın ortak fikridir. Ancak bu fikri gerçekleştirmek ve uygulayabilmek toplumsal bir anlaşma, sistemli görev dağılımı ve her bireyin ortak çabası ile sonuçlanacaktır. Olimpiyat oyunlarının yapılacağı ülkede bulunan lisanslı sporcu sayısı, ilgilenilen spor branşlarının çeşitliliği, toplumun spora ve sporcuya verdiği değer kısaca toplumun spor kültürü Olimpiyat Oyunları’na ev sahipliği yapabilmenin önemli şartlarından biri haline gelmiştir. Bu nedenle toplumu oluşturan bireylerin çok küçük yaşlardan itibaren, spor yapmanın önemine, olimpiyat ve olimpizm kavramlarının bilincine ulaşmış olmaları gerekmektedir. Bu kapsamda spor alanında eğitim veren ve toplumda spor kültürünün oluşmasında büyük sorumlulukları olan beden eğitimi öğretmenlerinin, antrenörlerin, spor yöneticilerinin toplumu bilişsel, duyuşsal ve fiziksel olarak Olimpiyat Oyunları’na hazırlamada en önemli halkalardan biri olduğu kesindir.

Günümüzde tüm dünya ülkelerinin bu kadar çok önem verdiği Olimpiyat Oyunlarının Ülkemizde yapılması (İstanbul, İzmir, Antalya v.s.) ülkemize her yönüyle büyük yarar sağlayacaktır. Bunun için öncelikle toplumun Olimpiyat Oyunlarına inanmışlık seviyelerinin, olimpiyat kültür düzeylerinin ve olimpizm ruhunun en üst düzeyde olması gerekir. Bunu yapacak kesim ise beden eğitimi öğretmenleri, antrenörler, spor eğitimcileri ve uzmanlarıdır. Bundan dolayı öncelikle Spor eğitimi veren kurumlarda okuyan öğrencilerin, Olimpiyat Oyunları hakkındaki genel kültür ve güncel bilgi düzeyleri, görüşleri, inanmışlıkları ve yaklaşımları, ilerideki meslek

hayatlarında, toplumun olimpiik kltr aısından daha hazır hale gelmesine katkı saėlayacaktır. alıřmamızda, ncelikle Spor Bilimleri Fakltesi ėrencilerinin Olimpiyat Oyunları hakkındaki bilgi dzeyi ve grřlerinin ne olduėunun belirlenmesi amalanmıřtır.

YNTEM

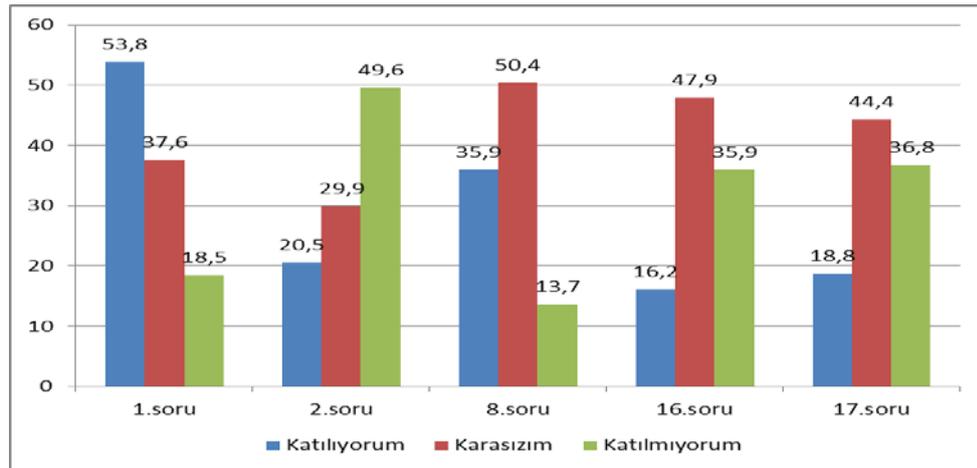

alıřmada, řenduran ve arkadařları tarafından yapılan anket formu arařtırmacılar tarafından ėrencilere ynelik bir řekilde uyarlanmıř ve geliřtirilmiřtir. Anket formu ilk olarak 30 ėrenciye uygulanarak n deėerlendirmeye alınmıřtır. alıřmaya U.. Spor Bilimleri Fakltesinde okuyan 52 bayan 65 erkek olmak zere toplam 117 ėrenci iřtirak etmiř olup, alıřmaya katılan ėrencilerin 42' 1. sınıf, 25'i 2. Sınıf, 40'ı 3. Sınıf, 10'nu da 4.sınıf ėrencisidir. alıřmada, arařtırmacılar tarafından geliřtirilen "Kiřisel Bilgi Formu" ve ėrencilerin olimpiyat oyunları hakkındaki yaklařımlarını deėerlendirmek amacıyla Olimpiyat genel kltr bilgisini ieren 5, Olimpiyatlar hakkında gncel bilgiye sahip olup olmamalarını ieren 4, Trkiye'nin Olimpiyat Oyunları'ndaki durumu hakkında 13 olmak zere toplam 22 maddelik bir anket kullanılmıřtır. Anket, iliřkisel tarama modeline uygun tarzda hazırlanmıřtır. Ankette cevaplar, Katılıyorum, Kararsızım ve Katılmıyorum řeklinde  seenekten oluřmaktadır.

Verilerin Analizi: Elde edilen veriler basit istatistiksel yntem olan frekans daėılımları ve baėımsız iki grubun baėımlı bir deėiřkene iliřkin lmlerini karřılařtırmak iin kullanılan Mann-Whitney-U testi ile deėerlendirilmiřtir (Ural, 2006).

BULGULAR

Ařaėıda Spor Bilimleri Fakltesi ėrencilerinin olimpiyat genel kltr bilgisi, olimpiyatlar hakkında gncel bilgiye sahip olmaları ve Trkiye'nin Olimpiyat Oyunları'ndaki durumu hakkındaki grřleri 3 ayrı grafik halinde verilmiřtir.

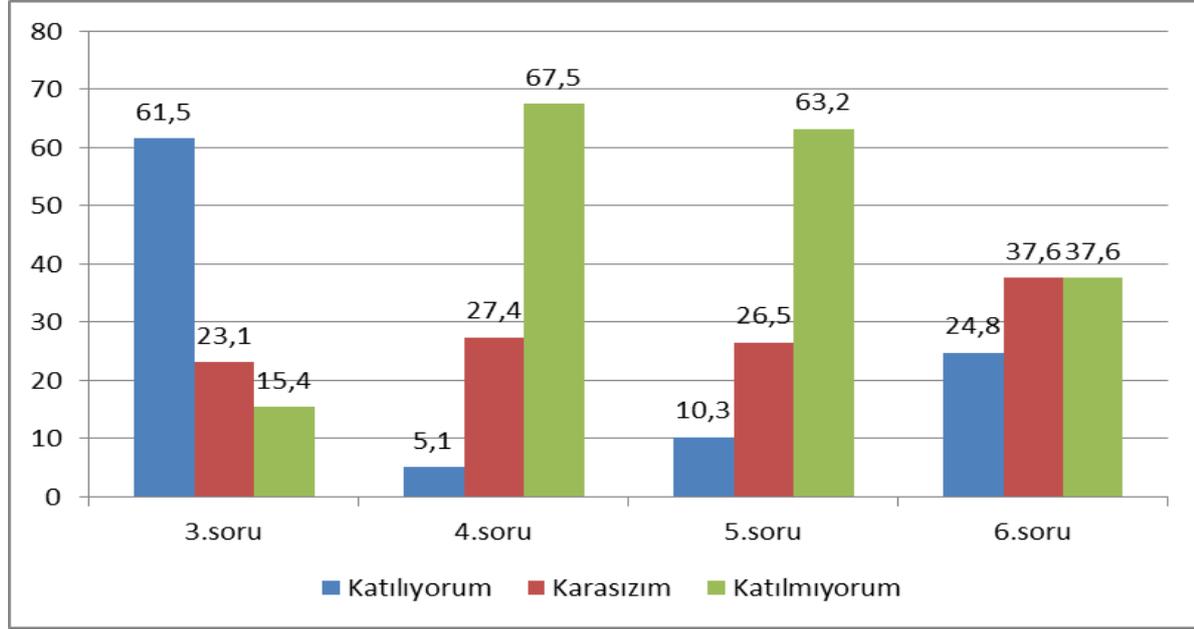

Grafik 1. Katılımcıların Olimpiyat genel kltr bilgisinin ne dzeyde olduėunu gsteren daėılım.

Katılımcıların % 53,8'lik kısmı olimpiyat halkalarının ne anlama geldiėini rahatlıkla aıklayabileceklerini, % 20,5'i modern olimpiyatlarının kurucusunun kim olduėunu bildiklerini, % 35,9'u lkemizdeki olimpiyat řampiyonu olmuř sporcuların isim ve branřlarını bildiklerini ifade ederken, % 16,2'i olimpiyat tarihi hakkında

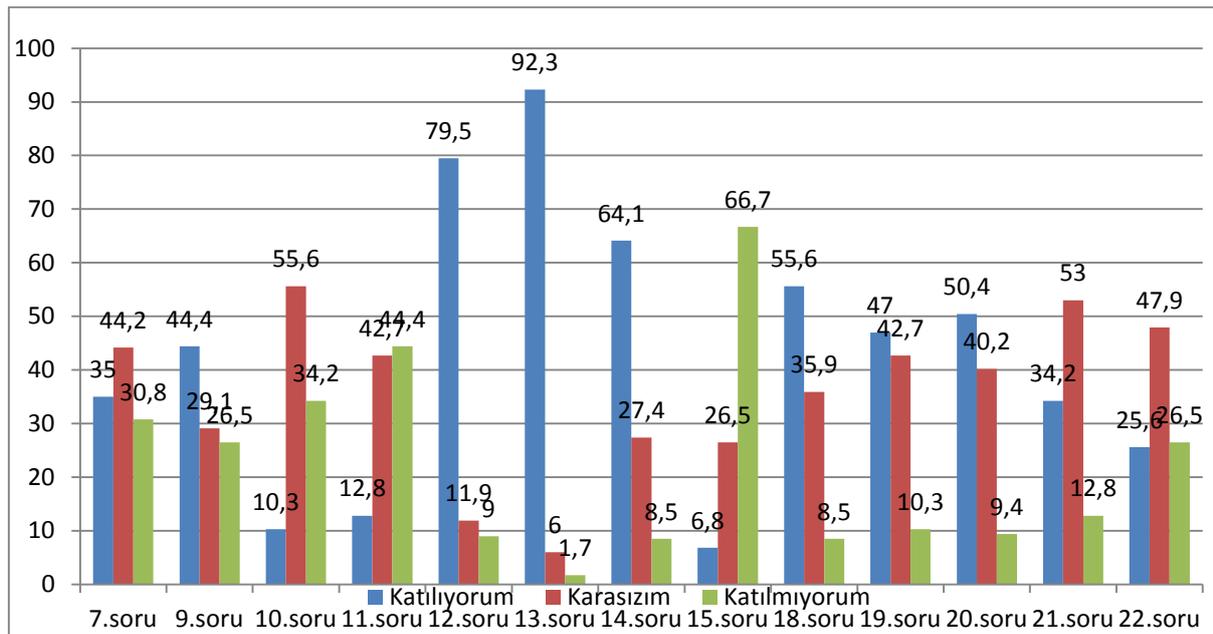

birçok bilgiye sahip olduklarını ve % 18,8'i de olimpiizm kavramını detaylarıyla açıklayabileceklerini oldukça düşük bir oranla belirtmişlerdir.

Grafik 2. Katılımcıların Olimpiyatlar Hakkında Güncel Bilgiye Sahip Olup Olmama Durumunun Dağılımı

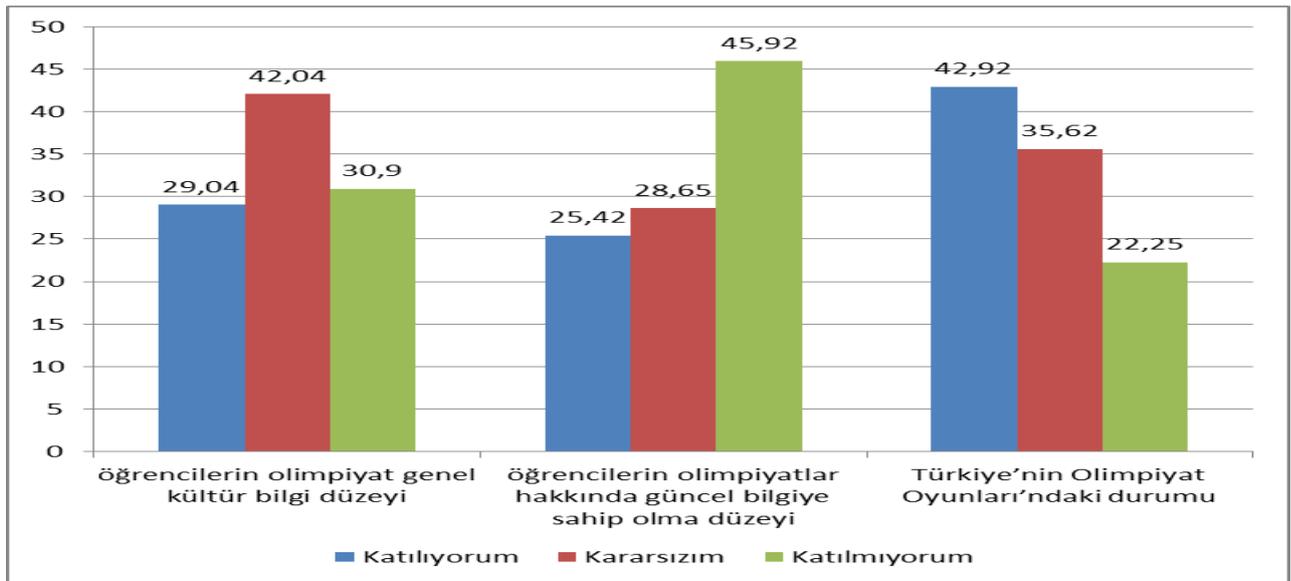

Grafik 2'de görüldüğü gibi katılımcıların % 61,5'i 2020 Olimpiyat Oyunları'na hangi şehrin ev sahipliği yapacağını belirtmiştir. Yine katılımcıların, % 5,1'i Uluslararası Olimpiyat Komitesi (IOC) başkanının ismini ve % 10,3'ü Türkiye Milli Olimpiyat Komitesi başkanının ismini bildiklerini belirtirken, % 24,8'i Türkiye Milli Olimpiyat Komitesi'nin (TMOK) faaliyetlerini takip ettiğini belirtmişlerdir.

Grafik 3. Katılımcıların Türkiye'nin Olimpiyat Oyunları'ndaki Durumu Hakkındaki Görüşlerinin Dağılımı.

Olimpiyat Oyunları'nın Türkiye'nin öncelikleri arasında yer almadığını düşünen öğrenci sayısı % 35 düzeyinde tespit edilmiştir. Katılımcıların % 44,4'ü İstanbul'un Olimpiyat Oyunları'na kabul edilmemesinin en büyük nedeni olarak toplumdaki bireylerin spor kültüründen uzak olmalarını gösterirken, bunun tersini düşünenlerin oranı ise % 26,5 olarak kalmıştır. Yine Türkiye Milli Olimpiyat Komitesi'nin (TMOK) verimli şekilde çalıştığını belirtenlerin oranı ise sadece % 10,3 düzeyindedir. Bunların yanında, Olimpiyat Oyunları için ülkemizdeki spor federasyonlarının gerekli alt yapı çalışmalarını gerçekleştirdiğini düşünenler % 12,8 olarak belirlenirken, ülkemizde spor medyasının futbol ağırlıklı bir yayın politikası gerçekleştirmesinin amatör spor branşlarının olimpiyatlarda yeterince başarı kazanamamasında önemli bir etken olduğu düşüncesi % 79,5 düzeyinde belirlenmiştir. Olimpiyat oyunları çalışmalarından daha önce; okullarda beden eğitimi ders saatlerinin artırılması, ülkemizde daha güçlü spor politikalarının üretilmesi ve yeni spor kulüpleri kanunu gibi yasal düzenlemelerin yapılmasının gerekli olduğunu düşünenlerin oranı ise % 92,3'dür. Öğrenciler % 64,1 oranında bir gün İstanbul'da Olimpiyat Oyunları'nın yapılacağına inanmaktadırlar. İstanbul'un Olimpiyat Oyunları'na kabul edilmesinin bir hayal olmadığını düşünenlerinin oranı ise % 66,7 düzeyindedir. Ayrıca öğrencilerin % 55,6'sı 2020 Olimpiyat oyunlarında Türkiye'nin 2016 olimpiyatlarında aldığı madalya sayısından daha fazla madalya alacağı görüşünü desteklerken, % 47'si ise İstanbul'un her yönüyle Olimpiyatları yapmayı hak ediyor olduğunu düşünmektedir. Türkiye Olimpik Hazırlık Merkezlerinin (TOHM) çalışmalarının gelecekteki olimpiyatlarda (2020 - 2024 ve sonrası) Türkiye'nin Olimpiyat başarısını önemli ölçüde arttıracığına inanan öğrencilerin oranı da % 50,4 düzeyindedir. % 34,2 oranında öğrenci ise Türkiye'nin Olimpiyat Oyunları organizasyonunu yapabilecek tecrübeye sahip olduğunu belirtmiştir. Yine öğrencilerin % 25,6'sı İstanbul'un Olimpiyat Oyunları'nı gerçekleştirecek nitelikte olimpik spor tesislerine sahip olduğu düşüncesini desteklemektedir.

Grafik 4. Anket sonuçlarının genel değerlendirilmesi.

Spor bilimleri fakültesi öğrencilerinin olimpiyat genel kültür bilgi düzeyinin %29,04, olimpiyatlar hakkında güncel bilgiye sahip olma oranının ise % 25,42 düzeyinde kaldığı görülmektedir. Türkiye'nin olimpiyat oyunlarındaki durumu için öğrenciler % 42,92 düzeyinde olumlu görüş belirtmişlerdir.

TARTIŞMA VE SONUÇ

Çalışmamızda Spor Bilimleri Fakültesi öğrencilerine uyguladığımız anketin değerlendirilmesi, öğrencilerin olimpiyat genel kültür bilgi düzeyleri, olimpiyatlar hakkında güncel bilgiye sahip olup olmaları durumları ile Türkiye'nin Olimpiyat Oyunları'ndaki durumu ve geleceği hakkındaki görüşleri olmak üzere 3 ayrı alanda yapılmıştır. Elde edilen veriler öğrencilerin olimpiyatlar ile ilgili genel kültür ve güncel bilgilerinin beklenen düzeyden düşük olduğunu gösterir bir bulgu olarak değerlendirilmektedir. Ankete katılanların büyük bir çoğunluğunun Beden eğitimi ve spor tarihi dersini henüz okumamış olmaları göz önüne alınsa dahi ortaya çıkan sonuç beklentilerin altında kalmıştır.

ŞENDURAN ve arkadaşları tarafından 2009 yılında yapılan “Beden Eğitimi Öğretmenleri ve Akademisyenlerin Olimpiyat Oyunları Hakkındaki Görüşleri” 2012 yılında yapılan “Toplumdaki Bireylerin Olimpiyat Oyunları Hakkındaki Yaklaşımları” ile Şahin ve arkadaşları tarafından yapılan “Antrenörlerin Olimpiyat Oyunları Hakkındaki Görüş Ve Değerlendirmelerinin Belirlenmesi” isimli benzer araştırmalardaki bazı değerlendirmeler çalışmamızla karşılaştırılmıştır (tablo 1).

Tablo. 1 Dört ayrı araştırmada benzer sorulara “**KATILYORUM**” cevabı verenlerin karşılaştırılması.

DURUM	Erden 2017 Spor Bil.öğr.	Şahin 2016 antrenörler	Şenduran 2009 Beden eğt. Öğrt.	Şenduran 2012 genel
1- Olimpiyat halkalarının anlamını tam olarak açıklayabilirim.	53,8	% 72,3	% 89,7	% 52
3- 2012,2016, 2020 Olimpiyat oyunlarına hangi şehrin ev sahipliği yapacağını hemen söyleyebilirim.	61,5	% 77,2	% 74,4	% 35,1
6- Türkiye Milli Olimpiyat Komitesinin faaliyetlerini takip etmekteyim.	24,8	% 42,6	% 23,1	% 28,6
9- İstanbul'un Olimpiyat oyunlarına kabul edilmemesinin en büyük nedeni toplumdaki bireylerin spor kültüründen uzak olmalarıdır.	44,4	% 46,5	% 61,5	% 35,1
11- Olimpiyat oyunları için ülkemizdeki spor federasyonları gerekli alt yapı çalışmalarını gerçekleştirmektedirler.	12,8	% 35,6	% 9	% 30,8
15- İstanbul'un Olimpiyat oyunlarına kabul edilmesi sadece bir hayal olarak kalacaktır.	6,8	% 19,8	% 39,7	% 19,1
13- Olimpiyat oyunları çalışmalarından daha önce; okullarda beden eğitimi ders saatlerinin artırılması, ülkemizde daha güçlü spor politikalarının üretilmesi ve yeni spor kulüpleri kanunu gibi yasal düzenlemelerin yapılması gereklidir.	92,3	% 80,2	% 91,1	% 57,1

Tablo 1 de görüldüğü gibi dört araştırmada da benzer sorulara verilen cevaplar değerlendirildiğinde Türkiye Milli Olimpiyat Komitesinin faaliyetlerinin antrenörler dışında fazla takip edilmediği görülmektedir. “İstanbul'un Olimpiyat oyunlarına kabul edilmemesinin en büyük nedeni toplumdaki bireylerin spor kültüründen uzak olmalarıdır” düşüncesinde olanların oranı tüm araştırmacılarda yüksek çıkmıştır. Buda bize gösteriyor ki toplumun spor kültürünün artırılması öncelikli konular arasındadır. Söz konusu araştırmalardaki bir başka

benzerlik ise katılımcıların büyük çoğunluğunun bir gün İstanbul'da olimpiyat oyunlarının yapılacağına inanmış olmalarıdır.

Spor Bilimleri Fakültesi öğrencilerinin “Olimpiyat oyunları çalışmalarından daha önce; okullarda beden eğitimi ders saatlerinin artırılması, ülkemizde daha güçlü spor politikalarının üretilmesi ve yeni spor kulüpleri kanunu gibi yasal düzenlemelerin yapılması gereklidir” görüşümüze %92,3 oranında, “Ülkemizde spor medyasının futbol ağırlıklı bir yayın politikası gerçekleştirmesi diğer amatör olimpik spor branşlarının olimpiyatlarda yeterince başarı kazanamamasında önemli bir etkidir” görüşüne de %79,5 oranında katılmaları, dikkatlerin spor politikamızda yapılacak yasal düzenlemelere ve spor medyasının yayın politikalarına çekmektedir. Ülkemizde spor ile ilgili yapılan yasal düzenlemeler çoğunlukla futbol kulüplerinin istekleri doğrultusunda yapılmaktadır. Bir çok yayın kuruluşu da futbol dışında spor haberi veya programı yapmamaktadır. Bu nedenle yetkili kurumların ve hükümetin bu alanda ivedi olarak gerekli çalışmaları başlatması oldukça önemlidir.

Katılımcılardan, İstanbul'un Olimpiyatları yapacak organizasyon tecrübesine sahip olduğuna inananlar %34,2 oranında, nitelikli spor tesislerine sahip olduğunu belirtenlerin oranı ise % 25,6 gibi düşük bir seviyede kalmıştır. Ayrıca öğrenciler, Türkiye Olimpik Hazırlık Merkezlerinin (TOHM) çalışmalarının gelecekteki olimpiyatlarda Türkiye'nin olimpiyat başarısını artıracaklarını düşünmektedirler (%50,4).

Sonuç olarak, çalışma bulguları doğrultusunda nitelikli olimpik spor tesislerin yapımına önem verilmesi, kalıcı spor politikalarının ve yasal düzenlemelerin öncelikle uygulamaya girmesinin İstanbul'da Olimpiyat Oyunları'nı yapabilme açısından büyük bir gereklilik olduğu görülmektedir. Bununla beraber başta TMOK olmak üzere Beden eğitimi ve spor eğitimi veren kurumlar ve spor federasyonlarının eğitim çalışmalarını, olimpik bilinç ve kültürünü daha güçlü ve somut hale getirmeleri önemli olacaktır. Yine genel olarak olimpik bilgilerin ilkokuldan başlayarak eğitim süreçlerinin her döneminde verilmesinin ve özellikle olimpiyat ve olimpizm konularının daha etkin bir şekilde uygulanması bu konulardaki tutum ve davranışları da olumlu yönde etkileyecektir. Ayrıca spor medyasının futbol ağırlıklı yayın politikasını değiştirmesi ve amatör spor branşlarına daha fazla yer vermesi, yasal düzenlemelerin biran önce uygulamaya geçmesi amacımıza ulaşmada başka bir önceliktir.

STATUS AND IMPROVEMENT OF HUMAN RIGHTS EDUCATION FOR POLICE IN KOREA

Chong, Sangwoo / Kang, Eunyeong / Han, Hwaeryeon
Inha University
The Republic of Korea
sangwoochong@naver.com

ABSTRACT

This study focuses on human rights education for police officers and police recruits in The Republic of South Korea. It is very important to educate civil servants to increase their sensitivity to the human rights of individuals they interact with because police officers have the potential to limit human rights. This study examines human rights education for police officers and police recruits, and is written in order to urge a change in human rights education for police in South Korea.

INTRODUCTION

According to the Korean act on the Performance of Duties by Police Officers, police officers shall perform the following duties: (i) Protection of people's lives, body, and property; (ii) Prevention, suppression, and investigation of crimes; (iii) Performing guard duties, guarding of important persons, and performance of counter-espionage and counter-terrorist operations; (iv) Collection, preparation, and distribution of information on public security; (v) Traffic control and traffic injury prevention; (vi) International cooperation with foreign governments and international organizations; (vii) Maintenance of public order and security. Police in Korea perform the same kinds of duties as police in other jurisdictions and can be summarized as; maintenance of the security of citizens, maintenance of community order, investigation of crimes, and upholding the law.

Due to the nature of their work, there are often cases where police impose restrictions on human rights while carrying out their duties.. Police work is paradoxical. Police protect people's freedom and rights and maintain public order in society, Yet police can violate human rights and limit people's freedom in the name of public interest. Many pre-democratization cases in Korea include violations of human rights by police.

The purpose of this study is to investigate the current state of human rights education of police officers and police recruits in Korea, and to suggest improvement. The study examines government policy since the police are an arm of the government closely related to human rights, and I expect that it will have implications for human rights education for the broader civil service.

THE NECESSITY OF HUMAN RIGHTS EDUCATION FOR POLICE

Police human rights education is needed. According to The National Human Rights Commission, 20% of human rights violation complaints are related to police cases. The results of Korea Human Rights Awareness Survey (2016) shows police are at the top of the list of professions seen as violating human rights, followed by teachers, and then other civil servants. According to the Judicial Agency Reliability Survey (2016), public trust in police is not high. (See table #1 below).

There are at least three possible situations in which the police might violate someone's human rights. First, when police resolve cases through 'investigation', without regard to human rights, then the risk of human rights violations can be increased. Second, There are also possibilities of human rights abuse in investigation (internal and external), inspection, arrest, and interrogation. Fourth Violation of human rights can also happen during policing of protests and demonstrations and fifth traffic safety maintenance.

	Trust	distrust
Court	23.4%	42.4%
Prosecution	12.7%	58.7%
Police	23.1%	37.2%

Table 1: Judicial Agency Reliability Survey(2016)

23.4% trust court and 42.4% distrust court. 12.7% trust prosecution and 58.7% distrust prosecution. 23.1% trust police and 37.2% distrust police, see [Table 1].

Principles of Criminal Procedure

Despite the legal process, as codified in law, and human rights of a suspect, the possibility of human rights violation during criminal procedure exists. Trust in the police means trust by the public in the exercise of authority by government so it leads to trust in the law(Tyler, 2001, pp. 374-377). It is important to have a plan to restore trust in the police because the subsequent trust in law increases the possibility of compliance and order maintenance. Human rights education for police is necessary and important in that the implementation of human rights-friendly police will enhance the trust of police(Tyler, 1998).

HUMAN RIGHTS EDUCATION IN DEPARTMENTS OF POLICE ADMINISTRATION

There are three ways to become an administrative police officer in Korea. First, by graduating from The Korean National Police University, then he or she can be an executive officer in The Korean National Police Agency. Second, When a student graduates from a 'Department of Police Administration' at a university, he or she can apply for special recruitment. Third, when a student graduates high school, or graduates with other majors from an university, then he or she can apply for general recruitment.

In Departments of Police Administration students need to take elective classes as well as studying courses in police science, criminal investigation, law(criminal law, Constitutional law, human rights law), fundamental rights theory, criminal procedure and human rights), public administration, and Defensive Tactics. And police ethics. Students graduate from university after taking 1–2 courses out of less than 20 required courses. Criminal law, criminal procedure law and police ethics courses contain human rights regulations content. However, human rights are neglected when education is centered on investigation procedures. Human rights education is insufficient at The Korea National Police University and in departments of police administration at other universities.

HUMAN RIGHTS EDUCATION FOR POLICE OFFICERS

Once the appointment of a police officer is confirmed, they enter the police central school as an intern for practical work before actual police work. upon completing studies at The Central Police Academy, recruits have an education that is more focused on practical police education. Constitutional law (focusing on human rights) is the only subject taught related to human rights. Furthermore, Human rights education often only occurs in one-time lectures.

At The Police Training Institute, executive police officer candidates receive education for administration and field duties. There has been criticism in the past that human rights education was neglected at this level of police training. Since 2017, the curriculum for executive police officer candidates, has expanded to include human rights training with courses such as 'understanding the victims' and 'sensitivity training'. In addition, at least 2 hours of human rights education is offered in practical courses, While field training has added more than one human rights course for each of its modules.

At individual police stations human rights education for police officers has been implemented. There has been an average 2 hours per month of human rights education(seminars, workshops) at police stations in Seoul since 2014. Between 2012 and 2014, only 4.4% of all staff at police stations received human rights training. Most of the time in-service human rights training is conducted internally. The National Human Rights Committee or other external experts should be invited to conduct professional human rights education(Cardenas, 2005).

Ultimately, there is not enough human rights education in the form of practical training after obtaining the status of police officer. Police officers do not get enough continuing human rights education and there is hardly any effort on the part of authorities to draw police officers' attention to human rights or to human rights education. Therefore, it is necessary to suggest ways to improve and encourage the human rights education of police.

IMPROVEMENT OF HUMAN RIGHTS EDUCATION FOR POLICE

1.Improvements at departments of police administration at universities

Even in courses taught on criminology, law, and administration, the focus remains on investigation. Yet police duties are divided into 20% investigation and 80% public safety. Only 20% of police work is investigation, the remaining, and 80% is focused on public safety. There is too much of an emphasis on the criminal investigation. Public Safety education should be increased. A more balanced curriculum would emphasize Constitutional law, human rights law, and police ethics. This study suggests Criminal Law and Criminal Procedure Law courses

should be *human rights-friendly*. In addition to police ethics class, police human rights courses are essential. Opening and enforcing attendance of special lectures on Human Rights Education is also necessary. There should be more experiential human rights education and online lectures need to be created. Human rights education through elective classes at universities also needs to be enhanced (Hudson, 2005, pp. 117-120). Support and funding from The National Human Rights Commission in providing human rights education could also be provided (Lapayese, 2004, pp. 168-170).

2. Improvements at the police station

There are plans to strengthen human rights education for police, announced by the new Korean government in 2017. The education should have the plans by the new Korean government in 2017 in the curriculum.

The police stations need to establish an human rights education plan at the local level. This also needs to provide structured programs instead of one-time lectures, and instructors need to invite external human rights education experts. Trained members of the police can be human rights education specialists. Appropriate training methods for police officers should be adopted (Leßmann, 2002, pp. 288-290). Online human rights education programs should be developed and operated effectively. Programs of human rights education should be developed that contain participatory and experiential elements (Levin, 2008). The National Human Rights Commission is a good place to conduct research on appropriate police human rights education methods

CONCLUSION

I think that there are implications arising from the second phase of the World Programme for Human Rights Education of police officer. I propose the following measures: : (i) Establishing a code of conduct for ensuring human rights that must be respected by police in the execution of their duties; (ii) Creation and training of police human rights regulations; (iii) Abolition of one-time lectures for human rights education and developing continuous human rights education programs; (iv) Human rights education conducted by experts; (v) Activation of online human rights education programs to expand participation; (vi) Individual record of human rights education and practices.

STRATEJİK İLETİŞİM YÖNETİMİ VE YAPAY ZEKA (Pazarlama Otomasyonu Emarsys Örneği İle)

Yrd. Doç. Dr. Saadet Uğurlu
STF Yeni Medya ve İletişim Bölümü
İstanbul Kültür Üniversitesi
Türkiye
s.ugurlu@iku.edu.tr

ÖZET

Hızla değişen ve yayılan bilgi iletişim teknolojileri marka iletişiminin; uygulamalarında, iletişim sistemlerinde köklü dönüşümlere neden olmaktadır. Çalışma yeni medya araçlarıyla, bireylerin mecra olmaları ve bu alanda kullanılan değişen marka iletişimi ve değişen kitle iletişim araçlarıyla veri yönetimi ve doğru içerik üretimini ele almaktadır. Gelişen teknoloji sayesinde, kullandığımız iletişim cihazları, akıllı cep telefonları, tablet, bilgisayar, akıllı TV'ler hem mecra hem de veri bankaları olarak kullanılmaktadır. İnsanlar uygulamalarla, kendi gazetelerini hatta TV kanallarını oluşturarak, kendilerine sunulanları değil, kendi seçtiklerini izlemektedir. Beğendiklerini paylaşıp, böylece çevrelerine yayıncılık yapmaktadır.

Yeni medya ortamları açısından iletişim disiplinine baktığımızda, yeni bir iletişim anlayışının kurumlar açısından edinilmesi gerekliliği açıktır. Bu açıdan baktığımızda yeni medyanın içinde her kullanıcı ve her marka artık aynı zamanda bir yayın haline gelmiştir. Kurumlar bu anlayışı, online stratejilerinin içerisinde daha fazla analiz etmek zorunda kalmıştır. Çünkü hedef kitleleri artık klasik kitle iletişim araçları olan gazete, televizyon ve radyo gibi mecralarda pasif izleyici durumundan, kurumun yanında, gönül bağı kurulması gereken, aktif kitleler haline gelmiştir. Gelişen iletişim teknolojileri; insanları, internet ve sosyal medya ile anlık iletişim kuran, sevdiği markaları yücelten, kırıldığı markaları kitlelere şikâyet etmekten çekinmeyen kitleler haline getirmiştir. Bu durumda kurumlar yeni ve sosyal medyada belirlenen iletişim stratejisi içerisinde, hedef kitlelerle pozitif ve etkin iletişim kurmak için çaba sarfetmeye başlamışlardır. Hatta hedef kitlelerini kendi markalarının gönüllü elçileri haline getirmeye çalışmaktadırlar.

Bu çalışma da 1991-2016 yılları arasında farklı sektörlerde iş deneyimim dahilinde (inşaat, turizm, alışveriş merkezleri, perakende, sağlık, eğitim, v.b) yeni ve sosyal medyada kullanılan veri madenciliğinde manuel ve/veya pazarlama otomasyonu yapay zeka üzerine ihtisaslaşmış uluslararası şirket olan Emarsys örneğinde; veri analizleri ve içerik yöntemlerini gözden geçirilerek derlenerek; teorik inceleme ile nitel bir çözümleme yapılmıştır. Çalışmanın sorunsalı veri yönetiminde; sosyal ve yeni medyada yapay zeka pazarlamasına yönelik olarak kullanılabileceği yöntemler, sosyal medya içerik yönetimi, içerik üretiminin saptanması bu çalışmanın temel amacını oluşturmaktadır.

GİRİŞ

Dijital cihazların kullanımının yaygınlaşmasıyla birlikte popülerleşen büyük veri kavramı, işlenebilir ve anlamsal birliktelik sağlayabilen, her an üretilen her türlü veriyi kapsamaktadır. Verinin büyüklüğünden ziyade, verinin firmalar tarafından nasıl kullanıldığı daha önemlidir. Yapay zeka ve kognitif bilişim teknolojileri ile veriyi analiz edip iç görü üretebilen ve bunu stratejik iş aksiyonları için kullanan firmaların iş hacimlerini büyütme ihtimali çok yüksektir. Müşteri verilerini, öngörüye dayalı analizleri ve içerik tavsiyelerini ekleyerek her müşterinin yaşam boyu değerini belirlemekle kalmayacak, hangi ürünlerin ve içeriğin o müşteriye uygun olduğunu da otomatik olarak belirleyebilecek sistemler geliştirmektedir. Böylelikle oluşturulan mesajlarınızın alıcısıyla ilgili olma düzeyini ve uygunluğunu artırırken daha az zaman ve çaba harcanabilecektir. Bu durumda marka iletişimde; daha yüksek müşteri memnuniyeti, daha fazla alışveriş ve müşteriyi elde tutma gibi sonuçlar alınacaktır ve dolayısıyla ölçülebilir oranda, daha yüksek etkileşimi sağlanabilecektir. Web.3.0 'ın bize sunduğu 'kişiselleştirme' teknolojileri, basit demografik bilgilere göre pazarlama yapmanın çok ötesine geçerek 'Büyük Veri/Big Data'yı da Web.4.0 ile artık 'micro data'ya dönüştürüleceği ön görülmektedir.

Veri tabanı pazarlaması, müşterilerle etkileşimi artırma ve müşteri sadakatini geliştirme amacıyla müşteriye ait veri toplama ve değerlendirmeyi içerir. Başarılı bir veri tabanı pazarlaması müşterileri tanımlama ve onlarla iletişim kurma üzerinde durur. Bu farklı müşterilerin yaşam boyu değerlerini anlamayı ve müşteriye elde tutma çalışmalarını geliştirmeyi içerir. Bu bağlamda oluşturulan ‘Pazarlama Otomasyonu (Yapay Zeka)’ kavramı da bütünleşik pazarlama iletişimde önemli bir disiplin haline gelmiştir. En gelişmiş, sezgisel ve görsel içerik yönetim sistemlerinden biriyle tek içerik merkezinden mesaj yaratılabilir. Esnek ve önceden tasarlanmış, aynı zamanda mobil cihazlar için optimize edilmiş şablonları kullanarak özelleştirilebilen tutarlı e-posta görünümü ve hissi verilebilmektedir. Çok kanallı kullanılabilen bu platformda her mecranın teknik özelliklerine göre özel içerikler oluşturulabilir. Mecranın teknik özelliği ile müşteri yaşam değerinin birleştirilerek kişiselleştirilmiş veriye dönüştürülmesi yapay zekadan makro bilgiye geçişi sağlayacaktır.

YÖNTEM

Bu çalışmamızda kurumların kendi birim çalışanlarıyla elle yapabildikleri gibi veri yönetme işlerini ayrıca günümüzde ihtisas pazarlama otomasyonu şirketleriyle de yönetebilmektedirler. Kullanılacak stratejik iletişim adımlarında aynı paralelde devam etmektedir. Yapay zeka da stratejik iletişim yönetiminin yürütümünde kendi deneyimlerimin yanı sıra bazı projelerde beraber çalıştığımız uluslararası pazarlama otomasyonu firması Emarsys’den de bazı örnek kullanımları bu çalışmada aktarılacaktır. 2000 yılında kurulan Emarsys, perakende ve e-ticaret dahil çeşitli sektörlerde faaliyet gösteren lider markaları desteklerken ileri düzeyde teknoloji ile SaaS yazılımları sağlayan kişiselleştirilmiş müşteri etkileşimiyle ticari değerlerini artırmalarına yardım eden uluslararası bir gruptur. Veri bilimini uygulamayla buluşturan Emarsys, sonuçları maksimize etmek için tüm kanallarda gerçek kişiselleştirme sunan en güçlü pazarlama platformlarından birini yaratmıştır.

Bugün Emarsys’in öngörebildiği bilgilerle kullanıcı dostu, gerçek zamanlı pazarlama otomasyonu stratejileri destekleniyor. 140 ülkeden 1.500’ün üzerinde müşteri her ay 10 milyarı aşkın e-posta pazarlama mesajı gönderiyor ve ciddi yatırım getirisi elde ediyor.

ÇALIŞMA

Veri tabanı oluşturma, bilgi kodlama ve veri madenciliği yapma müşterilerle birebir iletişim kurma amacı için çıktıları değerlendirir. Kişiselleştirilmiş iletişim, ilişkiler kurar ve devamlı iş ve müşteri sadakatini yönetir. Bunlar, şirketi ve ürünlerini marka paritesinden marka değerine taşımaya yardımcı olur. Etkili veri tabanı programları detaylı müşteri satın alma tarihçelerini devam ettirir. Veri tabanı şirket ve müşteri arasındaki her etkileşimi kaydeder. Bir müşteri teknik desteğe bir e-posta gönderdiğinde bu bilgi veri tabanında yerini alacaktır. Bir ürünü iade eden ya da şikâyet için müşteri hizmetlerini arayan her kişinin bilgisi belgelenir. Satın alma ve etkileşim tarihçeleri müşterilerle ilerideki iletişimi hep belirler ve pazarlama ekibini her müşterinin yaşam boyu değerinin ve diğer müşteri değer metriklerinin hesaplanmasında yardımcı olur.

Tablo1: Büyük veri için ilk önce cevaplamamız gereken dört soruyu sormamız gereklidir: Müşteri Kimdir? Ne tür ürünler ister? Ne zaman? Nasıl ve hangi kanallarla iletişime geçilmelidir? Sonrasında etkili başlık, içerik, yazı, v.b mesajınızı oluşturulmalıdır.

Modern firmaların rekabet içerisindeyken sonsuz kaynakları olmadığından sınırlı kaynaklarla ‘Yeni Müşteri’ sahibi olmak yerine ‘Eldeki Müşteri’yi tutmak daha az maliyetli gerektirdiğinden; günümüzde pazarlamanın ağırlıkta ilgilendiği alanı olmaya başlamıştır. Günümüzde eldeki müşterileri sadık müşteriye geçişin adımlarında dijital ve sosyal medya etkin bir şekilde kullanılmaktadır. Müşteri verilerinden üzerinde işlenebilir bilgilerle müşterilerle ‘bireyselleştirerek/kişiselleştirilmiş’ özel iletişime geçilebilmektedir. Böylece küresel bir müşteri kitlesine kişiselleştirilmiş hizmet sunumunun temelleri atılmış olunacaktır.

Müşteri kazanımını ve iletişim araçlarını üç grup ile inceleyebiliriz:

- 1- Müşteri Yaratma: Sosyal medya, mobil, performans bazlı dijital reklamlar, SEM /SEO, gösterim reklam, liste yaratma, marka işbirlikçileri, e-mail, display (mobil, lokal network, Google), içerik pazarlaması, blogger marketing, video reklamları, v.b
- 2- Elde Tutma: Veri yönetimi, e-mail, mesaj, sadakat programı, bildirimler
- 3- Üyeden Üye Kazanma: Network pazarlama yaklaşımı ile mesaj, e-mail, v.b

Veri tabanı kodlama ve analizi kişiselleştirilmiş iletişimi geliştirmek için bilgi sağlar. Bunlar pazarlama kampanyaları yaratmaya yardımcı olur. Veri tabanı kodlamanın yaygın formları yaşam boyu değerleri analizi, müşteri kümeleri ve konum verileri takibini içerir.

Tablo2: Müşteri verilerini, öngörüye dayalı analizleri ve içerik tavsiyelerini ekleyerek her müşterinin yaşam boyu değerini belirlemekle kalmayacak, hangi ürünlerin ve içeriğin o müşteriye uygun olduğunu da otomatik olarak belirleyebilecek sistemler geliştirmektedir. Müşteri ya da pazar segmenti için yaşam boyu değeri sayısı, bireyin ya da segmentin marka ya da firma ile hayat boyu oluşturacağı ilişkinin, gelecek faydalarının şimdiki değerini tahmin eder. Bir tüketici ya da tüketici grubunun yaşam boyu değerini hesaplamak için gerekli olan bu sayılar gelirler, giderler ve elde tutma oranlarıdır. Gelir ve giderler genellikle kolay elde edilir, çünkü birçok şirket bu rakamları muhasebesel amaçlarla kaydeder. Elde tutma oranları doğru bir pazarlama veri tabanı sistemi gerektirir.

Başarılı bir veri tabanı pazarlaması, tüm müşteri verisini tutan kaliteli bir veri deposu gerektirir. Bir veri deposu oluştururken BT ve pazarlama ekibi, veri tabanını operasyonel ve pazarlama olarak ayırıştırır. Veri örneklerinin ve analizlerinin bulunduğu standart bir pazarlama veri deposu oluşumu için günümüzde temel olarak üç tip veri söz konusudur:

- Birinci parti veri: Direkt olarak şirketimize ait olan verilerin toplamıdır: E-posta adresleri, şirket web sitesine yapılan ziyaretlerin dijital kayıtları, satın alma işlemlerinin tarihçesi, anketler şikayetler ve iadeler gibi müşterileri etkileşimleri tarihçesi, her türlü müşteri anketi sonuçları, müşteriler tarafından verilen tercihler ve profiller, pazarlama kampanyalarından elde edilen pazarlama faaliyetleri
- İkinci parti veri: Veri konusunda iş birliği yaptığımız şirkete ait olan birinci parti verileridir. Bu sayede iki (veya daha fazla) şirket istediği zaman birbiriyle veri paylaşabilir.
- Üçüncü parti veri: Ticari ve satın alınan, aracılı, maddi değer ile satın alınan herkesin ulaşabileceği veridir. Bunlar, hedef kitlemize özel analiz ile ortaya çıkan segment verileridir. CRM, mağaza verileri, meslek odaları& sektörel dernek üye veri tabanı, sadakat& perakende kartı verileri, online işe alım portalları örneklerden sayılabilir. Veri toplama ve kullanıcıyla ilişkilendirmede yaygın olarak ‘çerez’lerden (cookie) faydalanılır.

Tablo3: Pazarlama otomasyonunda kullanılan genel müşteri veriler

Müşteri verilerini topladıktan sonraki adımlar analiz edilmesidir. Müşterilerinize ayrı bireyler olarak düşünmek gerekmektedir. Depolanan tüm veriler kategori edilmeli ve hedef kitlenizi davranış ve yaşam şekillerine göre ihtiyaç duyabileceği ürün ya da hizmeti ona çok kanallı araçlarla sunulabilir hale getirilebilir. Kişiselleştirilmiş iletişimde; etkili bir veri tabanı erişimli iletişim programı müşteri profillerine ve mesajları bireyselleştirmeye yarayan müşteri tercihleri hakkındaki diğer bilgilere dayanır. Giyim perakendecileri genellikle yeni gelen ürünleri hakkında e-posta gönderirler. Bu e-postalar veri tabanındaki her kişiye gitmez. Sadece bu bilgileri almak istediğini belirtmiş kişiler ya da moda haberleri ile ilgilendiğini belirtmiş kişiler mesajları alır. Bu müşteriler çoğunlukla özel “iç” bilgileri aldıklarına inanır. Pazarlama çalışanları, müşteri profil verisinde yer alan, doğum günü kutlama mesajı gönderilecek sadık sürekli müşteri listesi oluştururlar.

Tablo4: Yapay zeka teknolojisiyle tüm bu analizler koordine edilebilir. ‘Pazarlama Otomasyonu’ ile filtreleme, zamanlayıcı temel fonksiyonlara sahip tekrarlayan, çok aşamalı iş akışlarınızı otomatiğe bağlanabilir. Bu hizmetleri sağlayıcı firmalarla çalışılabilir. Toplanan verilerle birleştirilmiş her müşterinin birleştirilmiş profil sayfası oluşturulur. Kalifiye veri tabanı pazarlama programları her müşterinin kişisel tercihler hakkında spesifik bilgiler olan profiller içerir. Bu profiller ve kişisel tercih dosyaları, müşteri anketleri ve sadakat kartları için başvurulardan sağlanan bilgiler aracılığıyla değişik şekillerde yapılandırılabilir.

Tablo5: Kişisel tercih profilleri şirketin bir müşteri ile kurduğu her temas da bilgi müşterinin karşılığı ile birlikte veri tabanında yerini almalıdır. Bu bilgi neyin işe yarayıp yaramadığı ile ilgili zengin bir tarihçe sağlar. Bu daha ileride her müşteri için en yüksek başarı oranına yükseltecek iletişim metotlarının özelleştirilmesine izin verir. Sonraki adımlar sırasıyla; müşteri verilerinden yararlanarak hedefleme, koşullu dinamik içerik (seçilmiş hedef kitleye birebir uygun içerik oluşturulmalıdır), öngörü verilerine göre kişiye özel tavsiyeler, siberyemler (finansal, Temel, Değer dürtüleri), fırsatlar, kolaylıklar sunulmalıdır. Çoğu platformlardaki e-postalar ve web formları hakkındaki tıklama ve açılma oranları, sosyal medya istatistikleri, link ve kategori izleme gibi her türlü temel ölçütleri ve karşılaştırma raporlarını, mobil cihaz kullanıcılarının bilgilerini ve sosyal medya raporlama yapılabilir. Müşteri profillerini link tıklama davranışlarına göre kategorize edilebilir ve bu profillere uygun, son derece kişiselleştirilmiş içerikler geliştirilebilir.

Tablo6: Bir veri tabanı pazarlama programı, mesajları kişiselleştirmek için araçlar içerir, etkili ve etkisiz iletişim tiplerinin kayıtlarını tutar. İnternet veri tabanı erişimli iletişim için ana teknolojiyi sağlar.

Tanımlama kodlar ise bir veri tabanı erişimli pazarlama programı, bireysel müşterilere atanmış siteyi ziyaret ettiklerinde giriş yapmadan kolayca ulaşamayacakları alanlara giriş yapabilme imkânı tanıyan kimlikler ve şifrelerle başlar. BT uzmanları kimlikleri ve şifreleri, sayfaları ve bireysel fırsatları özelleştirmek için her müşterinin bilgisayarındaki çerezlere bağlar. Sistem düzgün olarak çalıştığında müşterinin her seferinde giriş yapması gerekmez. Çerezler müşterinin yerine bunu yapar.

Tablo7: Şirketler satış sonrasında özelleştirilmiş iletişim kurarlar. Satışı bir dizi mesaj takip eder. İlk olarak, alıcı satışı onaylayan ve teşekkür içeren bir e-posta alır. Bu e-posta, siparişinin istediği zaman yerini görebileceği bir takip kodu içerir. Mesajda tahmini bir gönderi tarihi vardır. Bazı şirketlerin gönderdiği e-postalar, siparişin depoya ulaştığına dair bir ara bildirim içerir. Daha sonra sipariş çekilip gönderildiğinde bir başka e-posta gönderilir.

Veri tabanı erişimli izne dayalı pazarlama; istenmeyen ve önemsiz e-postalara karşı müşteriler tarafından güçlü bir tepki büyümeye devam ediyor. Bu sebeple birçok pazarlama departmanı, şirketlerin tanıtım bilgilerini sadece yetki veren tüketicilere gönderdiği bir pazarlama programı olan izne dayalı pazarlamaya döndü. Dönüş oranları izne dayalı programlarda sıklıkla daha yüksektir, çünkü müşteriler sadece talep edilen ya da onay verilen pazarlama materyallerini alırlar. Yine de izne dayalı pazarlamaya izin veren her müşteri değerli bir müşteri haline gelmez. İlişkiyi güçlendirme orijinal hediyein ötesinde yeni teşvikleri gerektirir. Pazarlamacılar bir müşteri hakkında hobileri, ilgi alanları, tutumları ve görüşleri gibi daha derinlemesine bilgi edindiğinde ilişki geliştirilebilir. Bilgi, özel fırsatlar sunarak yeni satın almalar yapmaya ikna etmek için özelleştirilebilir.

Pazarlama Programı Oluşturmanın Adımları:

1. Müşteriden izin almak.
2. Tüketicilere devam eden, anlamlı müfredat sunmak.
3. İlişkiyi sürdürebilmek için teşviki güçlendirmek.
4. İzin düzeyini arttırmak.
5. Her iki tarafın yararı için izni güçlendirmek.

Müşteriler, olumlu tutumlarını devamlı hale getirmek için sadece başlangıçta değil, tüm süreç boyunca ödüllendirilmelidir. Bu karşılıklı hissiyatı ya da şirkete karşı yükümlülük duygusunu yaratır. Sadece ilk katılımda müşteriyi ödüllendirmek hata olacaktır. Yetkilendirme ve karşılıklı müşteriyi şirket değerlerine, ilişkiye inanmaya yöneltilir, ki bu da müşterinin aktif bir katılımcı olarak devam etme ihtimalini artırır.

Ayrıca coğrafi kodlamada veri yönetiminde kullanılan araçlardır. Her müşterinin kaydına coğrafi kodların eklenmesi işlemi ile müşteri adresleri harita üzerinde işaretlenebilir ya da coğrafi kodlama karar vericilere perakende satış noktalarının yerlerini karara bağlamalarını ve pazarlama materyallerini belirli coğrafi bölgelere yönlendirmelerine de yardımcı olur. Bu pazarlama ekibinin reklam için en iyi medya kanallarının seçiminde de yardımcı olur.

SONUÇ:

Teknolojik değişim ve dijitalleşmenin sınırları olmayacak haliyle gelişmeye devam ediyor. Teknolojik yenilikler insanın ve toplumun yaşamını kolaylaştırmak için geçmişten günümüze kadar pek çok yenilikle hayatımıza girmiştir. Genelde iletişimin özünden çok, cihazlara ve internetin sunduğu teknolojik imkânlarla odaklanılıyor. Ancak teknoloji ne kadar gelişirse gelişsin, insanların pek çok temel ihtiyaçları aynı kalıyor. İletişimde amaçta “insanı anlamak” onların fiziki ve duygusal ihtiyaçlarını, beklentilerini anlamamız gerekiyor. Çünkü değişim büyük oranda insanlardan kaynaklanmaktadır. Yeni medya ile de küresel bir müşteri kitlesine kişiselleştirilmiş hizmet sunumunun temelleri atılmıştır.

Markalar artık söylediklerine göre değil de yaptıklarına göre yargılanıyorlar. Marka ve kurumlar çevrimiçi tüketici algısını yönetme işini pazarlama iletişim stratejisine eklemeleri gerekmektedir. Hedef kitlenizin davranışlarını, nasıl yaşadıkları bilmemiz, onlara dokunmamız ve empatik iletişim kurmamız gerekmektedir. Burada veri yönetimine çok büyük görev düşmektedir. Değişen kitle iletişim araçlarıyla hedef kitlenin verilerinin temin edilip, işlenmesi, segmente edilmesi ve sürdürülebilir iletişim kurulmasında iki tarafında etkin ve fayda misyonuyla içerik üretimi gerekmektedir.

Özellikle dev verinin analizinde kullanılan yapay zekanın algoritmalarının düzenlenmesi, yürütülmesi, hedef kitlenin temsili, arşiv ve veri saklama, performans ölçeklerinin takibi gibi pek çok alanları da iletişime etkileyerek disiplinler arası işbirliğini ve stratejik iletişim yönetimi ihtiyacını ortaya koymaktadır. Gelecekte

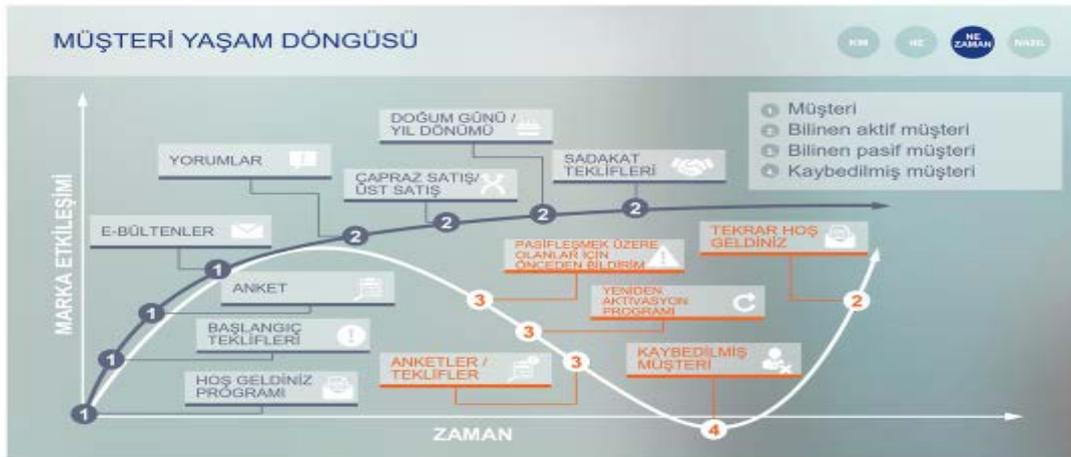

sezgisel tabanlı iletişim teknolojinin kullanımı, avatar, simülasyon, sanal asistanlar (Siri), bulut iletişimi, yüz tanıma v.b yeni teknolojileri baş döndüren artışı yöntem ve yaklaşımların, son kullanma tarihi olmayan 'bilgi' nin kullanımlarını sorgulatar olacaktır. Küreselleşmiş, uzgörülü ve mikro verilerin kullanılacağı yeni iletişim alanları geliştirilecektir.

Gelecek yıllarda hayatımızı değiştirecek teknolojilerle, özellikle 'Yapay Zeka', 'Veri Analizi' 'Nesnelerin İnterneti' alanında kognitif bilgisayar teknolojisiyle tüm sektörlerde pazar ve toplum eğilimleri ile yeni teknolojilerin temelini yine 'veri' oluşturacaktır. Geleceğin stratejik pazarlama iletişimi, kişiselleştirilmiş mikro ve uz görülü veri kullanımı üzerine kurgulanacaktır. Pazarlama iletişimi artık 'duygusal ve güvene dayalı' uzun vadeli, sürekli, etkileşimli iletişim; günümüzde yeni teknolojilerle, duygusal bağ kurarak 'insanı anlamak' odaklı hale getirilmiştir.

STUDENTS' GAME PLAYING PREFERENCES AND PERSONALITY TRAITS

Simon So, PhD

Department of Mathematics and Information Technology
The Education University of Hong Kong
Hong Kong
swwso@eduhk.hk

ABSTRACT

This study aims to explore students' personality traits and game playing preferences at a teacher-training institute in Hong Kong. In psychology, the Big-Five personality factors have been defined as *Openness to Experience*, *Conscientiousness*, *Extraversion*, *Agreeableness*, and *Neuroticism*. These factors are widely used in the literature to measure a person's personality traits. In video gaming, players usually have preferences over different game genres. Games can be categorized into genres such as *Action*, *Strategy*, *Adventure*, *Role-playing*, *Sports*, *Simulation* and *Puzzle*. In this research, it is hypothesized that game players with certain personality traits would prefer certain types of games. The 50-item IPIP version of the Big-Five Markers was used to measure the students' personality traits ($n=160$). A questionnaire was used to measure the students' gaming preferences on the seven game genres. A quantitative analysis was used to evaluate the relationship and significances among the variates and the results are discussed. The statistically significant relationships (either positively or negatively) between personality traits and preferences on game genres were identified.

INTRODUCTION

Video games are a multi-billion business. The computer and video game market in the United States was valued at over 20 billion U.S. dollars (ESA, 2016). Computer games, console games and mobile games are played at all ages from toddlers to seniors. In higher education, students often play games with or without their peers. In the Hong Kong institute which this research was conducted, it is common to see students sitting together to play games like League of Legends (LoL).

Game playing preferences among university students may be different from the gamers in the general public. The aim of this study is to investigate the university students' gaming preferences in correlation with their personalities. It is hypothesized that there is a relationship between the personality traits based on the Five-Factor Model and the preferences on different game genres. Students enrolled in the courses taught by the author were requested to participate in this research. The following research questions were addressed in this study:

- RQ1: What are the personality traits among these university students?
- RQ2: What are the game types that these students find difficult to play?
- RQ3: What are the game types that these students enjoy playing?
- RQ4: Would there be significant correlations between game types and personality traits?

This paper is structured as follows. The Five-Factor Model (FFM) of personality traits is detailed and is followed by the discussion of game genres in the game industry. The methodology section describes the background of the participants, the two instruments, and the procedure of this research. This is followed by the quantitative analyses to answer the research questions. Some conclusive remarks and future research work are then discussed.

PERSONALITY TRAITS

Many psychologists believe that *personality* is an elusive concept (Carver & Scheier, 2012). The definition of personality can be complex. However, personality can refer to an individual's unique constellation of consistent behavioral traits (Weiten, 2010). Traits are consistent personality characteristics and long-term behaviors displayed in a person. Trait models attempt to analyze personality into its basic dimensions. *Factor analysis* is commonly used to identify general patterns from a large number of variables in personality. The Five-Factor Model (FFM) of personality traits is the most popular model used in studies related to personality traits. The five factors are *Openness to Experience*, *Conscientiousness*, *Extraversion*, *Agreeableness*, and *Neuroticism* (Emotional Stability). It is commonly referred to as "Big Five" and the factors have the mnemonic OCEAN (or EACNO). Each of the five factors or high-order traits represents an amalgam of several lower-order traits called facets (Kowalski & Westen, 2011, p.459). These factors and the facets are briefly described below.

Openness (O)

The *Openness* dimension refers to openness of experience. The characteristics that make up this dimension include an active imagination, a willingness to consider new ideas, divergent thinking, and intellectual curiosity. People high in Openness are unconventional and independent thinkers (Burger, 2011). Innovative and creative people are generally high in this dimension. The lower-order traits include *Fantasy* (active fantasy life), *Aesthetics* (artistic interests), *Feelings* (emotionally open), *Actions* (flexible), *Ideas* (intellectual), and *Values* (unconventional) (Kowalski & Westen, 2011; McCrae & Costa, 1997).

Conscientiousness (C)

The *Conscientiousness* dimension refers to how well-organized, disciplined, punctual, and dependable people are. Conscientiousness is associated with being diligent, reliable, responsible and efficient. People who score high in conscientiousness are likely to be healthier and live longer (Friedman & Martin, 2011; Schultz & Schultz, 2012). The lower-order traits include *Competence*, *Order*, *Dutifulness*, *Achievement Striving*, *Self-discipline* and *Deliberation* (Kowalski & Westen, 2011; McCrae & Costa, 1997).

Extraversion (E)

The *Extraversion* dimension refers to the tendency to be sociable, active, fun-loving, talkative, affectionate, and willing to take risks. Attention-seeking and domineering are often perceived. Low scorers are likely to be shy, reserved, quiet, loners, passive, and lacking the ability to express strong emotion (Kowalski & Westen, 2011). There is a good deal of variation in what this trait includes. The lower-order traits include *Warmth*, *Gregariousness*, *Assertiveness*, *Activity*, *Excitement Seeking* and *Positive Emotion* (Kowalski & Westen, 2011; McCrae & Costa, 1997).

Agreeableness (A)

The *Agreeableness* dimension refers to those who tend to be warm, likeable, helpful, trusting, and sympathetic. Agreeable adults get less angry over bad outcomes. Agreeableness has been related to greater responsiveness in parenting, less negativity in marital interactions, less seeking of revenge after being harmed, greater cooperation in resolving social dilemmas over resources, and less antisocial behavior (Carver & Scheier, 2012). The lower-order traits include *Trust*, *Straightforwardness*, *Altruism*, *Compliance*, *Modesty*, and *Tenderness* (Kowalski & Westen, 2011; McCrae & Costa, 1997).

Neuroticism (N)

The *Neuroticism* dimension refers to those who tend to be nervous, emotional, insecure, worrying, and hypochondriacal (Cervone & Pervin, 2013). This dimension places people along a continuum according to their emotional stability and personal adjustment (Burger, 2011). A high level of neuroticism relates to distress in a wide variety of difficult circumstances, more difficult interactions among married partners, less satisfaction in the relationship, likely to distance themselves from their partners after a negative event, likely to impair academic performance, and even to predict earlier death (likely to smoke more) (Carver & Scheier, 2012). The lower-order traits include *Anxiety*, *Angry Hostility*, *Depression*, *Self-consciousness*, *Impulsivity*, and *Vulnerability* (Kowalski & Westen, 2011; McCrae & Costa, 1997).

GAME GENRES

The word *genre* refers to a particular class or type of an artistic venture. You can categorize games into different genres based on gameplay, atmosphere and various other factors. One must admit that definitions of the game genres are somewhat subjective and there is a lack of consensus in the game industry for a general standard of classification (Haninger & Thompson, 2004; Wolf, 2005; Smith, 2006). Furthermore, a game can be categorized into different genres. Nevertheless, the most widely used game classifying system categorizes games into seven genres: action, adventure, strategy, role-playing, simulation, sports, and puzzle (Saltzman, 2003). The seven genres are briefly described below.

Action Games

Action games rely more on hand-eye coordination. The gameplay of these games consists primarily of physical coordination challenges (Adams, 2010). These games are generally fast-paced and reflex-oriented. First-person shooter (FPS), action-adventure, combat simulation, fighting games, stealth games and some platform games are all parts of the action genre (Robin, 2010). Action games can unfold over many hours but it is difficult for gamers to sustain excitement for very long. Hence, some breaks during gameplay are often needed. Examples include *Call of Duty: Infinite Warfare*, *Battlefield*, *Grand Theft Auto V* and *Tom Clancy's The Division* as the top 10 selling video games in 2016 (ESA, 2017).

Adventure Games

Adventure games allow players to move in their own pace in a journey of exploration, puzzle solving, and unearthing treasures. These games usually have a storyline and call for the player to visit different locations and interact with many different characters and non-playable characters. The protagonist usually set out to accomplish a main goal through character interaction and inventory manipulation (Saltzman, 2003). Examples include *Myst*, *King's Quest*, *Batman: A Telltale Series*, *The Walking Dead: A New Frontier*, *Resident Evil 7: Biohazard*, *Firewatch*, and *No Man's Sky*.

Strategy Games

Strategy games require a great deal of mental challenge and emphasize logical thinking, planning and resource management. Resource management typically includes constructing a variety of buildings or units, and deciding how and when to put them into action (Novak, 2012). The player builds an empire, fortress, or world and prepares to resolve problems like invasion, hardship and revolution. There are two distinct types of strategy games. They are classified into *real-time strategy* games (RTS), which are relatively fast-paced and strategic decisions must be made quickly, and *turn-based strategy* games, which are played in rounds or turns. Examples of real-time strategy games include *Age of Empires II*, *Europa Universalis IV*, *StarCraft II*, *Company of Heroes 2*, and *Homeworld: Deserts of Kharak*. Examples of turn-based strategy games include *Civilization VI*, *XCOM 2*, *Endless Space 2*, *Total War: Warhammer*, and *Master of Orion*.

Role-Playing Games

In role-play games (RPG), a player can play a character (such as a warrior, thief, knight, prince, priest, or wizard) and pursue quests, collect items, explore dungeons, fight monsters, and gather treasures. RPGs are similar to adventure games, but rely more on character growth and development, conversation, and strategic combat than on puzzle-solving. Quests and fantasy worlds with non-playable characters (NPC) are common to this genre (Saltzman, 2003). NPCs can help or hinder the player depending on the game design. The storyline is not always linear and the narrative usually drives the game. Examples include *Final Fantasy XV*, *The Elder Scrolls V: Skyrim*, *Dark Souls III*, *Fallout 4*, *EverQuest*, and *Star Wars*.

Sports Games

Sports games simulate the real-world counterpart sports, such as basketball and soccer. These games often feature the real-world rules and strategies. Realism is important, as are fast action and tactical strategy (Saltzman, 2003). Some sports games focus on the actual playing of a sport and others stress on the management behind the sport. Many of these games are released annually to reflect the real-world change in that sport. The most popular titles prominently feature current sports celebrities, and sport teams toward which game players are likely to have a preexisting positive disposition. Examples include *The Golf Club 2*, *Tour de France 2017*, *PES 2017*, *NBA 2K17*, *Madden NFL 17*, and *Football Manager 2017*.

Simulation Games

A simulation game emulates real or fictional activities of systems. These systems or activities can be anything from the workings and economy of railroads to combat scenario where the player controls troop movement, or a fighter craft (Rabin, 2010). Sims realistically simulate a given animate or inanimate object or process. Simulations often place the gamer in a 3D first-person perspective (Saltzman, 2003). Typically, the game play is focused around the maneuvering of the machinery. "God-game" simulations require the player to build and manage cities, communities and other resources on a grander scale. Hence, the player is external to the game and builds up the world with a holistic view. God games are likely played in an isometric view. Examples include *Farm Simulator 18*, *Surgeon Simulator 3*, *GT 7*, *The Sims 4*, *Sim City 5*, and *Combat Flight Simulator 3*.

Puzzle Games

Puzzle games do not usually have much of a story but instead focus on a mental challenge for the player to find one of the correct solutions. In puzzle games, the player only interacts with the puzzle and does not take on the role of a character. Some puzzle games do not really have victory condition and allow the player to retry continuously after defeated. Pattern recognition and matching challenges are common in puzzle games. Puzzle games include those classic games of leisure such as tile games, card games, trivia games, word games and board games (Saltzman, 2003). These games are generally smaller, simpler or shorter. This type of game dominates the handhelds and mobile phone worlds. Examples include *Tetris*, *Puzzle Quest*, *Candy Crash Saga*, and *Brain Age*.

METHODOLOGY

Participants

Participants were students at a teacher-training institute in Hong Kong. Students were recruited from a general education course entitled “Understanding Digital Games”. The course does not have any prerequisite and any student from the university can enroll into this course. Students (n=160) were recruited in two academic years between 2016 and 2017. Participation in the study was voluntary. They signed a consent form and were informed of their rights to withdraw at any time during the study. PC games, VR games, Sony PS3/4 games, Xbox 360 games, Nintendo Wii, and a number of handheld games in the laboratory were provided for the students to play for a period of a semester.

Measures

Two instruments were used in this research. For the personality traits, we use the IPIP Big-Five factor markers (Goldberg, 1992). For the gaming preferences, we adopted a game liking questionnaire similar to deGraft-Johnson, Wang, Sutherland, and Norman (2013). Although their research was similar to the research we were conducting, we used a more renowned instrument to evaluate the participants’ personality traits and we classified the games differently. The details of the instruments are described below.

IPIP Big-Five Markers

For the personality test, we chose the International Personality Item Pool (IPIP) as the measure. The IPIP measure has many items and scales developed over the years (IPIP, 2017). This research used the smallest scale with the 50-item version over the more detailed 100-item and 300-item versions. This version is by far the most popular Big-Five personality instrument in psychology and is freely available to the public. Items from the IPIP have been translated from English into more than 25 other languages (Goldberg et al., 2006). Both English and Chinese were used in this research. The 50-item English version can be located at http://ipip.ori.org/New_IPIP-50-item-scale.htm. The five-point scales are: 1) Very Inaccurate, 2) Moderately Inaccurate, 3) Neither Accurate Nor Inaccurate, 4) Moderately Accurate, and 5) Very Accurate. The big-five factors (i.e., OCEAN / EACNO) can be calculated using the following equations:

$$\begin{aligned}
 E &= 20 + (1) - (6) + (11) - (16) + (21) - (26) + (31) - (36) + (41) - (46) = \underline{\hspace{2cm}} \\
 A &= 14 - (2) + (7) - (12) + (17) - (22) + (27) - (32) + (37) + (42) + (47) = \underline{\hspace{2cm}} \\
 C &= 14 + (3) - (8) + (13) - (18) + (23) - (28) + (33) - (38) + (43) + (48) = \underline{\hspace{2cm}} \\
 N &= 38 - (4) + (9) - (14) + (19) - (24) - (29) - (34) - (39) - (44) - (49) = \underline{\hspace{2cm}} \\
 O &= 8 + (5) - (10) + (15) - (20) + (25) - (30) + (35) + (40) + (45) + (50) = \underline{\hspace{2cm}}
 \end{aligned}$$

The numeric values of the five-point scales were used. The signs were accounted for the reverse items and adjusted with the constants. Hence, the score for each factor should be between 0 and 40. An example of a participant on calculating *Openness (O)* is shown as follows:

SID (2241)	<i>Openness to Experience</i>	8
Q5	I have a rich vocabulary. (我能言善道)	+3
Q10	I have difficulty understanding abstract ideas. (我難以了解抽象的概念)	-3
Q15	I have a vivid imagination. (我想像力豐富)	+4
Q20	I am not interested in abstract ideas. (我對抽象的議題不感興趣)	-4
Q25	I have excellent ideas. (我常有很棒的主意)	+4
Q30	I do not have a good imagination. (我沒甚什麼想像力)	-3
Q35	I am quick to understand things. (我很快就能理解事情)	+5
Q40	I use difficult words. (我有時會用艱深的字眼)	+2
Q45	I spend time reflecting on things. (我會花時間反省)	+5
Q50	I am full of ideas. (我有很多主意)	+4
		=25

Game Preference Questionnaire

For the seven game genres, the participants had to fill in the questionnaire after they played their selected games. The questionnaire contained questions on the played hours, their preferences and views on the selected games. A sample of the questionnaire is shown in Figure 1.

Game Preference								
Game's Type: <u>Action</u>								
Game's Played: _____ (e.g. GTA IV)								
Played Hours: _____ (should play at least an hour)								
Item	Use ✓ to make your selections							
1	Have you played this game before? 之前有否玩過這隻遊戲?	() Yes (有)			() No (沒有)			
		No at all 一點也不					Very much 非常	
Items		1	2	3	4	5	6	7
2	How difficult do you think this game is? 這隻遊戲很難玩嗎?							
3	How well do you think you did on this game? 這隻遊戲玩得有多好?							
4	How much do you enjoy playing this game? 享受玩這隻遊戲嗎?							
5	How likely would you play this game again? 會否再玩這隻遊戲?							
6	How interested would you be in playing other games like this? 對這類遊戲會有興趣玩嗎?							
7	Other comments about the game: ***please provide 3 short video clips (preferably at the start, in the middle, and at the end) on you playing the game. 對這隻遊戲的一些評論: ***請提供三段你玩這隻遊戲短影片, 最好是在開始、中段及尾段的時候。							

Figure 1. The questionnaire for the game type

Procedures

At the start of the course, the IPIP survey was conducted. The participants answered the IPIP instrument related to the five personality factors so that the research team could evaluate their personalities using the framework proposed by IPIP (Goldberg, 1992; IPIP, 2017). During the course, the participants were taught to be familiar with the game classification and explored the various classification systems in the game industry. The teaching team provided the web resources for them to search and identify their games. The major game titles can be found in the laboratory. They were allowed to borrow and use them at home. They could rely on the available games to complete the questionnaire or use their own games to evaluate their preferences as part of their exercises in the course.

RESULTS

Scores on personality traits were calculated using the above equations for each participant on the five factors. Table 1 shows the means and standard deviation, calculated for the participants who filled the questionnaire completely. The questionnaires which had missing data were excluded. The radar chart (Figure 2) displays the multivariate dimensions of the participants' personality traits. *Agreeableness*, *Conscientiousness* and *Openness* had the three highest means. This result is not surprising as the participants are mostly pre-service teachers. These students are typically polite and likeable people, and sensitive to the needs of others.

Table 1. Descriptive Statistics of EACNO for all participants completed the questionnaire

	N	Minimum	Maximum	Mean	Std. Deviation
Extroversion	154	7	32	19.76	4.717
Agreeableness	154	12	38	26.71	4.125
Conscientiousness	154	11	37	24.57	4.533
Neuroticism	154	0	37	20.23	6.067
Openness	154	15	37	24.07	4.444
Valid N (listwise)	154				

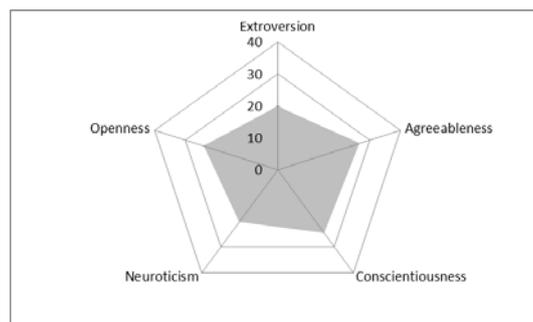

Figure 2. The radar chart of the participants' personality dimensions

For game preferences, the participants felt that strategy games such as 'Age of Empires' were the most difficult game genre to play and simulation games (mostly in 'The Sims' series) were the easiest.

Table 2. Response on the difficulty of playing the game types

	N	Minimum	Maximum	Mean	Std. Deviation
Action: Difficult	133	1	7	4.05	1.437
Strategy: Difficult	132	1	7	4.49	1.501
Adventure: Difficult	129	1	7	3.99	1.702
RPG: Difficult	133	1	7	3.96	1.578
Sport: Difficult	131	1	7	4.02	1.581
Simulation: Difficult	128	1	7	3.52	1.739
Puzzle: Difficult	133	1	7	3.68	1.795
Valid N (listwise)	123				

Interestingly, the participants felt that they would like to play strategy games the most as shown in Table 3. Although they identified strategy games as the most difficult game type to play, they would like to play these games. These participants enjoyed the aspects of logical thinking, resource management, planning and mental challenge in strategy games. Action games were also high on their preferences, indicating that many participants also liked to play action games. The research team believes that there are many experienced gamers among the participants.

Table 3. Response on the enjoyed game types

	N	Minimum	Maximum	Mean	Std. Deviation
Action: Enjoy	133	2	7	5.29	1.413
Strategy: Enjoy	132	2	7	5.32	1.437
Adventure: Enjoy	129	1	7	4.82	1.465
RPG: Enjoy	133	1	7	5.20	1.313
Sport: Enjoy	131	1	7	5.22	1.421
Simulation: Enjoy	128	1	7	4.72	1.374
Puzzle: Enjoy	133	1	7	4.76	1.349
Valid N (listwise)	123				

On whether the participants enjoy the game types, the correlations between the personality traits and the game types can be found in Table 4. We found that (1) *Neuroticism* significantly correlated with *Action*, (2) *Extroversion*, *Neuroticism* and *Openness* correlated *Strategy*, (3) *Conscientiousness* significantly correlated with *Adventure* negatively, and (4) *Neuroticism* significantly correlated with *Simulation* negatively. Hence, participants with higher neuroticism enjoyed playing action games. Those with higher extroversion and openness enjoyed playing strategy games. Those with higher conscientiousness did not enjoy playing adventure games. Those with higher neuroticism did not enjoy playing simulation games. We can explain these outcomes intuitively. However, we could not explain why people with higher neuroticism enjoy playing strategy games.

Table 4. Correlations between the personality traits and the preferred game genres

		Action	Strategy	Adventure	RPG	Sport	Simulation	Puzzle
Extroversion	Pearson Correlation	.037	.187*	-.081	.020	.084	-.043	-.102
	Sig. (2-tailed)	.675	.032	.363	.817	.340	.627	.241
	N	133	132	129	133	131	128	133
Agreeableness	Pearson Correlation	.042	.168	-.027	-.005	.072	-.103	.056
	Sig. (2-tailed)	.629	.054	.759	.958	.414	.248	.520
	N	133	132	129	133	131	128	133
Conscientiousness	Pearson Correlation	.136	.065	-.187*	.033	.035	-.033	-.059
	Sig. (2-tailed)	.118	.456	.034	.707	.696	.714	.503
	N	133	132	129	133	131	128	133
Neuroticism	Pearson Correlation	.215*	.203*	-.070	-.061	.026	-.186*	-.048
	Sig. (2-tailed)	.013	.020	.430	.489	.771	.036	.581
	N	133	132	129	133	131	128	133
Openness	Pearson Correlation	.072	.180*	-.047	.049	.068	.077	.074
	Sig. (2-tailed)	.411	.039	.594	.577	.440	.389	.398
	N	133	132	129	133	131	128	133

CONCLUSION

This research reveals that most of the participants studying at a teacher-training institute in Hong Kong are high on the personality dimensions of *Agreeableness*, *Conscientiousness* and *Openness*. As they are pre-service teachers, they are generally polite and likeable people. The teacher training environment may nurture and shape these students in this direction, but further research work is required to establish this claim. Among this group of students, they identified strategy games as the most difficult game type to play. Interestingly, they enjoy playing this type of games despite its difficulty. It is possible that these students attract to the challenges which this type of games provides. However, further research is needed to investigate the reasons. This study clearly shows the correlations between the personality traits and the preferred game types. Some correlations are intuitive, but others require further investigation.

STUDY ABOUT THE PERCEPTION OF BASIC DIGITAL COMPETENCES OF STUDENTS OF A CHILEAN UNIVERSITY

Lagunes Domínguez AGUSTIN, Universidad Veracruzana, México, aglagunes@uv.mx
 Judikis Preller Juan CARLOS, Universidad de Magallanes, Chile, juan.judikis@umag.cl
 Torres Gastelú Carlos ARTURO, Universidad Veracruzana, México, ctorres@uv.mx
 Flores García María ALICIA, Universidad Veracruzana, México, maflores@uv.mx

ABSTRACT

Digital competences have long been of interest to many authors, for this reason, this paper shows the results of a survey applied to students of a Chilean university. Students were asked about their digital competencies in five dimensions, the first dimension is about their general knowledge and technological skills, the second about the use of ICT in everyday life, the third about their specialized skills for working and creative expression, the fourth about communication and technology-mediated collaboration, and the fifth, the way the manage and process information. Categories of their competences levels were created according to the score they obtained. They are Low, Low Intermediate, High Intermediate and High.

As a result, the data showed that the students had lower scores in the first dimension, general knowledge and technological skills (average 2.70%), and in the third dimension, specialized skills for working and creative expression (average 2.87%). The highest averages students obtained were in the fifth dimension, management and processing information (52.5%), and in the second dimension, use of ICT in everyday life (22.5%).

As a conclusion, the mere presence of technological resources in universities and the high capacity of students are not enough to develop the digital competence in students. Furthermore, because this was a study about perception, and several studies indicate that students are optimistic about their abilities, it follows that the basic digital skills of the students observed may be lower than the one indicated in the study. Therefore, it is suggested to create an instrument that evaluates their basic digital competences and confront their results with those presented here.

Key words: Competences, Digital competences, Students

INTRODUCTION

Many authors have investigated the basic digital competences that a person has; the approaches that addressed the topics have also varied, so we will present a review of important studies and their approaches. The first approach has to do with comparing what is known as digital migrants, for which the authors Román-García, Almansa-Martínez and Cruz-Díaz (2016) conducted a study with adults (18-55 years) and older adults (+55 years) to whom they applied an instrument, in total 174 people from Andalusia Spain. The results were interesting, the study indicates that adults with age range between 18 and 30 years present a better level of media competence in technical skills related to instrumental use, interaction and language, whereas from the 30 they increase the skills in Critical and participatory dimensions, such as reflection, analysis and creation. In addition, they found that the digital skills of adults over 55 years are directly related to their level of income, this means that a person over 55 years old has a good level in digital skills as long as their economic level is also.

Other studies focus on a different generation of students to check their digital skills, such as the authors Pérez-Escoda, Castro-Zubizarreta and Fandos-Igado (2016) who, through a study of 678 students of Primary Education, try to show that the students of the generation Z already have this ability. The results reveal that they do not inherently acquire digital skills, but need education in this regard, noting the danger of a digital division, not by use or access to them, but by lack of competitiveness. The absence of a significant difference in the general level of digital competence among the students of different courses of Primary Education reflects that, to some extent, this level is acquired more by coexistence with ICT in informal contexts than by an adequate development in the school context that gradually and gradually enhances their acquisition. That is, it is not inherent to Generation Z, but they are acquiring competence informally.

In a similar way, the authors Fernández-Cruz and Fernández-Díaz (2016) carry out a study where they indicate that the mere presence of technological resources in the centers and the high capacities of the Generation Z students are not sufficient to develop in the students the digital competence. They indicate that the fundamental key is determined by the technological and pedagogical competences of teachers, that is, that teachers are the most important factor for primary and secondary students to acquire digital skills. Therefore, they applied an instrument in 80 schools And 1,433 teachers, the results were revealing, 36.85% had a "Bad" profile and 9.56% "Very bad", that is, a total of 46.31% of

teachers have a negative profile in terms of Their ICT training in the educational world, then they directly affect the development of digital competence of Generation Z students.

Other studies that refer to teachers, such as Morales-Arce (2013) who writes about the support that is given to the Digital Abilities for All program for the development of digital skills in Mexican teachers. Likewise, the authors García López et al. (2012) carried out an investigation with teachers of secondary education in Mexico, with the purpose of identifying the levels of acquisition of the digital competences of teachers. The study took into consideration five dimensions: knowledge and skills in the Web, organization in format Digital, use of digital tools or devices for communication, electronic search and design of digital educational resources. The results reveal that most teachers have greater mastery of the organizational dimension in digital format and the one that less dominate and require a training course is in the design of digital educational resources. That is, teachers remain in debt to students to help them develop their digital skills.

The study by Hatlevik, Ottestad and Throndsen (2015) conducted in Norway for seventh grade students, teachers and educational managers, as well as Fernandez-Cruz and Fernández-Díaz (2016), show that the higher level of managers and teachers the more is the level of digital skills in students. Finally, let us talk about university students, as well as this research, authors Castellanos-Sánchez, Sánchez-Romero and Calderero Hernández (2017) carry out research with new students to the university. They applied an instrument to 301 students with 29 items, and the results show the predominance of students over 30 years of age, female, who have a computer with Internet connection. It also shows that student's favorite means to interact is the telephone, surf daily and use e-mail, basic technologies, especially the office suite, and are not familiar with the use of current tools such as blogs or social bookmarks. It is concluded, that these students do not share the expected qualities of a digital native: produce, disseminate and consume culture through the Internet. That is, they do not have the digital competence that would be thought the students of this generation. In agreement with Castellanos-Sánchez, Sánchez-Romero and Calderero-Hernández (2017) this research group has carried out an investigation in a university of the Chilean Patagonia applying a perception instrument to the students of new entrance of Pedagogy to determine their level of Digital competition.

THE STUDY

For this study, new students of Pedagogy were invited, being a probabilistic study, each student decided whether to accept the invitation, they were asked to answer their study of perception, 40 students accepted to participate.

The instrument was a questionnaire with five dimensions, the first dimension is about their general knowledge about ICT, the second on the use of ICT in their daily lives, the third on their specialized skills for work and creative expression, the fourth about technology-mediated communication and collaboration, and fifth, how they manage and process information. This instrument had 48 items and applied through the survey technique.

To facilitate the application of the instrument and to give reliability, it was programmed in PHP with the MySQL Database Management System, it was preregistered to the participating students, because the instrument is closed and to respond it is necessary to log in first, It was validated that each student could only respond on one occasion. The Cronbach alpha for the items corresponding to the basic digital competence is 0.825 (Zúñiga, Edel and Lau, 2016).

It should be noted that this instrument was taken from the authors Zúñiga, Edel and Lau (2016) who applied this same in the Faculty of Pedagogy of the Veracruzana University in Mexico.

The instrument is of perception so the answers were multiple choice and the options were as follows:

- A) "Yes and I would explain." (If you think, you know how to do the action without difficulty and you could explain it to another person).
 - B). "Yes". (To indicate that you can perform the action without difficulty).
 - C). "Yes, but with help." (If you have difficulty doing it yourself, but you can do it with the help of another person).
 - D) "No". (If you think, you do not know how to carry out the proposed action)
- For option a) "Yes and I would be able to explain," a numeric value of four was assigned,
for b) "Yes" was assigned three,
 c) "Yes, but with help" value 2 and
 d) "No" value 1.

According to the score obtained by the students, the categories of their competence level were created: Very Low, Low, Low Intermediate, High Intermediate and High, the way in which the classification was performed is the following:

Level	Minimum	Maximum
Very low	1.00	1.99
Low	2.00	2.50
Low intermediate	2.51	2.99
High intermediate	3.00	3.50
High	3.51	4.00

Table 1. Determination of levels.

In each case, the scores were considered to get an average of the score obtained in the five dimensions, and the, it was calculated to be able to locate them in one of the levels indicated in Table 1. The results are shown in the next section.

FINDINGS

Before starting with the analysis of results it is necessary to remember the scale of qualification for each question, where four could be obtained if the participant answered that he could carry out the activity and could explain it to another person and one if he did not know how to do it activity. Therefore, we will show scatterplots where students will be surveyed in each of the categories with grades 1 to 4 and finally, we will show the general results and the levels that they obtained. Let us start with the first dimension, which can be seen in Figure 1.

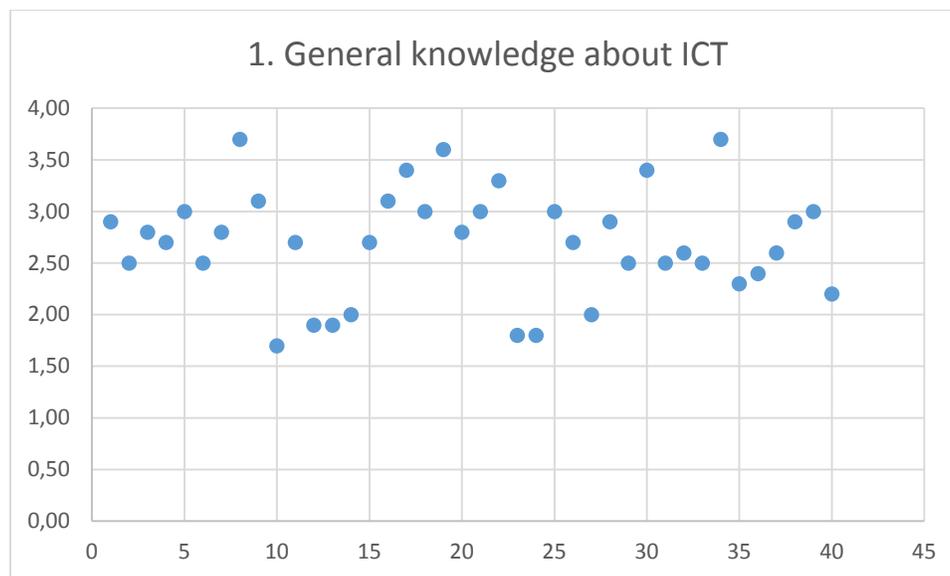

Figure 1. First dimension on basic digital skills.

As can be seen in Figure 1 on the general knowledge about ICT, there are students with very low grades, there are five students with scores below two, that is, with a Very Low level, and another 10 between 2 and 2.5 With low level. On the other hand, only three students are at a High level. In this dimension, the lowest rating was 1.70, the average 2.70 and the highest rating 3.70.

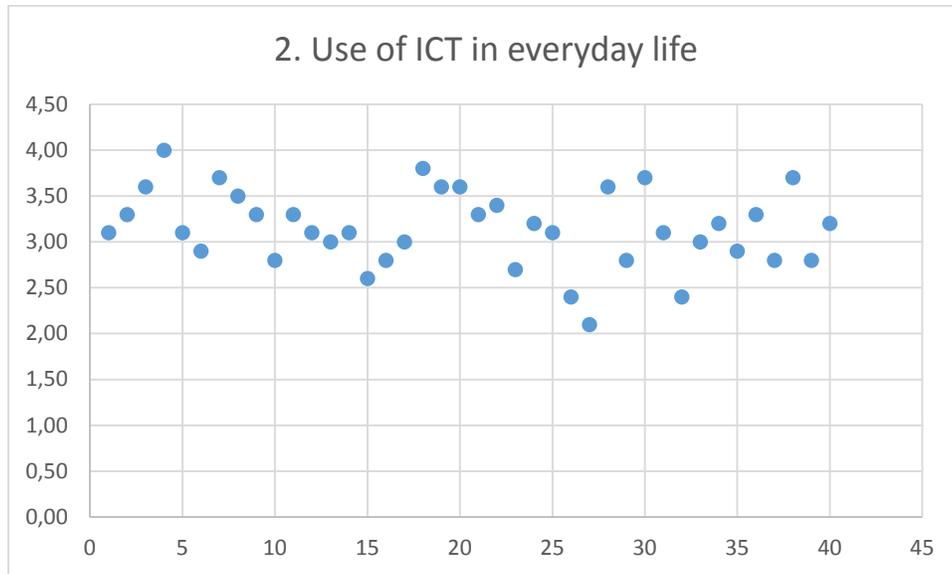

Figure 2. Second dimension on basic digital skills.

In the dimension of the use of ICT in daily life, the results are more concentrated, Figure 2 indicates that the results of the students are closer to the average. The minimum rating was 2.10 well above the minimum of the first category, and the average is 3.50. It is the time the highest rating was four. The results show that 75% are below average, 2.5% on average and 22.5% above average.

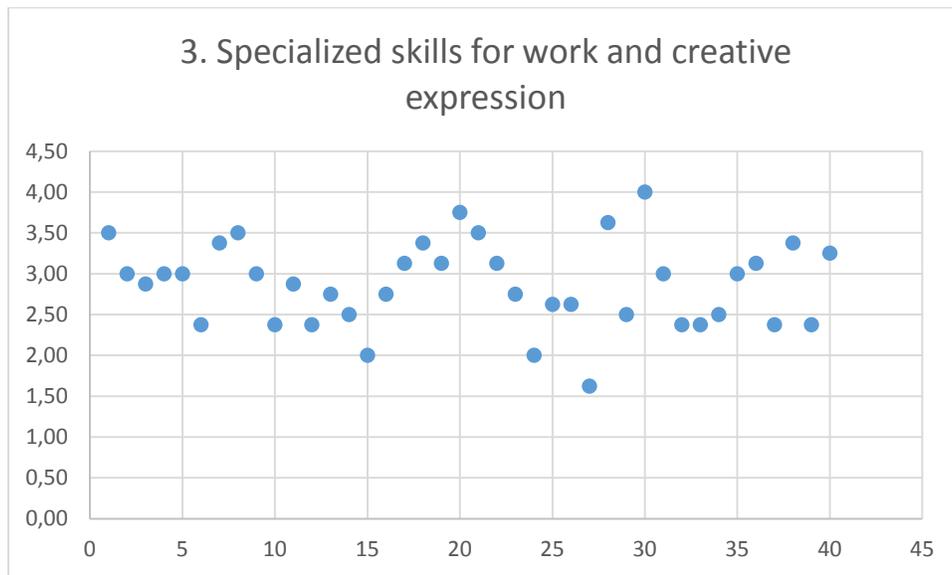

Figure 3. Third Dimension on Basic Digital Skills.

As for specialized skills for work, the highest score remains at 4, the lowest score falls much to 1.63 being the lowest of the analyzed dimensions and making the average also lower to 2.87 as seen in the Figure 3. The good news in this dimension is that 50% of students are above average, 5% on average and 45% below average.

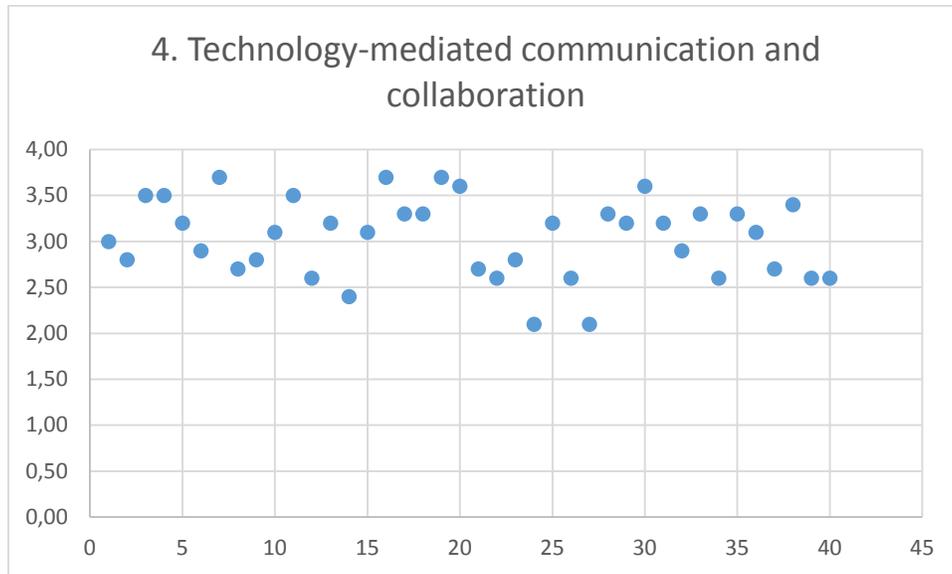

Figure 4. Fourth dimension on basic digital skills.

Like the dimension of ICT use in daily life, this dimension has very concentrated ratings as shown in Figure 4, although it does not have a grade of 4, the results are between 2.10 and 3.70, with an average of 3.04. It should be noted that the most frequent qualification is 2.60 with six students who obtained this qualification. Likewise, 55% of students were above average and 45% below average.

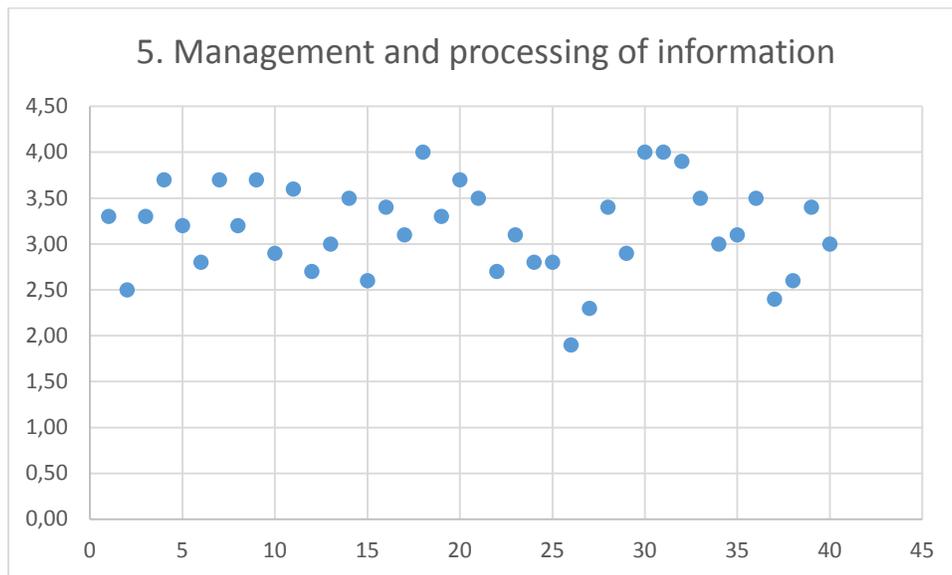

Figure 5. Fifth dimension on basic digital skills.

In this last dimension on information management and processing, Figure 5 shows that it is the first dimension where there is more than one student with 4 grades, with 3 students who obtain it. Regarding the major and minor qualifications, evidently the highest was four, while the lowest was 1.90 and the average 3.18, if we look at the results of the four previous dimensions we will see that this dimension has the highest average of the whole test Applied. As for the average, above average is 52.5% of students while 47.5% are below average.

To finalize this analysis of results, Graph 6 is presented with the general results of the students assigning the levels established in Table 1.

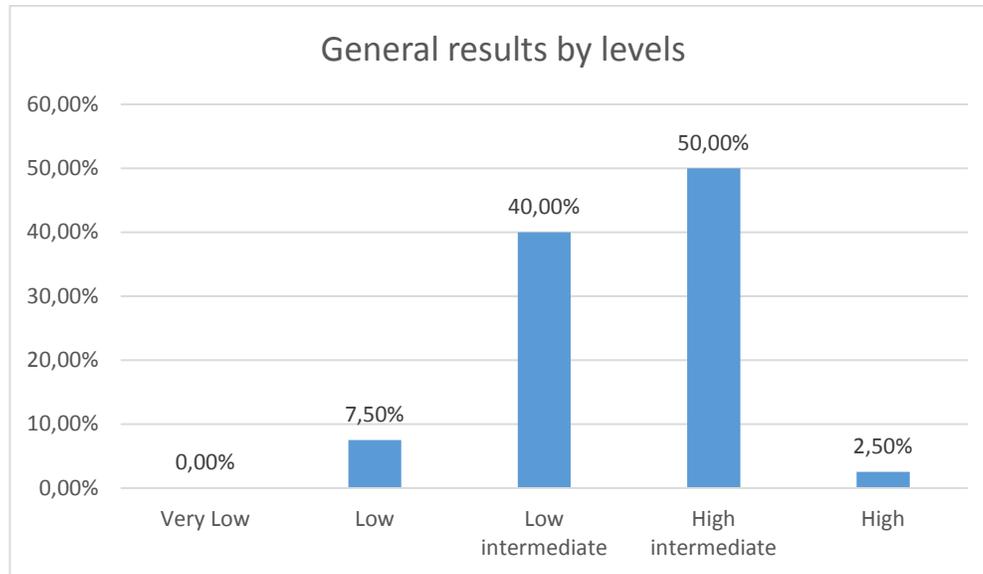

Figure 6. General results by levels.

Figure 6 clearly shows that the trend is toward an intermediate level, that is, from High Intermediate to Low Intermediate and then to Low. When this research was started it was hypothesized that students would be between Intermediate High and High, but this is not so.

CONCLUSIONS

As a first conclusion we have the dimension with the lowest qualification is the third "Skills specialized for work and creative expression" with 1.63, followed by the first dimension "General knowledge about ICT" with 1.70. The second conclusion is that the lowest average dimension is the first "General Knowledge about ICT" with 2.70, followed by the third dimension "Specialized skills for work and creative expression" with 2.87.

The third conclusion is taken from the previous two, the dimension where the students had the lowest results is the first "General knowledge about ICT" and the next low dimension is the third "Skills specialized for work and creative expression", This means that these two dimensions are the ones that must work to improve in the students.

The fourth conclusion refers to the highest averages, where the fifth dimension "Management and processing of information" with 3.18 and has the highest average followed by the second dimension "Use of ICT in everyday life" with 3.15.

As a fifth conclusion, the dimension in which students left the better is the fifth one because it has a higher average of 3.18 and above the average is 52.5% of the students while, while the second dimension "Use of ICT In everyday life" with 3.15 on average only has 22.5% above.

The sixth conclusion is that the students are at an intermediate level in terms of their basic digital competences, being expected to be at an Intermediate High and High level.

Finally a general conclusion, as this was a test of perception, and several studies indicate that students are optimistic as far as their abilities, it is possible to conclude that basic digital competences of the Chilean students of this university are lower than the ones they say the have. Being aware of the fact, the authors suggest developing an instrument that evaluates their basic digital competencies and confront their results with those presented here.

ABSTRACT

Nowadays, tri-lingualism strategy in the Republic of Kazakhstan generates a lot of new challenges, and, on the other hands, it provides us with a lot of innovative tools for multilingual studies. Thus, one of perspectives in linguistics as well as in philology students' training is the implementation of corpus-based approach in language study and research process.

Why is it necessary to apply corpus-based approach in the process of linguistic research in multi-lingual context? Firstly, such resources as Russian and British National Corpuses as well as Almaty Corpus of Kazakh Language represent an appropriate amount of information; so the study will become much more objective than a traditional one.

Secondly, the data represented in Corpuses are excerpted from various sources related to different periods of time and diverse stylistic characteristics (thus, Russian National Corpus deals with 283431966 entries covering the period of time from XVIII to XXI centuries). At the same time, the BNC site says that "the British National Corpus (BNC) was originally created by Oxford University press in the 1980s - early 1990s, and it contains 100 million words of texts from a wide range of genres (e.g. spoken, fiction, magazines, newspapers, and academic)" whereas Almaty Corpus of Kazakh Language should be treated nowadays rather as a pilot project than as a completed source. However, even at this stage of its functioning Almaty Corpus of Kazakh Language comprises more than 40 million entries. So, the comparative study of lexical phenomena on the basis of plenty of sources provided by language corpora should be construed as a new opportunity to reveal peculiarities of national world view represented in Kazakh, Russian and English languages.

Thirdly, linguistic corpora represent information concerning specific collocations in Kazakh, Russian and English languages. In our viewpoint, this characteristics of language corpora is of paramount importance for language study especially because of variability of contexts.

Keywords: tri-lingual study, British National Corpus, Russian National Corpus, Almaty Corpus of Kazakh Language, collocations

INTRODUCTION

In the frame of Tri-lingualism Policy in Kazakhstan which was proclaimed by our President, Kazakh language is used nowadays as a predominant language; the status of Russian language is specified as a tool of intercultural communication used by all ethnic groups in Kazakhstan whereas English language is considered as a means of international communication. So one of current trends in Kazakhstani linguistics is the comparative study of semantic phenomena represented in all aforementioned languages.

Why is it so important to study collocations? First of all, there is no doubt that collocations are unpredictable and specific in all languages; moreover, it is not an overstatement to say that collocations predetermine the specificity of national world view.

Why should we use corpus-based approach?

As it is stated before, Language Corpuses provide us with the appropriate amount of data, wide range of documents; also, they comprise wide representation of semantic information, combinability of the certain word as well as its grammatical and syntactic peculiarities. One of the main advantages of Language Corpuses is use of various sources containing certain collocations.

LITERATURE REVIEW

At present stage of language study, there are a lot of works based on corpus data and using corpus-based approach. Most of scholars argue that automation of information extraction expand horizons of semantic study

especially in collocation analysis and practical implementation of its process results. Thus, Riloff, E. & Shepherd, J. (1997) stated that “semantic information can be helpful in almost all aspects of natural language understanding, including word sense disambiguation, selectional restrictions, attachment decisions, and discourse processing. Semantic knowledge can add a great deal of power and accuracy to natural language processing systems. But semantic information is difficult to obtain”. At the same time, in his paper *A Corpus-Based Approach to Language Learning* (1993) Eric D. Brill said the following: “Part of a person’s knowledge of language consists of knowing how to assign an abstract structural description to sentences. Included in this knowledge is an awareness of the word and phrase classes of a language, the members of each class, and the relationships that hold between classes”. Also, in accordance with his position, “simple semantic template-matching approach would fail on many complex sentences, where no keyword matching can uncover the relationships between the words in the sentence”.

Works by Nesselhauf, N. (2004), (2005) are also dedicated to practical implication of corpus-based approach in semantic studies. Thus, in her paper *Collocations in a Learner Corpus (Studies in Corpus Linguistics)* (2005) she proposed the following definition of collocation as bilateral phenomenon correlated both with semantics and syntax: “Collocations, i.e. arbitrarily restricted lexeme combinations such as make a decision or fully aware, are one type of a group of expressions whose importance in language has been increasingly recognized in recent years. This group of expressions has been variously called prefabricated units, prefabs, phraseological units, (lexical) chunks, multi-word units, or formulaic sequences. 1 They are made up of more than one word and are lexically and/or syntactically fixed to a certain degree. Following a period in which, largely due to the wide influence of generative grammar, prefabricated units were considered peripheral in language, it is today widely assumed that their number is vast and that they play a major role in language processing and use”.

Besides, Nesselhauf, N. (2004) highlighted some methodological principles of corpus-based approach in study collocations, e.g.

- “- If you use different corpora for an analysis, find out to what degree they are comparable (corpus size, variety, time span covered, text types) etc.;
- You need to make sure that your search (or searches) actually finds all occurrences of the language item in question;
- After performing a search with corpus software, you have to check whether all results are actually relevant for the investigation in question (and if not which ones have to be excluded);
- You need to check how the item in question is distributed in the corpus (e.g. whether it only occurs in certain periods / text types etc.); it is also relevant from how many different texts (or text categories) the solutions come from (i.e. if an item is very frequent, but occurs only in one or two texts, this does not mean that it is frequent in the variety / text type etc. investigated)”.

Therefore corpus-based approach is considered to be one of the fruitful ways of semantic studies including such aspect as study collocations.

RESEARCH METHODOLOGY

In our research we used such methods as semantic analysis and comparative analysis of Corpus data.

Passages containing the appropriate lexemes were extracted from Russian National Corpus (RNC), British National Corpus (BNC) and Almaty Corpus of Kazakh Language in order to

- Analyze their semantic structure;
- Find the most typical contextual realizations;
- Find various cases of correspondence and discrepancies between Russian, Kazakh and English words *snow /sneg (rus.)/kar (kaz) and rain/dozhd (rus.)/zhanbyr (kaz)*

The process of study collocations in FLT involved such stages as

- comprehension/reasoning;
- reflection on the way of reality representation;
- active use of collocations in the process of communication.

LIMITATIONS

As it was stated before, the Almaty Corpus of Kazakh Language is still in the planning stage; so there are some discrepancies in the amount of documents (entries) between it and the British National Corpus, as well as between the Almaty Corpus of Kazakh Language and the Russian National Corpus. Consequently, we are able to find some general trends only; at the same time many details are probably lost on because of its incompleteness.

The second type of limitations is related to different representation of lexical material in Corpora and varied

tools used in Corpora system; thus, there is special section for collocations in the British National Corpus whereas in the Russian National Corpus as well as in the Almaty Corpus of Kazakh Language it is necessary to set certain target in the process of search.

The screenshot displays the Almaty Corpus of Kazakh website. The main content area shows search results for the word "қар" (kar). The results are listed as follows:

- Шығармалар** Мұхтар Әуезов 1925–1929. [Расширить контекст](#)
Үшіншісін **қар** түскеннен кейін ауыл үстінен алып еді.
- Соңғы парыз** Әбдіжәмит Нұрпейісов 1999. [Расширить контекст](#)
Сосын сырт айнала бере қолын сілтеп: «Ит білсін бе, сен туған күні жағаға алғаш **қар** жауған еді », – деген-ді.
- Ақбілек** Жүсіпбек Аймауытов 1927. [Расширить контекст](#)
Ауыл-үйден ұят емес пе?– деп келе жатқанда Өрік кимелеп: – Тәйт әрі, албасты қатын **қар** !
- Соңғы парыз** Әбдіжәмит Нұрпейісов 1999. [Расширить контекст](#)
Итырзынмен өткен өмір сияқты мына із де мықтағанда бүгін, не ертең жауған бір **қар** , бір үрлеген боранмен кемелді де қалады.

The sidebar on the right contains search options: "форма" (form), "лемма" (lemma), and "перевод" (translation). It also includes a search bar, a "Дополнительно" (Additional) dropdown, and a "Расстояние до следующего слова" (Distance to the next word) section with "Искать" (Search) and "Очистить" (Clear) buttons. At the bottom, there are links for "Подкорпус" (Subcorpus), "Настройки выдачи" (Output settings), "Поиск в новом окне" (Search in new window), and "Сообщить об ошибке" (Report error).

THE STUDY

As it was stated by Evans & Green (2006) “cognitivists claim that the meanings associated with linguistic units such as words, for example, form only a subset of possible concepts. After all, we have many more thoughts, ideas and feelings than we can conventionally encode in language”.

We chose collocations with *snow* /*sneg* (rus.)/*kar* (kaz) and *rain*/*dozhd* (rus.)/*zhanbyr* (kaz) as a language material under consideration. First of all, those words are correlated with such main part of world view as nature and natural phenomena. The second factor predetermining our choice is frequency of use which is also represented in Corpora data. Thus, there are 6214 contexts with *rain* in the British National Corpus (BNC); in the Russian National Corpus (RNC) the amount of documents containing the corresponding word, is 4404 (14418 entries) whereas 870 entries are represented in the Almaty Corpus of Kazakh Language (ACKL). There are wide range of contexts with *snow* and its equivalents in Russian and Kazakh languages in all three Corpora; thus, in BNC there are 3416 context containing *snow*; in RNC 4908 documents, or 19076 entries with *snow-sneg* are represented; in ACKL the amount of entries with *snow-kar* is 273.

As we can see, all corresponding words in three languages related to natural phenomena are frequently used in contexts included in BNC, RNC and ACKL.

One of the most typical collocations with rain in English is *heavy* (*torrential*) rain. In BNC we found 224 cases with *heavy* and 103 collocations with *torrential*, e.g. *He had paid three pence at the booking office for his ticket and, after waiting ten minutes or so on the cold and draughty platform for the next London-bound train, he had arrived at Christchurch some ten minutes later to run through torrential rain toward the group of cottages which flanked the open park in the town centre(Man at the sharp end. Kilby, M. Lewes, East Sussex: The Book Guild Ltd, 1991); Gloucestershire Ambulance Service has begun its own investigation, but points out that its drivers are trained to the highest standards and are very rarely involved in accidents. The collision occurred at about 9.15 this morning, when there was torrential rain across much of the Cotswolds. There were 6 accidents in Gloucestershire in just one hour (Central television news scripts); The climatic perturbations known as alminio seemed to occur every two to ten years. The nineteen eighty two to three event was one of the most severe on record and its affects were felt around the world. Large parts of Africa, India and Australia were ravished by drought (pause) while the west coast of the Americas was lashed by storms and torrential rain. The nineteen eighty two to three event was also the most comprehensibly observed so far.*

RNC and ACKL represent (in both cases) one word instead of collocation – the word which is a synonym for the English set expression: *liven’* in Russian and *zhauyn/noser* in Kazakh. Both words can be treated as wide-spread ones, see:

Вечер моего дипломного концерта выдался душевный, хотя над Москвой и прогремела гроза, прошёл ливень. [И. К. Архипова. *Музыка жизни* (1996) [омонимия снята] ————

As it is clearly represented on the picture, there are 791 document (1288 entries) for *heavy rain* analogue in RNC. On the other hand, on the basis of the appropriate amount of contexts it is necessary to underline that it does not coincide in meaning with the Kazakh version: in Kazakh language, the corresponding key concept was *to go* whereas in Russian it is much closer to *pour*.

Comparing both Russian and Kazakh words with the English collocation, we can also find out that figurative meaning of *heavy* represented in collocation *heavy rain*, does not correspond to Russian and Kazakh analogues; in Kazakh/Russian mental map, *heavy* goes together with weight and has no correspondence with rain. Besides that, Corpus data proves grammatical disparity of collocations in Kazakh/Russian and English. Thus, in English – because of conversion – it is possible to use *rain* (as well as *snow*) as a verb; on the contrary, in Kazakh and Russian languages conversion cannot be treated as a predominant way of word formation, so there are collocations in Kazakh and Russian corresponding to one word in English. In such cases, we deal with specific kind of asymmetry presupposed by both peculiarities of grammar and national world view.

FINDINGS

In the process of study, the most important goals were to find out

- typical cases of corresponding collocations is English, Russian and Kazakh languages, stipulating similar encoding of cognitive and cultural information and simplifying study of Russian/English language for Kazakh

people and vice versa;

- typical cases of discrepancy presupposed by

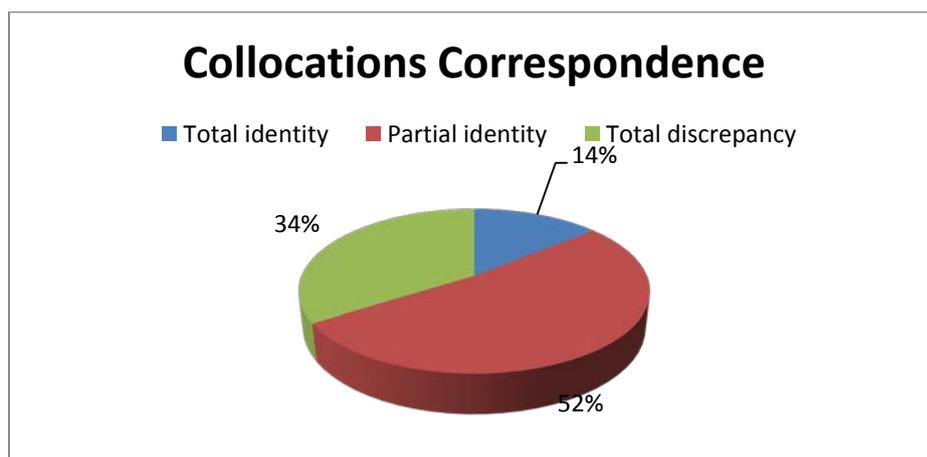

(a) grammatical differences;

(b) semantic and pragmatic differences.

It is obvious that all kinds of discrepancies should be considered as hindrances in the process of language teaching because they symbolize both cultural and mental differences.

As it is represented on the diagram below, partial correspondence overwhelms such cases as total correspondence and complete discordance in the sphere of English/Russian/Kazakh collocations related to natural phenomena *snow* and *rain*:

Figure 6. Snow/rain collocation correspondence in English, Russian and Kazakh languages

The diagram done on the basis of Language Corpora data shows the predominance of partial identity in the sphere of collocations (52%); 34% of total discrepancy cases represent inter-language asymmetry in case of collocations with snow and rain. So, it is possible to state that the results of study represent some general trends in English/Kazakh/ Russian collocation correspondence; all those facts should be taken into account while study languages in the frame of tri-lingualism strategy.

CONCLUSIONS

To sum up, comparative study of Language Corpora data is one of the ways to overcome hindrances in the process of intercultural communication: while studying great amount of language facts represented in Corpora we can understand the peculiarities of national world view. As it is stated before, Language Corpora provide us with the appropriate amount of data, statistics, wide range of documents; also, they comprise wide representation of semantic information, combinability of the certain word as well as its grammatical and syntactic peculiarities. One of the main advantages of Language Corpora is use of various sources containing certain collocations.

Also, Corpora provide us with the system of parameters such as frequency, historical evolution of the certain word and its use in contexts related to various periods of time; RNC has also such tools as year-by-year representation and distribution of the texts in accordance with their style and authors. It is necessary to point out that in case of standardized tool system researches on the basis of Language Corpora will be much more productive than it takes place at contemporary stage of Corpora implementation.

ABSTRACT

This paper shows results and conclusions on the training of university teachers and provides proposals for improvement. The European Higher Education Area has meant a change in the university teaching, and thus the training of university teachers is an issue that needs to be addressed. The aim of this study was to contrast the differences and similarities of the training actions of the university teaching training in Spain. The methodology was based on a content analysis on the training programmes of more than twenty universities located in six different districts. The results show common lines in the training of university teachers, but the need to carry out training actions for specific profiles, i.e. for managers, was found. In the conclusions section, the implications for practice are discussed.

Keywords: university teaching; continuous training; documental analysis; teacher training; training needs.

INTRODUCTION

The challenge in training Researching Professors (hereinafter RPs) in the context of European convergence consists in the fact that training activities should be set out by respecting and applying the methods and activities that the lecturers should use as professionals. There must be a coherence between the teaching model that is being preached and the one that lecturers learn (De la Calle Velasco, 2004). The basic pillars of a Higher Education Institution lecturer, following the set legal regulations are determined by research, management and teaching. Nonetheless, the main aim of training university lecturers is the need of improving the lecturer's teaching method (Cordero, et al. 2014; Lacunza, 2002; Valcárcel, 2005; Zabalza 2002; Zabalza, 2016). All these cases require a training procedure that professionally prepares the lecturer. An epistemological restructuring of university teaching is necessary as well as looking into the organisational area of the institution, reason whereby the functioning of the Departments and Schools needs to be refocused (Imbernón, 2012). Depending on the organisational work culture, in other words, its decision making and ways of proceeding, this will refer to its organisational development and, of course, its social image. This change must be led by prepared managers (Hogg & Terry, 2000; Van Dick *et al.*, 2004; Rodríguez & Artiles, 2017). Therefore, the university manager must be a trained leader. Within this triple dimension of the educator as a manager, lecturer and researcher, depending on the type of lecturer, there are different points of view in order to understand the institution.

The perceived image of a lecturer is usually an inherited image. By interiorising a model of how to be a lecturer, the trend is to teach students by following, better or worse, the model of other lecturers taught during one's own experience as a student (Prieto, 2008). This learnt role may interfere in the teaching and learning process that takes place in the classroom. The identity of the university lecturer is associated to the ways in which education is perceived, as it is built on a constant interaction between what is individual and in group, and focuses on subjective and individual processes (Sanchez, 2014).

The training plans should also take into account the different profiles of lecturers and the years they have been teaching for. It would seem that the difference between the novel and expert lecturer is that new lecturers, when they begin, tend to focus more on the contents that they must teach. Their main worry is to appear an expert in the contents being taught, answer all questions asked by the students, and have knowledge about aspects that go

beyond the contents (Gros & Romaña, 2004). New lecturers usually worry about not being able to answer a student, answering vaguely or being forced to acknowledge their ignorance. Insecure beginners imagine that these answers are evasive, even though this is untrue, as they are transmitting an important message regarding the authentic learning process (Knight, 2005).

University Teacher Training (hereinafter UTT) must be a continuous and flexible process. In addition, it should take collaboration with the business and socio-political world into consideration where such action is required (Aguilera, *et al.*, 2010; Rodríguez, 1999). Likewise, a set of requirements must be met in order to optimise the results: it must promote reflexion on teaching, facilitate the exchange of experiences among peers, as this would help to train managers, join the process to an innovation project and train by means of group collaboration (Imbernón, 2012). In any case, it must be contextualised, near to the diverse disciplinary fields, focused toward innovation and teaching. This should be carried out bearing in mind at all times that the lecturer's educational task is to provoke, facilitate, guide, and help the student achieve the knowledge, abilities, emotions, aptitudes and values required (Gomez, 2010).

With regard to teacher training, it must be taken into account that the demands of a university professor demonstrate that lecturers from the Social Sciences, Politics, Behaviour and Education areas, as well as those from the Economical Sciences, Business Studies, Law fields, usually collaborate and require more training than those from the fields of Mathematics, Physics, Chemistry and Engineering (García *et al.*, 2003). This means that training and the implication of the lecturers may be determined by their field of knowledge. In order to provide an answer to these groups, various training models need to be worked on. In other words, if there are different profiles among the lecturers, there may be distinctive features regarding the learning model (García, 2000; Camarero *et al.*, 2000). Thus, this process may adopt a variety of training procedures: common training during the doctorate; modular training through plans which reply to the demands of the lecturers; or by means of a master or expertise course (Imbernon, 2012).

THE STUDY

Aim. The main aim of this paper is the analysis of the reality of the training plans and actions from a set of Spanish public universities in order to establish the common policies of these institutions. Further to this, the focus and theme of the training, the methodology, profiles and requirements of RPs to access training will be laid out together with emerging proposals of triangulation and debate with the theoretical framework.

METHOD

The analysis of the complex situation of university teacher-training plans and actions in the frame of the European Higher Education Area (EHEA) requires the application of a qualitative methodology. This perspective makes it easier to fully understand the reality, beyond the description (Sandin, 2003). This method made it possible to contrast different training focuses and provided a global view wherefrom aspects that had not previously been contemplated emerged (Taylor & Bodgan, 1984).

The procedure that has been followed is called content analysis (Bardin, 1996; Mayring, 2000). This analysis technique provides an objective and systematic comprehension of a text set out in the communications in order to thoroughly study and understand that reality. The article is based on the analysis of the existent training plans at a set of Spanish public universities.

Sample

The Universities included in the study have been selected by means of a sampling that would provide a data overload depending on the links that a more accessible text may have (Mayan, 2001; Patton, 1990). Overall, 24 public universities from 6 different regions have been analysed, which are distributed as follows: Madrid (6), Basque Country (1), Galicia (3), Andalusia (10), Canary Islands (2), Valencia (2). Their explored web pages, transparency of data and quality platforms are considered, for this purpose, the virtual universe of the sample.

Instrument

A protocol to systematically collect data was designed, based on the theoretical references and the existent training plans (Bardin, 1996). These contemplated: the university to be studied, the thematic features of the type of training, the general and specific addressees of the contents, the target field (teaching, research or management), and the specific or centralised nature of the training depending on who was offering it, the head department of the university or a specific area or department.

Procedure and data analysis

In general, it must be highlighted that two different parts have been identified. The first part identifies the authors and research on the object of the study. To this regard, the classification criteria of the thematic categories carried out was followed (Bardin, 1996); participants and access requirements to the training; how the training was oriented (lecturer, management and research competencies); and other training features of interest such as the field of knowledge and title offered, modalities, organiser. The second part consisted in accessing the reality of the different Spanish universities and carry out a documental analysis on the aforementioned categories.

RESULTS

Due to the high volume of data, a synthesis of the results is offered of the different universities divided by Region or Districts.

Andalusia

Quality teaching and the professional development of university professors are some of the aspects included within the so-called Quality of Education. This is highlighted by both the European Association for Quality Assurance in Higher Education (ENQA) and the European Union with the H2020. The region of Andalusia insists on these factors and they are provided within its regional regulations, the Legislative Decree 1/2013 of the 8th of January, on the approval of the Consolidated Text of the Andalusian Universities Law, which refers to the permanent training of lecturers as well as the direct competencies of the universities.

At the *University of Almeria (UAL)*, the teacher training plans are annual. The contents of the Teacher Training Plan focus on the acquisition of a second language, in-depth study of research-related aspects, knowledge for coordination and tutorial action or training in directive capacities and university management, among others. Furthermore, it offer a training programme for new lecturers.

The Teacher Training Plan of the *University of Cadiz (UCA)* is annual. The contents are general and focus on covering the needs of the areas of teaching, research and management, as well as offering Language Training.

The *University of Cordoba (UCO)* has a multi-year Teacher Training plan, the latest corresponding to academic year 2015-2018. The Plan is structured into three types of training. There is an initial training for new lecturers who have been teaching for less than five years; a permanent training for experienced professors in order to establish teaching competencies and an efficient use of the methodology; and a specific further teacher-training course at centres.

The *University of Granada (UGR)* has developed a biennial Teacher Training Plan. The current plan available corresponds to academic year 2016-2018 (Plan FIDO UGR 2016-2018). UGR's Training Plan is divided into levels and modalities: basic actions of teacher training and advanced actions of education innovation. The training and innovation offer provided in the FIDO UGR Plan includes various formats and takes into consideration an array of programmes with the participation of expert trainers from the UGR and external collaborators with an interesting and extensive history.

The contents of the Continuous Training Plan of the *University of Huelva (UHU)* are divided into contents for the improvement of the didactic methodology, digital contents, further training for research and university management training. The training actions are made up of different modalities: courses, workshops, seminars, round tables, symposiums and debates that may be presented in different formats (taught, online or hybrid).

The *International University of Andalusia (UNIA)* has a yearly Teacher Training Plan called the Education and Digital Innovation Plan. The training lines and actions focus on E-learning and Educational Innovation training actions on the online platform and other digital tools. In addition, training is promoted with open self-training contents (taken from lecturer courses).

The Teacher Training Programme offered by the *University of Jaen (UJA)* focuses on developing actions drawn up to foment innovation, updating and renovating the lecturers education methodologies, as well as coordinating and promoting actions and activities for teacher training. The programme is coordinated by the Secretary of Education and Teacher Innovation. Assessment is carried out through satisfaction surveys.

The *Univerisy of Malaga (UMA)* has a yearly Teacher Training Plan. The contents of this training plan are based on the learning of languages, methodology, digital competencies and research training. The Training Plan is offered by the Vice-chancellor of Lecturers, and is multi-year, the current plan belonging to the academic year 2017-2019.

Regarding the *University of Seville (US)*, the Teacher Training Plan is carried out by means of the Integral Plan for excellent professors. Its aim is to achieve educational excellence in innovation, further training and the assessment of competencies for the development of the professional activity of the RP. It takes place annually. The proposal of Training Plan of the University of Seville is organised by means of its own teacher development plan, called the Integral Plan for Excellent Professors and is carried out by calls (it is currently on its 3rd edition). Training is divided into different phases so that it is easier for the lecturer to make the most of, follow and remain in the teacher improvement programmes. All RPs may participate with a current contract for teaching official university degrees which are taught with priority at its centres, and at centres affiliated to the University of Seville. This Teaching Plan is coordinated by the Vice-chancellor for Academic Affairs.

Canary Islands

Since 2003, the *University of La Laguna (ULL)* has organised training activities in order to support university professors with the education improvements and innovations contemplated in the European Convergence Process. To date, there have been 12 teacher-training programmes, each for an academic year (since 2004/2005 to 2015/2016). Each academic year analyses the training needs of the university professors by means of a survey with 17 questions, organised into 9 main areas or modules: Information Technologies and Communication, Education Methodology, Languages, Research, Management, Social and environmental sustainability, preferences related to hours, turns, seasons and a free question on individual proposals. This training is organised by the Vice-chancellor of Education.

With regard to the *University of Las Palmas de Gran Canaria (ULPGC)*, and in accordance with the document created on Teacher Training for the year 2008/2009, a plan emerges as the answer to the situation of lecturer and research training at the ULPGC. As there was no Training Plan for RPs until that year that organised the different courses offered by the Departments and Centres, a training project was created to improve the ULPGC's offer. This plan put forward an Initial Training programme for new lecturers with a psycho-educational, instrumental and management nature, and oriented toward the improvement of the teaching quality of lecturers with less than three years of experience; a Basic Training Programme (EHEA, ITCs and Psycho-education); a teaching, research, and management-direction and language capabilities training course. The Plan is completed with support from Specific Courses carried out by lecturers from outside the ULPGC. At the moment, the Teacher Training Plan is organised by the Vice-chancellor of Titles and Permanent Training.

Galicia

The *University of Santiago de Compostela* has a general training offer, which includes all the lecturers at the institution with matters related, among others, to the planning of the teaching and learning process, assessment, tutoring, attention to diversity in the classroom, professional development and ITCs applied to university teaching.

The *University of Vigo* has a similar programme, where training is also aimed at all the lecturers generally, although it scopes more active methodologies related to cooperative learning, teaching competencies, language development and the *Flipped Classroom* model for university education.

Regarding the *University of La Coruña*, it has two different publics divided by two training offers: the Teaching Support Plan (TSP), which is a general training course, and the Initial Training Plan (ITP) for lecturers with under four years of experience.

Valencia

At the *University of Valencia*, each term the *Servei de Formació Permanent i Innovació Educativa* (Permanent Training and Educational Innovation Service) makes a calling for the Services and Administration Personnel (SAP) and Lecturing and Research Personnel (LRP) of the university. With regard to the LRP, it is organised as follows:

- Continuous training
- Own offer
- Training upon demand. This type of training is based on the organisation of activities starting from specific training petitions from the personnel (SAP and LRP) of the different campus, centres, departments, institutes, services and/or units of the University of Valencia.

The *University of Alicante* is in the process of updating the design of the 2018-2020 academic year. The actions currently in place focus on the Research of University Teaching, the Tutorial Action Programme and the general Teacher Training Programme.

Madrid

The training of RPs is analysed for the following universities: Complutense, Autonoma, Politecnica, the University of Alcalá, Carlos III, and Rey Juan Carlos. In some cases, Teacher Training directly depends of a Vice-chancellor while in other instances it is provided by the Institute of Education Sciences (ICE).

At the *Complutense de Madrid University (UCM)* and the *Autonoma de Madrid University (UAM)*, training focuses on the internationalisation of the education and training in information technology. These universities have Teacher Training Programmes aimed at all professors and their target is to work on the general competencies of the professors.

The *Polytechnic University of Madrid (UPM)* organises its training plans from the ICE (Institute of Education Sciences), an Initial Training (aimed at young lecturers who are starting out in teaching) and a Continuous training (with short-term activities such as seminars, workshops, congresses, round tables on teaching matters, very occasional, or contents requested by centres, departments or lecturers). These initiatives have actions aimed at increasing the quality of teaching by means of training and continuous further training of its professors, educational research in different fields, technical-educational assessment, innovation in methodologies and the introduction of technologies in the learning process, among other activities.

Likewise, the *University of Alcalá* presents an initial training course for lecturers that is aimed at first year UTT interns and focuses on aspects related to university teaching and the context.

The *University of Carlos III* promotes the continuous training of its professors as well as education innovation. In the recent years, it has offered many MOOCs (Massive Open Online Courses) on international platforms such as edX and miriadaX. It also uses this methodology to improve the quality of taught education by means of SPOCs (Small Private Online Courses).

The Digital Education Innovation Centre: URJC online, is responsible for the education training at the *University of Rey Juan Carlos*. This centre is a university service and abides by the University's Statutes. It provides support to professors and research by using human and material resources. It focuses on research and innovation in E-Learning and provides technical-educational services aimed at covering the needs of lecturers and training in educational technology.

The Basque Country

The University of the Basque Country has a variety of training offers, depending on the addressees and the actions, and each has a different name: *FOPU*, *ERAGIN*, *IRAKER* and *AKADEME*. The Teacher Training for University Professors (FOPU) is a training programme aimed at the lecturers of the university, and it scopes general contents regarding teaching, research and the professional development of lecturers. The Professor Training Programme in Active Educational Methodologies (ERAGIN) is aimed at full time lecturers and focuses on achieving capabilities related to learning through practise, stepping away from the traditional theoretical lecturer. The Professor Academic Competencies Development Programme (IRAKER) is targeted at doctorate professors in process of accreditation, and looks at the planning of lectures and basic research aspects. The Leadership Programme for academics (AKADEME) is oriented towards professors who are in the process of occupying a management position or have recently taken one up. The aim of this training is to improve leadership capabilities, communication and the management of conflicts. Training is carried out in taught sessions that analyse different cases and with coaching techniques. Its development abides by regulations and the Plan is implemented and managed by the Managers, through the Vice-managers of Personnel and its Cabinet of Studies, Planning and Training.

CONCLUSIONS

Having analysed the training actions at the above-described universities, there is an enormous worry regarding the improvement of university teaching by means of providing the lecturer the most appropriate tools to carry out its tasks.

It is impossible to find models or sole approaches of UTT, although the existence of national and regional systemic approaches could be of interest, as they generate a global framework whereby the policies are developed (Valcarcel, 2005; Del Valle, 2009; Aramburuzabala *et al.*, 2013). Nonetheless, the different university training plans that have been presented herein also have in common basic structuring aspects, with contents focused toward an improvement of the educational methodology, the development of the base of the teaching profession, instrumental contents, the development of research and the development of university management. There are cases where the training programmes have a didactic approach that continues to position the professor

as a technician (Chocarro *et al.*, 2001), instead of reflexing on the current demands of the EHEA, which focuses on the learning process of the students.

With regard to the focus and contents of the training courses, it has been found that there is a diversity of approaches depending on the nature of each of the universities. However, there are general approaches based on methodology, aimed at improving the teaching and the use of resources. Another aspect common to most of the training plans is the further training in languages, something that is necessary due to the research profile of the RP and the need of attracting resources and adapting to the diversity of students that may come from throughout the European Higher Education Area. Many universities, such as that of the Basque Country or the University of Las Palmas de Gran Canarias offer courses aim at the knowledge of accreditation possibilities depending on the different figures that are provided in the legislation and the accreditation model of the Spanish National Agency for the Evaluation of Quality and Accreditation (ANECA). Most of these plans include further training courses on methodology based on ITCs, currently known as LKTs (Learning and Knowledge Technologies), and focusing the methodology towards an active participation of the students.

This diversity of focuses is in line with the approaches of Garcia & Maquilon (2010) and Torra *et al.* (2002) who identify seven competencies as the most recurrent in teacher training: interpersonal, methodological, communicational, planning and management of teaching, team working and innovation. To this regard, there is a general coincidence that the training described responds to this type of competencies. Hence, it can be understood that the competence profile should go beyond the micro-context of the classroom and into the institutional context by means of the management and/or organisation of events, and the social context through transfer.

It would appear that training in aspects related to the tutoring of a student is not significant in the training plans. It is no doubt reduced to the academic dimension and the improvement of the learning process in the context of a course or module. Occasionally, it is considered necessary for support in the procedures for defining coherent training itineraries with the academic and professional development interests. There is special interest regarding the Personal Learning Environments to optimise the educational process. Furthermore, there is a need of orienting the training process for university lecturers in this direction, as it would be an advantage for their professional practise and for the results of students (Lopez *et al.*, 2017).

Regarding the participants and requirements, it can be stated that the teacher profile of the courses and actions of the training plans include all RP categories. Training focused on experience is proposed, carrying out training proposal linked to the years of teaching in intervals, in most cases below or equal to five years of teaching experience. In other cases, the profile of the participants is limited to the functions that the university develops. This is the case of managers who may attend further training courses in order to optimise their time while occupying this unipersonal position, although this type of training is limited.

Training for university management is carried out at few Spanish universities. Those responsible for training do not realised the need of training university staff at all levels. There are numerous conflicts in higher institutions and the difficulties and inconveniences that their managers need to overcome in order to achieve a certain objective. These limitations, and their necessary training, are organised around the decision making carried out from the different levels of the university; the procedures required for the management; the lack of legal support to staff members; the non-acceptance of shared targets by the members or management teams; and the organisation of the time dedicated to management tasks (Rodriguez & Artiles, 2016). The training must contemplate actions oriented towards the management of the higher institution, as this would lead to an improvement of the current management processes. Managers are claiming more training, especially in terms of solving conflicts, the attraction of resources and leadership in times of change. Hence, the need of viewing certain training actions in the training plan of the University, aimed at heads of Departments, Deans, Secretaries, Vice-chancellors, Vice-deans, etc., as well as all interested lecturers who may become part of the managing team at some time.

The modalities marked out for the development of the training actions in most of the cases analysed are courses, seminars and workshops, and are carried out in various formats (taught, online or hybrid). Nonetheless, whether the use of these modalities will improve teaching is a matter that should be reflected upon (Rodriguez, 2003). In definite, training actions present a diverse existential prescriptive orientation, as well as the ways of organising the educational development of university lecturers, with short-length training actions, coinciding with Feixas *et al.* (2003).

In general, the petitions of university lecturers are not taken into account per field of knowledge. It is not considered that the training petitions and implications of the lecturers may be determined by the belonging to a field of knowledge as proposed in the research carried out by Aciego *et al.* (2003). Moreover, there is no distinction, in general, between in design of the training and the learning context which may vary with the genre and degree, according to suggestions put forward by Suarez *et al.*, (2000). The location where the university lecturer's training is designed and carried out is still the Institutes of Educational Sciences, Vice-chancellors who have taken on these responsibilities and the Units of Teaching Innovation or Training and Assessment.

With regard to the limitations, it must be taken into account that the results put forward in this paper and the conclusions that have been reached, although based on approaches backed by the studied scientific literature, are only a fragment of the reality. The conclusions of this study answer the training needs of lecturers of higher institutions; nonetheless, care must be taken when extrapolating the totality of the results to all centres. For this reason, the external validity of this research paper may only be generalised to contexts similar to those studied herein.

On the other hand, although this paper analyses many Universities and Spanish regions, this paper will be enriched with the analysis of other institutions in order to favour a general framework with regard to the training of university lecturers in the frame of the EHEA. In addition, only fragment of Spanish public universities have been analysed, however it is considered of interest to learn more about the training plans offered in private institutions.

SURİYE İÇ SAVAŞIYLA BİRLİKTE TÜRKİYE'YE GÖÇ EDEN SURİYELİLERİN TÜRKİYE'DEKİ EĞİTİM DURUMLARI VE SAVAŞIN BAŞLANGICINDAN GÜNÜMÜZE SURİYELİLERE TÜRKÇE ÖĞRETİMİ

Murat KILIÇ
mkilic@gantep.edu.tr

1999-2012 yılları arası (13 yıl) Gaziantep Üniversitesi ile Halep Üniversitesi arasındaki işbirliği protokolü çerçevesinde Halep Üniversitesi bünyesinde açılan Türk Dili Öğretimi Merkezinde Türkçe öğretimi görevinde bulundum. Günümüze kadar da Suriyelilerin eğitimiyle ilgili (toplam 18 yıl) çalışmalarımız, onlarla olan iç içeliğimiz devam etmektedir.

Bu sunumumuzda; Mart 2011'de başlayan ve 6 yıldır devam Suriye iç savaşından beri, Türkiye'deki Suriyelilerin eğitim durumları, devletimizin kurumlarının bu süre zarfında değişik eğitim kademelerindeki Suriyeliler için yaptıkları, Türkçe öğrenimleriyle ilgili yapılan çalışmalar hakkında bilgi vereceğim.

Bugün yarın, 3 ayda, 6 ayda, 1 yılda vb. bitecek diye baktığımız ama 6 yıldır devam eden ve ne zaman kesin biteceği belli olmayan Suriye savaşı; Türkiye'deki Suriyelilerin eğitimleri, özellikle "Suriyelilere Türkçe Öğretimi" konusunda geçici değil kalıcı ve sürdürülebilir çözümlerle yaklaşılması gereğini ortaya koymuştur.

Kamplarda ve kamp dışında yaşayan 3.000.000'a yakın Suriyelilerinin İlkokul, ortaokul, lise ve üniversite eğitimlerinde başarılı olabilmeleri Türkçe öğrenmeleriyle doğru orantılı olarak artacaktır. Eğitim hayatında olsun ya da olmasın bütün Suriyelilerin Türkiye'ye entegrasyonlarında rehabilitasyonlarında, Türklerle sağlam iletişim kurabilmelerinde en önemli etmen Türkçe öğrenmeleri ve Türkçeyi doğru kullanma becerileri olacaktır.

Bütün Suriyelilere, en başta Türkçe öğrenimlerinin ne kadar önemli olduğu algısının verilmesi gerekir. Her şey Türkçeyle başlayacaktır. 2016-2017 eğitim öğretim yılıyla birlikte Suriyeli öğrenciler 1., 5. ve 9. sınıfa kayıt yaptırmış ve 3 yıl içinde de "Suriye Okulu" kavramı ortadan kalkacaktır.

Suriye üniversitelerini bırakarak Türkiye'ye gelmek zorunda kalan, gelirken de hiçbir evrak getiremeyen Suriyeli gençler, aynı zamanda da Türkiye'de liseyi bitiren ve bitirecek olanlar, Türk üniversitelerinde yabancı öğrenci kontenjanı, özellikle Suriyeli öğrenci kontenjanının artırılmasına ve diğer çözümlere ihtiyaç duymaktadır.

Suriyeliler için Türkçe öğrenimi bu kadar önemliyken, bizlerin de 3.000.000 Suriyeliye (çocuklara, gençlere, ihtiyarlara, okuma yazma bilenlere ve bilmeyenlere, ev hanımlarına vb.) göre Türkçe öğretim yöntem ve tekniklerinde, yazılı ve görsel materyallerde yeniliklere gitme mecburiyeti ortaya çıkmıştır. Eğitim yükü ağırdır ama çözmek zorundayız.

SYSTEM ARCHITECTURE OF BUSINESS INTELLIGENCE TO AUN-QA FRAMEWORK FOR HIGHER EDUCATION INSTITUTION

ABSTRACT

This research aims to 1) design the system architecture of business intelligence to AUN-QA Framework for higher education institution, and 2) assess the system architecture of business intelligence to AUN-QA Framework for higher education institution. The research process is divided into 3 stages: 1) study and analyze the relevant documents and researches of system architecture of business intelligence to AUN-QA Framework for higher education institution, 2) design the system architecture, 3) assess the appropriateness of the system architecture. The samples are 10 experts selected by purposive sampling. The data is analyzed by means and standardized deviations statistically. The research result shows that 1) the system architecture of business intelligence to AUN-QA Framework for higher education institution has consisted of 2 key components which are 1.1) the system architecture of business intelligence, 1.2) AUN-QA Framework for higher education institution, and 2) the result of assessment of the system architecture of business intelligence to AUN-QA Framework for higher education institution is rated as absolutely appropriate in overall ($\bar{x}=4.51$).

Keywords: Business Intelligence, AUN-QA, Higher Education

1. INTRODUCTION

Quality in higher education is not a simple one-dimensional notion about academic quality. In view of the varied needs and expectations of stakeholders, quality in the undergraduate study can be said to be a multi-dimensional concept. ASEAN University Network (AUN) recognizes the importance of quality in the undergraduate study, and the need to develop a holistic quality assurance system to raise academic standards and increase education, research, and service among its member universities. In 1998, it mooted the AUN-QA Network which led to the evolution of AUN-QA Framework. Since then, the system has been promoting, developing, and implementing quality assurance practices based on an empirical approach where quality assurance practices are tested, evaluated, improved and shared (ASEAN University Network, 2015). The continuous evolution of higher education institution in a growing competitive environment necessarily requires appropriate decisions to be made, adequate, based on significant information and as accurately predicted as possible. In the current practice, the higher education institutions have defined sets of technologies and processes that provide decision support the management process so that the administrators could set up plans and make any decisions more efficiently (Srima et al., 2015; Rodmunkong et al., 2015). These solutions for decision support (Renu et al., 2013) are based on integrated management information systems (Shah, 2014), including specialized business intelligence (Horkoff et al., 2012; Jooste et al., 2014; McBride, 2014; Moro et al., 2015) BI modules supporting of decision making.

According to AUN-QA Framework, executives in higher education institutions in Thailand are required to develop patterns of higher education institution standards that involve developing suitable plans, setting technological strategies and should be using business intelligence tools such as visualization, decision support system, and knowledge discovery as tools to business analytics tools. The reason mentioned above, the researchers are interested in the analyzing of the compositions of the system architecture of business intelligence to AUN-QA Framework for the higher education institution.

2. PURPOSE OF THE STUDY

- 1) To design the system architecture of business intelligence to AUN-QA Framework for higher education institution.
- 2) To evaluate the system architecture of business intelligence to AUN-QA Framework for higher education institution.

3. LITERATURE REVIEW

3.1 Business intelligence

Business Intelligence (BI) aims to support business users to make decisions by providing methods and tools to easily access and manage their information (Horkoff et al., 2012; McBride, 2014; Moro et al., 2015). This is performed by means of data collection, storage, distribution and exploitation (Jooste et al., 2014). Business Intelligence involves three key steps, extraction, transformation and load (ETL). These steps are not necessarily linear and depend on the development of a data design. The metadata model influences what data is extracted, but also is influenced by what data is available, and the nature of the questions being asked by employees and the processes being diagnosed. Extraction is inevitably a process of selection: selection of sources and data within sources. Data transformation involves resolving inconsistencies, validating data ranges, removing irrelevant data and checking for accuracy. Loading concerns populating the target Business Intelligence database with the structured information. Each step involves interpretation and the imposing of the framework on the data, driven by the goals and purposes of the Business Intelligence team. The loaded Business Intelligence target database is then made available to power users and ordinary users through the application of intelligent tools for structuring queries.

3.2 Management Levels and Decision Making

The topic of decision making is directly related to management and to the various management levels found in an organization. A popular way to identify different management levels is through the management pyramid (Simon, 2015) (Figure 1).

Figure 1. In the classic management pyramid, three management levels are identified (Simon, 2015).

The focus of strategic management is on the performance of the entire organization. Most of the decisions made on this level concern the entire organization. Some examples are: Should we acquire a new organization? Should we enter new markets? Should the organization be flattened? Should we outsource all IT? Decisions made by strategic management have long-term consequences and objectives. Tactical management is concerned with planning for and controlling the units in an organization, such as marketing, sales, and production. Normally their decision making has an impact on the short or medium term. Operational management deals with the day-to-day operations of the organization. Examples of decisions made on this management level are: How many pallets of soda should be delivered at a particular store the next day? Are there enough drivers scheduled for all the parcels to be delivered? What measures should be taken now that an incoming airplane with many passengers who have to make connecting flights has been seriously delayed?

3.3 Data Warehousing

Data warehousing provides architectural science and tools for business executives to methodically organize, understand, and use their information to make strategic decisions. Data warehouse systems are convenient tools in today's competitive, fast-evolving world. (Han et al., 2012) Data warehouse systems use back-end tools and utilities to populate and refresh their information. These tools and utilities include the contributory functions:

- Data extraction, which typically gathers data from multiple, disparate, and external sources.
- Data cleaning, which detects errors in the data and corrects them when possible.
- Data transformation, which converts data from legacy or host form to warehouse form.
- Load, which sorts, summarizes, consolidates, computes views, checks integrity, and builds indices and partitions.
- Refresh, which broadcast the updates from the data sources to the warehouse.

3.4 Data Marts

A data warehouse is really one large data store, all the reporting and analytical tools access that one data store, which can lead to a query workload that's too intense for the database server managing the data warehouse. For this reason, many organizations have developed data marts to offload the query workload. Each data mart is developed for a specific group of users, normally all users with comparable data needs. This means that a data mart contains a subset of all the data from the data warehouse. And quite often, whereas a data warehouse contains the lowest level of data, a data mart contains a slightly aggregated version of all that data. If data marts are in place, most reports run on one of those data marts instead of on the data warehouse, thus offloading the query workload (Simon, 2015). The main advantage of using a data mart-only architecture is development speed. When an organization starts from scratch, developing a data mart for a small group of users requires less time than when a data warehouse is developed for a large group of users.

3.5 Business Analytics

Business analytics is about leveraging value from data. Instead of being referred to as the 'sludge of the information age,' data has recently been deemed 'the new oil.' While data can be employed for purposes such as detecting new opportunities, identifying market niches, and developing new products and services, it is also notoriously amorphous and hard to extract value from. Figure 2, which presents a structural framework for deriving value from business analytics, indicates how extracting value from data requires aligning strategy and desirable behaviors to business performance management in conjunction with analytic tasks and capabilities (Acito & Khatri, 2014). A strategy is a purposeful plan of action that requires making choices regarding the deployment of resources (Mintzberg, 1987). Davenport et al. suggest that a strategic business case for an analytics initiative can be used to create organizational support and obtain funding. Desirable behaviors refer to beliefs and culture that are embodied in the corporate value statement, mission statement, rituals, and structure. It is the unique desirable behaviors in an enterprise that create value (Weill & Ross, 2004). Business Performance Management (BPM) is based on the balanced scorecard methodology, which is a framework for defining, implementing, and managing an enterprise's business strategy by linking objectives with factual measures. The objective of BPM is to optimize the overall performance of an organization.

Figure 2. Structural framework for business analytics (Acito & Khatri, 2014)

3.6 Online Analytical Process (OLAP)

OLAP (On Line Analytical Processing) systems have been proposed to improve decision making process due to analysis of large datasets (Codd et al., 1993). This kind of software is designed to explore easily and quickly multidimensional data (Rivest et al., 2005). The word OLAP can be associated with a process, a kind of system or a kind of data (Jerbi et al., 2009). A basic Relational OLAP (ROLAP) system architecture consists of (1) a relational Data Base Management System (DBMS), that stores data in accordance with data warehousing paradigm; (2) an OLAP server that implements the multidimensional model and OLAP operators on top of the DBMS; (3) an OLAP client, that combines and synchronizes tabular and graphical displays and allows query building; and (4) an ETL tool that extracts data from heterogeneous sources, transforms them and loads them into a data warehouse.

3.7 Ad-Hoc queries and reporting

Ad-hoc queries allow users to request, in real time, information from the computer that is not available in periodical reports. Such answers are needed to quicken decision making. The system must be intelligent enough to understand what the user wants. Simple ad-hoc query systems are often based on menus. More intelligent systems use structured query language (SQL) and query-by-example approaches

3.8 Data Mining

Data mining is the capitalization of specific algorithms for extracting patterns from data. It allows the automated discovery of implicit patterns and interesting knowledge hidden in big amounts of data (Jiawei and Kamber, 2001). Data mining helps organizations to focus on the most important information and knowledge available in their existing databases. Data mining has three main objectives: description, prediction, and prescription. Whereas description focuses on finding human-interpretable patterns describing the data, prediction involves using some variables or fields in the database to predict unknown or future values of other variables of interest (Fayyad et al., 1996). On the other hand, definition focuses on providing the best solution for the given problem (Evans, 2013). These objectives can be achieved by using many data mining tasks, including classification, clustering, prediction, outlier detection, optimization, and visualization. These tasks differ with the type of problem to be solved as follows:

- Classification focuses on mapping data to predefined qualitative discrete attribute set of classes, which could be binary or multi-class.
- Clustering focuses on segmenting the data to some meaningful classes or groups.
- Prediction focuses on finding a future numerical value (forecasting) or non-numerical value (classification).
- Outlier Detection focuses on finding the data that significantly deviates from the normal.
- Optimization focuses on finding the best solution given some resources.
- Visualization focuses on the visual presentation and understanding of data.
- Regression focuses on estimation of a dependent variable from a set of independent variables.

3.9 Text Mining

Text mining is the new frontier of predictive analytics and data mining. Eric Siegel in his book *Predictive Analytics* (Siegel, 2013) provides an interesting comparison: if all the data in the world was equivalent to the water on earth, then textual data is like the ocean, making up a majority of the volume. Text analytics is driven by the need to process natural human language, but unlike numeric or categorical data, natural language does not exist in a “structured” format consisting of columns (of attributes) and rows (of examples). Text mining is therefore the domain of unstructured data mining.

3.10 Web mining

Web mining, in general, is the application of data mining techniques to discover patterns from the web (Baraglia and Silvestri, 2007; Chakrabarti, 2002; Eirinaki and Vazirgiannis, 2003; Liu, 2007). For example, using association analysis to analyze users’ usage data, which records the user’s behavior when the user browses or makes transactions, on the web site and the results can make the content of the website to fit correctly with the users’ needs. Different with data mining, there are no existing data available for web mining. Web miners can use name or terminology to search and to collect data. There are lots of valuable information on the web, but it is not easy to find it. Search engines provide the initial act needed to conduct more complex form of web mining.

3.11 AUN-QA Framework

The AUN-QA Framework for higher education institution comprises strategic, systemic and functional QA as illustrated in Figure 3.

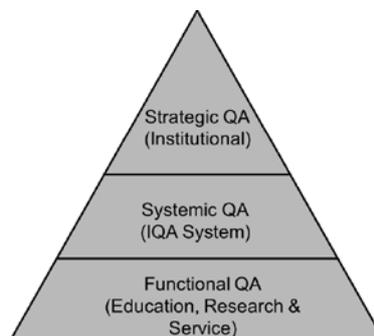

Figure 3. AUN-QA Framework for Higher Education Institution (ASEAN University Network, 2015)

AUN-QA Framework for Higher Education Institution are subjected to both internal and external QA assessment. Internal QA ensures that an institution, system or programme has policies and mechanisms in place to make sure that it is meeting its own objectives and standards. External QA is performed by an organization or individuals outside the institution. The assessors evaluate the operation of the institution, system or programme in order to determine whether it meets the agreed upon or predetermined standards. The AUN-QA models are applicable to the diverse universities in ASEAN which are also aligned to both regional and international quality assurance frameworks.

4. METHODOLOGY

- 1) Study and analyze the relevant documents and researches of system architecture of business intelligence to AUN-QA Framework for higher education institution.
- 2) Design the system architecture of business intelligence to AUN-QA Framework for higher education institution
- 3) Assessment of the appropriateness of the system architecture of business intelligence to AUN-QA Framework for higher education institution. The statistics utilized in this study were arithmetic means (\bar{x}) and standard deviation (S.D.) following the weighing criteria of appropriateness of the design using five rating scales of Likert

5. POPULATION AND SAMPLES

1) Population:

Population is the experts in the field of business intelligence, and quality assurance for higher education.

2) Samples Groups:

Samples were selected from the experts in the population using purposive sampling technique. The 10 experts comprised of business intelligence, and quality assurance for higher education. They are highly-experienced experts in these fields for at least 5 years.

6. RESULT

Stage 1: The system architecture of business intelligence to AUN-QA Framework for higher education institution is composed of 2 key components which are:

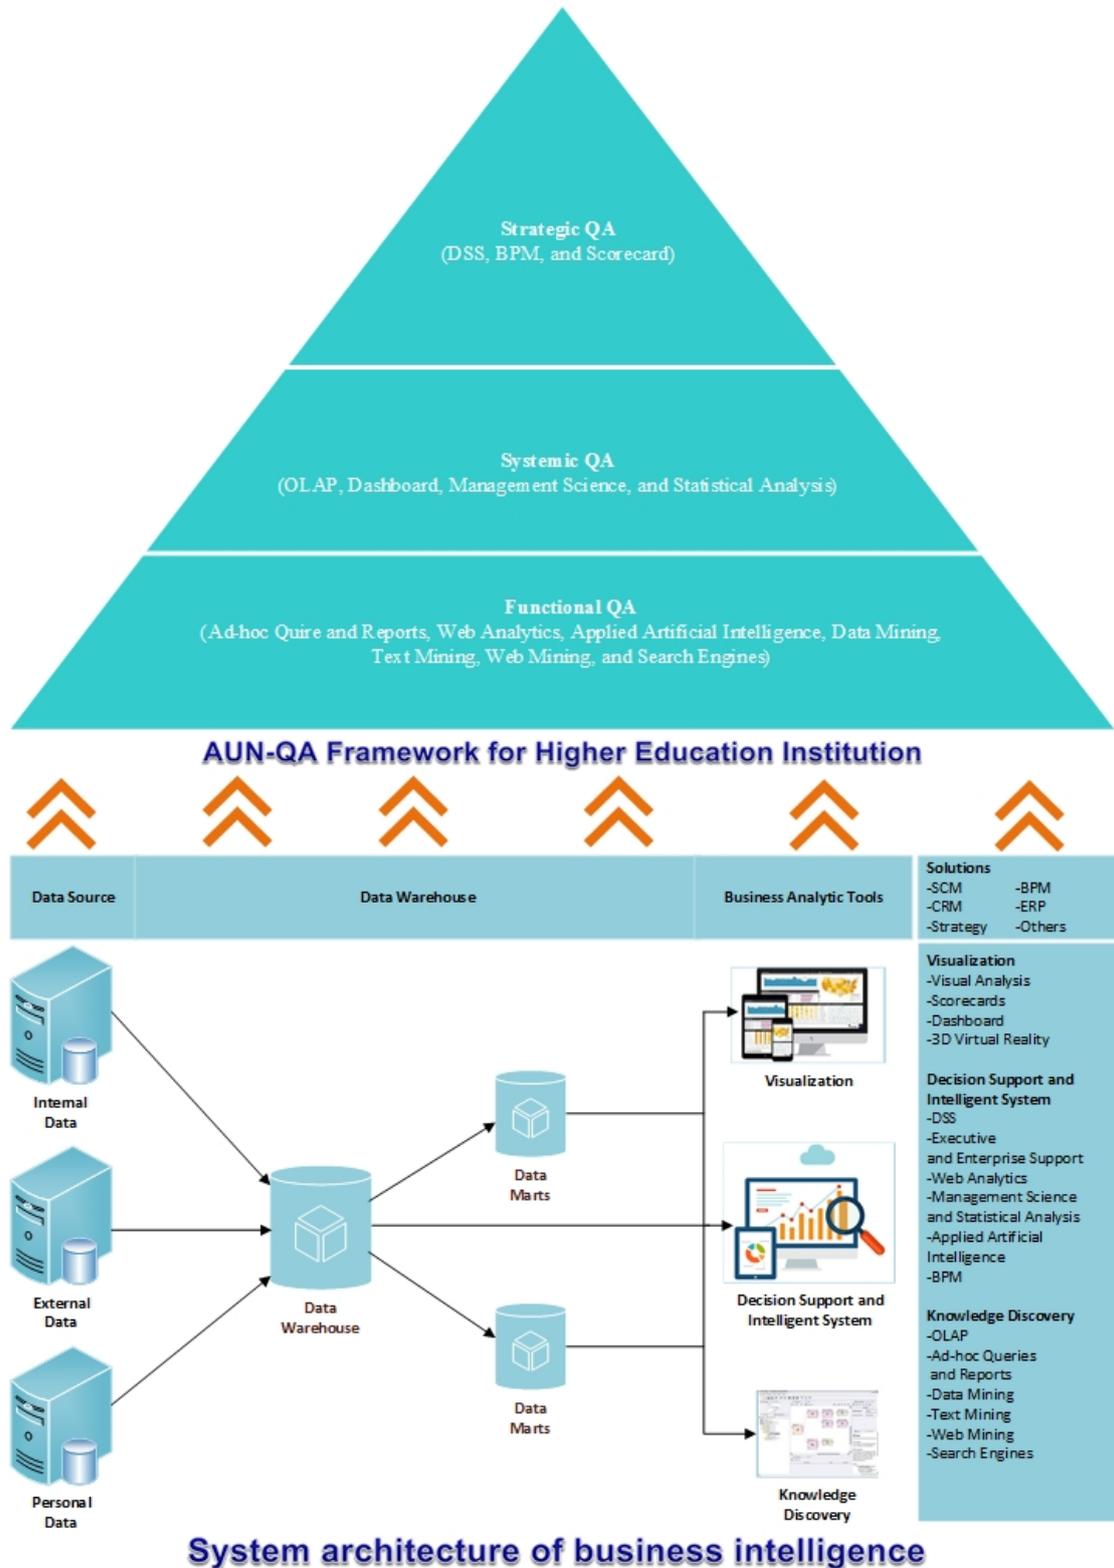

Figure 4. System architecture of business intelligence to AUN-QA Framework for higher education institution

1) System architecture of business intelligence can be classified into Data Source, Data Warehouse, and Business Analytic Tools. Data Source can be categorized into Internal Data, External Data, and Personal Data. Data Warehouse can be subdivided Data Warehouse and Data Marts. Business Analytic Tools includes Visualization, Decision Support System and Intelligent System, and Knowledge Discovery. Examples of Visualization are Visual Analysis, Scorecard, Dashboard, and 3D Virtual Reality. Decision Support System and Intelligent System includes Decision Support System, Executive and Enterprise Support, Web Analytics, Management Science and Statistical Analysis, Applied Artificial Intelligence, and Business Performance Management. The examples of Knowledge Discovery are OLAP, Ad-hoc Quire and Reports, Data Mining, Text Mining, Web Mining, and Search Engines.

2) The AUN-QA Framework for higher education institution comprises strategic, systemic and functional QA. There are many types of technologies which are used to support AUN-QA Framework for higher education institution. Strategic QA that Business Analytic Tools supports related technologies including DSS, BPM, and Scorecard. Systemic QA that Business Analytic Tools supports related technologies including OLAP, Dashboard, Management Science, and Statistical Analysis. Functional QA that Business Analytic Tools supports related technologies including Ad-hoc Quire and Reports, Web Analytics, Applied Artificial Intelligence, Data Mining, Text Mining, Web Mining, and Search Engines.

The system architecture of business intelligence to AUN-QA Framework for higher education institution runs on data that have been processed to information and knowledge. Transformation of data into knowledge and solutions is accomplished in several ways. In higher education institution, it resembles the process shown in Figure 4. It starts with data source and new data collection from various sources. These data are stored in databases. Then the data are preprocessed to fit the format of data warehouse or data marts, where they are stored. Users then access the warehouse or data mart and take a copy of the needed data for analysis. The business analytic tools done with data analysis are done with data analysis and mining tools with intelligent systems.

Stage 2: The result of appropriateness measurement of the system architecture of business intelligence to AUN-QA Framework for higher education institution

Table 1: Explain the architecture assessment

Assessment Topics	\bar{X}	S.D.	Assessment Result
1. Component Consistency Requirements	4.87	0.35	Highest
2. Connector Consistency Requirements	4.70	0.45	Highest
3. Component-Connector Compatibility Requirements	4.45	0.37	High
4. Configuration Requirements	4.25	0.26	High
5. Style Restriction Requirement	4.30	0.48	High
The overall results	4.51	0.38	Highest

In Table 1, the research found that the system architecture of business intelligence to AUN-QA Framework for higher education institution was evaluated at the highest level in component consistency requirements and connector consistency requirements. The component-connector compatibility requirements, configuration requirements and style restriction requirement were at the high level. The system architecture of business intelligence to AUN-QA Framework for higher education institution showed overall results at highest level (arithmetic mean=4.51, standard deviation = 0.38).

7. CONCLUSIONS

Research results exhibited that the system architecture of business intelligence to AUN-QA Framework for higher education institution was appropriated and fit to higher education institution and executives. Through BI solution, it is expected the university's management able to handle reporting among variety of users and manage huge amount of data to be transformed into valuable real-time information. Furthermore, the system architecture of business intelligence to AUN-QA Framework for higher education institution also can facilitate the university to structure the process of improving the BI solution and helps to implement the university's BI strategy in a very cost effective way. Eventually, BI projects will be more successful, cost less and deliver more value to the university's BI users. Hence, this initial the system architecture of business intelligence to AUN-QA Framework for higher education institution can be used as a guideline as it gives better definition for strategic vision in higher education institution. Furthermore, we believe this initial architecture is that the importance of quality in higher education.

ABSTRACT

Changing educational paradigms require teachers acquiring new skills at different stages of their teaching careers. System of continuous professional development (CPD) serves as a support to those teachers who want to be up-to-date with the latest achievements in the sphere of education and are willing to enhance knowledge of the subject they teach and increase or develop new skills. It is especially important for language teachers, as language itself and approaches to its teaching are constantly changing and being aware of the changes will help language teachers develop as professionals. Notwithstanding the fact that CPD system for teachers in Kazakhstan suggests great opportunities for professional development, it is aimed at teachers in general and language teachers' needs are addressed not in all the regions and on the regular basis. The research explores opinions of language teachers working in the sphere of secondary and higher education on issues and perspectives of the continuing professional development system in Kazakhstan.

INTRODUCTION

The continuous professional development system in Kazakhstan has a very complicated structure with a number of organizations regulating and suggesting different courses and opportunities for professional development. The CPD system is regulated by the laws and orders of the Ministry of education and regional departments of education responsible for administration of the laws and orders. The system of continuing professional development includes special organizations for training in-service teachers, such as national and regional centers for continuing professional development of teachers and other professionals working in the sphere of education, short-term courses suggested by national and private universities and the centers for professional development, internships suggested by government as well as by non-profit organizations, seminars and conferences addressing methodological issues organized by universities, regional departments of education, teacher associations and other educational organizations. Teachers also have the opportunity for self-education through participation in webinars and online open courses. However, the question of teaching quality and therefore the quality of education in general is still being discussed in connection with the problem of assessing teachers' knowledge of subject matter (language in our case) and methods of its teaching and ways of motivating teachers to develop professionally (Koybagarov, 2009). The diversity of courses and range of opportunities still do not prove effective in reaching all the language teachers and providing the quality of their language and methodological skills and knowledge. The other question is addressing students' outcomes through continuous professional development of teachers as well as "teachers' individual growth and fulfillment" (Borg, 2015). In this regard it is necessary to find out the reasons why not all the teachers use the opportunities of professional development, what kinds of CPD will better meet the needs of language teachers and learners, and the ways of involving and motivating language teachers to acquire new skills and develop professionally.

LITERATURE REVIEW

Padwad and Dixit define continuous professional development as a “planned, continuous and lifelong process whereby teachers try to develop their personal and professional qualities, and to improve their knowledge, skills and practice, leading to their empowerment, the improvement of their agency and the development of their organisation and their pupils” (Padwad and Dixit, 2011: 10). Thus it is obvious that CPD is a “critical element in successful educational systems, enhancing teacher quality, organizational effectiveness and student outcomes” (Borg, 2015). Kazakhstan has always had a mandated framework of continuous professional development supposing teachers to have professional development courses at least once in five years and publish some articles sharing their teaching experience to be able to get a higher rank as a teacher. The government have always suggested conventional options of CPD such as courses, lectures or seminars. As it was mentioned before there are some state organizations responsible for continuous professional development of school teachers and university staff. According to the order of the minister of education (2004) organizations for in-service teacher training responsible for teachers’ continuing professional development have the following functions: 1) development and improvement of different forms of educational services; 2) cooperation with different local and foreign organizations in order to provide better opportunities for both in-service and pre-service teacher training; 3) professional development of university staff.

Changing educational paradigms, life-long learning paradigm in particular, has changed the understanding of CPD in Kazakhstan, which is reflected in the “State program for Education development for 2011-2020” (2010). The “Conception of continuous professional development for “new formation” teachers in Kazakhstan” (2005) and the “Conception of higher education for teachers” (2005) developed by the government introduce the new term “new formation teacher” who is defined as intellectually developed, creative personality able to think reflectively, having professional skills, teaching talent, and ambition to develop professionally... (2005). “New formation teachers” are required to have profound knowledge of the subject they teach, methods of teaching the subject, pedagogy and psychology as well as be motivated to grow professionally and intellectually. These new trends prompted establishment of new national center for professional development “Orleu” which having considered the best continuous professional development practices designed new short and long term courses for teachers combined with teaching practice and support of teachers after the courses, which helps to make CPD an ongoing process rather than a series of periodic events as it used to be before.

“Nazarbayev intellectual schools” are also involved in developing CPD programs for teachers and training in-service teachers. As CPD programs are developed for teachers with different needs there are programs at three different levels and all the teachers in Kazakhstan are planned to have the courses within some period of time (for instance, 27582 teachers attended the courses in the period from 2012 to 2015 (Akhmetova, 2015)). The courses are aimed at all school teachers regardless of the subject they teach and give information about action research, lesson study and other contemporary strategies of professional development and new trends in teaching. Mathematics and Science teachers also attend English and CLIL courses.

The idea of trilingual education has changed CPD programs for language teachers. Kazakh, Russian and English language teachers are now tested for their language proficiency. Special educational program for CPD of English teachers was developed in 2016. CPD system is becoming more context bound, which according to Borg (2015) is the most effective way of its successful implementation. In some regions a special multi-staged program for language teachers’ professional development is suggested, which will help language teachers to improve first their language skills and then language teaching skills. The program aims at preparing English teachers to getting TKT and CELTA certificates. Moreover, preparation courses for these exams are sponsored by regional government.

A great range of CPD options described by different scholars (Borg, 2015; Prince and Barrett, 2014) is available for teachers in Kazakhstan. However, many of the options, such as joining an online teacher forum or course,

action research or presenting at the conference, which are based on a teacher's ability to reflect over their experience and enthusiasm for professional self-development are not much used. Vlasenko and Koryagina (2016) state that such issues with continuing professional development can be avoided through interaction between schools, universities training pre-service teachers and continuous professional development system training and supporting in-service teachers.

DATA COLLECTION AND ANALYSIS

The study was conducted in Kazakhstan among the teachers from different regions of the Republic. This study is a small-scale research using both qualitative (interview) and quantitative (questionnaire) methods in order to be able to triangulate the research results. The participants of the study were 22 English teachers. 10 of the teachers are currently teaching English at university and the other 12 teach English at school. We decided to include teachers of English from both secondary and higher education institutions to be able to see if English teachers in different educational institutions have the same issues with continuous professional development. All of the participants have teaching experience for more than three years, so all of them have had an experience with continuous professional development.

An online questionnaire with twenty yes / no and open-ended questions was developed in order to find out the answer to the following research questions: What are the issues of CPD perceived by English teachers? What are the CPD options considered to be good / adequate by English teachers? To triangulate the results we also interviewed five teachers to get better understanding of the reasons why the teachers considered some aspects of CPD system to have issues and why some continuing professional development options seemed better than others. The interviews were face-to-face structured interviews, which means all the interviewees were asked the same questions. While analyzing the interviews we used qualitative content analysis method. We did not have any preset categories but looked for the categories that emerged from the participants' answers. Small number of participants is a limitation for the study, as the results cannot be generalized in this case.

FINDINGS

Results of the questionnaire analysis showed that only about 18 % (4 out of 22) of the participants had professional development certificate (3 - TKT, 1 - CELTA). About 23% (5 out of 22) of the participants had language proficiency certificate (4 - IELTS, 1 - TOEFL). It is important to mention that only one of the participants had both professional development and language proficiency certificates. The main reason for not taking the certificates was the fact that they are not required by the organization where the teachers work. Although all the participants mentioned that they attended either a seminar or a professional development course at least once a year most of them (77%) did it because it was one of the requirements of the institution they work in and 23% (4 out of 17) in this group stated that their institution provided them with opportunities to attend CPD courses and even organized the courses itself. Only three (about 16%) of participants attended webinars and one of them was currently enrolled into an online course on teacher training. One of the participants was the member of the Association of English teachers and none of the respondents was a member of online community of English teachers. The results show that the teachers are not motivated to develop professionally by the institutions they work in and do not understand the necessity of professional development as most of them attend CPD courses / seminars not because it is interesting for them but because it is required. Some teachers also mentioned lack of time and work overload as the factors preventing them from doing / having continuous professional development activities.

A number (4 out of 10) of the participants that teach English at university attended continuous professional development courses irrelevant to teaching English, which in our opinion is also an issue for continuous professional development of English teachers as language and methodology skills are important for teachers at any level of education system.

The other issues that were mentioned by the participants of the study were access to courses and internships. Those participants that live in big cities had more opportunities to attend lectures of native speakers and ELT professionals. None of the interviewees had an internship abroad. Although government suggests great

opportunities for teachers it takes time and a lot of effort to win the scholarship and again the teachers living in big cities have more opportunities as they have easier access to information and organizations suggesting scholarships.

Lack of system (monitoring and evaluation), standard requirements and planned “interlinked program” (Johnson, 2009) was also mentioned by the participants of the study as one of the issues of continuous professional development system in Kazakhstan. Those teachers that have a certificate or attended more courses than others are not distinguished by the principals, so the only factor that motivates the teachers in the opinion of the participants is getting a higher rank as a teacher or proving that you still have enough skills to held the rank you have, which happens once in five years. For most university teachers the aim is to fulfill the requirements of the university concerning continuous professional development as ongoing professional growth is not monitored or evaluated and consequently there is no external motivation. Nevertheless, such continuous professional development activities as peer-observation and methodological seminars are compulsory in secondary as well as in higher education organizations.

Neither of the participants, who are school teachers was involved in action research so far. Only two university teachers mentioned that they did individual action research.

Some of the respondents (about 23%) stated that they would like to improve their language skills, however there are no special courses suggested by government for developing language proficiency. Those regions that suggest language proficiency courses organize them for teachers working in the country or remote areas.

Among the skills that the participants thought to be useful and wanted to develop were language skills (about 23%) as it was mentioned above, computer skills (about 23%) and research skills (about 14%). The areas that interested the respondents were inclusive education and content and language integrated learning as they are new trends widely discussed by teaching professionals at all the levels and informal and formative assessment especially for school teachers as the system of assessment at school is mostly formal and summative.

CONCLUSION

The findings showed that notwithstanding the fact that the system of continuous professional development in Kazakhstan suggests great opportunities and is constantly improving there are still some issues to be addressed. The most important of them is motivating teachers to grow professionally. Mandatory requirements for language teachers, such as having language proficiency certificate and one of the professional development certificates will make teachers improve their language and teaching skills, which in turn will improve teaching quality and quality of education in general. Financial motivation and improving of teachers' social status are also important factors here.

Cooperation of higher education organizations with schools and centers for continuous professional development will help to understand the needs and support teachers through all the stages of their career and professional growth. Motivating teachers to do action research, which will improve teaching practices of teachers themselves and give information for further research and improvement of educational programs and courses at universities training pre-service teachers is one of the key factors for successful collaboration of schools, universities and centers for continuous professional development.

To be able to continue learning through the whole life a person should have reflective thinking skills in order to understand and analyze the need for learning and personal and professional development. Developing future teachers reflective learning and thinking skills will help them become decision-makers, which is one of the conditions required for “achieving positive and sustained impacts” (Borg, 2015, 3) through continuous professional development. Teachers are still not decision-makers in our country as most of the changes in the system of continuous professional development for teachers as well as in the system of education are top-down.

Systematic approach to teacher continuous professional development when it is an ongoing process but not a series of occasional events attended to fulfill some requirements should be maintained. Involvement of teachers in action research is, in our opinion, an effective way to make teachers read theoretical literature and implement theory in practice trying new methods and activities in the classroom.

A good old practice of methodological seminars and unions of teachers of the same subject / relative subjects at schools or departments at universities where teachers can learn from each other should be revisited and actively used by all the education organizations. Nowadays these practices are routine or done only for reports.

The same can be said about peer-observation and mentoring. These continuous professional development activities are rarely used nowadays. They are perceived as something old-fashioned and used to criticize and find faults with the observed or mentored teacher.

According to Borg (2015) “a productive approach to continuous professional development will support teachers in identifying (ideally with reference to classroom practice and student learning) those specific areas of professional practice where development is required and work with teachers to identify and implement appropriate strategies for supporting such development” (Borg 2015, p.5). So, interaction of stakeholders in the system of education and raising awareness and motivation of teacher for professional growth will have positive impact on education quality in a long term.

SYSTEMIC APPROACH IN "MOTHER-CHILD HOME" PROJECTION IN EDUCATION

Leyla SURI
Istanbul Commerce University
Turkey
lsuri@ticaret.edu.tr

ABSTRACT

Urban facilities, in means of urban areas hierarchy, are closed and open areas of which right of use belongs to public and which meet the user requirements in their regions.

The need of facility, parallel to the city development plan, is designed according to the socio-cultural, demographic structure of the population to whom it provides service.

The quality and the size of the facility that is necessary in urban systems are also specified in regulations.

Even described under several headings in the current legislation, there is no exact explanation of the meaning of mother-child home facility. It can be described as the smallest unit of urban systems in the subarea called "The Neighbourhood" and it is among one of the most important facilities for both parents and children.

Especially parent (generally mother) who has to spend more time with his/her child who is at preschool age can not find opportunity to be physically and socially accessible for himself/herself and for his/her child and to have sufficient socialisation, to use his/her energy at right source and to express himself/herself sufficiently. Similarly, there is need for places of public nature and that are secure and which may contribute to socialisation and education apart from school for age groups whose parents work and who are at school age and however, who can not stay at home on his/her own after returning from school. The mother-child home facility proposed for meeting such needs is not fully included in current legislation.

Describing the mother-child home facility, its size in the neighbourhood scale, and examining the site selection and application criteria are the subjects of this study

The mother-child home criteria are examined in urban design and architectural scales relevant to observations and researches.

Within the scope of this study the concept of facility, concept of neighbourhood, local needs, are examined within the axis of system component and mother-child home in brief.

INTRODUCTION

Areas in urban systems that ensure a proper functioning of the residential and working areas also include social and cultural facilities.

Quality and spatial size of social and cultural facilities are determined by the identity and needs of the user. Social and cultural facilities in the areas covered by the development plans are positioned according to the hierarchy of settlement. Facilities in the plans are defined by the laws that also describe their minimum sizes.

Despite the fact that 'Mother-Child Home' can be defined under the heading of social cultural facilities, it does not have a self-contained definition yet. "Regulation on Spatial Plans" (Official Gazette 29030, 2014) that identifies the terms of preparing development plans contains below given definitions.

Social infrastructure areas:

The general name of the outdoor and green areas that are created by the public or private sector for meeting the cultural, social and recreational needs of the individual and society, creating a healthy environment and improving their quality of life such as educational, health, religious, cultural and administrative facilities, indoor and outdoor sports facilities as well as parks, children's playgrounds, squares and recreation areas (Ministry of Environment and Urbanization, 2014a).

Social facility area:

Areas under public or private property allocated for providing service in such functions as nursery, course, dorm, kindergarten, reformatory, elder and disabled care home, rehabilitation center, community center, dorms for patient relatives to be used by the society for the purpose of improving the level and quality of the social life" (Ministry of Environment and Urbanization, 2014b).

As can be understood from above given definitions;

- Meeting the cultural, social and recreational needs of the individual and society,
- Improving the level and quality of the social life

constitute the basis for the legal arrangements in the system of settlements.

Detailed description of the definitions are indicated in the Table 1 below. Mother-Child Home facility includes a part of the functions specified in the headings within the Table 1.

EDUCATIONAL FACILITIES AREA	SOCIAL OUTDOOR AND GREEN AREAS
Nursery School Primary School Secondary School Day High School Boarding High School “Industrial Vocational High School, Multi-Program High School” Special Education, Rehabilitation and Guidance Centers “Public Training Center Advanced technical School for Girls”	Children’s Park Park Botanical Park Zoo Recreation Area Recreation

Table 1. Description of Social and Educational Facilities Given in the Regulation (Ministry of Environment and Urbanization, 2014c).

Spatial areas of social and cultural facilities are also defined, and its value is minimum 0.50 M²/person-1.00 M²/person, depending on the population in the settlement (Table 2).

Another regulation (Ministry of Environment and Urbanization, 2017) contains general definitions of several uses within residential and commercial areas, under the headings social and cultural facilities, public service area, green areas, picnic entertainment recreation areas, social spaces ...

POPULATION GROUPS (person)	0 - 75.000	75.001- 150.000	150.001 - 500.000	501.000 +
EDUCATIONAL FACILITIES AREA (M ² /person)	0.50-1.75	0.50-1.75	0.60-2.00	0.60-2.00
SOCIAL OUTDOOR AND GREEN AREAS (M ² /person)	10.00	10.00	10.00	10.00
SOCIAL AND CULTURAL FACILITIES AREAS (M ² /person)	0.50	0.75	1.00	1,00

Table 2. Facility Area by Population (Ministry of Environment and Urbanization, 2014c).

When Table 1 and Table 2 are taken into consideration together, it can be seen that all other social and cultural facilities than those clearly defined such as schools shall be planned in the scope of the area calculated over the same standard M²/person. In another way of saying, for example within the total minimum area of 37,500 M² to be allocated within a settlement of 75,000 people, social, cultural, religious, administrative indoor and outdoor facility area can be present, but the ratios and definition of quality in the sub-heading are not clear for the facilities.

In the housing and work areas, demographical structure, social tendency and expectations of the population determine the type, priority and size of the facilities to be planned, but this does not constitute an obligation in planning of a facility not defined in the legal system in each sub-region (neighborhood).

Mother-Child Home facility was considered for the purpose of clarifying this issue in the legal system.

IMPORTANCE AND REQUIREMENT OF THE MOTHER-CHILD HOME

There are several studies addressing the position of children and the parent who takes care of them (mostly the mother) within the social and cultural life.

United Nations Convention on the Rights of Child states that “The child holds the right to rest and leisure, to engage in play and recreational activities and to participate freely in cultural life and the arts” (United Nations, 1989). The Convention is a legally binding document at the international level (Şişman, Özyavuz, 2010).

In the 10th Growth Plan of our country that covers the period between 2014 and 2018, it is stated that pre-school education for the 4-5-age group is at the level of 0.44 (Article 138) and that the early period child development program is not at the required level (Article 260).

Summarized objectives and purposes of the aforementioned plan:

“... addresses maximizing participation of everyone and every region in the process of growth” (Article 129), raising productive and happy individuals that have a developed skill of thinking, perception and problem solving, ... are prone to science and technology use and production and are equipped with the fundamental knowledge and skills required by the information society (Article 142), ensuring raising the citizen’s quality and period of life as well as their participation in the economic, social and cultural life consciously, actively and healthily (Article 172), strengthening the women’s role in social, cultural and economic life (Article 249), increasing the opportunities and facilities to support children’s wellbeing by observing their best interests, to develop and realize their potential and increasing access to basic public services, particularly in the fields of education, health, justice and social services (Article 263).”

Tools to realize aforementioned objectives are described in the same plan:

Pre-school education that contribute to students’ social, mental, emotional and physical development shall be made common, in the manner to support access by the households and regions with limited facilities (Article 146); Family consultancy and training services shall be made comprehensive, standard, effective and common (Article 250); Women’s level of education and skills shall be increases (Article 251); Children’ wellbeing and basic skills shall be improved (Article 265).

It is stated that not only nutrition, health, housing and education, but also the child’s engagement in play is of vital importance, as it lead’s the child’s physical, spiritual, mental and social development (Heseltine and Holborn, 1987, Şişman, Özyavuz, 2010). Researches show that 0.50 of the mental development until age 17 is formed until the age 4, while 0.30 thereof is formed from age 4 to age 8, and 0.33 of school achievements made until age 18 depends on the education that child received in ages 0-6 (Tekiner,1996, p.10).

Influence of the parent, particularly mother in determining the child’s future identity and socialization is inarguable (Güngörmüş, 1995). The parent (generally the mother) who has to be with her child more particularly during pre-school period cannot find the areas that are physically and socially accessible for herself and her child to socialize sufficiently, use her energy in the right source and to express herself. Indeed, for the children at an age group when the parent works, he/she is at school age, however is not able to stay alone at home after school, safe spaces of public quality that make other contributions their socialization and education than the one made by the school is needed. Mother-Child Home facility that is suggested to meet these needs is currently not available in the legislation with its exact definition.

Despite the fact that there are practices regarding different areas under public and private property that provide children as well as parents with service, our country needs quality spaces where mother and child can be and spend time together depending on their needs.

For reasons such as the parent, who takes care of the child at any time of the day in the first years following the birth of babies, assuming a great responsibility, while being pushed to loneliness at the same time, individuals’ or society’s negative reaction to the child in environments where she was present before giving birth to the child, the environment not matching the needs of the child, mother’s lack of any guarantee to receive constant assistance from her relatives and not being able to get the child stayed with another person for some time due to economic reasons or security concerns (Westhead, 2017), the parent’s social relationships become different after having a child. The institutions such as community houses offer restricted facilities and lack arrangements to allow both the mother and child to spend longer times. Therefore, the mother needs spaces to get socialized with the groups with similar demands and expectations, to receive support to meet her needs (Westhead, *ibid*) and to spend longer times with her child.

Actions to be considered in the scope of Mother-Child Home facility can be provided at the neighborhood level.

NEIGHBORHOOD

Can be defined as the smallest local unit in cities, the smallest administrative unit of the city, neighborhood (Suri, 2002) is a physical and social sub-zone. Occupying a significant place in the social, cultural and administrative structures of the cities, the concept of neighborhood has a wide scope. In this study, the neighborhood is analyzed with regard to its social and physical accessibility and facilities. Neighborhood is the sub-zone, where daily and weekly needs can be met in walking distance. It is also defined in the other source as the unit of vicinity (Çabuk, 2003, Çetiner, 1971).

Elements determining the physical borders of the neighborhood:

- Borders are generally defined according to the reference of primary school facility. Walking distances to the primary school give a general clue on the general borders of the neighborhood. Primary school is also a determinant element in selection of the locations of the other functional areas.
- Walking distance is expressed in different distances. Freidberg (1982) determined it as 2-3 minutes to the playground areas within the sub-vicinity group and 10 minutes to the neighborhood park. According to Cetiner (1991), children's playground must be of 400-800-M distance and kindergarten of 400-M distance. Walking distance must allow the child to reach to the school with his/her parent before school age and on his/her own without getting tired at the primary school period.
- When primary school-centered access is taken into consideration, borders of the neighborhood can be told to cover an area that can be walked within 10 minutes in general view or an area with diameter of 800 M from bird's-eye view.
- Physical texture of the area, its slopes and unevenness are taken into consideration in walking distance.
- Artificial and natural thresholds are important in access of the neighborhood and in determining its borders.
- Çetiner (1971) made the definition as a unit of 3500-7000 people with the approach based on primary school.

FACILITIES IN THE NEIGHBORHOOD

Çetiner (1971) generally defined the facilities in the neighborhood determined according to daily and weekly needs as settlement areas, schools, outdoor sites-playgrounds, a small shopping center, meeting place and public facilities and required transportation areas.

Aksoylu et al. (1996) on the other hand, summarizes the facilities that must be present in the primary school settlement unit as follows:

- Buildings for Education (Primary School, Kindergarten, Nursery)
- Social Buildings (Medico-Social Center)
- Administrative Buildings (Neighborhood Administration, Police Station, Post Office, Fire Department)
- Commercial Buildings (15-20 shops that can meet daily needs)
- Recreation and Entertainment Areas (Playgrounds, Children's Playground, Park, Movie Theater, etc.) (Osmanli, 2012).

Social and cultural facilities in the neighborhood are positioned according to accessibility. Accordingly, center of the neighborhood is an area, where shopping units, social-cultural buildings, educational facilities, administrative facilities, recreation areas, medical facilities. Center of the neighborhood must be the areas that are still active out of working hours. Therefore, residences must be available with the other facilities within the center.

MOTHER-CHILD HOME FACILITY

Scope of the Mother-Child Home Facility suggested in this study is as follows:

- Preschool age group,
- Primary school students in 6-14-age group,
- Parent attending on preschool age group,
- Neighborhood inhabitant who comes for educational purpose solely.

DEFINITION

Mother-Child Home Facility can be defined as follows: "The name given to public spaces that meet requirements of 0-14-age group in the neighborhood unit such as playing, recreation, after-school study, library, short-term child care and that consists of a couple of classrooms where adults can have courses and of which indoor-outdoor floor area is maximum 0.20." Its properties can be listed as follows:

- Playing area shall be available in both indoor and outdoor area and indoor area shall meet playing need when weather conditions are not convenient.
- Play area arrangement shall be considered in three categories for 0-2-, 2-6-, 6-14- age groups.
- The parent that attends on the child in pre-school period can stay in the indoor space with his/her child for longer. In case of request, he/she shall be able to use nursery service for 2 or 3 hours on payment of small fee.

PROGRAMS

- Adults, generally women in the neighborhood shall be able to receive seminars on child education, social relationships and needs and attend courses to improve their knowledge and skills.
- Therefore, children, particularly those in early childhood period and their parents shall be able to express themselves without being isolated from the social life.
- Students of primary and secondary schools shall be able to come to the Mother-Child Home after the school. This way, in a safe environment, one can play, recreate, study and use the library.
- The seminar shall be subject to registration, and short term child care and use of the indoor space by school age children shall be subject to registration and a small fee.

Properties which are stated above in general shall help determining the identity of Mother-Child Home users and therefore, area sizes. Suggested facility includes recreation, study, library, seminar-course areas and small office functions, in addition to the indoor and outdoor play area.

There are different approaches regarding sizes of children's playgrounds. For example, in Australia, recommended playground area for a neighborhood of 5000 people is 14,000 M2. While this value is considered to be 5 M2 per child in France, in England it is 24 M2 (Anonymous, 1998, Şişman, Özyavuz, 2010). According to Yılmaz and Bulut (2003), playground area must be considered to be min 250 M2 or 6.5 M2 per child. Playground area is recommended to be 500-1000 M2 depending on the need (Öztan, 2004). In general, it must be thought that 1/3 of children in a neighborhood shall be in the playground at the same time and the size must be determined accordingly (Şişman, Özyavuz, 2010).

SIZE DETERMINATION

Size of the Mother-Child Home facility shall be determined according to the users and population. In 2016, population of Kadıköy county, İstanbul that is selected to be the area of analysis is 452302 people according to Turkish Statistics Institute (Kadıköy District Governorship kadikoy.gov.tr/mahalle). In calculations made for a neighborhood sub-unit of 5000 people, proportional values of population data of Kadıköy was used as an example. Although pre-school is considered to be 0-6-age, because details of 0-6-age cannot be calculated in the official population values, official data was taken as basis. The population that was calculated according to the proportional values of the age groups for whom the Mother-Child Home is thought to provide service is given in the Table below.

TOTAL POPULATION	5000 (F 55%, M 45%)			
AGE GROUP	0-4	5-9	0-14	20-40 K
Population %	8%	7.5%	7%	(49.8%)*55%
People	400	375	350	1370
Total People	1225			1370

Table 3: Distribution of Population of Kadıköy County by Certain Age Groups

CALCULATION OF PLAYGROUND SPACE

Because adult use shall be generally by women, in facility calculation, calculation was made according to the population of women.

Calculation of playground according to the table:

$$1225 \times 0.33 = 404.25$$

$$404.25 \times 6.5 = 2600 \text{ M2 approximately}$$

Indoor space calculation:

It was prepared by considering 25-40-age group women (1370 people) Ministry of National Education Directive (2014).

$$400 \times 0.33 = 130 \text{ people approximately}$$

Indoor space hosts classrooms, library, study, staff room and the area providing the required infrastructure. It was calculated to be around 750 M2 in total.

Playground parcel to host a building with a total floor area of 750 M2 must be around 3600-4000 M2. When rated to the population of 5000 people, Mother-Child Home facility standard was calculated to be 0.8M2/person (neighborhood population) or 3.25M2/child (0-14-age group). 0.8 M2/person here shall be excluded from the green area Standard in the development legislation.

Its indoor space can be stated to be building area ratio of 0.20, min. 750 M2, and in total floor area coefficient to be 0.40, min. 1500 M2, building road approach distances to be min. 10 M, in development plan terminology.

In another way of saying, the parcel in the “Mother-Child Home” legend within the development plan covers an area of 3600-4000 M2. Public children’s playground located in the outdoor part of the parcel can be used at any time of the day. The ground floor of min. 750 M2 is the indoor playground designed for different age groups. These are controlled spaces that pre-school children can use with their parents and children of higher age with registration. As also stated before, in addition to the seminar, course, short-term child care and use of the space by school age children shall be subject to registration and the fee financed by the public. The other functions than the playground shall be in the upper floor.

CONCLUSION AND EVALUATION

This study was conducted for the purpose of defining the Mother-Child Home facility that is not clearly defined in the current legislation. Women constitute the half of the population. In the years following giving birth to a baby, ability of movement is restricted both for the baby and mother. Raising healthy, skillful, productive individuals is in direct proportion with the providing the mother with the environment for self-development and sufficient socialization. 10. This facility was developed based on the following statements of the Growth Plan (2013-2018): “... maximizing participation of everyone and every region in the process of growth” (Article 129), raising productive and happy individuals that have a developed skill of thinking, perception and problem solving, ... are prone to science and technology use and production and are equipped with the fundamental knowledge and skills required by the information society (Article 142), ensuring raising the citizen’s quality and period of life as well as their participation in the economic, social and cultural life consciously, actively and healthily (Article 172), strengthening the women’s role in social, cultural and economic life (Article 249), increasing the opportunities and facilities to support children’s wellbeing by observing their best interests, to develop and realize their potential and increasing access to basic public services, particularly in the fields of education, health, justice and social services (Article 263).” The facility developed is of the sufficient quality for pre-school children, parents, group of children whose parents work and who need support after school and the other individuals who pursue self-development can carry out all activities together.

It must be evaluated together with the primary school facility designed for the neighborhood center. This way, functional integrity with the primary school and ease of physical access shall be provided.

In this study, standard of the Mother-Child Home facility was tried to be calculated. For trial purpose, only the neighborhood population of 5000 people and population group rates for 2016 in Kadıköy Municipality, Istanbul were used. Demographic structure of the sub-zones and detailed description of tendencies and expectations through questionnaire and observation shall be included in another study. Furthermore, discussing the Mother-Child Home facility and evaluation of its definition, content and justifications by different disciplines shall bring new dimensions to the research.

TEACHER CANDIDATES' VIEWS REGARDING THEIR CREATION AND JUSTIFICATION OF CLASS RULES IN PRIMARY SCHOOLS

Aygül OKTAY

ayguloktay@hotmail.com

Abstract

Classroom rules in primary schools are essential in terms of formation of democratic teaching environment and students' developing democratic behavior and attitude. This study aimed to identify class rules, reasons of them, and how they were created in the primary schools. The population of the study consisted of 72 senior students who took Teaching Practice course in the Department of Elementary Mathematics Teaching at the Faculty of Education. In the study survey method in a qualitative research approach was adopted. Data were gathered with a semi-structured interview form and 66 forms of senior students was included in analysis. The data were analyzed with descriptive analysis. Results of the study showed that 54 teachers form the class rules themselves, 38 teachers form with their students, and 17 teachers do not create any rules. 21 of the 29 class rules are in the form of negative sentences. Teachers generally form class rules on 1) Course activities, 2) Usage of equipment and objects in classrooms, 3) Course preparation and classroom entrance and exit, 4) Usage of other school parts and 6) Other. It was found that the rules were formed mostly by female teachers whose seniority were 11 years and more. It was concluded that it may be difficult for students to gain democratic behavior and attitude in primary schools.

Keywords : Primary schools, classroom rules, democratic behavior

TEACHER MOTIVATION ORIENTATIONS AND LEADERSHIP STYLES

Svetlana LUKASHOVA

ABSTRACT

The study examines the impact of teacher motivation orientations on leadership styles. The population comprises the academic staff of 60 randomly selected male (26) and female (34) educators from five departments of Suleyman Demirel University, Kazakhstan. The research explores teachers' professional and personality orientations; analyses the motivation scheme of university educators; identifies teachers with autocratic and democratic leadership styles; examines the relationship between teacher motivation orientations and their leadership styles. Mann-Whitney U-test and Spearman correlation analysis were employed for the present study as methods of data analysis. Based on the summary of the findings, the working hypothesis about statistical differences in the motivation structure of teachers with autocratic and democratic leadership styles was confirmed. The autocratic style positively correlates with self - orientation and negatively correlates with student interaction – orientation and approval motivation. Democratic style positively correlates with approval motivation and student interaction - orientation and negatively with self-orientation. In addition, autocratic leadership style is associated with a positive correlation with the orientation toward extrinsic negative motives, while the democratic style, on the contrary, has a negative correlation with this motivation. That is, the more the teacher demonstrates an autocratic style, superiority in knowledge and skills, the more it is essential for him a desire to avoid criticism from colleagues, possible troubles or punishments. Conversely, the more the educator seeks to remove the inhibition from his students, the more he encourages and supports them, the less he is afraid of criticism from colleagues and students. The results of the present study can be implemented in both professional development courses and teacher training seminars.

KEYWORDS: teacher motivation, professional orientations, leadership styles, autocratic, democratic

INTRODUCTION

How are positive feelings about a course and instructor generated? Effective communication between the leader and subordinates plays a central role. Should teachers care whether or not students find this communication satisfying? They should because it matters how the instructor influences the whole class and individuals in such situations when students request information, ask about course content, exchange greetings, or ask a personal question. The teacher appears in the leader position in the educational process since he makes plans, organizes and monitors students' activity (Drobot L., Rosu M., 2012). Unfortunately, while instructors do not even see themselves leaders in the classroom, their students do (Wallace , 2007). The research findings show that students find effective those leaders who answer questions clearly and explain guidelines concisely, and highlight what is important in each lesson ; who reveal interest in students' opinion and who do not interrupt them (Daniel , 1983) . According to McDowel (1993) a great majority of the student participants 'rated friendliness, "communicator image," "impression leaving," attentiveness, and "animated" more positively' than other leadership style variables.

What motivates teachers to develop different leadership styles which students find more or less effective and satisfying? No doubt, there is a significant impact of teacher motivation orientations on leadership styles . If this is so , then it is worthwhile to understand how professional and personality orientations and teacher leadership styles are related and find out the ways to enhance teacher self-awareness and develop an optimal leadership style.

LITERATURE REVIEW

Teacher Orientations

Orientations is a broad category that includes beliefs, values, preferences, and tastes (Alan H. Schoenfeld , 2011). The term 'orientations' is given preference in the article because the term 'beliefs' is more general. Teachers develop perceptions about students and pedagogy , the nature of teaching and learning on the basis of their experience, and those orientations/beliefs tend to shape their leadership styles.

The issue of 'teacher orientations/beliefs' has always attracted academic scholars attention . Still , we decided to illustrate three approaches that we found most helpful for our study.

One of the approaches describes *professional orientation*. The author of this theory, E. Rogov (1999), identified four indicators of professional orientation:

- Communication orientation
- Subject orientation
- Organization orientation
- Intelligence orientation

Among these types of teachers (communicator, subject, organizer and intellectual), each has its own ways, mechanisms and channels for the transmission of educational influences.

For example, the teacher "communicator" is distinguished by extraversion, low conflict, goodwill, ability for empathy, and love for learners. He realizes his educational impact on the basis of compatibility with the student, finding common ground in his personal life. Obviously, these effects will have the greatest impact on everyday behavior of the learner.

The "subject"- teacher is a rationalist who is firmly convinced of the need for knowledge and his significance in life; he is characterized by a desire to educate a student with the means of the subject studied, by changing his perception of the scientific picture of the world, drawing him to work in a circle.

The "organizer", who is often the leader not only for students, but also of the entire teaching staff, mainly broadcasts his personality traits during various extracurricular activities. Therefore, the result of his impact is likely to be found in the sphere of business cooperation, collective interest and discipline.

The "intellectual" or "enlightener" who is distinguished by adherence to principles, observance of moral norms, realizes himself through highly intelligent educational activities, bringing morality, spirituality, and a sense of freedom to the students.

Another approach designed by V.Smekal and M. Kucher (Cherny, B., Kollarik, T.,1988) describes three *personality orientations* for teachers:

- Personal (self) orientation
- Collectivist (interaction) orientation
- Business(task) orientation

It should be noted that all three orientations do not exist absolutely independently, but are combined with each other. Therefore, it will be more relevant to identify the dominant orientation of the teacher.

The Personal Orientation is associated with the predominance of the motives of one's own well-being, the desire for personal primacy, and prestige. Such teacher is most often occupied with himself, with his feelings and experiences and reacts little to the needs of learners around him. In the work he sees primarily the opportunity to satisfy his claims.

Collectivist orientation characterizes the situation when the actions of a teacher are determined by the need for communication, the desire to maintain good relations with students. He is likely to show interest in joint activities.

The business orientation reflects the predominance of the motives generated by the activity itself, the fascination with the process of activity and new skills mastery. Typically, such teacher seeks to cooperate with the team and achieves the greatest productivity of the group; therefore, tries to be useful for the performance of the task.

The third approach we were drawn to was proposed by K.Zamfir (1983) who illustrates the following *motivation orientation* indicators:

- Intrinsic motives
- Extrinsic positive motives
- Extrinsic negative motives

It is important to note that the internal (intrinsic) type of motivation characterizes an individual who is interested in activity itself. If the motivation for professional activity is the desire to satisfy other needs then it is the case to talk about external (extrinsic) motivation. The external motives themselves are divided into external positive (social prestige, wages, rewards, etc.) and external negative (fear, threats, pressure, etc.). External positive motives are undoubtedly more effective and more desirable from all points of view than negative ones.

Leadership Styles

Teachers bring leadership in classrooms, and the behaviors they demonstrate as leaders greatly affect a variety of student outcomes (Walumbwa, Wu, & Ojode, 2004; Pounder, 2008; Bolkan & Goodboy, 2010). Leadership

style is the manner and approach of providing direction, implementing plans, and motivating people. (Newstrom, Davis, 1993). Leadership style relates to something that characterizes a specific person throughout different situations, and this is what many researchers in the 21st century emphasize (Jamal, 2014).

Individual style of leadership was originated in Lewin's works in 1939 who identified three different styles of leadership: autocratic, democratic, and laissez-faire. During their experiment Kurt Lewin and his colleagues discovered that the most effective style was democratic whose leader shared responsibility for decision making and outcomes with his subordinates. Autocratic leaders imposed and expected obedience, which caused dissatisfaction and led to revolution ; whilst laissez-faire leaders failed to encourage people to put in the energy that they did when being actively led. Modern research works on leadership styles in teaching learning process support Lewin's conclusions.

Autocratic leaders. Atchison and Hills (1978, 1987) describe an autocratic leader as 'the sole native agent' who 'considers his subordinates as passive receivers of the instructions'. The teaching style 'in this case is often characterized by nagging, distrust and suspension. This is normally due to lack of effective communication between the leader and subordinates'. Typical autocratic leaders are the people, who like to insist, give orders, have strong desires to be in the middle of interest and are generally over confident (Boella, 1988). This kind of leaders generally concentrate on work activities and their communication level with their followers is really low (Sisk & Williams, 1981). Katrina Franklin (2016) concluded that the autocratic leadership style played a significant role in the students' demotivation.

Democratic leaders. Fred (2001) concludes that with a democratic leader the students are certainly 'involved in any efforts aimed at finding solution to the problems and planning the classroom of the organization'. Vain (2000) emphasizes that a democratic leader is always mindful and sensitive to students' needs and always strives to motivate them. This sort of leaders and their followers have an effective social interaction, reciprocal confidence and friendly relationship which help them to go forward as a single social unit (Moideen, 2002). At all times, the democratic leader makes available his advice and suggestion to his class. They can provide a high level of personal motivation, manage to use followers' knowledge on the process of decision making, create commitment to organizational goals and eliminate potential disputes by using effective communication (Costley & Todd, 1994).

Laissez-faire leaders. Such leaders provide free working conditions which help the groups to internalize new changes and this situation can be seen as a motivating aspect, but a lack of coordination of the activities can also likely to happen as a consequence of this loose structure (Costley & Todd, 1994).

In the final theory analysis, there have been found different theories on teacher professional /personality and motivation orientations and leadership styles. However, there is still a gap in the scientific evidence about relationship between teacher motivation orientations and autocratic and democratic teaching styles.

THE STUDY

The problem of the current study is to investigate the links between teacher motivation orientations and leadership styles. Hence, the objectives of the research are as follows:

- 1.to study teachers' professional and personality orientations
- 2.to analyze the motivation scheme of university educators
- 3.to identify teachers with autocratic and democratic leadership styles
- 4.to examine the relationship between teacher motivation orientations and their leadership styles .

Research hypothesis: there are differences in the motivation structure of teachers with autocratic and democratic leadership styles

Methodology and Procedure

Participants: The sample was comprised of instructors from Suleyman Demirel University , Almaty , Kazakhstan. The age ranged from 25 to 65 years old (average age 34,5 years old). Participants gained a different work experience at both school and university from 4 to 43 years. The sample includes 60 teachers of Social Science and Humanities department, Economics, Engineering , and Philology faculties. Depending on the literature and previous studies, we used four research instruments - questionnaires which were selected in order to resolve the assigned research tasks and hypothesis. The findings indicated that all four questionnaires were found to have high reliability.

“Method of diagnosing the professional orientation” - The method was outlined by E. Rogov (1999) and enables you to determine the preferred direction of a teacher identity, potential to organize activities and focus

on the subject, the need for communication and approval, and the importance of teacher's behavioral intelligence. Overall, there are 4 professional orientations proposed by the author, which we have already discussed above: communication orientation, subject orientation, organization orientation, and intelligence orientation.

The questionnaire includes 50 statements of personal characteristics. To process the results of a survey it is necessary to compare the answers of the examinee with the key. Each answer is assessed on a two-point scale:

- the answer that coincides with the key is estimated at 1 point;
- the answer that does not match the key is set to 0.

Each personality parameter is estimated by summing up points for a group of questions. The total score for the factor does not exceed 10 points. The norm zone is within 3-7 points.

The processing of results is usually started from the approval motivation scale, since if the answer goes beyond the norm for this factor, it should be recognized that the subject sought to distort the results and they are not eligible to further interpretation.

Each of the directions of professional orientation is considered insufficiently developed if less than three scores are received on this scale, and clearly expressed if the score is more than seven. The severity of one factor indicates the mono-directionality of the teacher's personality, and the severity of several factors can be interpreted as a result of the poly-directivity.

“Teacher personality orientation” - The method was developed by Czech psychologists V. Smekal and M. Kucher . The technique is based on the verbal reactions of the subject in the alleged situations related to the work or participation of other people. The answers of the examinee depend on the kind of satisfaction and reward that he prefers.

The purpose is to determine the orientation of the person: personal / self-orientation; collectivist / interaction – orientation; business / task -orientation.

“Motivation of Professional activity” - The method was designed by K. Zamhir (in Rean's modification) (1983) and can be used to diagnose the motivation of professional activity, including the pedagogical motivation. The basis is the concept of internal and external motivation. Overall, the author proposes to explore intrinsic motives , extrinsic positive motives , and extrinsic negative motives.

Based on the results obtained, the motivational complex of the individual is being determined. Motivational complex is a type of relationship between the three types of motivation:

IM (intrinsic motives), EPM (extrinsic positive motives) and ENM (extrinsic negative motives).

To the best motivational complexes the following two types of combinations should be attributed:

IM > EPM > ENM and IM = EPM > ENM.

The worst motivational complex is the type : ENM > EPM > IM.

According to Rean A., job satisfaction has a significant correlation with the optimality of the teacher's motivational complex (positive significant relationship, $r = +0.409$). In other words, the higher the satisfaction of the teacher with the chosen profession is, the more optimal is the motivational complex: the high weight of internal and external positive motivation and the low weight of the external negative. The more optimal the motivational complex is, and the more active the teacher is, the more likely he is motivated by the very content of pedagogical activity, he has the desire to achieve certain positive results with a lower level of emotional instability. And vice versa, the more teachers' activity is conditioned by the motives of avoidance, censure, and desire to "not to get trapped" (which begin to prevail over motives related to the value of pedagogical activity itself, and also on external positive motivation), the higher is the level of his emotional instability.

“Style of Pedagogical Communication Self-evaluation” - The method was modified by E. Ilyin (1997) for pedagogical situation. There are 3 scales for each style: autocratic, democratic, and laissez-faire . The strength of each style is represented by 3 degrees:

0-3 points - low;

4-7 points - middle;

8-11 points - high.

The test is made up of 33 yes/no questions. All subjects were divided into two groups depending on the predominance of autocratic or democratic component in their leadership style.

FINDINGS AND DISCUSSION

Mathematical processing of data was carried out using the statistical package SPSS, version 16.0. We used descriptive statistics, r-Spearman's rank correlation coefficient, and Mann-Whitney U-criterion.

Statistical analysis

Research task 1 : to identify teachers' professional and personality orientations

Table 1. Professional and Personality Orientations Preferences of Teachers

N	Indicators of professional orientations	Mean N in %
1	Communication orientation	17%
2	Organization orientation	19%
3	Subject orientation	21%
4	Approval motivation	21%
5	Intelligence orientation	22%
N	Indicators of personality orientations	Mean N in %
1	Student interaction orientation	31%
2	Self-orientation	34%
3	Task –orientation	35%

Research task 2: to analyze the motivation complex of university educators

Table 2. Intrinsic and Extrinsic Motivation Preferences of Teachers

N	Motivation Structure Indicators	Mean N in %
1	Intrinsic motives	40%
2	Extrinsic positive motives	32%
3	Extrinsic negative motives	28%
	Motivational Complex	
	Intrinsic M > Extrinsic Pos M > Extrinsic Neg M	

Findings: 1. The triad of the motivational system is held towards highly intelligent educational activities, the development of professional competence, creative abilities of students and their approval.

2. Self, interaction and task orientations received an equal representation in the motivation structure of teachers (35%, 34% and 31% respectively)

3. The following motivational complex IM> EPM> ENM was obtained, which refers to the best, optimal motivational complexes.

Research task 3 : to identify teachers with autocratic and democratic leadership styles.

In accordance with the hypothesis of the study, all subjects were divided into two groups, depending on the predominance of an autocratic or democratic component in the style of pedagogical communication:

- 27 respondents with predominance of autocratic style (from 5 to 7 points, which corresponds to the average indicators);
- 33 respondents with a predominantly democratic style (low points for autocratic style 1-3).

Reliable differences analysis

Let us proceed to the next stage of the research. It is essential to recall that the second stage of the empirical study was to compare and identify motivational differences in the personality of teachers with an autocratic and democratic leadership styles. To do this, we chose a non-parametric Mann-Whitney U test.

Research hypothesis: there are differences in the motivation structure of teachers with autocratic and democratic leadership styles

Table 2. Reliable differences in the motivation structure of teachers with different leadership styles

Variables	Teaching Styles	Mean	U-test (Mann-Whitney)	Reliability
Communicator	autocratic	19.69	153.500	0.000
	democratic	39.35		
Approval motivation	autocratic	18,81	130,000	0.000
	democratic	40.06		
Self- orientation	autocratic	45,96	28,000	0.000
	democratic	17.85		
Interaction -orientation	autocratic	18.06	109.500	0.000
	democratic	40.68		

Extrinsic motives	negative	autocratic	40,39	178,500	0.000
		democratic	22.41		

Statements having an error probability of $p \leq 0.05$ are called significant, statements with an error probability of $p \leq 0.01$ are very significant, and statements with a probability of error $p \leq 0.001$ are the most significant.

Table 2 shows that there are significant differences in the motivation structure of teachers, depending on the preferred leadership style. Overall, these differences were identified by 5 indicators:

1. Communicator
2. Approval motivation
3. Self-Orientation
4. Interaction - Orientation
5. Extrinsic negative motives

At the same time for teachers with an autocratic style results are more descriptive on such scales as:

1. Self-Orientation
2. Extrinsic negative motives.

While for teachers with a democratic style the scales are different :

1. Communicator
2. Approval Motivation
3. Interaction - Orientation

Based on the results received in the study teachers with an autocratic style of communication gain the following characteristics: intolerant to others; most often occupied by themselves, with their feelings and experiences; react little to the needs of people around them; during their work they see, first of all, the opportunity to satisfy their claims; they also try to avoid criticism from the leader or colleagues, as well as to avoid possible punishments or troubles.

Teachers with a democratic style of pedagogical dialogue in contrast are more communicative, and empathic, light and mobile in emotions; they implement their educational impact on the basis of compatibility with a student, finding common ground in his personal life; they seek to understand the student's inner world, even in the a lack of information takes place; they are characterized by a high need for communication, the desire to maintain good relations with colleagues, interested in joint activities.

Thus, the main hypothesis about the existence of differences in the motivational structure of teachers with an autocratic and democratic style of pedagogical communication was confirmed.

Correlational analysis

In this stage we make use of r-Spearman's rank correlation coefficient .

Research task 4: to examine the relationship between teacher motivation orientations and their leadership styles .

Table 3 shows that leadership styles of pedagogical activity are related to the orientation of the teacher's personality with three correlations:

- The autocratic style is associated with the two negative correlations with the focus on motivation for approval and communication;
- The laissez- faire style is associated with a negative correlation with the communicative orientation;
- The democratic style is not related to direct correlations with the studied features of the profession

Table 3. Interrelation of leadership style and the professional orientation of the teacher's personality

	Communicator	Approval Motivation
Autocratic style	-0.434 **	-0.432 **
Laissez-faire style	-0.198 *	

The more the teacher resorts to the autocratic style of pedagogical communication, the less he opts to the communication sphere and the search for approval. Conversely, the less the teacher's style is autocratic, the more he is likely to communicate with students and look for their approval.

That is, the more the teacher seeks independence in decision-making and analysis of group problems, the more impulsive and emotionally unstable he is, the less he needs approval and support from outside, and the less he is sociable, empathetic, more introverted and conflicting.

The same features of behavior in the field of communication also characterize the laissez-faire style of behavior.

The more the teacher seeks conformity, dependence, and expresses the need for approval, the more conflicting, emotionally unstable, irritable and impatient in dealing with students he is.

Table 4 shows the relationship between the leadership style of pedagogical activity and the teacher's personality orientation, revealed by Smekal-Kucher's method.

From this table it follows that autocratic and democratic leadership styles are related by opposing correlation relationships with two types of personality orientation:

1. The autocratic style positively correlates with self - orientation and negatively correlates with interaction - orientation.
2. Democratic style positively correlates with interaction - orientation and negatively with self - orientation.

Table 4. Interrelation of pedagogical style and the teacher's personality orientation

	Autocratic style	Democratic style
Self-orientation	0,468 **	-0,228 *
Interaction - orientation	-0,454 **	0,257 **
Communicator	-0.434 **	
Approval motivation	-0.432 **	

Obviously, the more the teacher adheres to the autocratic style in his activity, the more he is motivated by the predominance of the motives of his own well-being, the desire for personal primacy and prestige. Such person is most often occupied with himself, with his feelings and experiences and reacts little to the needs of people around him. In the work he sees, first of all, the opportunity to satisfy his claims.

Conversely, the more the teacher follows a democratic style of teaching, the more his actions are determined by the need for communication, the desire to maintain good relations with fellow workers. He is likely to show interest in joint activities.

Thus, it is seen that the teacher's personality orientation is determined by a particular leadership style .

Table 5 presents the correlations between the leadership style and the motives of professional activity.

Table 5. Interrelation of leadership style of pedagogical activity and motives of professional activity

	Autocratic style	Democratic style
Extrinsic negative motives	0,347 **	-0,234 *

From the table presented, it follows that the autocratic style is associated with a positive correlation with the orientation toward extrinsic negative motives, while the democratic style, on the contrary, has a negative correlation with this motivation. That is, the more the teacher demonstrates an authoritative, arrogant or condescending behavior at the lesson, superiority in knowledge and skills, the more he tends to avoid criticism from colleagues, possible troubles or punishments. Conversely, the more the educator seeks to remove the inhibition, awkwardness from his students, the more he encourages and supports them, the less he is afraid of criticism from colleagues and various troubles.

CONCLUSION

Thus, the results presented above indicate the presence of differences in the motivational sphere of teachers, depending on their leadership style:

1. The teacher with an autocratic style of communication is characterized by the predominance of the motives of one's own well-being, the desire for prestige; he is likely to reject students' rights for individuality, to demand the uniformity that corresponds to the established values and tastes from the people around; he has a weak development of the channels of empathy;
2. The teacher with a democratic style of communication is characterized by a high need for communication, the desire to change this or that substructure of the student's personality, the ability to create an atmosphere of openness, trust, sincerity;
3. The main characteristics of the teacher with a laissez-faire style of communication are conflict, irritability and impatience in dealing with students; inaptitude to understand another; the desire to adjust the partner for themselves and regulate his actions ;
4. The working hypothesis about the existence of differences in the motivational structure of teachers with

an autocratic and democratic style of communication was confirmed :

Autocratic leadership style

- positively correlates with self - orientation
- negatively correlates with student interaction-orientation
- negatively correlates with approval motivation
- positively correlates with extrinsic negative motives

Democratic leadership style

- positively correlates with approval motivation
- positively correlates with student interaction - orientation
- negatively correlates with self-orientation

PEDAGOGIC IMPLICATION

The benefits of the research present invaluable knowledge to both college administrators and instructors in order to foster effective teaching and learning. First of all, having deep insights into their motives guided by their personality and professional orientations, university educators can make decisions to improve their leadership style to meet the needs of students and contribute better to the educational process. Furthermore, the results of the present study can be implemented in both professional development courses and teacher training seminars. A major challenge for professional development is to assist teachers in developing orientations, goals, and resources that enable them to function as highly accomplished teachers. Naturally, this is a slow process even though a teacher is aspired to teach in a particular manner, it takes some time to develop pedagogical content knowledge that support teaching in that way. There is high probability that changes in orientations will take place and last, if they are discussed overtly at a regular basis and are supported in everyday teaching practice (Alan H. Schoenfeld, 2011). Finally, the information gained from this study contributes to the research literature through expanding on the differences in the motivation structure of teachers with autocratic and democratic leadership styles.

TEACHERS ARE DETERMINING THE FACTORS INCREASING THE SATISFACTION OF THE FATIH PROJECT SAKARYA EXAMPLE

Dr.Metin ÇENGEL
cengel@sakarya.edu.tr

Dr.Ayşe ALKAN
ayshe_alkan@hotmail.com

ABSTRACT

The FATIH project is a Project designed to provide equal opportunity in education and training and to improve the information technology in our schools. It was created in 2007-2008 as an idea, started in November 2010 and completed in 5 years. The study group of the study is the teachers in Sakarya. In this study, it was aimed to determine the factors that will increase the satisfaction of the teachers to the FATIH Project. For this purpose, 12 questions were asked by researchers and 45 questions were asked in 7 categories according to Likertscale. The scale was developed and the factors were determined by analyzing the validity and reliability of the scale with answers. It is thought that the results of the research will contribute to the related literature by increasing the success in the FATIH project.

Keywords: FATIH project, information technology, technology

INTRODUCTION

Meet the needs of people throughout history, various tools to facilitate their work, has invented tools and techniques (Durmus and Arıduru, 2001). Today, access to information, knowledge utilization, and faster access to development opportunities thanks to the rapid development of information and communication technologies in teaching is provided. With the introduction of technology in the educational environment has emerged as a widely used educational technology and instructional technology concepts. Educational technology and instructional technology concepts are similar and often confused. Çilenti (1988) and Uşun (2004), education technology, manpower and manpower external sources, using the appropriate methods and techniques to the specific purpose of training individuals evaluating the results are expressed as the science that studies the transportation path.

Education technology, "what" and "why" questions, while teaching technology "how" tackles the question (Kaya, 2006; Lortoğlu, 2008,). Karademirci (2012), the teaching of information technology, in a systematic way to approach the technology being transferred to the students and also indicates the means used in this process. Place of teachers in integrating technology in education is undoubtedly great. Improve the quality of training of teachers to include this technology in learning and training programs are one important factor. In this regard, Mahiroğlu (2007), to determine the quality of education and teachers related to the system is being successful is that they have a responsibility.

Sakallı et al. (2013) technology, the most efficient transfer of information in the preparation of teaching activities is to provide the tools, applying is important, and students in achieving the goal of teachers using these tools, the information they have learned by experience indicates that it is more permanent. Tabancalı (2003) providing appropriate professional development for teachers of modern technology, when they adapt to changing conditions, it is that they become ready for change faced by students. Yıldız and Seferoğlu (2013) similarly in Information Technology (IT) teachers issued its ability to use a high level of education and potential benefits is noteworthy that in key positions.

Ministry of Education, which aims to take its place in the educational system technology (MEB) and carried out with the Ministry of Transport to Increase Opportunities and Technology Improvement Act (Fatih) project. The FATIH project, which aims to provide an interactive wooden and internet network infrastructure for pre-school, primary and secondary schools, aims to provide equality of opportunities in education and education and to use more active tools of information technology in the learning-teaching process in order to improve the technology in the schools. FATIH Project in Education consists of five components: provision of hardware and software infrastructure, provision and management of educational e-content, effective use of ICT in curricula, in-service training of teachers, and provision of conscious, safe, manageable and measurable ICT. One of the elements that constitute the FATIH project in education is "In-service Training for Teachers". In order to enable the FATIH project to progress more efficiently with this component, in-service training activities are planned through face-

to-face and distance learning. With these trainings, it is aimed to create a rich educational and teaching environment and to enable active use of teachers in classrooms (MEB, 2012). The perceptions of the teachers for the implementation of this project were worthy of studying in this issue with the implementation of the FATIH project and the importance of its advancement.

Purpose of the research:

The purpose of this study was to determine the factors that affect the positive and negative aspects of the project outlooks and perspectives of the Teachers in the Anatolian High School affiliated to the Sakarya MEM (National Education Directorate) to the perceptions of the project and to determine which factors affected teachers' satisfaction and project ownership.

The importance of research

It is important for the teachers, who are one of the important legs of the project, to determine the aspects of this project in order to achieve success of the Fatih project. Determining what the teachers' ownership of the project and their satisfaction depends on is a matter of fact. Therefore, the future of the system is important in terms of attitudes of teachers towards this project.

METHOD

In this section, information about the researcher's model, study group, data collection tool, data collection and analysis will be given.

Statistical Method of Research

In this study, validity and reliability analyzes of the scale, explanatory and confirmatory factor analyzes were made. SPSS program was used for explanatory factor analysis. AMOS program was used in confirmatory factor analysis.

Universe of your research

The universe of this research includes Teachers working in Sakarya Anatolian High Schools. In this study 418 teachers have been applied by using internet data collection method.

Research Questionnaire

In this questionnaire, the opinions of the teachers were asked about which factors will affect positively or negatively the teachers' satisfaction with the Fatih project and their ownership. The data collection tool used in the research was created by investigating the literature by the researchers and the factors affecting the satisfaction of the teachers were examined.

In the first part of the scale, 12 questions of demographic structure were asked. In the first factor of the scale, 5 questions about content, 5 questions about Infrastructure in the second factor, 6 questions about materials in the third factor, 7 questions about Smart Board in the fourth factor and 8 questions about the Teacher Perceptions in the fifth factor were applied to the opinions of the teachers. In addition, 8 questions about the teachers' satisfaction and 5 questions about the ownership were asked.

Research Data

The data used in this study; Sakarya has been obtained through questionnaires from teachers working on the internet. The research questionnaire was filled online by 418 teachers in the 2015-2016 school year. In this survey; The answers given to the questions asked in the dimensions of the factors together with the questions about the demographic structures of the teachers; I do not agree at all.

The validity and reliability tests of the data used in this study were carried out in (Çengel and Alkan; 2016).

In this study, it is to determine the factors that influence the satisfaction of the teachers more in the research and to make them more prominent in those factors. More studies are needed on the issues in the low factors.

Research Hypothesis

The hypothesis for the research is listed below. Hypotheses are shown in Figure 1.

Model Hypotheses

H1: Teachers' perceptions about Content are influential on ownership.

H2: Teachers' perceptions about Content are influential on their satisfaction.

H3: Teachers' perceptions about the infrastructure are influential on ownership.

H4: Teachers' perceptions about the infrastructure are influential on their satisfaction.

H5: Teachers' perceptions about material are influential on ownership

H6: Teachers' perceptions about material are influential on their satisfaction.

H7: Teachers' perceptions about salvation are influential on their satisfaction.

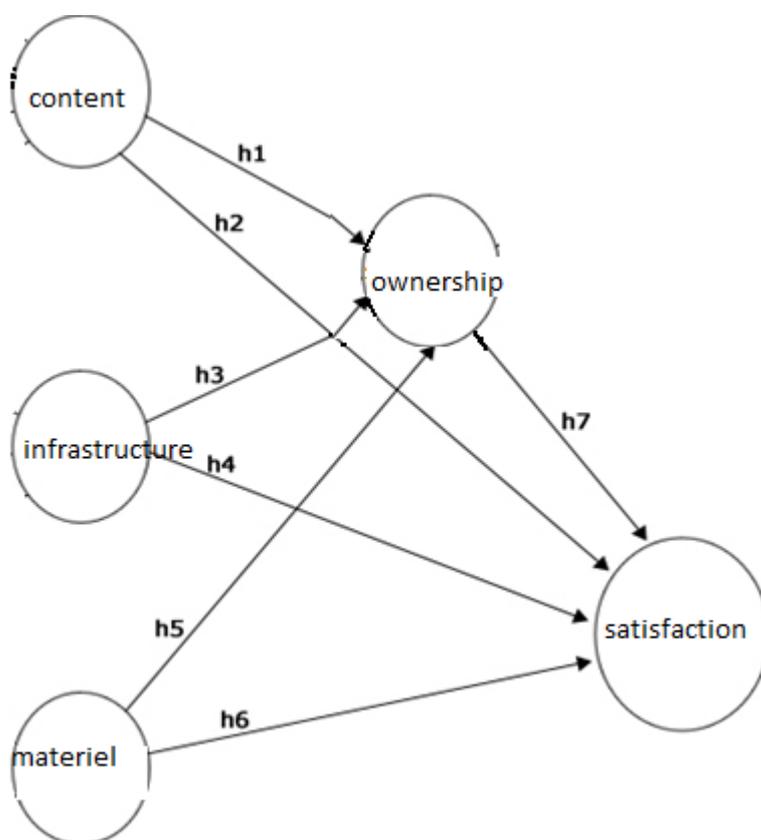

Figure 1. Research Hypothesis (Conceptual Model)

RESULTS

A structural equation model is used to control hypotheses.

Demographic Characteristics of Participants

The frequency analysis results of the demographic characteristics belonging to the students participating in the survey are shown in Table 1.

Table 1: Demographic Characteristics Frequency Analysis of Participants

Demographic Characteristics		Male [389 - %49]	
		Frequency	%
GENDER	Famale	201	48
	Male	217	52
	Total	418	100
Computer Education	I got	310	74
	I did not take	108	26
	Total	418	100
Fatih Project Training	I got	400	95
	I did not take	18	5
	Total	418	100

Main Hypothesis Analysis (Conceptual Framework)

The observation of the DFA and reliability analyzes applied to each factor and measurement model at the desired levels allows the model of the structural equation between the measurement models to be constructed considering the conceptual framework. Relations between the main model and variables created in this context are shown in Figure 2 below.

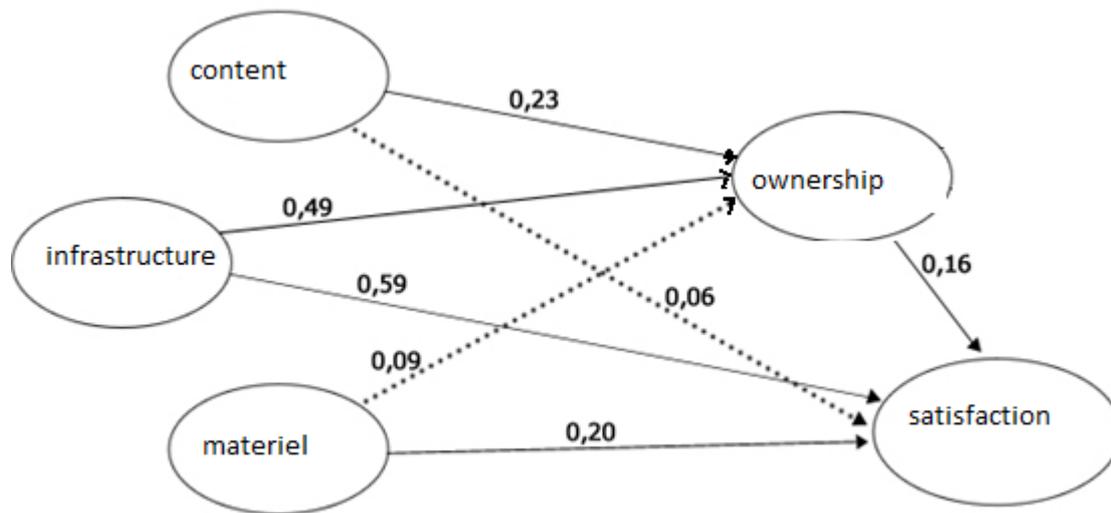

Figure 2. Main Hypothesis Analysis

Main Model Compliance Indexes

Table 2: Main Model Compliance Indexes

Main Model	Compliance Indexes					
	χ^2/df	GFI	AGFI	TLI	CFI	RMSEA
	11.7/ 2,1=5.1	,985	,889	,920	,978	,0490

When the fit indices are compared according to the values of the main model, it is seen that they fit well (Table 2). In view of the model in Figure 1, Appropriation (0.49), Content (0.23), Material (0.09) appear to be a positive effect of the factors on Appropriation. According to this, we can say that the impact factor is not within the desired limits although the Influence Factor is the weakest factor and the Material Factor has a small impact of <0.1. It is seen that Infrastructure (0.59), Satisfaction (0.20) and Content (0.06) have a positive effect on Satisfaction. Therefore, the most powerful factor in describing satisfaction is the infrastructure, the weakest factor is content and the effect of content factor is <0.1. We can say that the effect ratio is not within the desired limits. It has been seen that the ownership effect of ownership (0,16). In this context, the hypotheses h1, h2, h4, h6 and h7 in Figure 1 are confirmed within the scope of the research. The hypotheses h2 and h5 are also not confirmed.

CONCLUSIONS

In this research, a scale was applied to the teachers working in Anatolian High School in Sakarya to determine the views of the fatih project at the beginning and end of 2015-2016 academic year. Kayaduman (2011) It is important to examine the qualifications of teachers who are one of the important legs of the project and the current situation in the infrastructure so that the Fatih project can succeed. Although Adıgüzel (2001) deals with the widespread use of the conqueror project, it shows that the studies that measure the attitudes of the teachers and the students show that the placement of the teachers in the intelligent classes in education is not used effectively in accordance with the purpose of this project.

In this study, a satisfaction model was developed for the environment in which the teachers gave education by making use of the perspective of the conception of the conception of the conceptual structure. In this model teachers' demographical information about the teachers in the first dimension of the scale was asked and the perception of the Fatih project was asked in the second dimension.

In the main model, it is seen that the Infrastructure dimension has the highest value (Satisfaction, 0.59, Achievement 0.49) in the description of the main model and the content dimension has the second highest value (Appropriation 0.23) in explaining the main model. Teachers seem to have the third highest rating (satisfaction,

0.20) in explaining the main model. According to this situation, the strongest dimension in the perceptions of the teachers is the infrastructure dimension, the content dimension is the material dimension in the last dimension. It is thought that the influence of the infrastructure dimension on Satisfaction and ownership is the perception that other subjects will have no prescription when the internet and computer infrastructures of schools are lacking.

RECOMMENDATIONS

- In order to increase the ownership and satisfaction of the project, the teachers who are the practitioners of the Fatih project should be given in-service trainings in appropriate time periods.
- Software used in smart board usage should be done quickly to solve the deficiencies.
- Psychological motivation studies should be carried out in order to ensure that teachers and students are found in the positive slice in terms of project perspective.
- An economic incentive system should be introduced in order to enable teachers to participate as content developers in the EBA platform providing contents to Fatih Project.
- These tools should be trained to enable teachers to use EBA material developer tools more effectively.

ABSTRACT

The purpose of the current study is to determine teachers' opinions about professional development schools. In the current study; one of the mixed methods, the convergent design was employed. The sampling of the quantitative dimension of the study is comprised of 256 teachers working in 21 elementary and secondary schools in the city of Muğla. The teachers participated in the study on a volunteer basis. The sampling of the qualitative dimension of the study consists of 26 teachers selected from among the 256 teachers. The data of the study were collected through the Professional Development Schools Scale and an interview form. The quantitative data were analyzed by using descriptive statistics and the qualitative data were analyzed by using the inductive content analysis. The findings of the study revealed that the teachers have positive opinions about professional development school applications, they want more developed school-university cooperation, and they think that teacher-academician and teacher-teacher relationships need to be developed. The opinions of academicians working in education faculties about professional development schools can be elicited. A pilot study of professional development school can be conducted in Turkey.

Note: This research was financially supported by the department of Scientific Research Projects, Mugla Sitki Kocman University (Project No: BAP-17/046).

ÖĞRETMENLERİN MESLEKİ GELİŞİM OKULARINA İLİŞKİN GÖRÜŞLERİ

ÖZET

Bu araştırmada öğretmenlerin mesleki gelişim okullarına (professional development schools) yönelik görüşlerinin belirlenmesi amaçlanmıştır. Bu araştırmada karma yöntem desenlerinden yakınsak desen kullanılmıştır. Araştırmanın nicel boyutunun çalışma grubunu Muğla il merkezindeki ilkokul ve ortaokulda görev yapan ve araştırmaya katılmaya gönüllü olan 21 okulda 256 öğretmen oluşturmuştur. Nitel boyutunu ise aynı gruptan gönüllüler arasında seçilmiş 26 öğretmen oluşturmuştur. Veriler Mesleki Gelişim Okulu Ölçeği ve yarı yapılandırılmış görüşme formu ile toplanmıştır. Nicel veriler betimsel analizler kullanılarak, nitel bulgular ise tümevarımsal içerik analiz kullanılarak çözümlenmiştir. Araştırmada öğretmenlerin mesleki gelişim okul uygulamalarına yönelik olumlu görüş bildirdikleri, üniversite-okul işbirliğinin artırılması, öğretmenler ile öğretim elemanları ve öğretmenlerin kendi aralarındaki paylaşımların geliştirilmesi gerektiği sonucuna ulaşılmıştır. Mesleki Gelişim Okullarına yönelik eğitim fakültesindeki öğretim elemanlarının görüşleri alınabilir. Mesleki gelişim okulları uygulaması Türkiye'de pilot uygulaması yapılabilir.

Not: Bu araştırma Muğla Sıtkı Koçman Üniversitesi Bilimsel Araştırma Projeleri Bölümü tarafından mali olarak desteklenmiştir (Proje No: BAP-17/046).

TEACHERS' OPINIONS ABOUT VALUES EDUCATION IN SECONDARY EDUCATION INSTITUTIONS

Ahmet ESKİCUMALI

Zeynep Demirtaş

zeynept@sakarya.edu.tr

Nihan Arslan

narslan@sakarya.edu.tr

Yunus Akdeniz

Values education is a process that starts in family and continues in education institutions. It is a general thought that individuals that form society must have main value judgments to have a common social life and live well. In this regard, in this study, values education in secondary education institutions, the quality of the education, the problems encountered in practice and solutions of the problems are researched. In the scope of research, 31 teachers in different fields and cities are interviewed by using semi-structured interview technique. The obtained data is analyzed by using descriptive analysis technique. According to results, generally, the problems emphasized that there is no collaboration between teachers, abstract concepts are tried to be taught as concrete conceptions, curriculum, weekly course hours and school environmental planning is not appropriate for values education and students, teachers and families do not attach adequate significance to values education. As solution suggestion, curriculum revision, arrangement of weekly course hours, creating awareness for teachers and families about values education are come into prominence

ABSTRACT

Vocational school mathematics teachers usually feel unhappy when experienced the inability of the students to overcome the abstract math concepts that according to them these concepts are not difficult to learn in lectures. They explain the reason of this difficulty with the impossibility for the students to use geometrical intuition and the lack of practice in basic logic and set theory. Many mathematics education researchers believe that the situation could not be improved substantially with the teaching of Cartesian geometry and logic and set theory prior to abstract math concepts.

In Turkey, science-orientated mathematics curricula of the programs consist of calculus with many math concepts. The content of abstract mathematics is spread out after grades 9. When the vocational school teachers teach the content of abstract mathematics, they can help the students to build the basic symbols and languages of abstract mathematics.

Keywords: abstract mathematics, teacher's view, mathematical symbols, effective teaching

INTRODUCTION

University teachers of mathematics often feel annoyed and disarmed when faced with the inability of their students with abstract concepts to cope with them they consider to be very simple. Usually, they consider responsible on the impossibility for the students to use geometrical intuition or the lack of practice in basic logic and set theory (Dorier, Robert, Robinet, & Rogalski, 2000). According to Dorier, the situation could not be improved substantially with the teaching of Cartesian geometry or/and logic and set theory. In Turkey, science-orientated departments of the vocational schools consist of calculus with many other numeric lectures. To understand abstract functions and integral calculus efficiently or for other reasons, students have to learn a lot of concepts in abstract mathematics, such as ordered pairs, n -tuple numbers, coordinates, etc., from an early period.

For Turkish education system, we can say that the content of abstract mathematics is spread out from grades 9 to 12 in high schools. When the teachers teach the content of abstract mathematics, however, they do not concern much about the concepts of content. We believe that the teachers should help the students to build symbols and languages of abstract mathematics.

Kuhs and Ball (1986) formulated three views concerning teachers' beliefs about abstract mathematics teaching and learning. We summarized them the following way;

- The "learner-focused" view deals with on the learner's construction of mathematical knowledge by oneself through active involvement in mathematics lectures.
- The "content-focused with an emphasis on conceptual understanding" focuses on the logical relations among mathematical ideas and concepts.
- The "classroom-focused" means classroom activity that is structured, efficiently organized by teacher. According to the approach, teachers present concepts, theorems and material clearly and students practice them individually.

Teachers roles in the teaching are different in different teaching models. According to Ernest, there is three teaching models to reflect the roles a teacher might present in a classroom: instructor model, explainer model, and facilitator model (Ernest, 1989). He explained that in instructor model, the intended outcome is an instructor often focuses on student skill mastery and correct performance; in explainer model, the outcome is conceptual understanding with unified knowledge; in facilitator model, the outcome is student confidence in problem posing and solving for a facilitator teacher (Wilson & Ducloux 2007). It can be said that there are clear connections between the three characterizations of models about abstract mathematics teaching and learning the. We will use these approaches in the analysis of data from the study.

Many educational studies for understandings of teachers' belief systems about abstract mathematics, abstract mathematics teaching and abstract mathematics learning has been conducted from all over the world. In some of these studies have been stressed teachers' beliefs about effective teaching (Kaptan & Korkmaz, 2001; Marton, Tse, & dall'Alba, 1996; Stigler & Hiebert, 1999; Perry et al., 2006; Tatar, 2004; Perry, Vistro-Yu, Howard, Wong, & Fong, 2002). These authors expressed teachers' views of memorization and understanding and suggested that memorization and rote learning are generally considered the same way.

In his case study, Biggs (1994), through extensive interviews with the teacher educators, formulated a new way of seeing the relationship between memorization and understanding. For the teacher educators, memorization does not necessarily lead to rote learning; instead, it can be used to deepen understanding.

All of these studies have indicated the value and feasibility of investigating teachers' beliefs about abstract teaching mathematics from an international perspective. However, there is more need of such studies, particularly in terms of how teachers from all over the world belief and practice effective abstract mathematics teaching(Wilson & Ducloux 2007).

METHODS

In this study, we supposed that the quality of mathematics teacher of vocational schools can be determined by targeted outcomes in students' learning and the processes that yield those learning outcomes. We are particularly interested in mathematics teachers' views about the characteristics of effective teachers, characteristics of effective lessons, memorization and understanding, and the role of practice in students' learning. The study adopts a descriptive approach in order to understand vocational school teachers' belief systems without judge or evaluate these beliefs (Wilson & Ducloux 2007).

Effective teachers of mathematics were identified using local definitions of effectiveness (Wilson & Ducloux 2007). Each of the selected teachers was interviewed using semi-structured questions in order to understand each teacher's views about mathematics, teaching mathematics, and learning mathematics in vocational schools. Through semi structured interviews, we can understand not only what teachers believe, but also why they hold these beliefs.

21 mathematics teachers from different vocational schools of a state university participated to this study. Most of them had earned Masters of Education degrees. The all teachers for this study were selected after a request was made to their school management. Semi-structured interviews were conducted and three sets of interview questions were used in this study.

In your view, what is abstract mathematics? Some people believe: a lot of things in mathematics must simply be accepted as true and remembered and there really aren't any explanations for them. What do you think? Some people believe: Mathematics is abstract; therefore, we need to help students think abstractly. What do you think? (Wilson & Ducloux 2007).

Many people believe: Learning mathematics with understanding is essential. What do you think? What is "understanding" anyway? What do you think a teacher should do to help students learn abstract mathematics with

understanding? Many people believe: In order to help students, learn mathematics with understanding, concrete experiences are necessary. What do you think? What concrete experiences do they refer to? What role does memorization play in students' learning of abstract mathematics? What role does practice play in students' learning of abstract mathematics? (Wilson & Ducloux 2007).

We all know some teachers are more effective than others in teaching. In your view, what characteristics does an effective teacher have? We also know some lessons are better than others. What is an ideal, excellent lesson? What characteristics should an ideal, excellent lesson have? (Wilson & Ducloux 2007).

Interviews were either registered. In data analysis, we adopted three phases to code and analyze transcribed data. Firstly, researchers began with open coding of all transcribed interview data. The purpose of this open coding phase was to find unanticipated salient examples of cultural beliefs from the teachers. Second, we re-examined all the data using a start list of codes that were developed to specifically address the research questions about teachers' beliefs on the nature of mathematics as well as the teaching and learning of mathematics (Wilson & Ducloux 2007). We looked for commonly expressed themes in teachers' responses. Finally, we compared the similarities and differences among teachers' beliefs. This process helps us develop a grounded theory.

FINDINGS

Teachers' Views about Abstract Mathematics

What is the nature of abstract mathematics? Of the three fundamental questions investigated in this study, this one received the most varied responses among the teachers. 12 teachers focused on the functional view of abstract mathematics in the explains, which first, stayed the understanding of the symbols of abstract mathematics then emphasized to its usage in the physical world. 9 teachers had a different view, meaning that they focus more on the internal structure of mathematical knowledge. An analyze of some of the major similarities and differences between teachers' views is as below.

Abstract Mathematics couldn't be always practical; all of the teachers interviewed said that some abstract concepts of mathematics could have utilitarian aspects, including being applicable to other sciences.

“abstract mathematics is one of those essential subjects that allow us to formulate many things in the world”. (T5)

“abstract mathematics could provide a new perspective to generalize and systematize many things in math”. (T8)

“abstract mathematics could provide a new perspective for looking at the world”. (T12)

“abstract mathematics is not always practical in daily life but can help people understanding of real life problems in an efficient way. It is necessary tool for life”. (T17)

“abstract mathematic give us a tool to solve the problems and to prove the theorems in the books”. (T20)

“abstract mathematics is a tool that enables us to do things or to reach goals that they have. The substance of mathematics would be things like a set of rules or axioms, a set of methods that allow us to achieve goals or reach finals”. (T21)

Abstract mathematics is a language; It was the second-most common idea relating to the nature of abstract mathematics for the teachers. it is a system of knowledge that provides the means of description and explanation of natural one. The abstract language of mathematics is a logical framework of rules and terms that can be used effectively to solve problems

It is possible that the description of mathematics as a language is held more strongly for teachers. because of the language's relation to the scientific view of mathematics. On the other hand, this view is held less by a few teachers because of their emphasis on the application of mathematics.

Mathematical knowledge is abstract.

Abstract characteristic way of mathematics resulted a distinction among the mathematic teachers. 13 teachers had considerably more to say about the abstract nature of mathematics than did teachers from the others. In other words, there was a decreasing emphasis on the abstract nature of mathematics. 11 teachers determined mathematics knowledge from real life problems in that mathematics is an abstract and collective knowledge system turned out from real life problems. The real-life problems provide the useful materials that can be abstracted as mathematics knowledge. The almost all of the interviewed teachers said that developing abstract thinking in students is one of

main the objectives of teaching mathematics. Additionally, a few teachers did not give deep descriptions of what they thought abstraction is.

“The disregarding of the teachers to teach and encourage students to learn abstract principles is a reality”. (T16)

Teachers' Views about the Teaching

We can say that understanding teachers' views about abstract mathematics provide us an important context. The other aim of this study is to understand the teachers' views about abstract mathematics teaching.

The question of what characterizes an effective teacher of mathematics has analyzed the differences in the beliefs of teachers. 16 teachers had much more to say about the teacher's enthusiasm and rapport with the students than the rest of teachers in the research group. Additionally, almost all of the teachers focused on how well the teacher prepares and presents a lesson and the ability to provide clear explanations of the points to be covered in the lesson. Nearly all the teachers make a strong point of backgrounds of effective teachers of mathematics. According to them, well-grounded knowledge and understanding of the subject is a vital element in being able to effectively teach mathematics. In addition, 9 teachers pointed a very strong emphasis on understanding of the curriculum and the texts being used in the lectures. According to teachers in our study group, it is clear that a mathematics teacher should explore and study textbooks carefully and should try to predict the possibly difficult concepts for their students so that they can present instructional strategies to overcome the difficulties of abstract mathematics.

According to 8 teachers in our study group, teachers agree that group activities of students in the classroom is necessary to keep the students interested. Therefore, concrete examples are often being clearer into the lesson:

“I usually start talking about why we're learning this subject, why we need this topic. And I have my students say, we need it for calculate our daily consumptions. Than we talk about why we're learning this topic. Then I try to teach what does it really mean conceptually. (T6)

“I think that exploration by students and allowing them to find theorems, allowing them to find the way things process is very effective compared to just always lecturing and giving formulas”. (T12)

RESULTS

In this study, we see a connection between teachers' beliefs in mathematics, their image of an abstract mathematics lesson, and that of the effective teacher. For the teachers, mathematics knowledge and systems are stressed in the teachers' responses about effective mathematics teaching. It is important that practice plays a basic role in teaching and learning abstract mathematics. The teacher in our study group clearly expressed the importance of individual guidance to students. For these teachers, the main task of classroom teaching lies in the transmission of knowledge. The teacher must be well prepared and have the lesson well organized.

In this study, we have focused our investigations to teachers' perspectives on the effectiveness of abstract mathematics teaching. Many similarities and some differences have been discerned across the teachers in our study group. The qualitative methodology used in our research and the small numbers in a university samples could be seen as a limitation in our study. Further investigation is needed to see if these similarities and differences are more extensive.

There are many other studies that take different findings than our study, and they have found results that both contrast and comparison with the presented in this research (Clarke & Keitel, 2006; Leung et al., 2006; Shellard, & Moyer, 2002; Stigler & Hiebert, 1999). We need to strive for as full a picture as possible of effectiveness in mathematics teaching and learning so that future generations of students in all education systems can benefit. The current study is one approach that seems to have proved useful results.

ABSTRACT

This paper presents an educational project conducted at the Department of Computer Science, Systems and Communication of the Milano-Bicocca University in collaboration with secondary schools of Milan and its province. The project was devoted involving students potentially interested in Computer Science to understand how to develop knowledge based systems and how this technology could be useful for future jobs. The KAFKA framework was used as the didactic platform to learn how recognizing, correlating and using various kinds of knowledge involved in complex decision-making activities. Another aspect of the project was stimulating students to work cooperatively to the problem solution, reproducing in this way the typical team-oriented management of decision making processes within organizations.

INTRODUCTION

As pointed out in (Richardson et al. 2010), the modern software development process is by nature a distributed effort, where team members must deal with a highly articulated pattern of contacts and cooperative relations. Even more complex is the situation where the software artifact to be developed is expert system, usually implemented as a collection of facts and production rules. A generic rule-based expert system is basically made of an inference engine and a knowledge base containing rules and facts to be analyzed. The set of rules embodies the knowledge available about the scenario we want to model. The set of facts provides information to execute the reasoning and new pieces of knowledge when discovered. In this case an effective cooperation must be achieved between, at least, two distinct roles: a domain expert, who owns tacit problem-solving capabilities and a knowledge engineer, who is responsible for modeling the expert decision-making processes into proper conceptual and computational tools, usually implemented as rule-based systems. Domain expert and knowledge engineer are usually involved in synchronized activities, namely knowledge acquisition and representation, mandatory to define the main components of the rule-based system.

As widely demonstrated in the past, failures in acquiring knowledge are the main cause of unsatisfying development of every kind of knowledge-based systems; this point is known in literature as the Knowledge Acquisition Bottleneck (Wagner, 2004). Knowledge inaccuracy is the most difficult to detect and solve cause, being possibly due to both domain experts and knowledge engineers. In the first case, mistakes made by experts have the consequence to produce wrong knowledge bases; in the second case, misguided knowledge maintenance activities can turn previously correct knowledge bases into incorrect ones, or difficulties to model correctly the acquired knowledge can arise.

Thus, the Knowledge Acquisition Bottleneck continues to be a very important research trend, as reported in Gaines (2013), where two main points are highlighted:

- the need to consolidate and extend all that we know of knowledge acquisition processes and techniques;
- the need to continue to enhance the tools we provide knowledge engineers and domain experts with, to take advantages of developments in knowledge acquisition and representation techniques as well as computer technologies improvements.

These problems and challenges have a strong impact on the academic education of students willing to become knowledge engineering specialists. The main issue is to teach how to distinguish among distinct kinds (or layers) of knowledge, and provide the most suitable tools to acquire and represent them, without being forced to work only at the level of the rules language.

In this paper, we present KAFKA, a Knowledge Acquisition Framework based on the Knowledge Artifact (KA) notion. KAFKA has been designed as a highly structured tool to deal with complex knowledge engineering problems (Sartori and Melen, 2015), and turned out to be an extremely powerful tool for teaching academical students how to design and implement expert systems.

From the conceptual point of view, KAFKA is oriented to define knowledge acquisition and representation tools for functional knowledge (Kitamura et al., 2004), procedural knowledge (Surif et al., 2012) and experiential knowledge (Niedderer and Reilly, 2010), namely ontologies, influence networks and task structures. These tools are then correlated to include them into a unique conceptual knowledge artifact (Salazar-Torres et al., 2008), acting as a guideline in the development of a complete expert systems. Finally, KAFKA offers the possibility to model the knowledge involved as a rule-based system written in the JESS language (Friedman-Hill, 2003), automatically created based on a specific, domain-dependent KA.

KAKFA allows domain experts and users to interact in the development of a rule-based system, as knowledge-artifact developer (KA-Developer) and knowledge-artifact user (KA-User) respectively. The KA-User is responsible for collecting data and information about the problem domain, possibly identifying additional information to include in the model. The KA-User interacts with the KA-Developer that modifies the knowledge domain according to KA-User notifications, adding new rules or facts and/or updating/deleting existing ones. Doing so, the design and implementation of an expert system about decision making process is conceived as a distributed task rather than a centralized activity: KA-User and KA-Developer are continuously synchronized. They can discover new pieces of knowledge by using the system on the application field and test almost in real time the benefits/drawbacks from their inclusion in the model.

As a case study, the framework has been submitted to three groups of students from secondary schools of Milan and its province, during three consecutive years: 22 students in 2014, 18 in 2015 and 24 in 2016, for a total of 64 individuals. The students have been invited to simulate the knowledge engineering process on a concrete problem, trying to reproduce the main aspects of the expert system cycle of life. They have been also asked to evaluate the experience from many points of view.

METHODOLOGY

In Computer Science, artifacts have been widely used in many fields; Distributed Cognition (Norman, 1991) described cognitive artifacts as artificial devices that maintain, display, or operate upon information, to serve a representational function and that affect human cognitive performance. Thus, artifacts are able not only to amplify human cognitive abilities, but also change the nature of the task they are involved into. In CSCW, coordinative artifacts (Schmidt and Simone, 2000) are exploited to specify the properties of the results of individual contributions, interdependencies of tasks or objects in a cooperative works setting or protocols of interaction in view of task interdependencies in a cooperative work setting', acting as templates, maps or scripts respectively. In the MAS paradigm (Omicini et al., 2008), artifacts represent passive components of the systems that are intentionally constructed, shared, manipulated and used by agents to support their activities.

According to the last definition, it is possible to highlight how artifacts are typically considered passive entities in literature: they can support or influence human and artificial agents reasoning, but they are not part of it, i.e. they don't specify how a product can be realized or a result can be achieved. In the Knowledge Management research field, Knowledge Artifacts are specializations of artifacts. According to Holsapple and Joshi (2001), a knowledge artifact is an object that conveys or holds usable representations of knowledge. Salazar-Torres et al. (2008) argued that KAs are artifacts which represent executable-encodings of knowledge, to be suitably embodied as computer programs, written in programming languages such as C, Java, or declarative modeling languages such as XML, OWL or SQL. Thus, Knowledge Management provides artifacts with the capability to become active entities, through the possibility to describe entire decision-making processes, or parts of them. In this sense, Knowledge Artifacts can be considered as guides to the development of complete knowledge-based systems.

KAFKA, acronym of *Knowledge Acquisition Framework based on Knowledge Artifacts*, is a computer aided knowledge engineering tool. It allows developing complete rule-based systems to solve problems through different steps of involved knowledge acquisition and representation, and without any pre-requirements (like knowing specific programming languages).

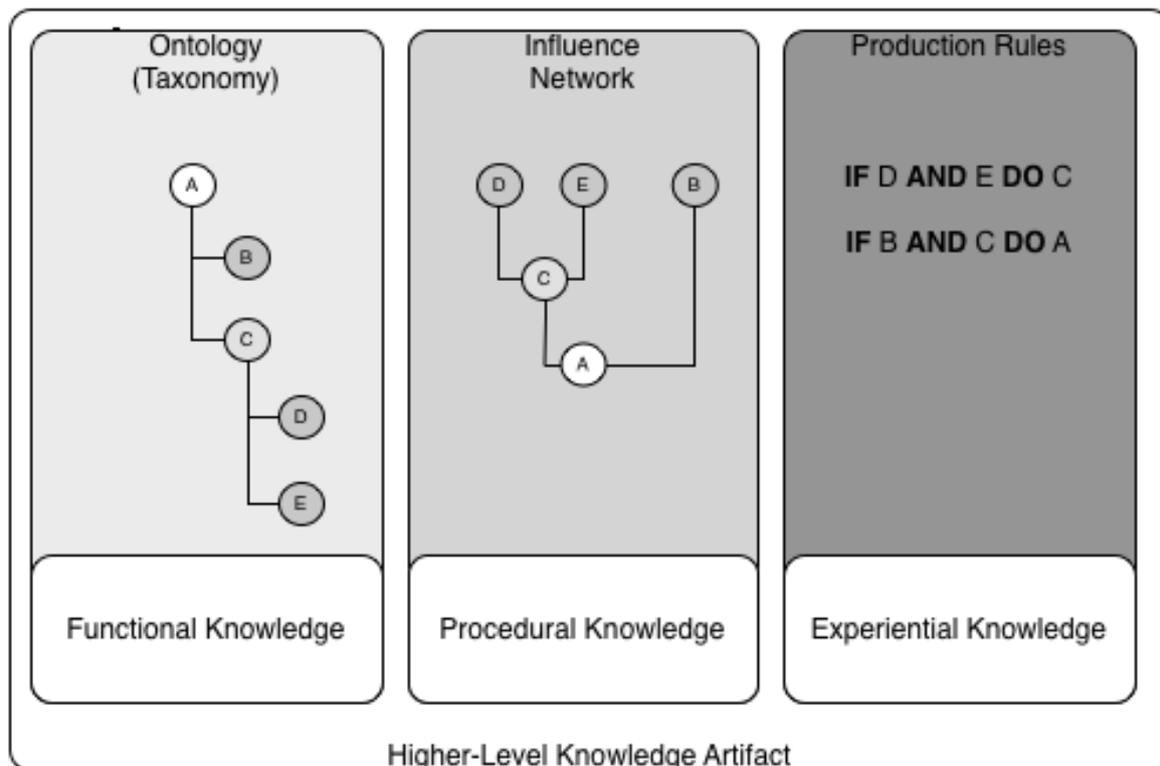

Figure 1: the conceptual model of KAFKA.

KAKFA integrates and correlates tools for the formalization of diverse kinds of knowledge, focusing on:

- functional knowledge, oriented to the representation of components of products and or services to configure, as well as their functional grouping;
- procedural knowledge, concerning the representation of (typically) causal processes through which the product/service components are related the one to each other;
- experiential knowledge, which reproduce the way a domain expert puts in practice those processes.

In our approach, the Knowledge Artifact is described as a 3-tuple $\langle O, IN, TS \rangle$, where O is an ontology of the investigated domain, IN is an influence network to represent the causal dependencies among the ontology

elements and TS are task structures to represent how one or more outputs can be produced by the system according to a rule-based system strategy.

In our KA model, the underlying ontology is a taxonomy defined by the 4-tuple $\langle I, P, O, R \rangle$ where:

- I is the set of input nodes, i.e. the information needed to the expert system to work properly; the root of the taxonomy is a particular input node whose scope is the description of the problem to be solved;
- P is the set of partial output nodes, i.e. the collection of new pieces of knowledge and information elaborated by the system to reach the desired output;
- O is the set of output nodes, i.e. the effective answers of the system to the described problem; outputs are values that can be returned to the user;
- R is the set of relationships to link the nodes of the taxonomy; in our model, R contains at least two relationships, i.e. is-a and part-of.

Inner nodes of the taxonomy are system outputs or partial outputs and the leaves of the hierarchy are inputs: in this sense, inputs are atomic entities that cannot be further decomposed because of relationships in R.

The influence network model is a structured process that allows analyzing complex problems of cause-effect type to determine an optimal strategy for the execution of certain actions, to obtain an optimal result. The influence network is a graphical model that describes the events and their causal relationships. Using information based on facts and experience of the expert, it is possible to analyze the uncertainties created by the environment where we operate. This analysis helps the developer to identify the events and relationships that can improve or worsen the desired result.

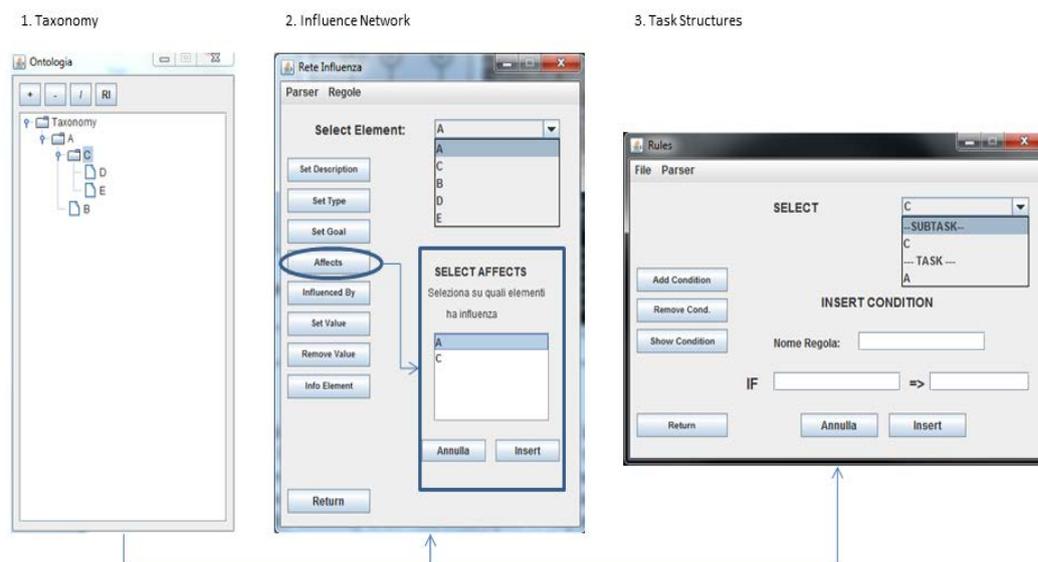

Figure 2: the computational model of KAFKA.

The influence network can be defined as a 4-tuple $\langle I, P, O, A \rangle$, where:

- I is the set of input nodes, i.e. the information needed to the network to start the procedural knowledge elaboration;
- P is the set of partial output nodes, i.e. the collection of new pieces of knowledge and information elaborated by the network to reach the final output(s); doing so, the influence network is able to identify causal dependencies among different parts of the final system as well as parts of the reasoning process that can be possibly executed at the same time;
- O is the set of output nodes, i.e. the effective answers of the system to the described problem; outputs are values that can be returned to the user;
- A is the set of arcs among the nodes: an arc between two nodes specifies that a causal relationship

exists between them; an arc can go from an input to a partial output or an output, as well as from partial output to another one or an output. Moreover, an arc can go from an output to another output. Every other kind of arcs is not permitted.

Finally, Task Structures allow describing in a rule-based system way how the causal process defined by a given IN can be modeled. A task structure is composed of a signature, specifying the name of the activity it reproduces, the needed inputs and the results to return to the user (in case of outputs) or the system itself (in case of partial outputs), and a body, specifying a sketch of the reasoning process to obtain desired results from inputs.

A Task Structure is the 4-tuple $\langle I, R, B \rangle$ where:

- I is the set of inputs, i.e. the information needed to the task structure to work properly; each task signature defines only the inputs necessary to the correct functioning of the related body;
- R is the set of results to be returned by the task, i.e. the effective answers of the system to the described problem; the elements of R can be both partial outputs and outputs, thus R is a subset of the union of I and P, where I and P are the input node and partial output node sets of the influence network portion explained by the task structure;
- B, the body of the task structure, is the set of IF \langle pre-condition \rangle THEN \langle post-condition \rangle rules; the pre-condition of a rule is a subset of R and the post-condition is a subset of the union of P and O where P and O are the partial output node and the output node sets of the influence network portion explained by the task structure.

Each task is devoted to defining computationally a portion of an influence network: in particular, sub-tasks are procedures to specify how a partial output is obtained, while tasks are used to explain how an output can be derived from one or more influencing partial outputs and inputs. A task cannot be completed until all the sub-tasks influencing it have been finished. In this way, the TS modeling allows identifying clearly all the computational levels of the system. The last step of our model is the translation of all the task and sub-task bodies into production rules of a specific language (JESS in our case).

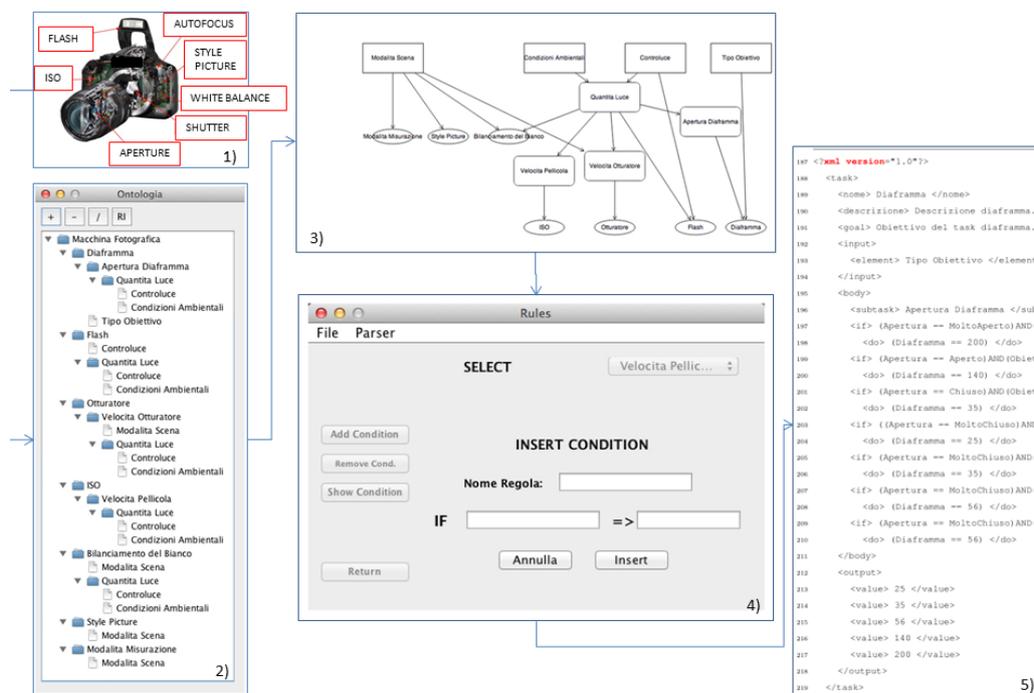

Figure 3: configuring a reflex camera with KAFKA.

Figure 1 shows the conceptual model of current version of KAFKA. Functional knowledge is modeled by means of taxonomies, linking the different elements of the problem to be solved by means of *is-a* and *part-of* relations. The taxonomy allows to identify the inputs (nodes B, D and E in the figure) and outputs (node A in the figure) of the problem to be solved and the values they can assume, as well as possible partial outputs (node C in the figure) necessary to move from inputs to outputs. Conceptually, inputs are observations on the field, they are valued by the KA-User at hand or by means of sensors; partial outputs are the result of a reasoning process, but they shouldn't be presented to the user, except for explanations (i.e. to make evident the different steps of a knowledge-based activity); outputs are the results of a complete decision-making process, obtained from a given set of inputs and partial outputs. The taxonomy in the figure says us that node A is the process output, depending on the values of input B and partial elaboration C, whose value is determined starting from inputs D and E.

The procedural knowledge is modeled by influence networks. The procedural knowledge goal is to link inputs, partial outputs and outputs by means of causal relationships, in order to identify the problem-solving strategy. Influence networks allow creating such causal relationships by means of *affects* and *is affected by* relationships, which permit to browse the causal dependencies from inputs to outputs and backward from outputs to inputs. To design the network, the taxonomy is browsed from inputs to outputs, grouping the nodes according to their level (i.e. inputs, partial elaborations or outputs), as shown in the figure.

Finally, the experiential knowledge is captured by task structures. Each sequence of links from inputs to outputs in the influence network is associated to one or more tasks, while each sequence of links from inputs to partial outputs is as associated to one or more sub-tasks. In this way, different computational levels of the system are clearly identified: for example, in Figure 1, the subtask C must be necessarily executed before the task A, since its result influences (together with the input B) the decision-making process of A.

The three artifacts are correlated: in the figure, the nodes A, B, C, D and E are the same concrete concepts,

managed with different semantics on the basis of the tool they are used by. The collection of different knowledge artifacts, properly correlated by an opportune equivalence relationship is said *higher-level knowledge artifact* (Sartori and Melen, 2015a) (Sartori and Melen, 2016).

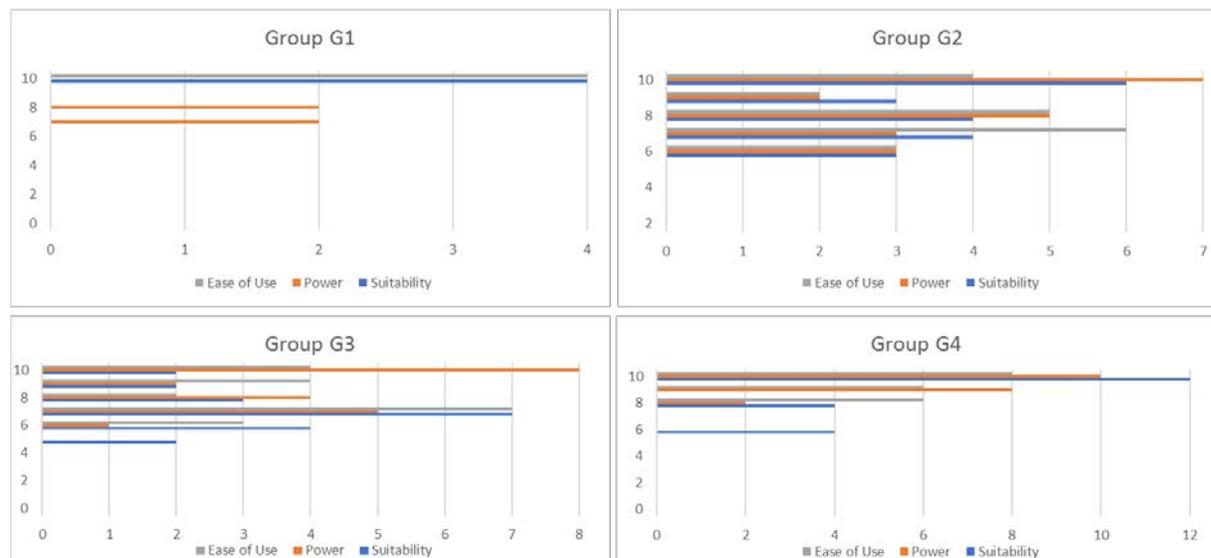

Figure 4: evaluation of KAFKA through questionnaires in the case study.

CASE STUDY

Figure 2 shows the computational model of KAFKA, according to the conceptual one described above. In Part 1, the taxonomy computational model is presented. The graphical user interface allows the user adding or deleting nodes at/from distinct levels of the taxonomy, by means of the + and - buttons respectively. The /

button allows resetting the taxonomy starting from the root. Based on the insertion point, the node will be interpreted as an input (B, D and E in the figure), output (A in the figure) or partial output (C in the figure).

When the definition of the problem taxonomy ends, the user can move to the influence network description, pressing the *RI button*; the related GUI is shown in Part 2 of the figure. For each node of the taxonomy, the user may specify causal relationships with others by means of the *Affects button*. Then it is possible selecting which output or partial output will be the target node of the connection. The framework automatically verifies that inputs are not considered as possible targets of a causal link. When procedural knowledge modeling has been terminated, the user can proceed to the last step of knowledge acquisition and representation, i.e. the definition of task structures for experiential knowledge modeling, as depicted in Part 3 of the figure. The proposed GUI allows the user selecting all the partial outputs and outputs defined by the influence network and, for each of them, describing the related sub-tasks and tasks as collections of IF <pre-condition> THEN <post-condition> rules. The final output of the KAFKA computational model is a set of XML files, each one called as the concerning task or sub-task. These files will be then translated into an opportune programming language by means of the *Parser function*, generating an executable rule-based system. Currently, KAFKA produces rule-based systems based on the JESS language syntax.

As an example of KAFKA application, we present here a Work Experience Scheme Project conducted at the Department of Computer Science, Systems and Communication of the University of Milan Bicocca in collaboration with many secondary schools of Milan and its province. The project, called *Becoming Knowledge Engineers*, aimed at enabling students to know the knowledge engineer professional, understanding the peculiarities of this kind of job that is almost unknown in Italy, despite its importance outside it. The students involved were 64 in three years of project delivery, from 2014 till 2016. The students were invited to reflect on and solve a concrete problem, quite easily understandable by them given their age and skills: how to set up a reflex camera (see Figure 3). Given that the final goal of the problem-solving strategy was to obtain optimal pictures according to camera configuration, students have analyzed several aspects concerning the whole problem or parts of it. Some of them (4 of 64) chose to set up all the components of the camera, as shown in Figure 3. We'll refer to them as *Group 1* (G1) in the following. Another group (20 students of 64) preferred to focus on specific components of the reflex camera taxonomy (like e.g. aperture). We'll call those students *Group 2* (G2). A second group of twenty students, namely *Group 3* (G3), faced with the problem to configure the camera to obtain optimal results with respect to a specific kind of picture to take (e.g. human portrait, panorama, and so on). Finally, the last group of 20 students, referred to as *Group 4* (G4), interpreted the problem from the photographer skill level point of view (e.g. expert, amateur, beginner and so on).

Evaluating the performance of rule-based systems is not simple, given that it strictly depends on the kinds of problem to be solved. Anyway, given that our approach is based on KAFKA adoption, we can evaluate the rule-based systems development cycle from a methodological point of view. To this aim, we will use metrics existing in the literature. The most similar framework found in the literature was developed by Ruiz-Mezcua et al. (2011), who designed and implemented a web server with the tools for knowledgebase construction and browsing, and two distinct interfaces for domain experts and users. The main difference between KAFKA and that approach is the target user addressed: while that work was devoted to support domain experts in developing their own, complete, expert systems, the KAFKA scope is to support any kind of user in developing knowledge based systems from scratch. For this reason, the main effort in KAFKA development was the characterization of the higher-level knowledge artifact model to guide the user in the identification of knowledge kinds involved in his/her problem and (possibly) to extend them in case of need.

Every group was divided into couples with a KA-User and a KA-Developer. Both couples in G1, seven couples in G2, eight in G3 and eight in G4 were able to complete their tasks successfully. On the other hand, three couples in G2, two in G3 and two in G4 were unable. Summarizing, 78% of couples involved in the experiment could complete the task of building an executable expert system: among them, only the couples from G1 and four couples from G4 had some knowledge on JESS and its usage (they studied this language at school), while

the rest of them used it for the first time. In this sense, it is important to notice that none of them needed to learn the JESS syntax, but they spent most of the time in acquiring knowledge about the proposed problem domain. Of course, the obtained expert systems were heterogeneous in terms of quality and number of solutions found.

The couples were also asked to evaluate the KAFKA usability, exploiting the same indicators used by Ruiz-Mezcua et al. (2011), that are the perceived *power* of the framework in developing expert systems, the *ease of use* of the tool and the *adaptation* of the system to user's needs (i.e. *suitability* dimension); the results are shown in Figure 4.

As expected, the best overall evaluations were given by couples in groups G1 and G4, since they mostly were composed of people with higher technical competencies than the other two groups (they studied Computer Science, and some of them JESS, at school). Anyway, it is important to highlight how also members of G2 and G3 recognized the capability of KAFKA in designing and implementing solutions to problems, independently by the application domain (power and suitability dimensions received very good votes). Summarizing, the KAFKA framework received an average evaluation of 8.2, 8.7 and 8.4 for ease of use, power and suitability, respectively. The total average evaluation of the framework usability was 8.4: these results are comparable with the previous work by Ruiz-Mezcua et al. (2011), although in that case the users were selected among domain experts, therefore had a much smaller competence gap to fill.

A second type of analysis was conducted with respect to the final aim of the project, that was enabling students to understand the knowledge engineer profile at work. The students were asked to answer a set of question before and after their experience with KAFKA.

Table 1: students' answers to the project evaluation questionnaire.

Question	Year 2014		Year 2015		Year 2016		Total	
	Y	N	Y	N	Y	N	Y	N
1) Did you the Knowledge Engineering professional?	0	22	3	15	2	22	5	59
2) Did you know what a Knowledge Engineer do?	0	22	2	16	2	22	4	60
3) Now, do you know what a Knowledge Engineer do?	19	3	18	0	21	3	58	6
4) Does being a Knowledge Engineer appeal you?	17	5	18	0	23	1	58	6
5) Would you repeat this experience in the future?	17	5	18	0	24	0	59	5
6) In your opinion, is KAFKA useful?	19	3	18	0	20	4	57	7
7) Do you think this experience useful for your future?	16	6	14	4	21	3	51	13

Table 1 summarizes the results, grouped by year of project development. As it emerges from the records, the project goals have been reached. Students have understood the peculiarities of knowledge engineer role and his/her main tasks. Moreover, they have substantially recognized the importance of tools like KAFKA. They appreciated the possibility to automatically generate an executable rule-based system focusing on knowledge modeling rather than learning a specific programming language to code it.

CONCLUSIONS

A Knowledge Artifact is any artifact purposely built to support knowledge-related processes. The Knowledge Artifact notion introduced in this paper allows the design and implementation of knowledge based applications minimizing the knowledge engineering effort. As shown in the case study, the most interesting feature of this scenario is the possibility for an operator to access quite real-time to new knowledge models, as well as for the domain expert to check continuously the critical situations and elaborating the necessary solutions.

The KA model implemented in KAFKA results useful in the development of rule-based systems by people not expert in knowledge engineering, with no evident competencies in the use of necessary languages and tools. The KAKFA framework has been adopted in an educational project with students from secondary schools of Milan and its province. The study involved 64 of them for three years. Each group of students was divided into

couples, to simulate the roles of domain expert (KA-Developer in the KAFKA terminology) and system users (KA-User). Each pair of students designed and implemented a rule-based system using KAFKA: 78% of couples involved in the experiment could complete the task of building an executable expert system. These results are encouraging: the KAFKA framework turned out to be very effective in teaching the use of knowledge abstractions and obtaining a prominent level of effectiveness and speed of development even for users with little experience in knowledge engineering. Thus, we plan to employ it as a foundation of our teaching methodology in the future.

Masaryk University in Brno

Czech Republic

nova@fsps.muni.cz

ABSTRACT

The aim of this paper is to provide a conceptual basis for addressing the needs of teaching the subject of Strategic Human Resources Management in sport management study programmes. The paper offers an overview of the various approaches regarding determination of HR managers' competences in general and in sport management in particular. On the basis of this, the paper suggests how to embed, using appropriate teaching and learning methods, the strategic focus in teaching Human Resources in sport management studies. A case study from the Czech Republic is presented based on the qualitative analysis of the students' assignments using coding techniques and Atlas.ti software.

INTRODUCTION

The importance of the competence of being able to manage Human Resources in Sport is highlighted by the work of current scholars in Sport Management, by educational standards in sport management and by the results from projects that are trying to define the competences expected from the sport practice. Taylor et al. (2017) described a model of SHRM in sport emphasizing the strategic focus of HRM in sport. They also underlined the necessity of understanding the theories of strategy as far as influencing the efficiency of internal processes such as SHRM within sport organizations. Nová et al. (2017) used the McKinsey 7-S model for sport organizations in order to explain the importance of its soft elements, namely the staff and skills for the successful implementation of the chosen strategy. Chelladurai (1994) stated that a sports manager is 'a person who coordinates limited human and material resources, relevant technologies, and situational contingencies for the efficient production and exchange of sport services' and Hoye et al. (2012) described HRM in sport as a process composed of planning recruitment, selection, retention and replacement, orientation, training and development, and appraisal and rewards. Doherty (1998) demonstrated the link between various HRM strategies and behavioural outcome and organizational effectiveness. Taylor, & McGraw (2006) stated that HRM is the most critical and problematic phenomenon for a sport organization's operation. In this paper we report on a study on the adoption of HRM practices by state sports organisations in New South Wales, Australia. Our results indicate that despite pressures to become more strategic in their people management, only a minority of these sports organisations have formal HRM systems. We also found differences between the HRM practices used with paid employees and volunteers, particularly in organisations with formal HR policies. Ivašković (2015) found that the perceived quality of HRM directly affects the degree of athletes' trust in the head coach but does not have a direct impact on trust among athletes, nor on team cohesion. Simkus et al. (2014) developed a volunteer management model that is relevant for non-governmental organizations operating in the sport industry. Weerakoon (2016) conducted a critical review of the meaning and importance of Human Resource Management in Sports.

When it comes to the academic standards that are shaping HR education in sport management studies there are two respected standards in the world. The first is produced by the Commission on Sport Management Accreditation (COSMA) in the USA as the Accreditation Principles Manual & Guidelines for Self-Study Preparation (2016). The second is the Subject Benchmark Statement for Events, Hospitality, Leisure, Sport and Tourism (November 2016), which defines what can be expected of a graduate in these subjects, in terms of what they might know, do and understand at the end of their studies. The COSMA defines as a part of Principle 3 the key content areas of the sport management curriculum - Common Professional Component (CPC). Among the CPC topic areas there are no direct HRM areas mentioned except diversity issues in sport management. The UK Subject Benchmark Statement emphasizes the fact that sport is such a substantial academic area so that considerable differences in the emphasis in content and approach to learning have arisen across the sector. Programmes may focus on specific aspects of the subject area or may take a multidisciplinary or interdisciplinary approach, covering conceptual and contextual frameworks and, according to the benchmark statement, an honours graduate in sport-related programmes is able, among other learning outcomes, to understand and apply the theories, concepts and principles of practice from the generic management areas of operations, finance, human resources, economics and marketing to sports facilities and events in the voluntary, public and private sector. The most significant project in that suggested Sport Management Curriculum for Bachelor and Master degree was the project AEHESIS. The results of the project stratified curriculum content depending on the sport management professions as classified by the project - Sport Management in Private Clubs, in Federations, in Municipalities and in Fitness (AEHESIS, Report

of the Third year, 2006). The two approaches for managerial activities and tasks differed. The sport manager should be able not only to analyse and understand the micro, meso and macro situation of the organization and define policies and projects, but also to find and use efficiently the different resources such as organizational, financial, material and human resources. In the list of General Activities & Tasks of 4 Main Occupations in sport management there are plenty of those who are related to HRM. In the Management Curriculum for a Bachelor degree in Sport Management the inclusion of the subject Human Resources in Sport Organizations is recommended. In spite of the effort to standardize the development of the curricula and create some models, a diversity of sport management study programmes to educate sport managers is still offered by universities in Europe, America and Australia. The same is valid for teaching the subject of HRM within these programmes. When it comes to a discussion on what should be included in the subject of HRM in a single sport management programme in order to emphasize the strategic focus and which kind of teaching and learning strategies can enhance the innovative approaches in order to link the strategy of the sport organization and its HRM generally, there is a lack of literature relevant for sport management studies. Therefore this paper is trying to cover this gap.

THE STUDY

Our study was realized in the three subsequent steps. Firstly we conducted a review of relevant literature from general management in order to understand the latest trends in HRM education and HRM field. Secondly an analysis of the selected standards for HRM professionals was performed. Both content analysis can influence and will be reflected in our understanding of how to design the HR education/ course content within sport management studies. Finally a qualitative analysis of the students' assignments from the subject of HRM in sport using coding techniques and Atlas.ti software was performed in order to reveal the extent to which the current approach in teaching and learning HRM in sport reflects the desired learning outcomes, i.e. understanding of the strategic focus of HRM in sports organizations.

FINDINGS

Table 1: The review of the relevant literature from general management – the latest trends in HRM education.

Author/s	Findings
Clint Chadwick (2005)	In order to produce effective SHRM practitioners, strategy must become a central component of SHRM courses on an equal footing with HRM.
Cheryl L. Adkins (2005)	Presents a comprehensive experiential exercise for use in the staffing course as an illustrative example
John W. Budd (2005)	Learning theory needs to be put into practice in the professional classroom, instructors must understand students and their diverse learning styles, teaching practices should be benchmarked against best practices, and instructors need to develop teaching toolkits for creating effective courses.
James C. Hayton & Glenn M. McEvoy (2005)	Introduction of four scholarly papers from the Innovative Teaching in Human Resources and Industrial Relations (HR/IR) Conference, hosted by Utah State University in Park City, Utah in April 2005 where discussions of appropriate content for HR/IR programs of study, the routes to enhancing the classroom experience for diverse types of learners, the leveraging of technology including video and multimedia, ways to address the challenge of teaching large classes, and examples of experiential or applied exercises and simulations were held.
James C. Hayton, Debra Cohen, Frances Hume, Bruce Kaufman & Johnny Taylor (2005)	Summarize the results from discussion with expert practitioners to present their perspective on what the market demands from HRM graduates at the undergraduate and graduate level. Their insights suggest new areas for innovation in HR/IR education. In the second conversation, representatives of three major professional institutions (Society for Human Resource Management, Labor and Employment Relations Association, and the Academy of Management) discuss the need for, and possibility of, innovation in teaching in HR/IR and the role that these institutions can play in institutionalizing the process of innovation.
Kate Rowlands & Alex Avramenko (2013)	Suggest an innovative course design incorporating both communities of practice and reflective practice as a learning strategy for part-time learners in higher education.

Table 2: The review of the relevant literature from general management - the latest trends in HRM field.

Author/s	Findings
Dave Ulrich & James H. Dulebohn (2015)	Propose that future HR will need to adopt an outside/inside approach where the external environment and stakeholders influence what HR does inside the organization. From this, they also discuss other specific actions HR will need, in order to add value, with respect to targets for HR work (individual, organizational, and leadership) and areas for HR investments (HR function, HR practices, HR people, and HR analytics).
Debra J. Cohen (2015)	Discuss where the profession has come from and where it is today, and focus primarily on the opportunities and choices available to those individuals who deeply care about the profession and those who may take more notice of the profession in the future. Among the opportunities are HR standards, HR competencies, consistent HR curriculum, HR professional development and HR research.
Mick Marchington (2015)	HRM has always been located at the interface of potentially conflicting forces within organisations. However, in its quest for legitimacy, HRM has tended primarily to look up the hierarchy and focus on narrow performance goals, so neglecting other long-standing values and stakeholders.
Dianna L. Stone & Diana L. Deadrick (2015)	Examine some of the challenges and opportunities that should influence the future of HR such as shifts in the economy, globalization, domestic diversity, and technology have created new demands for organizations, but also create numerous opportunities for HR and organizations as a whole.
Ann Marie Ryan & Jennifer L. Wessel (2015)	Describe several specific global workplace trends, namely, increases in workplace diversity and globalization, technology mediated relationships, individualized psychological contracts, and service-related jobs that require the change of HRM practice and HR research on fairness in the workplace.
Dianna L. Stone, Diana L. Deadrick, Kimberly M. Lukaszewski & Richard Johnson (2015)	Review the current effects of technology on HR processes, consider the existing literature on the topic, and discuss the advantages and potential limitations of using these systems.

Table 3. Educational Standards and Standards for HRM professionals.

Standard	Required HRM Content Areas
SHRM Human Resource Curriculum Society for Human Resource Management (SHRM), 2016	Employee and Labor Relations (Employment Law; Ethics; HR's Role in Organizations; Job Analysis and Job Design; Managing a Diverse Workforce; Outcomes: Metrics and Measurement of HR; Performance Management; Staffing: Recruitment and Selection (including organization entry and socialization). Strategic HR (Total Rewards (compensation, benefits); Training and Development; Workforce Planning and Talent Management). Graduate Students Only (Change Management; Globalization; Internal Consulting; Organizational Development). Secondary Content Areas (Downsizing/Rightsizing; HR Career Planning; Human Resource Information Systems (HRIS); Mergers and Acquisitions; Outsourcing; Sustainability/Corporate Social Responsibility; Workplace Health, Safety and Security).
Society for Industrial and Organizational Psychology (SIOP), SHRM competency model, 2014	The SHRM HR Competency Model identifies nine key competencies (HR technical expertise and practice; Relationship management; Consultation; Leadership and navigation; Communication; Global and cultural effectiveness; Critical evaluation; Ethical practice; Business acumen) along with a detailed set of sub competencies and proficiency statements.
International Organization for Standardization (ISO), 2016	A set of standards covering global HR practices In September 2016 the ISO TC 260 HRM Committee published four inaugural Standards: ISO 30400 HRM Vocabulary ISO 30405 HRM Guidelines on Recruitment ISO 30408 HRM Guidelines on Human Governance ISO 30409 HRM Workforce Planning

The HR Management Standards (Standards) developed by the HR Council for the Voluntary & Non-profit Sector (HR Council), 2009	The Standards are grouped into six broad clusters: <ul style="list-style-type: none"> • HR Management Policy Framework & Employment Legislation • Getting the Right People • Managing People and their Work • Workplaces that Work • Training, Learning & Development • HR Planning
HKIHRM HR Professional Standards Model, Hong Kong Institute of Human Resource Management, 2010	Knowledge (HR Professional Areas) major areas including: Reward Management; Sourcing and Staffing; Employment Law; Employee Engagement; Learning and Development; Business Knowledge for HR. Capability(HR Competencies): Professional Knowledge; Business Partnership; Ethics; Communication / Influence; Customer / User Focus. Experience(HR Roles and Responsibilities): Business Partner; Strategy Implementer; Organisation Development Designer; Expert Practitioner; Culture and Change Agent.

As a result of the previous analysis the model describing the context of strategic HRM in sport is described see [Figure 1].

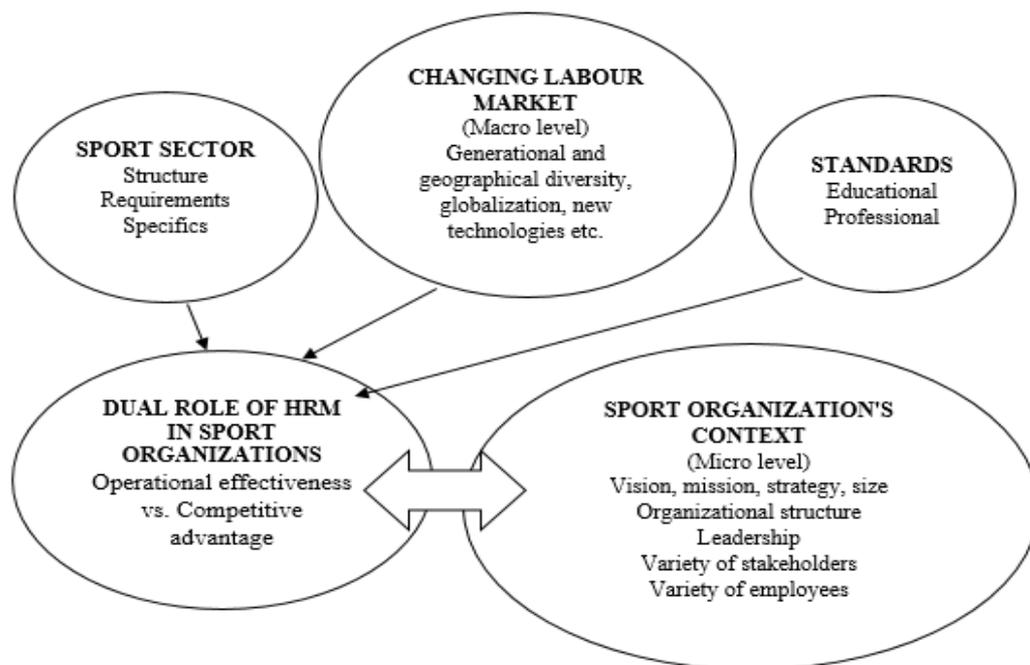

Figure 1 HRM Context in Sport

The Study programme Sport Management at Faculty of Sport Studies Masaryk University (FSPS MU) is delivered in cooperation with the Faculty of Public Administration (teaching the basics of management, marketing, economics and HRM). However, it failed to customize the subject of HRM to the sport sector. Now the Faculty of Sport Studies is delivering this course and our endeavour is to incorporate the strategic focus into the single subject Human Resources in Sport - link the HRM to Sport organization strategy (challenging task within one semester but not impossible within the whole curricula using prerequisites) see [Table 4].

Table 4: Delivery Logic of the HRM body of knowledge in Sport Management at FSPS MU

Subject /course taught in Sport Management Studies	Content related to the HRM and organizational strategy
Basics of Management	Definition and basic characteristics of the organizations' strategy
Management in Sport	Organizational strategy within a sport context
Human Resources Management in Sport	Interrelation between the organizational strategy of sport organization and HRM strategies and policies in sport organizations
Case Studies in Sport Management	Reflection and application of strategy based HRM theory in practice
Case Studies in HRM in Sport	Reflection and application of strategy-based HRM theory in practice based on specific case studies

Students' assignments analysis

We examined the assignments of 39 undergraduate students who passed the subjects Basics of Management, Sport Management and HRM in Sport. A condition for completing the subject of HRM in sport was the writing of the assignment respecting the following instructions:

- 1) Select a sports organization, briefly describe its mission, vision, and strategy.
- 2) Find its organizational structure or part of the contacts from which you can decide on what job functions there are in the organization.
- 3) Choose two jobs that you are interested in, or which are attracted to you based on your professional interest. You can also create new positions that you think you need to create to fulfil the strategy or the intentions of the sports organization you have chosen. Do not forget to indicate why the position is important from the point of view of the organization's strategy or its development.
- 4) Try to find organizational rules where job descriptions are described for the positions you have chosen. Then use the job descriptions and requirements for the person to perform the job of national qualification standards (see page where occupational standards - in search engines pages to enter the word Sport- are <http://nos.ukces.org.uk>; <http://katalog.nsp.cz/uvod.aspx>) and compare the descriptions of the positions listed in the organizational rules with the standards of similar positions from the National Qualification Standards. According to the comparison results, fill in or redefine job specifications and person specification.
- 5) If there is no organizational order, go to the National Qualification Standards and the positions you have selected, describe the job specification and person specification.
- 6) Design and justify for your chosen jobs:
 - a) The method of selecting the employee
 - b) Plan of orientation (justify the chosen strategy)
 - c) Training plan (at the workplace, outside the workplace)
 - d) Performance criteria (use 360 ° feedback)

We examined the assignments of 39 undergraduate students who passed the subjects Basics of Management, Sport Management and HRM in Sport. The qualitative analysis based on the thematic and in vivo coding (Strauss and Corbin, 1998) was performed in Atlas .ti software and was guided by the following questions:

To what extent are the students able:

- to apply critical thinking with regard to the concept of HRM in the chosen sport organization? (i.e. appropriateness of the organizational structure, missing positions, and
- to identify the link of HRM policies and strategy of the chosen sport organization? (i.e. suggesting a new job position and their description in tune with the strategy, new HR policies (namely selection, orientation, education, performance criteria.

To answer the above-mentioned questions in the process of the content analysis, 120 codes have been used that have been grouped into 7 code groups as it can be seen in [Table 5].

Table 5: The Code groups – content analysis.

Name of Code Group	Code grouping logic made on the quotation statements with regard to the	Number of Codes in Group
Strategy notions	Existence of the strategy in sport organization	6
Organizational structure notions	Appropriateness of the organizational structure	13
Job link to strategy	Linkage of the job purpose/ description to the strategy	15
Job positions	Chosen job positions due to their significance for implementation of the strategy	60
HR strategy notions	Usage of the HR concepts describing the approach towards HRM in sport organizations	6
Strategy link to HR policies	Existence of the links between the strategy of sport organizations and their HR policies	6
Performance criteria vs strategy	Ability to define the performance criteria for a particular job in tune with the strategy of the sport organization	14

More detailed description of the codes and code groups is presented in the code reports in Tables 6- 12.

Table 6: Strategy notions.

Strategy notions code report	Grounded
goals and sport strategy	2
mission and vision of the sport organization	29
strategic plan of the sport organization	1
Strategy and vision	15
strategy of the club - sport, economic and social goals	1
strategy of the sport club	1

As can be seen in Table 6 there are only a few sport organizations that possess a formal strategic document – strategic plan or strategy and there was even one sport organization with a strategy that encompasses sport, economic and social goals. The majority of the sport organizations have just fulfilled the legal requirements of defining their mission and vision. Thus the non-existence of a formalized strategic plan in the sport organization causes problems in terms of HRM such as those in establishing organizational structures, job structures and job descriptions in tune with the organizational strategy, as well as problematic translation of the strategic goals into performance criteria.

Table 7: Organizational structure notions.

Organizational structure notions	Grounded
analysing job positions as a result of their bad reputation	2
analysis of the position in the sport association	1
importance of the job positions for the strategy of the sport organization	4
job position and identification with strategy	1
link between the organizational structure and strategy	1
missing positions	13
new position as a source of competitive advantage	1
organizational structure	31
redesign of the job position for increasing the working effectivity	6
redesign of the position of club secretary for strategic purposes	1
strategy and skills gap identification	2
technology vs strategy and positions gaps	1
the importance of the suggested positions for the sport organization	4

As Table 7 shows, 31 out of 39 sport organizations have some kind of organizational structure. Further analysis of

the students' assignments revealed that they were able to critically assess the appropriateness of the organizational structure especially in terms of missing positions, describing the importance of job positions for strategy, suggesting new positions or redesign of current job positions in order to link their purpose either to the sport organization strategy or to improvement in performance.

Table 8: Link between the strategy and job positions.

Job link to strategy	Grounded
link between the strategy and job positions	29
identification of a particular job description with strategy (general manager of the sport association; head coach; HR specialist; lawyer; marketing- media- PR managers and specialist; scout)	11

As can be seen from Table 8 students achieved quite satisfactory results when assessing whether a description of a given position is related to a strategy. They were not only able to assess this but also able to propose amendments in the current job descriptions especially for jobs related to marketing or jobs related directly to the sport goals of the sport organization such as coach and scout.

Table 9: HR strategy notions.

HR strategy notions	Grounded
hard and soft HRM in the club	1
missing HR strategy in the sport club	1
soft HRM approach - national Olympic committee	1
sport success and complacency in terms of HRM	1
strategic focus of HRM in sport organizations	1
SWOT analysis of the club as a starting point of the HRM strategy	1

In the students' assignments there were just 6 HR strategy notions and this merely confirmed that strategic HR management in the sport context is missing. The explanation of this is (as indicated in Table 9) that sport success is, in some instances, accompanied by complacency in terms of HRM.

Table 10: Strategy link to HR policies.

Strategy link to HR policies	Grounded
link between orientation and strategy and values of the club	5
link between education and strategy	7
link between orientation and strategy	6
link between selection and organizational culture	3
link between selection criteria and strategy	8
link between strategy and recruitment	1

Although it was difficult for students to find general HR strategies that would be clearly defined and linked to the sport organization strategy, they were able to identify and suggest how HR policies (recruitment, selection, orientation and education) might be linked to the strategy and organizational culture that is considered to be one of the essentials of strategy implementation.

Table 11: Performance criteria vs strategy.

Performance criteria vs strategy	Grounded
performance criteria and strategy	11
performance criteria and competitive advantage /new product)	1
performance criteria and creativity	2
Definition of a performance criterion for a particular job (marketing specialist and manager; new media specialist; coach, head coach, sport manager; head of logistic; president of a sport union; general sport manager of a youth in sport association)	13

The definition of the performance criteria for a given job position is crucial in terms of assuring how the position contributes to the implementation of the strategy and strategic goals. Thus sport management students should be

able to critically assess and design appropriate performance criteria for any job position within a sports organization.

Table 12: Job positions in the assignments.

Job positions (60 codes) in the group
organizational worker; assistant coach in a club; assistant to the general manager in a sport association; chief accountant; head of the judges' committee; head trainer in a club - new position; coach assistant representational team; coach of A team as a creator of the sport strategy; coach of the A team in a club; coach of the sport school and class; coach of the women; team in a football club volunteer; coordinator for sport development at schools; coordinator of the international junior ice hockey; database administrator in a club - new position ; director of marketing in a sport association; facility manager in a club - new position ; financial manager in a sport association; general sport manager of a youth - sports association; sport manager position vs sport strategy of sport association; head coach in a club; head coach in a sports club; head coach of the representational team; head coach of youth; head coach of youth in a club; head of marketing; head of the arbitrary committee - sport association; head of the club; head of logistics; HR specialist; IT engineer; lawyer of a sport union; manager of a sport association; marketing employee in a sport club - new position ; marketing manager; marketing specialist; marketing specialist in a sport club - new position ; masseur in a club - new position ; merchandising specialist; methodist - educational manager of a sport association -new position ; methodist for youth; organizational and technical manager of a club – new position ; photo reporter; player on the A team; PR employee in a sport club volunteer; PR manager; PR specialist in a sports union; president of a sports union; process consultant – new position ; representation coach – men; scout position; secretary general - sport association; secretary of a sports club; social media specialist - new position ; specialist for new media and e-communication – new position ; sport manager; sport manager for youth; sport marketing manager of a sports club; team leader; volunteers coordinator; youth coach.

The analysis of the current job positions that were identified as crucial for strategy implementation or suggested as a new position for the same purpose is in Table 12. The majority of the jobs are related to sport goals and marketing, but students were also able to follow the strategic focus of HRM suggesting brand-new positions such as database administrator in a club, process consultant, specialist for new media and e-communications.

CONCLUSIONS

In order to produce effective sport managers who would be also able to perform their role as HRM practitioners, the strategic nature of HRM in sport organizations must be paramount for HRM courses taught as a part of Sport Management studies. The structure of the Study Programme is favourable for achieving the desired core learning outcome from the subject of HRM i.e. strategic focus of HRM in relation to the sport organization's strategy. The assignments reflected the reality within sport and showed the weaknesses in terms of the availability of formalized strategic documents of sports organizations and moreover missing operationalization of the organizational strategy (Nová et.al. 2016). Thus students' critical thinking and ability to link the strategy of a sports organization and HRM policies was limited. With consideration towards also the results from the analysis of suggested trends in HRM education, educational standards and professional standards, some innovative aspects are needed to be implemented within the subject itself especially with respect to the students' population features, maturity and experience.

Bearing in mind the conceptual model that describes the context of strategic HRM in sport (Figure 1) when it comes to the teaching and learning methods, still the focus will be on case studies accompanied with class case discussion (open-ended problems, supporting data and documents); students' oral presentation; written case studies – analysis; creation of a new case study; role play; web search; live (newspaper article – events occurring at the current time), etc. To underline the global context of HRM in sport the e-multimedia book was elaborated Case studies in Human Resources Management (HRM) in Sport (Nová et al., 2017) that offers case studies from different international sport contexts that are related to various aspects of HRM. Thus the book not only covers the gap in the teaching materials for sport management students related to HRM issues but it also highlights the importance of case studies as an educational tool that could impact the development of skills and knowledge development. Case studies focus on the substance of HRM processes taking into consideration the specificities of these processes in sports organizations and in organizing sports events and cover the following issues: Job design for HR in sport ;Volunteer recruitment and orientation ;Motivation; Knowledge management and education of HR; HR management of volunteers; Impact of Social media on culture and HR skills; Organizational and occupational professionalization of sports organizations; Gender diversity; HR and cultural differences ;Personal values and their importance in HRM in sport ; Labor disputes and remuneration ;Performance management of human resources; Influence of innovation on HR requirements. This multimedia book is intended to be a valuable resource consisting of international case studies in human resources management in sport are delivered by sport experts and the readers and students will benefit from the book as follows:

- ✓ The opportunity to analyse and learn HRM process in sport
- ✓ The examination of key issues in international HRM in sport enabled by clear and well-structured case studies
- ✓ Better understanding of practical implication of theory as a result of a balance of academic and practical elements of case studies

Although research in HRM and HRM education is rich there are no studies available that shed light on how sport management students understand or are taught this challenging topic. This qualitative case study offers an initial exploration of how the subject of HRM is learned and taught in sport management studies. Teaching and Learning Strategies which can be most successful in this sense are described, in order to successfully achieve the intended learning outcomes. After careful analysis of the transcripts from the undergraduate students' seminar work, their perception of the importance of strategy for HRM policies and vice versa in a real sport context was examined. This will allow the designing of a new, more strategic approach to the teaching of HRM in sport management studies.

TEACHING IN AN ONLINE ENVIRONMENT

Dr. Keith Buckley

Rollins College (USA)
kbuckley@rollins.edu

Abstract

The definition of online learning is a formal education program in which a student learns: at least in part through online learning, with some element of student control over time, place, path, and/or pace; at least in part in a supervised brick-and-mortar location away from home; and the modalities along each student's learning path within a course or subject are connected to provide an integrated learning experience. For universities online classes is cost cutting, and leverages time when physical expansion is out of the question. For faculty / educators - increasing frequency and variety of engagement; transition to fully online teaching. for students - address access / convenience issues (online 24/7 access) while still offering social & instructional interaction opportunities (classroom)

As learning and technology evolves one of the more popular teaching formats is a online learning course where a percentage of the time is face to face and the rest of the time is online. These types of classes are proving quite popular with students who want flexibility but at the same time experience a classroom feel and a personal connection with the teacher and other students. This gives the teacher a two faced problem in designing a class that meets the learning objectives through both formats. It is crucial that the teacher has a very clear vision how the class is going to flow and how the learning objectives will be met in the class room and online to have an effective class. In higher education the teacher must examine five critical areas.

1. Vision - The objectives and Learning outcomes
2. Interaction - The face to face and online interaction. How? What? and when?
3. Content - The ability to create learning modules that expand critical thinking
4. Assesment - Formal and informal assessment – what is important in the grading process
5. evaluation - This should be self peer and student evaluation. Its also very important to get some of reflective evaluation some time after the completion of the class.

This paper will examine the process of executing an effective online learning course. It is one that takes careful preparation, attention to detail, keeping instruction and direction as simple and easy to understand as possible whilst keeping the learning objectives central to the plan. online learning can accommodate students of all backgrounds, provide a creative learning environment and give students an extremely positive educational experience. In order to build an effective online class, it is important to establish what type of class you want to have and how this will be enacted. It is very important that it does not become two courses that run independently of each other. Learning objectives, learning outcomes, content assessment and evaluation have to be in sync with the online and in class interaction.

An effective course is well structured, easy to comprehend and allows the student to learn in an independent manner Formal and informal assessments correspond to the student's ability to grasp the critical thinking aspects of the course. A online learning format is one that encourages collaboration, discussion and debate. This paper will help educators plan, process and execute a productive course.

Keywords: Online Learning, Education, Teaching

INTRODUCTION

In order to create an effective online course, it is very important to understand that it is for the benefit of the student and all design implementation and evaluation should be done that is in the best interests of the student. online Learning is a mixture of learning methods that incorporate multiple teaching modals. It is a natural development to the growing accessibility of eLearning, online resources and the continued need for a human component in the learning experience. A online learning approach ensures that the learner is engaged and driving his or her individual learning experience. This approach also helps cater to the individual needs of the learner, most students have unique

learning styles and an online approach is more likely to cater to those needs than a traditional classroom teaching experience.

Online learning is important because it breaks down the traditional walls of teaching, ones that don't work for all students and now with access to present day technologies and resources we can tailor the learning experience for each student. Online learning also offers flexible time frames that can be personalized to each person, offering them the ability to learn at their own pace.

For universities, online courses can be part of a strategy to compensate for limited classroom space, as well as a way to think differently about encouraging faculty collaboration. For faculty online courses can be a method to infuse new engagement opportunities into established courses or, for some, provide a transitional opportunity between fully face-to-face and fully online instruction. For students the conveniences of online learning combined, the social and instructional interactions that may not lend themselves to online delivery. All students no matter their age learn differently and teaching methods should reflect this, by designing teaching programs in a way that reaches visual, auditory and kinetic learners alike. With the heavy integration of technologies, we'll be able to improve teaching, information retention, engagement, responsibility and enjoyment. Students never outgrow their learning styles, meaning online learning is more important than ever, no matter what the industry is, from schools to corporations, in all walks of life.

When setting the course there are five basic tenants of a complete course: Interactions, Design, Content, Assessment and Evaluation. Each one is extremely important and leads the student to have well defined, organized and pedagogically centered experience.

INTERACTIONS

This area clearly explains to the student all the necessary information about times, assignment's, expectations and protocols. In order to learn any academic subject students, need to interact and even struggle with the material being learned (called active learning). Pre classroom assignments are set and students are asked to explain concepts and ideas to their peers in class. The online component allow students to work at their own speed but it should force them to research, reflect and discuss complex issues within the course. The assigned work should tie in with the course goals and objectives.

An example of course objective

Students will develop an understanding and appreciation for global sport business as it relates to the commercial management of sport and sport organizations. By the conclusion of this course, the student will, through discussion, investigation, written examination and application:

- Understand the body of knowledge in international sport business
- Develop a knowledge base regarding international sport business research
- Become aware of the differences in regional, national and geographic sports culture
- Develop a knowledge base regarding international sporting events
- Appreciate the complexity of international governing bodies of sport
- Understand the historical development of international sport business and global sport expansion
- Describe U.S. global sport exportation and importation
- Discuss economic integration as it relates to global markets
- Learn concepts, principles, and terminology as it relates to international sport marketing
- Critically examine the promotion of international sports products
- Understand the complexity of licensing and merchandizing of sport in international markets
- Understand the historical development and importance of The Olympic Movement
- Identify major social, cultural, ethical, and business issues facing international sport

Schedule

A course schedule with topics and assignment distribution. The material should be divided equally and cover the entire course. The course schedule also helps students know from Day 1 the exam and due dates, as well as plan their reading to come prepared to class.

Syllabus

A student course guide with important information. The official syllabus of most schools are very long with details

and policies as required by institutional policy. A way to help the students is to create a mini syllabus to provide quick access to the most important aspects of the course.

Protocols

This is a document detailing course expectations and norms. In class preparation, E mail correspondence and online discussions are all discussed. This is where all technical support such as log in procedure .and course requirements are stated such as student responsibilities in the classroom and online are stated. Also the consequences of late/missed assignments.

Module Interaction

This document allows the alignment of the unit learning objectives with assessment and interaction activities. The teacher has to carefully consider how to design each week of the course, combining different content resources with faculty-student and student-student interaction activities that foster a sense of community and critical thinking, with formal and informal formative assessments.

Technology

There are of course many different technological tools. It is vital that the teacher designs' the course around technology that he/she is comfortable with and will aid the student in their learning process and not hinder it. Tools such as Google Docs, Edpuzzle, Padlett and Kahoot. Kahoot is especially effective as you can students individually or in teams compete against each other in their comprehension of the class that day. Each of the tools listed has its own functionalities, but all are beneficial when it comes to one crucial aspect of modern schooling: they pave the way for re-examination of the current learning methodologies. These tools open up the space for dialogue on the potential that technological devices can bring to today's learning environments.

In the majority of classes, interaction across all forms is vital. This gives the student a sense of belonging and that the course is important. The more effective interaction the more motivated the student will most likely be. Positive interaction will enhance the learning environment in all kinds of courses. The benefits of a online format allow students to work at their own speed and time in the online format and therefore in the classroom this can maximize in class discussion. This gives students the ability to understand other student's viewpoints and ideas. The teacher's responsibility is to facilitate this discussion and make it relevant to the modules of the course

DESIGN

It is obviously important to have an effective design that makes learning intuitive and stimulating. The quote "The focus should be first on the learning, and second on the technologies that will support that learning" is very profound. Different schools have various ways of approaching online learning and the design of the course must fit the mission of the institution. The course should focus on teaching and learning in a very collaborative and informative manner. Discussion and debate are very important parts of the curriculum. If an institution's online learning strategy can be designed to address the needs and dynamics of all three constituencies (institution, faculty, and student) simultaneously, then online learning can become a powerful force for institutional transformation. With the right design and strong learning objectives the students will embrace online learning and it will be a major addition to the curriculum.

There are different ways in which a successful online environment can occur. One such way is classroom flipping. In a "traditional" classroom, a lesson is presented during class time and learners may be given a "homework" assignment to ensure that they're comprehending the subject matter. In a "flipped" classroom, on the other hand, they are actually encouraged to prepare for lessons prior to class. This may involve taking the time to read course material or even complete relevant assignments. From there, class time is used to further discuss the lesson, share ideas and allow students to interact in a dynamic learning environment.

In an online classroom, flipping can work in a number of ways. Consider, for example, assigning students to complete a particular reading or lesson. An online discussion can begin where learners are encouraged to delve deeper into the lesson, pose questions, and share their own unique interpretations. This method creates a more diversified learning environment and foster a deeper understanding of the subject matter being discussed.

Mind mapping is probably one of the best online teaching techniques to implement for the visual learners within a class. A mind map is a diagram of related ideas and concepts that can be used as an aid for studying, a way of

organizing information or even a springboard for a writing assignment. This helps instructors in structuring classroom discussions, classifying ideas and gradually bringing learners to the central idea. The aim is to un-complicate complex concepts or issues.

The benefits for learners is that it's quick, easy and allows them to "dive right in" the ideas around a central concept and connecting the dots to reach the central idea. In an online course, you can have students create their own mind maps (either on paper or using online mapping software) and share them with the rest of the class, allowing for easier sharing of ideas and interpretations. Mind mapping is ideal for:

- making connections between ideas/concepts
- planning out projects or written assignments
- better understanding the learning material

Yet another concept to implement is that of promoting self-learning in a controlled environment. With self-learning, students are encouraged to explore certain subject matter and decide what aspects are most important or relevant to their own interests. Self-learning is a great way to get learners truly invested in the subject matter in ways that apply to real-life situations.

The concept of instructional design is a teaching technique that refers to designing your classroom around your learners' unique backgrounds and your ultimate goals (or what you want students to take away from the course). The technique is not restricted for the use in on-site setting, rather it's equally important in an online learning setting, where learners have very unique backgrounds and bring a different set of experiences to the table (especially when compared with "traditional" face-to-face classrooms).

As such, instructional design means taking the time to get a better understanding of your learners. What is their current understanding of the subject matter? What are their different learning styles? In simplest terms, instructional design recognizes that there's no "one-size-fits-all" approach to teaching.

Adaptive learning involves utilizing computers and other technologies as viable teaching devices. As an online instructor, adaptive learning will inherently come into play, but it's up to the teacher to make the most of the technology available to you (and your learners).

For some students, learning a particular subject by watching a video may be most effective. Others may learn better through participating in online discussion forums. Ultimately, it's up to the teacher to transform each student from a passive receptor of information into a willing and active participant in the online classroom. This may mean providing different mediums (video, text, visuals, etc.) for introducing each new lesson or concept.

ASSESSMENT

Students should experience various learning outcomes through direct in terms of presentations case studies and in class discussion. Online the students will research, interact with an online discussion and blog their thoughts. The assessment process is very important. Students in the traditional 18 -22 age especially the grade is very important to them. The bulk of work that the students will do will be accessed. Content could be provided in the form of articles, student researched articles, educational YouTube videos and in class presentations. The idea being that the learning outcomes are given to the students in various formats. Student's should receive assessments in a way that it is the course as a whole and not just one form. The issue is when the student prefers one form of instruction a puts their energy either in the online format or face to face class. The various forms of technology are a tough issue. Teachers should be on on the cutting edge but the class needs to be on task and it shouldn't get bogged down by technology issues. For right now Interactive online discussions, blogs and a podcast will be the limit of technology use.

It is crucial to provide clear instructions for all assignments, as well as exam objectives, to help students focus, have a clear understanding of expectations and how the assignments help fulfill course objectives. Written, clear instructions also help faculty minimize students' questions about what to do, when is the assignment due or how is it going to be marked. Part of the process is developing a scoring rubric. This can be a tedious, but it helps the teacher mark assignments consistently and students know how they're going to be evaluated and why they lost points.

Some student are inhibited to talk in a classroom format. There are instances where certain students do all the talking and almost bully the other students when their views aren't mainstream. This is when the teacher becomes an extremely important part of the process in how he/she involves all the class in honest and forthright discussion. It is obviously up to the individual teacher how they distribute their grades. Class size, length of course and technology will all factor into the different values and weights. Ideally students will be given questions that mean students have to think objectively and answer with thought and application.

Formal and informal formative and summative assessment are extremely important in the development of a course. Online assessments are quite personal and the student gets from it the level of work that they put in. In face to face classroom assessments the student's personalities are much more evident but sometimes one or two verbally strong students can dictate the class. The balance is for the students to write and research online and in the classroom listen to others student's opinions and evolve their thought basis. The formal assignments will come in the form of a research paper, class presentations and essay exams. Informally the student will be accessed in the classroom with their commitment to read before class and add to the classroom discussion. Therefore, the ideal is to have a combination of effective assessment in a classroom and online environment.

How will the teacher know if the course met the learning goals and was effective? Many evaluations are done right at the end of the class/semester when students are more concerned with finals as opposed to serious reflection of the class. Like many things as long as we grow in our learning each class should be more productive than the last and by building on a foundation of good teaching practices this should occur. It is advisable to have a colleague evaluate the formatting and design of the course and make comments. It is not easy to share with your peers and the teacher has to be able to take constructive criticism but it is a very valuable tool. The class needs to intuitive to a student, many teachers just assume the students understand what the teacher is thinking.

To determine the quality of the course and its levels of success hard to define in a learning environment. Success maybe having a class that those students who struggle with a traditional format find more appealing and their motivation to complete the class is enhanced. Quality is having best teaching practices best learning practices and the ability to effectively communicate with the students. It is good practice to follow the Universal Design for Learning Guidelines (UDL) guidelines for effective teaching practices. The UDL Guidelines are organized according to the three main principles of UDL that address representation, expression, and engagement. Most institution's has standard form evaluations from student's peers and sometimes outside consultants. The University of Central Florida Blendkit review evaluation is a very good tool. Its highly recommended to use this tool or something very similar for producing a quality program.

The key for having a quality online learning class that is well received by the students doing the research and applying simple design rules. The content, the application of the content and then analyzing the content is the way for any class to be successful. Peer review is a very easy yet significant way of making sure you are on task with your course. Student evaluations are a critical component but sometimes they do offer a short term reflection.

CONCLUSION

A online course isn't simply throwing in some PowerPoint presentations, assigned textbook readings, weekly quizzes and exams. The content must be balanced, clear, engaging and diverse. Given the nature of the course, communication is important. Students shouldn't be abandoned and an effort must be made to both give them the assistance they need and create a sense of community between the students. Assessment activities are more than quizzes and exams. Learning management systems provide a plethora of assessment activities, such as discussion forums, peer reviews, collaborative wikis and other group projects. Assessment needs to go beyond measuring cognitive learning and include other aspects such as the development of affective skills (i.e., working in group projects or integrating use if technology in the assignments). It is imperative that a online or online learning course is organized and has an attractive, accessible design. This means that universal design for learning guidelines should be incorporated into the design. Though it can be tricky, accessibility must be ensured for all students, including those that may have some form of disability. Furthermore, students must be able to easily navigate course content and identify graded assignments to ensure the best learning environment. All legal and ethical aspects must be followed to the law. The only way these can be successfully accomplished is by the institution providing concrete support to the faculty and giving students the right to dispute these standards in a very tolerant atmosphere. When these tools are used effectively the student will be a very healthy learning environment that is intuitive and encourages growth.

ABSTRACT

The ineffective and effective management of construction materials affects construction stakeholders, the construction industry and its environment. Time is a crucial concept, which the construction student must learn to exploit in order to efficiently plan, procure and utilize materials on construction projects. Inadequate inventory should not catch construction students unawares especially when they become construction professionals. The study aimed to examine the teaching of lead time reduction in material inventory planning in the construction education. The study utilized an in-depth literature review and the conceptualization of frameworks on lead time reduction in material inventory planning in the construction education. The study revealed that lead time reduction in inventory planning of construction materials takes into account factors such as ICT, Supplier, Project details, Construction professional, Environment and Construction company factors in helping the construction student effectively understanding construction material management. In conclusion, the study would help to enrich the construction education curriculum by building the knowledge base of construction students in order to be systematic in planning, procuring and control of construction materials leading to a better construction industry and environment.

Keywords: Construction Education, Construction Materials, Lead time, Planning, Procurement

INTRODUCTION

The bible ably recorded in Luke 14 verse 28 and 29 (King James Version), where Jesus noted that “for which of you, intending to build a tower, sitteth not down first, and counteth the cost, whether he have sufficient to finish it? Lest haply, after he hath laid the foundation, and is not able to finish it, all that behold it begin to mock him”. These verses broadly defined the importance of planning in setting up any form of building. Whether it be cost, materials, time, manpower etc. there is the utmost importance to plan. There is no reason insufficient construction materials should catch construction professionals on site if they actually engage in effective and efficient material inventory planning. The failure to effectively plan is evident in the Nigerian construction industry with diverse impediments which have stalled it in achieving successful project outcome at various levels. Pourrostan and Ismail (2011), Mohammed and Isah (2012), Oshodi and Iyagba (2012) stated that problems associated with planning and timing of project has been a major bane causing several challenges on projects in the construction industry. Planning resources essentially in the construction industry ranges from planning for construction resources such as materials, machine, men, money, time, etc. The influence of materials in the building and construction industry is paramount and cannot be over emphasized.

Studies from Formoso and Revelo (1999) and Dey (2001) indicated that in developing countries, material costs can make up as much as 60–65% of the total working capital of any industrial organization or construction project. According to Che Wan Putra, Ahmad, Abd Majid and Kasim (1999); Dey (2000); Chan (2002); Kasim, Anumba and Dainty (2005), the critical nature of construction materials during handling and management is crucial in that it can influence the total project cost, time and the quality. Therefore, contractors or construction companies that aim to profit or succeed in the construction business need to foster a good understanding of material inventory planning. The Nigerian building and construction industry is becoming highly competitive. Many clients desire that their construction projects are finished as fast as possible in order to reap their investments (Kaelbe 2001; Kasim *et al.*, 2005). Also, contractors and clients are avoiding any extra cost which may mean huge losses and higher expenses respectively (Aina and Wahab, 2011). In order to meet these goals, contractors are focusing on materials by lowering total costs in supply chain, shorten throughput times, drastically reducing inventories, expanding product choice, providing more reliable delivery dates and better customer service, improving quality, and efficiently coordinating global demand, supply, and production (Shankarnarayanan, 2003). This means that efforts must be put to offer more advanced and quality products, fulfillment of consumer needs and faster delivery times through efficient controls and planning; an aspect of material management, ensuring that productivity is maintained, stocks are minimized and resources are optimized.

Obtaining the right quantity and quality of construction materials means that good sourcing decisions must be made. Although, the factors affecting the sourcing decisions may vary from project to project. The basis is the introduction

of a lead time that could either be longer or reduced depending on the prevalent conditions. Using lead time is not a new concept but it is hardly taught in the four walls of the classroom. Also, lead time mostly been utilized in the manufacturing sector rather than on construction projects where it actually should be consciously used. In today's business world, the competitive nature requires that students are enriched with the requisite knowledge to make them the competitive edge that companies require. Understanding the management and use of a reduced lead time on construction projects gives that edge. The study intends to examine factors that would engender lead time reduction in the inventory planning of construction materials in order to teach construction students for an effective management of construction projects.

MATERIAL INVENTORY PLANNING

Bell and Stukhart (1986) in Kasim *et al.* (2005) defined materials management functions which include planning and material take off, vendor evaluation and selection, purchasing, expenditure, shipping, material receiving, warehousing and inventory, and material distribution. In three major functions, materials management is related to planning, procuring and storing in such a way that provides the appropriate material of right quality, right quantity at right place in right time. No organization should shove aside issues of material management due to its importance. Ogbadu (2009); Keitany, Wanyoike and Richu (2014) opined that materials management is a tool that should be used effectively by organizations to promote profit maximization and optimize customer service requirements by making the best use of available resources. Materials are vital in the activities of any industry since unavailability of materials can impede production. Unavailability of materials is not the only phase that can cause problems. Excessive quantities of materials could also make serious problems to managers. Unnecessary storage of materials can raise the costs of production and the overall cost of any project. Equere and Tang (2010) stated that stockpiling time of materials cause extended tied down capital that would otherwise have been better invested, requiring extensive storage facilities and space. An important aspect of material management that takes place on building construction sites is material inventory planning. Planning is said to be the formalization of what is intended to happen at some time in the future. Although, a plan does not guarantee that an event will actually happen, therefore the need for controls to help cope with the changes that may occur. Materials inventory planning in a construction process involves the process of quantifying, ordering and scheduling of materials. Payne *et al.* (1996) added that material inventory planning process is incomplete until a proper record is setup and maintained while determining target inventory levels and delivery frequency. Fundamentally, a critical purpose of materials inventory planning is to procure the materials for the dates when they are needed. Islam *et al.* (2013); Mehr and Omran (2013) stated that two crucial things lacking in material inventory planning on construction sites are that construction professionals hardly keep proper records and most construction sites experience material delay. Essentially, contractors and construction professionals depend on material schedules in order to know what materials are needed and when they should be on site. In addition to acting as a guide for ordering materials, the schedule also serves as a checklist of materials needed for the project. But, most of these schedules used either paper based or computer based hardly incorporate lead time management. They are most focused on the start and finish dates of the activities. The question is, what happens before the start date?

LEAD TIME MANAGEMENT

Laufer and Tucker (1987) argued that uncertainty and complexity cannot be eliminated from construction projects and that there is an increasing demand of speed. These uncertainties and complexities results in the need to introduce lead time in the acquisition of construction materials. Silver *et al.* (1998) defined lead time as the time spent that elapses between the placement of an order and the receipt of the order into inventory. According to Afzal and Vivek (2014), lead time is composed of setup time, processing time, move time and waiting time and there are different tools reducing the lead time of the different component as shown in Figure 2. Elfving (1999) explained that lead time is sometimes confused with cycle time whereas cycle time is the time it actually takes for a job to go from the start to the end of the process. Afzal and Vivek (2014) opined that lead time reduction does not mean working harder, faster or with reduced quality, but it means working smarter. Overall, lead time can be introduced at each stage of the construction project life cycle. By this, it is possible to separately allocate significant lead time to each of the "functional" lead times. For example, design lead time is the time that is reserved for defining and specifying product characteristics. Procurement lead time is the time that is reserved for product acquisition. Whereas, the inventory planning lead time consist of placing a purchase order, order entry and processing, supplier manufacturing/warehouse work lead time, transportation length, order received and different waiting periods between processes. Figure 1 showed the breakdown of a typical inventory lead time. The figure revealed that before the start of the activity, the inventory lead time had taken into account certain activities to ensure the prompt delivery and availability of the construction material. Therefore, it is possible to attach lead times to every inventory

to be used in carrying out an activity. In construction projects, long lead times of product delivery often dictate the pace of the construction project. This necessitates that lead times are adequately reduced.

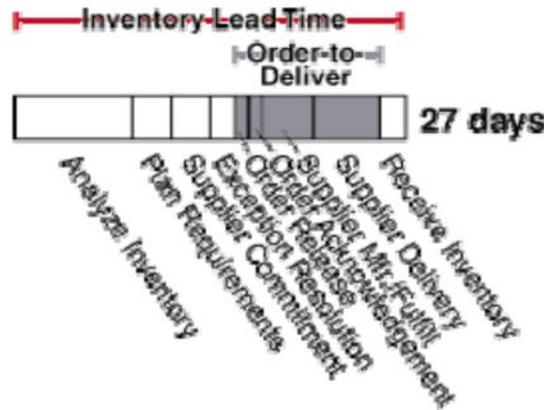

Figure 1. Breakdown of a typical inventory lead time

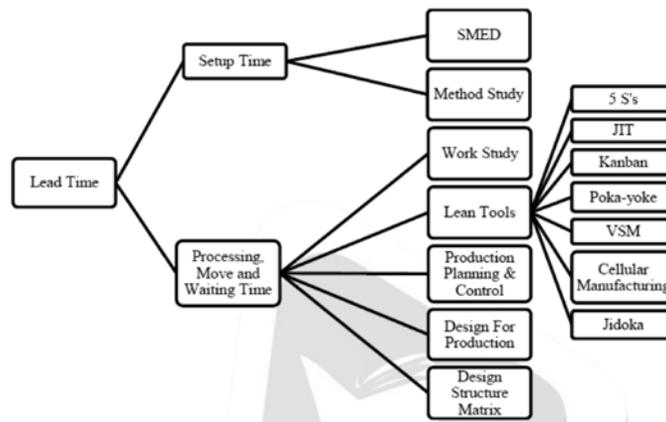

Figure 2. Summary of tools and techniques for Lead Time reduction
Source: Afzal and Vivek (2014)

The benefits of using lead time and making sure that it reduced are numerous. Afzal and Vivek (2014) identified benefits such as reduce work in progress, reduce safety stock, reduce costs, improved product quality, faster response to customer need, increased flexibility, reduce time to market and increase profitability. In addition, Treville et al. (2014) noted that short lead times can be a source of competitiveness.

METHODOLOGY

The focus of this study is to examine the teaching of lead time reduction in material inventory planning in the construction education. The study is theoretical in nature. The study gave a theoretical background to material inventory planning and lead time management and their benefits. In the discussion, reducing lead time for material inventory planning require that construction students and construction professionals take note of possible factors that could be considered when deciding the lead time for material inventory planning on construction projects. The study considered all construction materials has a basis of the inventory. As these factors affects inventory of construction materials in one way or the other.

DISCUSSION

In order to ensure that adequate construction materials are available before a construction activity is carried out, construction professionals may decide to stockpile the construction materials on site. Maintaining stock of building materials on site can be attributed to availability of funds, market condition, site location, climatic condition and project cost (Arunprakash and Nandhini, 2013). This has the disadvantage of tying down valuable capital that could have been used for other activities on the construction project. Mehr and Omran (2013) stated that there are

problems that are related to materials management during construction. These problems can be resolved largely by introducing lead times to construction activities and materials needed to carry them out. The lead time can be put in days, weeks or years. In spite of the project management or lean tools for reducing lead time on material inventory planning, there is need for the consideration of certain factors affecting the availability of the construction materials when it is needed, in the right quantity and quality. Figure 3 showed the framework of factors that could reduce lead time in material inventory planning.

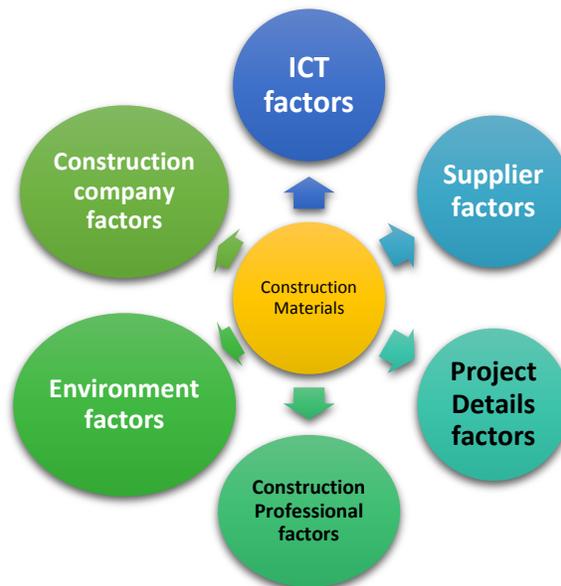

Figure 3. Factors affecting reduced lead time in material inventory planning

These factors are grouped into six (6) main factors which are the ICT factors: level of ICT usage, availability of ICT tools for material inventory planning and control; Supplier factors: relationship with supplier, supply and delivery of materials, price of building materials; Project details factors: site location, availability of storage space, availability of building materials, accuracy of project documents, variations, duration of project, sequence of activities; Construction professional factors: training of construction planner, experience, computer literacy, cooperation of team members, estimating skills of construction planner; Environment factors: market conditions, climatic condition; Construction company factors: availability of funds, communication between site and head office, policies of the construction firm. By identifying and understanding these factors it is possible to reduce or extend the lead time of the availability of the construction materials required. When these factors are favourable to the construction project it will result in lead time reduction on the material inventory planning.

In teaching of lead time reduction in material inventory planning in the construction education, Figure 4 described the framework for teaching lead time reduction in material inventory planning in the construction education. Much consideration has been given to teaching construction students about start and finish date, evidently this study revealed that before the start date, a comprehensive lead time must be out in place. Apart from the project management and lean tools to reduce the lead time, factors affecting material inventory planning must be considered in order to have an effective and efficient reduced lead time. Construction students' knowledge of construction activities should be aligned with the use of reduced lead time for proper inventory planning of materials and other construction activities.

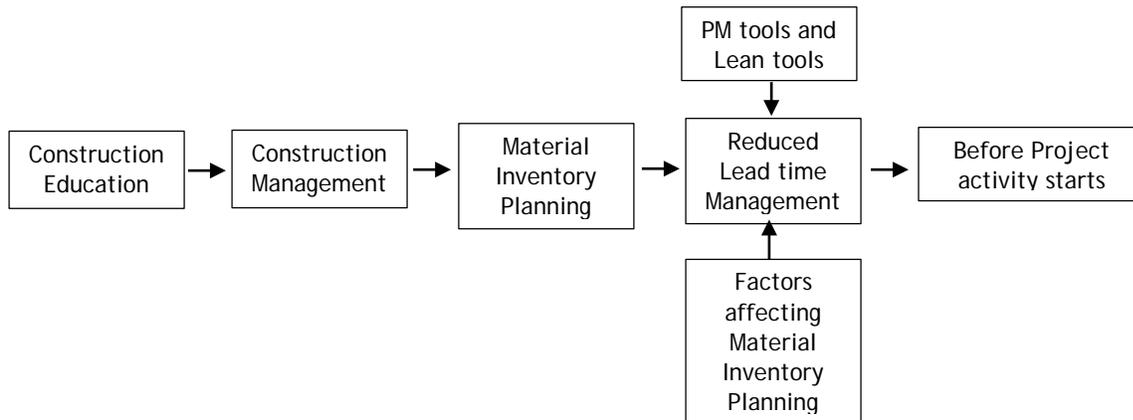

Figure 4. Framework for teaching lead time reduction in material inventory planning

Some of the material inventory planning variables are discussed below;

Availability of Storage Space

Material storage on site requires close attention in order to avoid waste, loss and any damage of materials which would affect the operation of the construction project. Previous studies have identified that construction materials often require a large storage capacity which is rarely available on site (Agapiou *et al.*, 1998). Lack of space is an inherent difficulty acknowledged throughout the industry, when constructing a development in an urban environment (Tindiwensi, 2000; Singer, 2002; Navon and Berkovich, 2006). However, Stukhart (1995) suggested that there are a few considerations to take in the planning of the storage space such as timing of the initial buy, and historical information and experience. Hisham and Khaled (2011) stated that storage on construction sites need to be properly planned and executed to avoid the negative impacts of material shortage or excessive material inventory on-site. Material inventory planning is essential to overcome this issue and management of the critical space.

Training and Experience of Project Manager

According to Stukhart (2007), studies from the Construction Industry Cost Effectiveness Project (CICEP) concluded that senior management have not recognized the contribution of material management to cost issues in projects, that personnel involved in material management activities do not receive an adequate training, and that the computer systems used by companies are not good sources of information for materials control. Lack of material may be due to an unskilled project manager who gives insufficient precedence to material procurement and has insufficient knowledge of materials, including appropriate substitutes (Mehr and Omran, 2013). Mehr and Omran (2013) reported that most people in the construction industry cannot use computer in case of materials management so they prefer to use manual materials management techniques. Navon and Berkovich (2006) noted that the use of manual process is labor concentrated, risky and inaccurate which may lead to extra and unwanted materials, delay, output decrease, shortage of new and up to date data.

Construction company policies

According to Umble *et al.* (2003), an organization or company must create a clear, compelling vision of how the company should operate in order to satisfy customers, empower employees, and facilitate suppliers. These types of decisions are the policy decisions of the management. Sometimes, the head office is in charge of material evaluation, its availability, alternative materials selection, procurement and inventory control or the make and buy decisions, thereby making sure that the inventory planning and control of materials are hinged on the major decisions of the construction firm to provide the necessary resources needed. Mehr and Omran (2013) reported that shortage of building materials on construction sites and activity delays have been hinged on poor communication between sites and head office purchasing, planning and co-ordination. According to Nwakor *et al.* (2012), most construction professionals (89%) have to bypass the establishment of material/store department in the head offices in order to save operational costs on their construction sites. However, this practice introduces flaws such as connivance with suppliers to inflate prices.

Availability of materials

This is one of the main factors affecting material inventory planning on Nigerian construction sites. Most Nigerian construction sites have been found to suffer from unavailability of needed construction materials which adversely delays the project, reduces productivity of workers and consequently lead to increase in final construction cost (Adeyemi, 2000; Liberda, Ruwanpura and Jergeas, 2003; Fagbenle, Ogunde and Owolabi, 2011). Mishra (2009) stated that it is important to make sure the quantity of materials which is required are available and that there is no shortage. Adeagbo (2014) noted that the availability of building materials should also be adequate in quality as this is crucial for the activities in the building and construction sector. According to Mehr and Omran (2013), timely availability of materials are essential to successful construction. However, the situation is such that the materials are often not available in the required quantity and quality. This adversely affects cost of construction and quality of projects executed. Material inventory planning cannot be effective when materials are not available.

Available ICT tools

Mehr and Omran (2013) explained that nowadays, successful management of construction materials has to be based on thorough and updated information, and procedure of using well designed construction materials management software. This idea has driven the vast use of ICT to ensure that up-to-date information is made available when needed. Mishra (2009) posited that computerize and network information offer fast, accurate and maintenance of information. The availability of ICT tools would affect the type planning and controlling technique adopted by the professionals involved and also the type of information available to them. Oladokun and Olaitan (2012) opined that lack of affordable, efficient, and user friendly inventory management tools, for adequate planning has been identified as a major cause of the high inventory cost in many Nigerian manufacturing firms. Navon and Berkovich (2006) added that lack of capable personnel in using computer-based materials management systems are considered the main difficulty in using computer in construction materials management.

Accuracy of Project documents

According to Mishra (2009), the success of material management is highly dependent on accurate and correct generation and convey of information. During the procurement phase it is necessary to decide how much material is required and when materials should be delivered to site. Mehr and Omran (2013) stated that accurate value and amount of materials must be accessible when needed. The accuracy of the information needed for inventory planning of materials would depend on the accuracy of the project documents that have been supplied by the consultants for project execution. According to Williamson (1996) resource allocation for a project becomes impossible when information provided in the design systems are uncertain and the complexity of the design do not align. Iyagba (2005) opined that design is the pre-planning process requiring knowledge, ability and selection of materials and determining performance. A faulty design document is a faulty foundation to building planning and control systems. Aina and Wahab (2011) have traced a lot of buildability problems to the issues of defective and faulty working drawings by inexperienced designers. The use of defective and faulty working drawings have often led to rework, high construction cost, huge claims, delay and ultimately building collapse (Iyagba, 2005).

Supply and Delivery of materials

Inventory planning of materials would greatly be affected by the frequency of supply and delivery of building materials. The logistics of supply and delivery of building materials during the building process is very crucial. Bertelsen and Nielsen (1997) noted that most contractors operate the "Oops! Principle", that is, ordering and deliveries of building materials take place when the production comes to a halt due to lack of the materials required. This means, not only frequent delays and loss of time but also additional costs caused by express deliveries. Mehr and Omran (2013) stated that many companies rely greatly on outside suppliers for the materials needed for production. Therefore, good relations and association with material suppliers might be decisive for a construction company to be in business. When a construction company has bad relation with their material suppliers it might be feasible that it experiences late deliveries or wrong materials delivered. This will have an impact on the total cost of the product, probably increasing the total costs, and delaying the end of the final product (Mehr and Omran, 2013).

Price of Building Materials

It is clear that materials should be obtained at the lowest cost possible to provide savings to the construction company (Damodara, 1999). Project delays and increase in project cost have been linked to increase in material prices and fluctuation in building material prices (Frimpong *et al.*, 2003). These changes in building material prices can be attributed to unavailability and shortage of materials in the country (Mehr and Omran, 2013). Eshofonie (2008) stated that price of material is highly dependent on supply and demand and are affected by many other things

such as quality, quantity, time and place, currency exchange, material specification, inflation and availability of new materials. Changes in building material price can stall material planning and controlling systems of construction project leading to time overrun.

Cooperation of Team Members

According to Mehr and Omran (2013), material management is an appropriate use of services, goods and equipment before, during and at the completion of construction projects. So for successful material management, there is a need for participation of all persons and parties involve in the project. In such situation material management needs collaboration between architects and engineers to identify the accurate material to be supplied during pre-construction to prevent over stocking. Construction management team must buy accurate quantity of material at the right time to prevent future issues such as deterioration and storage problems. Umble *et al.* (2003) noted that the implementation team is important because it is responsible for creating the initial, detailed project plan or overall schedule for the entire project, assigning responsibilities for various activities and determining due dates. The team also makes sure that all necessary resources will be available as needed.

CONCLUSION AND RECOMMENDATION

Before the start of construction project activities, there is need for construction materials in order for the activity to take-off. Most times on construction projects, the lead time management to prepare for the acquisition of materials are usually done haphazardly by construction professionals. The study sought to integrate the teaching of lead time reduction in material inventory planning in the construction curriculum in order to aid construction students in effectively and efficiently planning for construction projects. The study revealed the breakdown of activities in inventory lead time management and considered six (6) main factors that can lead to a reduced lead time in material inventory planning. The study posits that construction students should painstakingly address these factors in order to reduce the lead time in material inventory planning. The identified factors include as ICT, Supplier, Project details, Construction professional, Environment and Construction company factors. A framework was developed which showed that reduced lead time management should be integrated in the construction management education.

The study recommended that by enriching the construction education, construction students are empowered with knowledge that helps in adequate material inventory planning. Effective and efficient lead time management can lead to reduced material delay, availability of construction materials when needed and improve construction project delivery parameters of time, cost and quality. There is conscious need to constantly review the curriculum to adapt to the current needs of the industry.

ABSTRACT

This article deals with a problem which is currently solved in education in entire Europe. Specifically it is the decreasing interest of students at all levels of elementary education in science education. Because of this research, we prepared three lectures led differently; we used different teaching methods, the frontal and inquiry-based education. We worked with six different classes and monitored them for 16 lectures. Our research showed that the best results related to classical frontal method. We were surprised that the frontal method had the best results in tests. But the most preferred teaching method was the inquiry-based.

INTRODUCTION

The current ever-changing economic situation, general standards of education and demographic developments in relation to globalization show a great potential in the form of promising students having almost unlimited capabilities (Maryska & Wagner, 2015). The process on education on elementary school is changing all the time (Kuncova & Mulac, 2015), but biggest changes have happened lately. Nowadays a student is fighting with a large number of information. Parents, high school teachers and future employers demand that students have various skills and understand a wide range of issues, starting with general knowledge all the way to computer and language skills. The large number of information should help to develop students' key competencies and gain general overview about all mentioned areas. In view of the big competition on the labor market, it is also important to develop students' competencies in the area of problem-solving, communication, social development and many other competencies which cannot be supported by books etc. but those can be supported by specific teaching method only.

The important outcomes from lectures which were led by Inquiry-based method is that students need to develop different skills and competencies than in ordinary frontal lectures. They need to think much more about the problem on their own or they need to cooperate with each other. This fact is very important because of the growing demands (Chinnammal, 2005; Doucek, Maryska & Novotny, 2013). In secondary and tertiary education as well as on the labor market (Doucek, Maryska & Novotny, 2014; Maryska & Doucek, 2011; Maryska, Novotny & Doucek, 2010). Using different teaching method is not guarantee the better results or success in the test. Big problem of current education at all levels is student's lack of interest and motivation in science and technical education (Rocard et al., 2007). Popularity of science and technical subjects is currently low (MSMT, 2011).

We worked with students from elementary school Sunny Canadian International School, we expanded the "regular" frontal teaching method for several other, mostly activating, methods of teaching, which also include the inquiry-based teaching of science (Svatkova, 2015). The goal of our research was to show if students can work better with information which they found out on their own or if they remember better that information which is given by the teacher. And which information is easier to remember. After each lecture, we give the control test to all students after the lecture. The important aspect is the student's motivation and personal attitude toward teaching. Therefore, our research also included information about the students' age. Our research was conducted at the elementary school among students from the 6th to 9th grade. We could see differences between students of different age in motivation and attitude mostly, so we decided to map how the results change with students' age.

PROBLEM FORMULATION

During our survey processed at the Sunny Canadian International School (SCIS) we focused on a relatively specific area – a comparison of knowledge acquired by the students through two completely different learning methods. Our analysis provides information for a key decision, whether to change the current learning method at the SCIS, including inquiry-based learning in the learning, or whether to prefer frontal learning.

For the purposes of this article we formulated the following Research Questions:

- RQ1: Do the students prefer frontal teaching in comparison with inquiry-based learning?
- RQ2: Is any difference in preference of type of teaching in different classes?
- RQ3: Does preferred type of teaching provide better results in control test?
- RQ4: Does preferred type of teaching provide better results in control test in different classes?

MATERIAL AND METHODS (DATA COLLECTION)

The survey was conducted at the private Sunny Canadian International School (SCIS). There is more than 500 students study at SCIS (SCIS, 2016). Since its establishment SCIS has upheld the principle of bilingual learning where all the subjects are taught in Czech and in English by native speakers. SCIS is the first institution in the Czech Republic that integrates in its curriculum preparation of students for the IGCSE examination (International General Certificate of Secondary Education) and its graduation after the second year of secondary school. IGCSE is an academically rigorous, internationally used, and specialized English language curriculum which is offered to students to prepare them for International Baccalaureate (IGSE, 2016).

The project using inquiry-based learning in lessons at the SCIS elementary school was implemented in the period 1.4.2013 - 31.12.2014 (SCIS, 2016). For the project SCIS bought special study aids that could be used in the incorporation of inquiry-based learning into the SCIS curricula. Specifically, SCIS purchased Pasco (Pasco, 2016) probes for measuring various biological processes, such as working with CO₂ and taking blood pressure, and microscopes enabling the students to understand in more depth other natural phenomena. After the completion of the project in the period 01.2015-12.2015 we assessed the success of the implementation of inquiry-based learning in study. The research took the form of a full survey 6-9 SCIS classes.

METHODOLOGY

Methodology how to teach with support of sensor Pasco was defined by author of this paper. Similar methodology (process) how to work with sensor Pasco was prepared for students as well. We prepared similar methodology for work with microscopes too. Defined methodology is described in detail in (Svatkova, 2015). Respondents were grouped into groups based on their class. Each of those groups was introduced to the survey course and the methods that would be employed during it. At the beginning of the research all students included into survey were informed about each learning approach. The survey contains three parts. The first one was frontal learning, the second one was inquiry-based learning using microscopes, and the third one was inquiry-based learning using Pasco probes.

At the beginning of the entire project, students were informed about each of the individual teaching methods and their basic characteristics and differences. Individual lessons took place in the following order:

- Inquiry-based teaching supported with microscopes;
- Inquiry-based teaching supported with Pasco tools;
- Frontal teaching.

The learning was assessed in two ways:

- Enjoy, doesn't enjoy, not interested, where the students only mark whether they enjoy the learning regardless of the comprehensibility of the supplied information and its easiness to remember,
- With a mark 1, 2 and 3, where the students assess whether the transmitted knowledge is understandable and easy to remember.

At the end of each learning methods was verified acquired level of knowledge. This was processed by way of standard test. Each test have 4 question and student can gain between 0 and 4 points.

The research was realized among all students of sixth, seventh, eighth and ninth grade at Sunny Canadian International School. The Czech Republic passed Act No. 101/2000, on the protection of personal data. Therefore, we made all processed data anonymous at multiple levels. We made all information anonymous that could lead to the identification of a specific student.

GENERAL DATA CHARACTERISTICS

The data file with research answers currently includes 207 answers from 85 students of the second level of SCIS that we have been collecting in 2015. The second level represents 6-9 classes. Three monitored lessons were given in each class. The first two lessons were based on inquiry-based learning, which is preferred today in teaching of science and technical subjects. The first lesson was based on working with microscopes and the second one was based on working with tool Pasco. The last lesson was based on traditional frontal learning. After the lessons students completed an evaluation questionnaire and a control test on defined topic.

Other part of our research was student's evaluation of lectures led by different styles and with different techniques (sensors Pasco and microscopes). Important information in terms of data collection was gender and grade. Other important information was answer if the students are satisfied with teaching method and comparison with other teaching methods.

RESULTS AND DISCUSSION

GENERAL OVERVIEW

We received 207 answers from 85 students during our survey among classes from six-graders through nine-graders of SCIS. Classification of students included into survey by grade and gender is provided in the [Table 1]. The highest number of students is in the 8th and 9th grade where SCIS has just one class.

Table 1: Number of Students at SCIS (source: authors)

Grade	6A	6B	7A	7B	8A	9A	Sum
Boys	7	10	0	7	7	10	41
Girls	5	5	9	6	10	9	44
Total Number of Students	12	15	9	13	17	19	85

The number of answers is displayed in the [Table 2]. The 7A class does not contain any answered from boys because there are actually no boys in this class. Three surveys were conducted in 4 classes. Only classes 7A and 7B were conducted only two surveys (microscope-supported teaching and frontal teaching). The average return rate was 81.18%.

Table 2: Number of Answers from Students at SCIS (source: authors)

Grade	6A	6B	7A	7B	8A	9A	Sum
Answers - Boys	21	29	0	13	21	25	109
Answers - Girls	15	15	14	10	29	15	98
Total Number of Answers	36	44	14	23	50	40	207
Rate of return of questionnaires	100%	100%	52%	59%	100%	70%	81.18%

DATA ANALYSIS

The first part of our analysis focuses on analysis of preferred teaching method. Table 2 identifies the popularity of individual teaching methods among students included into survey. Students were informed about individual teaching styles (frontal teaching and inquiry-based teaching). The preferences of students were always evaluated after a specific lesson. Lessons took place in the following order:

- Inquiry-based teaching supported with microscopes;
- Inquiry-based teaching supported with Pasco tools;
- Frontal teaching.

The first column in table three – Thmikro (teaching hour with support of microscopes) provides information about preferences of each of teaching styles among students. Based on the information at the beginning of the project, the most preferred style was inquiry-based teaching supported with microscopes.

Table 3: Preference of the methods used in lessons in % (source: authors)

n=192	Boys + Girls (all classes)		
	THmikro	THpasco	THfront
Mikro	77.08%	79.55%	71.43%
Pasco	10.42%	13.64%	4.76%
Front	12.50%	6.82%	23.81%
Total	100.00%	100.00%	100.00%

Legend: **Front** – frontal teaching, **Mikro** – microscope, **Pasco** – Pasco sensors, **THmikro** – Teaching hour with support of microscopes, **THpasco** – Teaching hour with support of pasco, **THfront** – Teaching hour based on frontal teaching

[Table 3] shows that students preferred inquiry-based teaching supported with microscopes. This was expected result. We found really interesting that frontal teaching was on the second place. The second lesson was taught using inquiry-based teaching supported with Pasco sensors. After the lesson we founded out that students prefer inquiry-based teaching supported with microscopes and then inquiry-based teaching supported with Pasco tools and the last one was traditional frontal teaching. The most interesting results are mentioned in the third column - THfront. The popularity of inquiry-based teaching supported with microscopes dropped for 8% and popularity of Pasco dropped for 9%. As we see, after all lessons the importance of traditional frontal teaching increased and almost 24% of students prefer this type of teaching.

[Table 3] rejects RQ1. We see, that student prefer Inquiry based teaching with support of microscopes. A detailed analysis by grades is provided in the following [Table 4].

Table 4: Preference of the methods used in lessons in % by Class (source: authors)

6A	THmikro	THpasco	THfront	6B	THmikro	THpasco	THfront
Mikro	83.33%	91.67%	71.43%	Mikro	71.43%	80.00%	71.43%
Pasco	16.67%	0.00%	7.14%	Pasco	0.00%	6.67%	7.14%
Front	0.00%	8.33%	21.43%	Front	28.57%	13.33%	21.43%
7A	THmikro	THpasco	THfront	7B	THmikro	THpasco	THfront
Mikro	77.78%	0.00%	85.71%	Mikro	70.00%	0.00%	90.91%
Pasco	0.00%	0.00%	0.00%	Pasco	0.00%	0.00%	0.00%
Front	22.22%	0.00%	14.29%	Front	30.00%	0.00%	9.09%
8A	THmikro	THpasco	THfront	9A	THmikro	THpasco	THfront
Mikro	70.00%	50.00%	52.94%	Mikro	83.33%	63.64%	66.67%
Pasco	10.00%	14.29%	5.88%	Pasco	16.67%	36.36%	13.33%
Front	20.00%	35.71%	41.18%	Front	0.00%	0.00%	20.00%

Results showed in [Table 4] are really interesting. Students in 6th classes prefer teaching with support of microscopes nevertheless in case of 6A there is a preference of Pasco sensors before Teaching hour with support of microscopes and in case of 6B is preference set to Frontal teaching. Interesting is situation in 7th classes. This is just one place where preferences of Frontal teaching are decreasing.

RQ2 is confirmed by [Table 4].

Next [Table 5], shows results achieved by students in control tests. Those tests were taken after each lesson. The values 1, 2, 3 and 4 shows amount of points obtained by students obtained in these tests. If student obtains 4 points from the test, he has grade 1 (equivalent to A in the English education system).

Table 5: Amount of points from Control Tests (source: authors)

X	Boys+Girls		
	Nr of Tests	Average	Median
Mikro	73	2.48	2,5
Pasco	65	3.09	3.0
Front	78	3.71	4.0
Total	216		

Note: total number of test 216 is caused by the fact, that numbers of students is changing from hour to hour (sickness rate, absence etc.) and above mentioned questionnaire were based on voluntary basis, however control tests were obligatory.

[Table 5] clearly shows that the best results were achieved by students in the tests followed frontal teaching. The average value of points from test was 3.71 and median value 4.0 (the highest possible value). The worst result was in case of inquiry-based teaching with support of microscopes. In this case the average value of points from the control test was 2.48 and median 2.5. This result is very interesting for us because all the time students evaluated this type of lecture as entertaining. So, we were expecting better results of control tests. We were wondering about the reason, one of the possibilities is that student didn't really contend this education style as a proper part of education during lectures.

The [Table 5] rejects RQ3. We see that results are better in case of traditional frontal teaching although preferred is inquiry-based teaching with support of microscopes.

Detailed results by class are mentioned in the following [Table 6].

Table 6: Grades of individual tests by Classes (source: authors)

6A	Nr Tests	AVG	MED	6B	Nr Tests	AVG	MED
Mikro	12	2.75	3.00	Mikro	15	2.47	3.00
Pasco	11	2.84	3.00	Pasco	15	3.46	4.00
Front	13	3.85	4.00	Front	15	3.87	4.00
7A	Nr Tests	AVG	MED	7B	Nr Tests	AVG	MED
Mikro	7	2.57	2.50	Mikro	12	2.50	2.50
Pasco	N/A	N/A	N/A	Pasco	N/A	N/A	N/A
Front	7	3.71	4.00	Front	11	3.82	4.00
8A	Nr Tests	AVG	MED	9A	Nr Tests	AVG	MED
Mikro	15	2.63	2.50	Mikro	12	1.96	1.75
Pasco	26	2.31	3.00	Pasco	13	2.85	3.00
Front	17	3.41	3.00	Front	15	3.67	4.00

[Table 6] shows the results of individual tests according to the classes. The results are surprising because most students, in all classes, had excellent results in the tests taken after frontal teaching although preferred way of teaching was inquiry-based teaching with support of microscopes. The best results are achieved in case of frontal teaching in all classes. In general, the worst results were achieved in case of inquiry-based teaching with support of microscopes. Based on this fact, we can reject RQ4.

CONCLUSION

Based on our research, RQ1 and RQ3 are rejected and RQ2 and RQ4 are accepted/confirmed.

We found out that students prefer lessons where they can play with some equipment nevertheless they don't remember all important fact which are tested by followed control tests. Students preferred working with microscopes and often asked about their further application, yet did not use their knowledge in the test better than in the test taken after working with Pasco sensors.

We think that it is because of most students is taking care for tools and playing with them but they don't try to remember fact found-out by this tools.

Although our tests show, that students achieved the best results in frontal teaching, we recommend to continue using of inquiry-based teaching as a part of lessons. Although control test showed that results are not the best one in case of inquiry-based teaching it should be full-fledged part of teaching, because this type of teaching improve cooperation among students, it improves their manual abilities, communication abilities etc. We understand that it is difficult for students to work with information obtained in a way that is very different from what they are used to. This is why we would like to include inquiry-based teaching in our lessons to such an extent so that students

could practice the application of knowledge acquired in a way that is different from what they have been used to so far.

ACKNOWLEDGEMENTS

Paper was processed with contribution of long term institutional support of research activities by Faculty of Informatics and Statistics, University of Economics, Prague (IP 400040).

ABSTRACT

Laboratory activities may serve diverse educational purposes and be used in different ways. The educational advantages taken from laboratory activities depend strongly on the ways they are performed. Teachers' conceptions on the best ways to carry out laboratory activities may influence the potential taken from them. This paper aims at finding out how teachers' representations of practices regarding laboratory activities compare to their perspectives on a possible ideal form of implementing them. Data were collected through an online questionnaire from 159 teachers belonging to schools all over the country. Almost all participants stated that they were used to include laboratory activities in their classes. Besides, most teachers stated that the way they would implement laboratory activities would not change if there was no constraints to putting laboratory activities into practice. Thus, most teachers do not feel the need to change their practices regarding laboratory activities. In addition, teachers that would do things differently did not express theoretically grounded reasons to do so. Hence, research results suggest that pre-service and in-service teacher education must deal with the pros and cons of the diverse ways of using laboratory activities as well as with an analysis of possible strategies to overcome the main constraints face by teachers in Portuguese schools.

CONTEXT OF THE RESEARCH

Laboratory activities are a teaching resource that has concentrated educationalists' attention for a long time (Abrahams, 2011) even though for reasons that depend on the interest of the moment or on the prevailing conceptions about what teaching science is. In fact, in the late nineteenth century, laboratory activities were used to argue for the inclusion of science in the curriculum. By the turn to the twentieth century, Armstrong saw them as a way to give students' the opportunity to acquire first-hand knowledge. By mid-twentieth century, they were conceptualized as a way to promote the development of science process skills. By the last decades of the twentieth century, they laboratory activities were seen as a tool to help students to reconstruct their previous ideas. More recently, it has been argued that they should be used to foster the integration of conceptual and empirical knowledge (Abrahams, 2011), based on an interplay between theory (or ideas) and evidence (or observables) supported by empirically based argumentation (Gott & Duggan, 2007). Besides, it is acknowledged that they should be used in such a way as to help students to bridge the gap between school science and contemporary issues (Gott & Duggan, 2007; Llorens-Molina, 2010).

Despite the long history of laboratory activities as an educational tool and the large amount of publications, including several books (Woolnough & Allsop, 1985; Woolnough, 1991; Wellington, 1998; Leach & Paulsen, 1999; Psillos & Niederer, 2002; Abrahams, 2011) focusing on them, a lack of consensus still emerge in different domains of the laboratory activities issue, starting with the terminology used to address them. In fact, as it was discussed in a previous paper (Leite & Dourado, 2013), several different words (e.g., practical work, laboratory work, experimental work, investigations), that have different meanings, have been used to address laboratory activities in an undifferentiated way. This type of terminological issue is common when several researchers or research groups work simultaneously on the same issue, from different epistemological backgrounds. It happened, for instance, in the alternative conception research area (see Abimbola, 1988). Even though it does not necessarily suggests a lack of conceptual rigor from the researchers side, it may have negative implications for students learning, as it may impair readers' awareness of the educational powers and limitations of each set of activities that should, in rigor, be associated with each of the different terms. This is why terminology

clarification is a necessary requirement for an appropriate use of this valuable educational resource.

Within an educational context, laboratory activities can be defined as tools that enable indoor reproduction or simulation of natural facts and phenomena (or part of them) through conventional laboratory equipment and/or reusable everyday materials (Hodson, 1994; Abrahams, 2011; Leite & Dourado, 2013) that students and/or the teachers handle to produce data. Hence, laboratory activities are practical activities but it should be stressed that not all practical activities are laboratory activities. For instance, paper and pencil or computer modelling problem-solving activities are practical activities but they are not laboratory activities.

The ultimate goal of using laboratory activities in science teaching is not only to help students to learn how to interpret and explain facts and phenomena (Abrahams, 2011) but also to do it as scientists do (Ogborn et al, 1996). However, a set of intermediate and diverse objectives can be achieved through laboratory activities (Hodson, 1994), including conceptual, procedural, metacognitive and affective objectives. It should not be expected that a single laboratory activity would be able to lead to the fulfilment of such a variety of types of objectives. Rather to achieve such a demanding goal several laboratory activities, with different focus, should be performed. Thus, to enable the attainment of all of those objectives, a set of differentiated laboratory activities, each of them structured according to the requirements of the main type of objective to be achieved through it, should be performed (BERG, 2014; Leite & Dourado, 2013). As it has been argued before (Leite & Dourado, 2013), for instance: if attaining the main objective requires control and manipulation of variables to be done then an experimental laboratory activity may be required; if attaining the main objective involves problem-solving, then worksheet free laboratory investigation may be needed.

However, research suggests that teachers may have got used to the idea that laboratory activities are non-dissociable from science teaching, look at them as a single entity and often lack an appropriate methodological background on the best ways to using them. A consequence of this is that “Students’ experience of practical work as implemented could lead to a surface approach to learning rather than deeper learning for understanding.” (Sani, 2013, p. 1016). The point is that research suggests that the nature of the activities promoted by the syllabuses depend on the syllabuses’ authors (Ferreira & Morais, 2014; Šorgo & Špernjak, 2012) and that textbooks (Park & Lavonen, 2013) and teachers’ practices (Abrahams & Reiss, 2012; Sani, 2013) are pervaded by receipt-like laboratory activities that lead straight to the right answer. The popularity of worksheet-based laboratory activities leading to the right answer may lie on the fact that those activities are perceived as being less risky for teachers, that feel afraid of failing in the laboratory classes (Cossa & Uamusse, 2015), and for students who want to get credits for what they have done (Carlo, Mazzaro & Page, 2006). Nevertheless, research suggests that even though teachers resist to new ways of doing laboratory activities, with appropriate training, they gradually overcome their resistance and reluctance and develop willingness and motivation to practice them differently in everyday science classrooms (Kim & Chin, 2011).

Another issue that is worth raising is that laboratory activities may integrate the teaching and learning sequence in different ways (Leite & Dourado, 2013). In fact, the laboratory activities can be inserted at the beginning, the middle or the end of the teaching sequence, depending on whether it is aimed to be a starting point for conceptual learning, whether it is to facilitate conceptual knowledge reconstruction or procedural and conceptual knowledge integration or whether it is to reinforce previous conceptual learning, respectively.

Laboratory activities can have different levels of openness. The level of openness relates directly to the cognitive demands imposed to students (Tamir, 1991), so that the higher the level of openness of the activity, the higher the level of students’ demands. Consequently, the higher the level of openness, the deeper the learning that should be expected to take place. However, there is some empirical evidence that teachers’ activities are low demanding (Ferreira & Morais, 2015) for students, which according to BERG – Biology Education Research Group (2014), may be due to teachers’ intentions for using them. Their attention is often focused on the hands on part of laboratory activities, based on the argument that students need to perform the laboratory procedure to learn better. However, even though hands-on are important to develop handling capabilities as well as a few technical skills (BERG, 2014; Woolnough & Alsop, 1985), developing those types of skills is hardly relevant unless they are integrated with cognitive reasoning issues (Abrahams & Reiss, 2012). Handling is far less important for meaningful learning than thinking is. As BERG (2014) emphasizes, “practical work isn’t just ‘doing’, it also involves ‘thinking about doing’.” (p.178). Thus, if conceptual learning is to take place, then it is far more important that students’ are cognitively engaged into the activity (have minds-on) than that they handle equipment or materials (have hands-on), without being aware of what they are doing or of what it is relevant for. For this process to be successful, it can be argued that students should also have their hearts-on (Leite & Dourado, 2013), as positive affective involvement would facilitate cognitive engagement. Unfortunately, research suggests that teachers’ naïve beliefs about laboratory activities are reflected into their practices (Kang & Wallace, 2005) leading them to often use laboratory activities unthinkably (Toplis, 2012) and to fail to explicitly promote the link between the laboratory activity and the related theory (Chopra, 2017). In addition, research focusing on teachers’ practices and representations of practices suggests that teachers’ practices regarding laboratory activities are teacher centred and aiming at confirming, empirically, previously taught concepts (Abrahams, 2011; Leite & Dourado, 2007; Ramalho, 2007). This may explain why students’ motivation towards

laboratory activities decreases along the school path (Abrahams, 2009) and why some of them expect the laboratory to be the place to learn practical skills as well as to illustrate theory taught in lectures (Hanif et al, 2009).

As assessment practices determine what is important to learn (Abrahams & Saglam, 2010; Carlo, Mazzaro & Page, 2006), students' assessment procedures need to be consistent with the aims settled for laboratory activities (Hodson, 1992) as well as with what is in fact valued (Abrahams, Reiss & Sharpe, 2013). As it was argued elsewhere (Hofstein & Lunetta, 2004; Leite, 2005), there is a variety of learning issues that can be assessed when laboratory activities are at stake. This variety is as larger as higher is the level of openness, being investigations the type of activity that offers a larger variety of learning issues to be assessed (Leite, 2005). Besides, there is a variety of assessment tools that can be used (Doran et al, 2002) to assess students' learning from laboratory activities. The traditional laboratory reports are only one of them. They can be useful when open activities are used, as they assume a shape and role similar to the one of a scientific research paper in which all the decisions, procedures, data and conclusions are registered. However, they can be a waste of time when well-structured worksheet-based activities are under question, as to prepare the laboratory report students would need to transcribe (copy) the information and instructions given in the worksheet and to add the right answer only. On one hand, making copies is not what some researchers (e.g., Ellis, Taylor & Drury, 2007) talk about when they argue for writing for learning science. On the other hand,

“the majority of students find one way or another to come up with the “right answer”. While most of them rely on perseverance to achieve their goal (i.e., redoing or fixing the procedure), many take the alternative route of copying or manipulating data.” (Carlo, Mazzaro & Page, 2006, p.1366).

Therefore, more authentic assessment techniques need to be adopted (Hodson, 1992; Gott & Duggan, 2007), especially for summative purposes as it seems that the nature of summative assessment influences school practices with regard to using the laboratory with direct practical assessment favouring laboratory activities (Abrahams, Reiss & Sharpe, 2013). Of course, this may be a challenge for educational managers, as direct assessment in the laboratory is costly. It can also be demanding for teachers, as they themselves may feel the need of training, so that they can find the best assessment practices and to design activities that match their teaching context and their class conditions (Yip & Cheung, 2005) and that are more transparent to students (Ottander & Grelsson, 2006).

Teachers' conceptions are one of the key factors that may influence their teaching practices (Kang & Wallace, 2005) namely in what concerns the use of laboratory activities. Besides, teachers' work conditions may also condition their practices. In fact, teachers often complain about the conditions they have to include laboratory activities into their teaching practice. They mention laboratory unavailability, inexistence of a laboratory technician, shortage of equipment or reactants, lack of time, and even student's lack of interest on them. The worst part is that instead of finding valuable ways to overcome challenges to laboratory classes' impairments, some teachers opt for the easiest alternative – do not put them into practice.

In summary, teachers' conceptions on the best ways to carry out laboratory activities may influence teachers' practices as well as the potential they take from laboratory activities. Their practices are often inconsistent with what specialists argue for and they mention several factors that impair them from using laboratory activities or from using laboratory activities, as they should be. However, as far as it is known, there is no research on how schoolteachers would like to use laboratory activities if there was no constrain.

RESEARCH QUESTION

A few research studies on teachers' practices or representations of practices are already available. However, as teachers' practices are often limited by factors that they see as constrains to the way they can teach, this study aims at answering the following question: how do Portuguese Natural Sciences teachers' representations of practices regarding laboratory activities compare to a possible ideal form of implementing them?

RESEARCH METHODOLOGY

To attain the objective of the study, a questionnaire focusing on what teachers do and on what they would like to do (if there was no constrain) with regard to using laboratory activities in their junior high school natural sciences classes was designed. The questionnaire was inserted into Google Docs so that it could be answered online. In the first page there was an explanation about the overall aim of the study, as well as about the anonymous nature of the questionnaire and participants could decide on whether they were willing to proceed or not.

The target population was Natural Sciences (a school subject that encompasses biology and geology themes) teachers that were teaching in Portuguese public junior high secondary schools (grades 7 to 9) during the academic year of 2014/15. Due to the large dimension of the population, a sample was drawn. To do so, it was taken into account that data would be collected through an online questionnaire meaning that a large percentage of invited teachers could not reply. Besides, as the contacts of individual teachers were not available, it was decided to contact them through the school Director. Afterwards, it was decided to contact the Director (using

the school e-mail address) of all the junior high schools included in the ministry of education official schools database and to ask to him/her to collaborate in the study. Those that accepted were asked to ask four Natural Sciences teachers, with at least three years of teaching experience, to answer to the questionnaire. The objective of this requirement was to ensure that the research participant teachers had a minimum teaching experience at this school level and therefore had a quite good overview of the syllabuses as well as about the possibilities and the constraints associated with putting them into practice with regard to laboratory activities.

The school Director should make the questionnaire web link available to teachers selected and willing to participate in the study so that they could fill it in. According to McMillan and Schumacher (2010), it should be noted that filling in an online questionnaire is a volunteer action that can be accepted as good alternative to informed consent statement signature.

The effective participants in the study are 159 teachers. Due to the anonymous character of the questionnaire, the number of schools they come from is not known. An analysis of data given in table 1 shows that all teachers have more than five years of teaching experience, that is two years more than the minimum required. Besides, it shows that the least experienced group is very small. This is consistent with the fact that, in the recent years, the admission of new teachers has been very rare, due to demographic reasons. A consequence of this is that all but one teacher are over thirty years old. Besides, table 1 shows that the number of male teachers is very small when compared with the number of their female counterparts. The prevalence of female teachers is consistent with what happens in school in several countries (Kelleher, 2011) as well as with what was found in other studies (e.g., Dourado, 2001; Nunes, 2011). As far as teachers' academic background is concerned, all of them have graduated as teachers through a *Licenciatura* (the required 5 years qualification before the Bologna process) and about 27% (43 out of 159) have taken further post-graduation studies. This means that all of them are fully qualified to be teachers and that some of them even have additional qualifications.

Table 1: Characteristics of the sample (%)

(N=159)

Variable	Categories	f	%
Gender	Female	140	88,1
	Male	19	11,9
Age (years)	Less than 30	1	0,7
	30 to 40	49	30,8
	41 to 50	81	50,9
	More than 50	28	17,6
Professional Experience (years)	5 to 10	4	2,5
	11 to 20	87	54,7
	21 to 30	57	35,9
	More than 30	11	6,9
Higher academic degree	<i>Licenciatura</i>	116	72,9
	Specialization	10	6,3
	Master	32	20,1
	PhD	1	0,7

RESEARCH RESULTS

Table 2 shows that all but one percent of the teachers stated that laboratory activities have been performed in their classes over the last three years. However, teachers are almost divided between a mean of less than and more than six activities a year in each of the classes they taught.

Table 2: Teachers' mean use of laboratory activities over de previous 3 years

(N=159)

Use of laboratory activities		Percentage
Do not use		1
Use	1 to 3 times a year	14
	4 to 6 times a year	37
	More than 6 times a year	48

Comparing these frequencies with data obtained in other studies it can be stated that these data are similar to those obtained for Physics and Chemistry, for example (see Leite & Dourado, 2007). Besides, by comparing them with the syllabuses laboratory requirements, it can be argued that whatever the grade level, the syllabus requires more than six activities to be done. Therefore, performing less than six activities a year in each class is not too much.

About a quarter of the 157 teachers that stated that they use laboratory activities in their classes mentioned that they were fully satisfied with the way they use them (table 3). The other three quarters were not fully satisfied with the way laboratory activities are carried out, being 2% fairly satisfied and 27% moderately satisfied only. Teachers that stated that they were fully satisfied put forwards arguments that are related to the objectives that can be attained through laboratory activities. They argued that laboratory activities:

- i) promote students' conceptual learning
"Students internalize concepts much more easily" (P8)
- ii) promote students' procedural learning
"They improve students' laboratory material handling skills and develop their data analysis competences" (P43)
- iii) increase students' motivation to learn
"Students show enthusiasm every time a laboratory activity is performed." (P13)
- iv) develop students' critical thinking
"They foster students' critical thinking." (P158)

Table 3: Teachers' level of satisfaction with the laboratory activities used in their classes
(N=157)

Level of satisfaction	Percentage
Fully satisfied	26
Quite satisfied	45
Moderately satisfied	27
Fairly satisfied	2
Unsatisfied	0

Most teachers that were quite satisfied put forwards positive and/or negative arguments. The positive arguments compare to those used by the fully satisfied teachers. The negative arguments compare to reasons reported in the literature for teachers to not use laboratory activities. They are as follows:

- i) students do not engage into the activities
"Students do not look at these classes seriously." (P29)
- ii) good laboratory conditions are not available
"There is not a real well equipped laboratory in our school." (P31)
- iii) the class time is too short
"I am not fully satisfied because for some activities, the duration of the class (45 min) is insufficient." (P39)
- iv) the syllabus is too long
"The only reason for my [moderate] satisfaction is the great length of the syllabus." (P71)
- v) the class is too large
"There are too many students in a class." (P128)

Moderately satisfied teachers mentioned negative aspects mainly. Those aspects compare to the ones previously presented. Finally, teachers that were fairly satisfied mentioned negative reasons only. Their reasons compare to reasons found in other studies for not performing laboratory activities, namely:

- i) lack of laboratory
"I cannot perform more laboratory activities because there is no sciences laboratory in my school." (P1)
- ii) shortage of laboratory material
"There is shortage of laboratory material in schools." (P11)
- iii) insufficient discipline workload
"The number of hours per week is very low." (P41)
- iv) shortage of training

“I have inappropriate training to perform laboratory activities consistent with the syllabus.” (P41)

An analysis of the reasons above suggests that most teachers would like to have better conditions to use laboratory activities differently. However, comparing the way teachers state that they use laboratory activities with their perspectives on the ideal ways of using them it can be noted that, in each case, teachers mention a variety of ways with quite similar percentages (table 4). It can also be noted that there is a slight reduction on the percentages of teachers in the categories involving the option *after* teaching the content and a *slight* increase on the percentages of teachers in the categories involving the *before* option. This means that most teachers that stated that they use laboratory activities after teaching the content are happy with that approach and would not perform them differently if they had no constraints to their teaching practices relative to laboratory activities. However, a few teachers that use them *after* teaching the content would like to introduce them *before* teaching it. They are used to introduce the content before the activity because, as P59 stated, they feel that “introducing the theoretical content before the activity helps the majority of the students to understand better the objectives of the activity and to consolidate conceptual learning”. However, they would like to start with the activity because, as the same teacher stated, “to suggest problems to be solved through laboratory activities fosters inquiry, requires several types of knowledge to be used and stimulates students’ autonomy”.

Table 4: Teachers’ use of laboratory activities and their perspectives on the ideal way of using them (%) (N=157)

Laboratory activities versus concept teaching	Real use	Ideal use
Before	1	11
During	34	29
After	14	6
Before or during or after	27	29
Before or during	7	11
Before or after	4	8
During or after	13	6

Besides, the percentage of teachers that use and would like to perform the laboratory procedure either before, or during or after teaching the content remains almost unchangeable (table 4). For these teachers, the decision “depends on the content to be taught and on the activity itself” (P67). This may mean that teachers that believe that laboratory activities can be performed at any moment of the teaching and learning sequence do it because they believe it is the best for their students and that they can overcome the constraints they face in their daily life practice. In fact, laboratory activities should be performed at different stages of the teaching and learning sequence, depending on the main objective to be achieved (Leite & Dourado, 2013). However, a few teachers that are used to introduce laboratory activities at any moment of the teaching and learning sequence would like to introduce them before theory, because, as P9 stated, it would “enable students to interiorize concepts more easily”. In addition, a few teachers that are used to introduce laboratory activities during theory presentation, they would like to use them before theory because, as P31 stated, “It enables the teacher to guide the students towards the formulation of questions that would be answered, with increased motivation, during the presentation of the content”. Hence, a few teachers, with different practices, seems to believe that students would benefit if laboratory activities were introduced before the content.

Table 5 shows that there is not too much difference between the tasks that teachers stated that are carried out before the implementation of the laboratory procedure and the tasks that would be performed in the ideal situation of having no constraints. However, there is a slight reduction in the percentages of teachers that stated that the teacher “Teaches contents related to the laboratory activity”, “Does scientific and pedagogic preparation for the laboratory activity”, and “Selects laboratory materials and Provide information on safety and handling rules”. In fact, as P11 mentioned, some teachers are used to “Start by introducing theory so that students can understand what they are going to do and what they should conclude from the laboratory activities”. It is worth noting that this is what a few of them would like to do under ideal conditions: “Introduce the theory related to the issues to be studied in the lab, so that students can have the theoretical foundations underlying the activity to be carried out.” (P11). However, a few other teachers would like to do it differently, as P18 stated: “Would not introduce the content before the activity; students would be asked to reach conclusions and to discover by themselves. It would be much more interesting even though most students are not used to work on this way” (P18).

Also, there is a reduction in the percentage of teachers that would ask students to “Read and analyse the laboratory worksheet” (table 5). On the contrary, there is a slight increase in the percentages of teachers that stated that they would like to give students the chance to “Design the laboratory worksheet”, “Do bibliographic search” and “Carry out predictions”. This may mean that only a reduced number of teachers would like to give

more autonomy to students or to conduct more students' centred activities. P1, which gives students the opportunity to become familiar with the laboratory worksheet in advance in order "[...] to develop the activity without wasting time", may illustrate this group of teacher. In fact, this teacher stated: "Ask students to design the worksheet. I think that it would be educationally more valuable and the classes would not be receipt-based". This argument may mean that P1 that trusts students' abilities to learn in a student centred environments. Additionally, it should be noted that the percentage of teachers that did not answer increased in 19% (from 8% to 27%) from the actual practices to the ideal situation. This means that more than a quarter of the participants may not be aware of what they would like to do before the implementation of the laboratory activities. This is a very intriguing result, as experienced teachers should have an idea about the way they would like to use a key educational resource like laboratory activities.

Table 5: Tasks carried out before starting the implementation of the laboratory procedure (%) (N=157)

Responsible person	Action	Real way	Ideal way
Teacher	Teaches contents related to the laboratory activity	31	27
	Does scientific and pedagogic preparation for the laboratory activity	13	10
	Selects laboratory materials	20	16
	Provides information on safety and handling rules	24	19
	Provides information on learning assessment criteria	9	8
	Prepares for teamwork	12	11
	Does a prior trial of the laboratory experiment	3	3
	Asks questions on the activity to be carried out	8	8
Students	Read and analyse the laboratory worksheet	29	24
	Design the laboratory worksheet	4	10
	Do bibliographic search	3	6
	Carry out predictions	1	3
	Practice the handling of laboratory materials and equipment	2	1
	Solve exercises	6	4
Do not answer		8	27

Comparing what teachers stated that is done during the implementation of the laboratory procedure with what would be done (table 6), it can be noted that, in the majority of the laboratory activities, there would be about 20% less teachers guiding students and also about 20% less explaining to students, if there was no constrain to their implementation. This means that during the laboratory procedure, teachers would like to give more responsibility to students: "Would give a more central role to students." (P3). Consistently, more teachers would like to have students performing the laboratory procedures in small groups or individually (table 6). However, there is no evidence that teachers would ask students to engage more strongly into the activity, as they did not mention that they would ask students to carry out conceptual/cognitive tasks.

Table 6: Tasks carried out during the implementation of the laboratory procedure (%) (N=157)

Responsible person	Action	Real way		Ideal way	
		None/few	Majority/All	None/few	Majority/All
Teacher	Guides students	18	82	36	64
	Explains issues to students	27	73	45	55
	Asks questions to students	11	89	13	87
	Observes students working	11	89	8	92
Students	Observe teacher's laboratory procedure performance	98	2	99	1
	Help teacher to perform laboratory procedure	89	11	92	8
	Carry out laboratory procedure in small groups	32	68	23	77
	Carry out laboratory procedure individually	94	6	80	20

Besides, some teachers are not confident on students' motivation to engage into learning from laboratory activities. This statement can be illustrated by teachers like P40 that was used to guide students in all the activities

because he/she believes that “only with guidance students succeed on performing the activities and getting aware of the interactions between the activity and the relevant theory”. This teacher would reduce the number of activities in which guidance is provided but only “In an utopian situation in which students are engaged and interested in learning and in which schools have good laboratory conditions”. Also, P157 stated that he/she explains and would explain content issues to the students in all activities because “students are very immature, have no rules, and have their interests focused on other places than the school. Therefore, they need explanations to recall previously acquired knowledge.”. Underlying these teachers’ answers is the perception that students are not motivated (even) to perform laboratory activities which is in disagreement with teachers who state that students enjoy all laboratory activities.

Finally, it should be mentioned that teachers whose students perform (only) the majority of the activities individually would like to have their students performing all the activities individually. To illustrate this, we take P69 o stated that: “as someone said ‘learning by doing’ leads to a deeper understanding of the phenomena”. This statement seems to be strongly influenced by a hands-on conception of using the laboratory for teaching science, which can be negative in terms of students learning achievements, as it was discussed above.

Table 7 shows that, after the laboratory procedure, a few teachers would do things differently, if there was no constrains. In fact, the percentage of teachers that, for the majority of the laboratory activities, would “Remind students about laboratory activity related contents” as well as the percentage of teachers that would ask students to “Discuss on the laboratory activities” previously carried out increased slightly. Besides, the percentage of teachers that stated that they would teach new contents increased 11%. However, this may mean that teachers would like to teach either the new content related to the procedure previously performed or another new content not related to the previous activity. Their answers are not too clear about that, as shown by P20’s answer: “Laboratory activities may be a starting point for approaching new issues.”.

Table 7: Tasks carried out after the implementation of the laboratory procedure (%)
(N=157)

Responsible person	Action	Real way		Ideal way	
		None/few	Majority/All	None/few	Majority/All
Teacher	Reminds students about the activity related content	27	73	22	78
	Teaches new contents	76	24	65	35
Students	Prepare the laboratory report	40	60	25	75
	Discuss on the laboratory activities	11	89	8	92
	Solve problems	61	39	36	64
	Plan new laboratory activities	94	6	61	39

Larger percentage increases were found in two tasks that teachers would ask students to do. One of them relates to laboratory report preparation (15% increase). Teachers stated that they use and would continue to use laboratory reports because “They promote the development of a bridge between theory and practice; laboratory reports (besides being assessment instruments) they lead students to systematize their learning achievements” (P19) or “The elaboration of a laboratory report is an assessment and a consolidation tool.” (P158). These teacher’s answers reveal a deficit of knowledge laboratory learning assessment techniques and/or of critical thinking on laboratory reports potential and limitations. As argued above, laboratory report is a traditional laboratory assessment tool whose educational usefulness depends on the type of the activity that is at stake. It can be useful for investigation like activities (not based on a worksheet) but may be a waste of time for receipt like activities as their laboratory worksheets give all the information to students.

The action whose percentages are different has to do with asking students to solve problems (25% increase). Solving problems in the basis of a laboratory activity to be performed or related to the activity performed would be good for students to develop problem-solving competences or to perceive the usefulness of the newly acquired knowledge, respectively. With regard to this, teachers that ask and would like to ask students to do problem-solving, stated that they do it “so that students learn how to think scientifically; learn with experimentation” (P9) and because “ a laboratory activity serves to lead to a conclusion, that is to solve a given problem.” (P112). These results raise some concern, as there is some empirical evidence that teachers often do not differentiate the concepts of exercise and problem and also that problems are seldom used I the classrooms as well as in the textbooks.

Finally, the largest increase (33%) was noted for “Plan new laboratory activities” related to the majority or all activities performed. P54 that do not ask students to plan laboratory activities, stated that he/she would like to having them doing it for all the activities because “It is important and having the chance to plan new activities would be interesting for the students but it would require much more time for each activity.”. Similarly, P64, stated that “if the syllabus was not so long, it would be possible to ask students to plan new activities and to

present problem to be solved through laboratory activities.”. This would be nice, as it would provide opportunities for students to develop procedural competences and to better integrate their knowledge. However, it seems hardly consistent with the reduced ambition shown by teachers in the previous phases.

CONCLUSIONS AND IMPLICATIONS

Almost all participants stated that they were used to include laboratory activities in their teaching practice, even though about half of them seem to use laboratory activities once in two months in each class. However, only about a quarter of the participants mentioned that they feel a moderate or lower level of satisfaction with the laboratory activities they put into practice. Besides, as far as the stage of the teaching and learning sequence in which laboratory activities are introduced is concerned, teachers stated a variety of possibilities that compare to the ones they would introduce them if they had no constraints to putting laboratory activities into practice. The only important difference has to do with the ‘before’ stage, as 10% more teachers would like to introduce laboratory activities at that stage than they were actually used to do. In addition, the percentages of teachers that do and would like to do things in a certain way before, during or after the implementation of the laboratory procedure are quite similar. Exceptions are that: i) a few less teachers would like to give guidance and explanation to students; ii) a few more teachers would like to have students performing the laboratory procedure individually, writing laboratory reports and solving problems after the laboratory procedure. These results suggest that teachers do not feel a strong need to change their practices regarding the introduction and implementation of laboratory activities. Besides, teachers that would do things differently did not express theoretically grounded reasons to do so. Some changes that they would like to do may not even be the best ones, as they would reinforce practices based on doing *for habit*, irrespective of the nature of the activity that is at stake. An example of this is the use of and belief in laboratory reports, which has powers and limitations, as discussed above.

Hence, pre-service and in-service teacher education must deal with the possible ways of using laboratory activities for teaching science in order to help them not only to overcome the temptation of continuing to use the frequent excuses reported in the literature (see Cossa & Uamasse, 2015) to not perform laboratory activities, but also to continue performing them as usual. Training should include a discussion on the potential and limitations of the diverse ways of using laboratory activities as well as on the best ways to carry them out in order to counteract what Kang & Wallace (2005) called teachers’ naïve epistemological beliefs about laboratory activities. Besides, it should help them to find ways of overcoming constraints faced in particular school contexts, for instance by doing laboratory activities (safely but) in places other than the conventional laboratory and or with non-conventional materials. Teachers and prospective teachers may need to perceive that motivation is important but that motivation in itself is not a learning outcome (Hanif et al, 2009). Nevertheless, it is possible to structure and use laboratory activities in such a way as to both increase students’ learning achievements and develop students’ positive attitudes (Tarhan & Sesen, 2010; Toplis, 2012).

Finally, curriculum developers and educational authorities need to find ways of fostering changes namely by fighting the *right answer syndrome* and promoting more realistic school laboratory practices that, as Ogborn et al (1996) would put it, may help teachers to lead their students to explain science as scientists do. As Abrahams, Reiss and Sharpe (2013) have emphasized, laboratory related learning assessment guidelines might need to change in order to foster teaching changes. Doing laboratory activities costs time and money. Therefore, they cannot be done just because ‘they are a part of science’ or because ‘science is a practical subject’. They need to be done because and when they have a meaningful role to play in the specific educational context each teacher is immersed at the moment, so that teachers can help their students to better master the scientific explanations of real facts and phenomena.

TECHNOLOGY AND SOCIAL MEDIA: THE CHANGE IN FAMILY AND SCHOOL COMMUNICATION

Tissiane Carla De Oliveira

tissinne.aiesec.ep@gmail.com

Abstract: If we could do an analysis on communication in the family environment in the past and nowadays, surely we would find positive and negative changes. Modernity is part of most families worldwide. The technology itself has transformed communication between parents and children and it has modified development of learning. Family and school environment have gained a new member. But are these changes positive or negative? To what extent can we control the use of technology? Keeping communication in the family and school environment is a challenge today.

Keywords: technology – education- family- psychology- modernity- communication- changings- learning- social media.

Introduction

Our world is moving toward full digital inclusion. The numbers of students who are using electronic tools in every aspect of their lives have rapidly increased. While for students to adapt to new technologies in the school environment is easy, many teachers face certain difficulties with innovations, especially in non-private schools. But which changes has these technologies made in communication between students and their families? And what has changed in learning? How do teachers deal with the challenge of teaching? How modernity modifies the communication environment?

Modernity appears solid because of the rapid centralization of institutional power (Weber, 1946). Technology is a power nowadays that controls our lives and changes the way we communicate. Social media and technology have affected the foundation of a family and of school's communication. Still about globalization, in "Modernity and the Holocaust" (Bauman, 1989: 13) says:

Modern civilization was not the Holocaust's sufficient condition; it was, however, most certainly its necessary condition. Without it, the Holocaust would be unthinkable. It was the rational world of modern civilization that made the Holocaust thinkable. The Nazi mass murder of the European Jewry was not only the technological achievement of an industrial society, but also the organizational achievement of a bureaucratic society.

As we know, there are positive and negative sides of modernity and technology. Although technology is an ally of education, it can also ruin its communication, as well as, in family environment. Students spend much time on their iPad, computers, video games, and cellphones and don't take their books to read. They always find an excuse to not do their homework instead.

Family Communication

Effective communication in the family can lead to better relationships between the members of the family. It must be built on a foundation of trust, listening and understanding. The more effectively your family can communicate together, it will keep you open to share thoughts and feelings, understand the expression out of your children and foster a safe home environment in which all members of your family can feel comfortable and secure in their relationships. Communication is unique within each culture and at the same time, there are universalistic and apply the same value standards to everyone. With the technology this effective communication has changed. Families don't use to spend time together, having dinner or having a simple chitchat. Parents are always busy with their jobs and they are always checking their phones, messages, e-mails and social media. The same is happening with children and teenagers. They don't miss having a conversation in family. It seems that this new technology life has become part of their routine. A routine where each other has your own world. According to Pahl and Spencer (2004), social shift has happened; from relationships that are primarily given to relationships that are

chosen. The individualization has risen and family members are spending less time together, their routine has also changed. As “the relationship between family and individual biography” (Scott, 1997), has loosened recently and the conception of the traditional family has been replaced with the notion of a household.

Outside of the home, communication is when you express your thoughts, feelings and opinions to someone else, while they listen and reciprocate. At home, communication takes on a much more personal level. When you communicate with your family, you can expect a listening ear that can gently or an honest opinion to direct you on the right path. Making sure that your family works on communication skills can keep your family tightly knit while being open and honest with each other.

When a teenager for example, doesn't have a conversation at home their parents don't use to listen to them, they will look for it on social media. This can be positive and negative at the same time. Sometimes teenagers use to listen better their virtual friends than their own parents. At this time the issue in family communication starts. That's why is so important for parents to keep a clear and open conversation with their children. Children need to feel that they can count on their family.

Communication and Learning in Classroom

We are living in a society of constantly changing, where the knowledge is upgraded and the school has to create new strategies using these new technologies tools with the purpose of adapting the multidisciplinary education. The teachers have to innovate and motivate their students. For this to be possible, school have also to invest in new technologies offering better conditions for the teacher, who can be dynamic, innovator and instigator. On base on this, according to Moran (2004)“ What should a classroom have to have better educations conditions? First qualified teachers motivated and well paid with pedagogy graduation updated. As technology has been inserted in schools, the teachers should think about how to organize researches on internet, work in the labor room, bring to the students a new perceptions of learning. The new challenge for the teachers is to keep the students motivated and look for new knowledge. It is important to be updated to the new technologies and learn how to communicate with these “new” students.

Sometimes teachers download many videos but they don't know how to work on it during the lesson. The interdisciplinary area is extremely important; to have positive results after the lesson, the teachers have to know critically methodologies to work with these videos in lesson. With simple questions, example: what is this video for? What is the subject? Why am I using these videos? What are my targets? When am I going to use? etc. With this reflection, teachers can have an idea how use technology in learning and how to create ways to achieve the communication with the students.

The teacher plays an important role in the development of student communication. It is at school that the student will learn how to express himself, to be critical and to be a good listener. Communication means nothing if we do not know how to listen. Teachers are extremely important for Education and for the teaching-learning process, since he is the agent responsible for student-mediation mediation. Among the various components that this mediation involves, there is the teacher-student relationship. In the classroom, the teacher communicates with his students. He receives diplomas to teach, teach content, but in many cases he is deficient in communication. Having entered the classroom, you should combine and harmonize the different students disciplinarily and thus lead them to learning. To do this, you must be skilled in communication. The difficulty in communication is not knowing whether to express well, let alone transmit information. This poor communication quality has become one of the main problems affecting classrooms. To make itself understood, although it seems very easy, it is necessary to know the exercise of language, to know how to transmit, which is different from expressing. Such is the art of communication. Dialogue with the student is advantageous; with an undisciplined, very risky class: the advantages and risks are inherent in communication. If, in order to maintain discipline, if you put yourself with authoritarianism, it is likely that nothing will be able to dialogue with the same purpose is more advantageous. Within the increasing focus on new literacy practices and digital media within classrooms today, there is not a question of why we should study digital media in contemporary society today, but how we should and can study its implications for the global technology communication, Chen &Zhang (2010 p.11). But how this communication in classroom has changed since social media and technology starting being integrated? In this study we are going to see the changings in learning and communication.

Social Media and Technology Has Changed the Communication

A powerful tool that contemporary society uses not only to entertain but also to communicate and educate. According to Chen & Zhang (2010), online learning spaces represent a different but equally important multicultural digital media environment. According to Lee (2005), Bauman (1998a: 84) considers consumers as people who 'live from attraction to attraction, from temptation to temptation, from sniffing out one tidbit to searching for another, from swallowing one bait to fishing around for another'. As needs turn into desires and then into wishes, so the compulsion to consume runs into the dead-end of 'never wilting excitement'. More and more people have bought news technologies every year. They have spent their money in new cellphone and notebooks generations to keep themselves connected to the virtual world, to communicate. However there is a debate about the positive or negative consequences in different aspects of our lives, more and more people are become part of this virtual community. One are of concern is the families that use Social Media or Technology all the time. Technology has grown up very fast and is difficult to observe the influence that these devices are having nowadays in which family interacts. Technology has affected foundation of a family

Technology and social media have changed family and school's communication with students and also the advantages and disadvantages of using computers, cellphones, videos, e-mails and social media. In the other hand some communication tools are becoming important. They can be used to develop activities of different curricular contents, for example: creation of communities for discussion and sharing information, the exchange of information and content among teachers from different institutions, in this case, increasing the social network among schools and teachers. This study will also find out how technology has changed the communication in families. Many children and teenagers spend more than seven hours online per day. This situation has increased and parents don't notice because they are also most of the time connect on their devices and the face to face communication, which is very important for the child development, has been lost.

Since technology has entered in our society, many things have changed. In some schools, children can take their cellphones inside of the classroom and this can affect the lesson. The teacher can lose his patient and consequently, his motivation. So, how can schools solve these problems? Which rules can be set it up to decrease this situation? At home, families and children have talked less and less. Children arrive from school and parents from their jobs. They have dinner and then they go straight to their rooms to check their social media or other technology activity. They have spent much less time together. They don't share their day's experiences, their ideas or feelings. According to Moores, (2000):

“ It is necessary for us to think about how communication technologies are embedded in the interpersonal dynamics and power relations of life in the private sphere. One of the difficulties which we face in is that broadcasting is no much a taken-for-granted part of modern domestic experiences – an institution- every-day life and it is therefore not easy to distance ourselves enough to explore its significance in routine situations”.

It is possible to manage this situation but parents need to be educated by education professionals. Reorganize a healthy and productive routine where children can use technology with limited. However, students, teachers and families can improve their communication even with their devices around. According to (Krauss, 1998, p. 1029) “the internet is a social technology used for communication with individuals and groups, but it is associated with declines in social involvement and the psychological well-being that goes with social involvement” The output of this study is a source material that teachers and parents can assimilate their opinions about how to use social media and technology in learning and at the familiar environment.

In the field of education, change in the instructional practices of teachers will only occur if there is more than just technical need clear and explicit practices for successfully integrating technology into teaching and learning. They also need strategies for partnering with parents about the use of digital tools but explicit guidelines in terms of the dialogue that would govern social practices Chen & Zhang (2010). With the development of new technologies the family relationship has been influenced as well as, the learning education. Parents need to follow up their children's unsupervised media interaction by engaging in conversation with them.

The communication in family is extremely importance especially for children during their education time. Nowadays, children and parents are holding their devices and this has affected their communication between them.

Both are losing their patient because they used to do and get everything very quickly. All schools are adopting the technology for their schools and the teachers can use this to make their lesson more interesting. The teacher can teach all disciplines using social media and technology. It can work with all subjects, such as: math, languages, geography.

Communication and Psychology

The impact of social media on the patterns of communication, according to Soren (2010), is turned towards that we today call the modernity, the danger of which lies precisely in the levelling of individuality and sinking into abstract intellectualism contrary to the individualism concreteness and particularity. This article defends that the new media converges the forms and functions of information, media, electronic, communication and electronic computing; interactivity- the freedom in producing a reproducing the content and form of the information during interaction: new life experience for human being. In this case, we can turn our eyes to students (children): in which way these tools have affected children's human being? How about their relationship with their friends and family? As we know, children and teenagers have spent an average time on their devices, chatting, texting messages, etc. The new media are intrinsically social; they foster the development of new communities, specific subcultures with their particular modes of communication. This theme paper discuss that the effects of social media on communication can be positive and negative. Positive: sharing of ideas, tools of communication, bridges communication, gap, acts as the information, marketing tool, etc. Negative effects: intrusion into privacy, loosing of the family's interaction. This article has been chosen because presents a large discussion about the changing communication and also it brings a survey made with students about their opinion at social media effects. It shows the changes in the whole dynamics of situation since interactivity, reciprocity and involvement.

According to Kraus (2002). the language we use to communicate, it is just a symbol system notwithstanding the utility of such symbolic displays, and language endows human communication with three properties: semanticist, generativity and displacement. The ability of language to generate an unlimited number of meaningful novel messages that are not bound to the here and now, combined with the cognitive capacity to exploit these properties, allows human communication to be extraordinary effective and versatile. But taking a look nowadays, how can we describe our communication? Are we using our cognitive capacity while we are talking or we just text messages and don't really have a conversation? We should consider that with the insert of technology, the communication that before was used to transfer information, today seems to be empty.

Intentional relationships, conscientious or unconscientious that exists in discursive and relates fields. The communication has evolved through the history and the process of the language. According to Franco (2006) the communication can be useful when there is respect in its environmental. The language is built by psychological and social extent. In psychological aspect the language is seen as a cognitive for. In social aspect, the language is seen as an instrument that the individual uses to interact with the world. According to Vevere (2015), social media is building socials identities that have changed the way people interact themselves. Their communication is been modified according to their interests. Communication and Psychology: the necessity of observation of the messages. There is a connection between them that is related to many situations during people's life. The communication between two or more people can be considered in three levels: intrapersonal, interpersonal and intercultural. These three levels belong to humans subjective and can happen in various situations.

According to Franco (2006), communication-psychology is related to unconscious aspects that can make modifications in language. Communication is about unconscious aspects that can interfere negative or positively day-by-day. Psychology is the study of human's relationship in communication. This research is important to my article because it is focused in the study and the comprehension of the communication and the psychology in our language development. The understanding of both studies about how communication and psychology have changed along the human's history.

Family, technology and communication

The family is an agent of socialization and the primary source of influence behind the formation of personality and the growth of a child. But with the rapid progression of technological advances, this interaction between family and children has changed by the influence of devices. Media is influencing family relationships and possible effects on socializing can be seen too. According to Villegas (2013), there are both sides of technology – negative and positive.

Some researchers say, according to it, that internet can be seen as a positive tool of communication and better access to education, promote global understanding and make the world better a place to live. There are two important questions that we have to make before giving our opinion: are media shaping the way family interacts or is it family interactions that shape the way media is used? In this article, the researcher made qualitative survey with families and the results show that media plays an integral role in the lives of children and in family life. The average use of TV, computers, socials media, mobile phone, Ipad, is increasing. According to Franco (2013), parents are responsible for the children's media environment. Parents employ media in the home as a safe and affordable distraction or as a habit. The way that parents use media may have a substantial effect on the structure and dynamics of the family, as well as, on the relationship with their children. Media present during the ritual of mealtime could have detrimental effects on the development of a family system. Media-saturated social worlds influence family relationships and dynamics. Traditional evenings spend together eating around the family table neither are now long gone. These communication technologies are altering family relationships. This article was chosen because it has a large field of information about how social media, TV and technology have changed the communication in family relationship.

A process involving two information-processing devices. One device modifies the physical environment similar to the representations already stored in the first device, Daniel Sperber and Denise Wilson (1986, p. 1). In fact, in human communication the information processing devices are people, the representations are mental representations or ideas, and the modifications of the physically environment are the uniquely human disturbances of the acoustic surround called speech. For example, at school or in the Universities, when a student have to make a presentation in front of the classroom, they usually don't know how to express himself because nowadays students are becoming more individualist and they are connected the whole day on social media, they don't really have a communication with their friends and families.

In sum, with the interact media in learning, schools and teachers, can be used to develop a good learning in classroom and somehow, helping with online research and communication. But we must be aware that the modernity has no control: but our lives have. We must analyze the positive and the negative sides of the affects in our lives with simple questions: How is the communication in my family? Am I listening to my children? How is my child progress at school? Is he learning or is he memorize information?

There are many questions and sides to be looked at. It is not difficult but before we look at our children and students, we have to look at ourselves and our behaviours.

ABSTRACT

Acts of terrorism have the significant impact on many areas of our societies. The paper explores the possible impact of the terrorist attacks in Europe on short-term students' mobilities called International Business Week (IBW) that are organised by the network of 15 European business colleges/universities. The network was established in 1999 to encourage finance/business students to apply for international mobility. The paper describes possible security concerns of the students when considering their mobility during their studies. The research was made in 2017 at 4 IBWs, 2 of them in the countries that haven't been exposed to terrorism recently (College of Polytechnics Jihlava, Czech Republic and Satakunta University of Applied Sciences, Pori, Finland). Other 2 parts of research were made in the countries that have experienced severe terrorist attacks in the last 2 years (EPHEC, Brussels, Belgium and IUT St Denis, France). Presented data were obtained through semi-structured interviews with university/colleges representatives and questionnaires distributed among the participants of IBWs, both from the home university and visiting students. Analysed data reflect their awareness about unsafe areas (regions, states, cities) and their decision-making process when deciding for mobility. Presented paper is a part of a longitudinal research about barriers to international students' mobilities within IBW international network, aiming to analyse barriers of mobilities with the focus on security concerns of the students.

INTRODUCTION

Internationalisation of higher education in the European Union, including students' mobilities, became a major theme since the 90s in policy debates as well as in related research. Recent studies emphasise the complexity of students' motivations for applying to international mobilities (f.e. within Erasmus Program) but also at the same time explore barriers or factors that reduce students' interest in internationalisation (f.e. Deakin, 2012; Van Mol, 2013; Brooks, Waters, 2013; Altbach, 2016). The main motivators for the students' mobilities include improvement of the foreign language skills, personal growth, potential reinforcement of employability by obtaining the higher quality education or even intention to emigrate (Altbach, 2016), not forgetting the role of specific personal psychological and personal traits (Carlson, B., 2015). Van Mol's (2013) research on the topic revealed how significantly variable are students' motivations, experiences and outcomes within European countries. Various research on students mobilities has repeatedly revealed that the likelihood of the decision to study/work abroad is influenced by the students' socio-economic background, their previous experiences of travelling, and influence of family members or friends who are abroad or who have lived abroad in the past (Jahr and Teichler 2002; King et al. 2010).

As for the limits of student mobility, several research studies reveal the overall impact of financial constraints or insufficient foreign language proficiency (Souto-Otero, Huisman et al. 2013, Lörz et al., 2015), university students also fear that they might lose their current job and are afraid of separation from a partner, children or friends (Carlson, S., 2011; Fischer et al., 2013). The lowest barrier of student mobility in the Czech Republic is the capacity of a mobility program, also problems with the recognition of studies decreased significantly (Šmídová, 2015). Van Mol (2013) presented the system of major factors with the influence on students' mobilities within

European countries, in which students' personal motivations are framed with the global context and macroenvironment of the students' home country (see Figure 1).

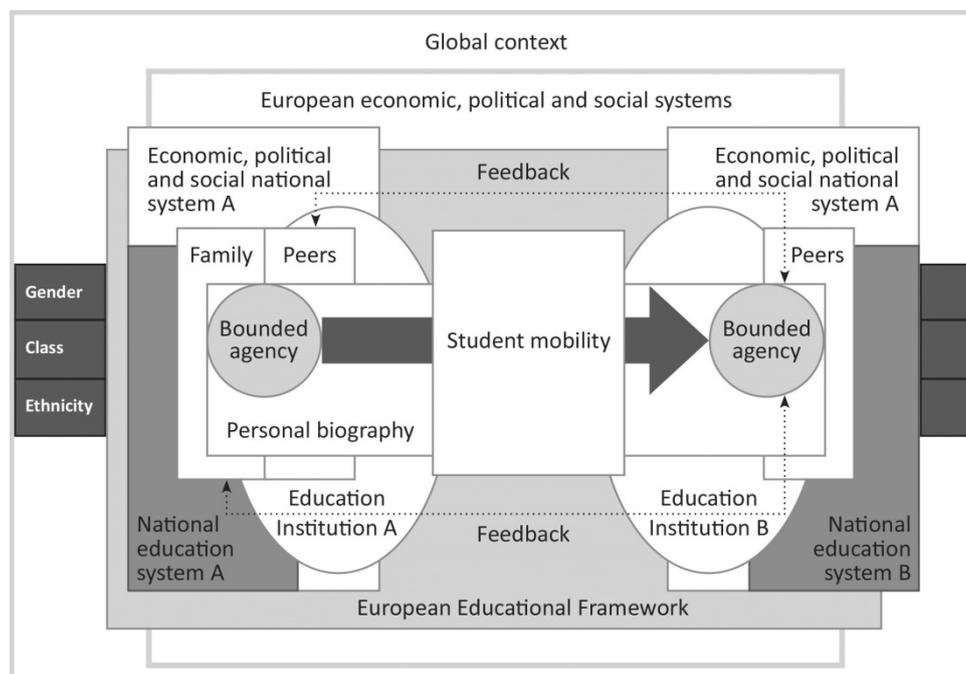

Figure 1: System approach for student mobility dynamics, (source: Van Mol, 2013, p. 153)

It also suggests that it is impossible to analyse the concept of internationalisation without considering the realities of the environment, with its major challenges. According to DeWitt (2017), the most current challenges for higher education and its international dimension are United Kingdom's intended withdrawal from the EU (Brexit), increasing political instability and the surge of national-populist appeal around the world, as well as the refugee challenge and the recent terrorist attacks in Europe.

Knight (2008) mentions two ways how terrorism might affect international student mobility, including the pace of higher education internationalization: through tightening visa requirements for the countries such as the United States and through the fear of terrorism expressed by potential international students, which might affect cross-border students' flows for a certain period of time. F.e. the 9/11 attacks resulted in a temporary decline in international student enrollment in the US universities, which continued until 2005/06. Since then American higher education institutions have shown resilience and the enrollment of international students has been growing (Choudaha, 2016). Denman and Hilal (2011) have discussed the impact of 9/11 attacks on the Saudi society and international students' mobility in higher education and have defined boundaries – if not barriers – from within Saudi society and those abroad. They concluded, that it is 'necessary to entertain educational strategies which would help us move beyond barriers and enable us to create bridges'. Similarly, Kell and Vogl (2008) discussed the link between terrorism and threats to the nation state and the presence of international students after 9/11 from the Asian-Pacific perspective. They have described increasing state regulation concerning conditions for students entering the countries and various aspects of the students' private lives and studies. There are many impacts and aspects of terrorism, yet the impact of international terrorism on international students' mobility within EU has not been explored deeply yet.

This article explores the possible impact of the terrorist attacks in Europe on short-term student mobilities. It is focused on the International Business Week (IBW) Network members: the IUT (French: Institut Universitaire de technologie) St. Denis, a part of the University of Paris 13, SAMK (Satakunta University of Applied Sciences) in Finland and College of Polytechnics Jihlava (CPJ) in the Czech Republic and associate member of the IBW Network EPHEC (French: Ecole pratique des hautes études commerciales) in Brussels, Belgium.

The IBW network was established 19 years ago by Belgian Leuven University College (University College Leuven-Limbourg since 2015) and University Paris 13 in France. The project reflected the situation in the late 90s: the two universities tackled the problem of low interest of finance students in Erasmus mobility. Both the universities partnered on the first IBW in Leuven in 1999. In the following years, the number of universities/colleges in the network increased (CPJ joined the network in 2008). In 2017 there were 13 partnering business universities/colleges from Belgium, Czech Republic, Denmark, Finland, France, Germany, Greece, Latvia, Netherlands, Portugal and Ukraine. Each IBW network member regularly organises a week of project

activities, that has an educational and social programme. Students work in international groups on an international business case but also try to get to know visited a country and its culture (Chalupová et al. 2016).

The aim of the paper is to identify the impact of recent terrorist attacks in Paris (2015) and Brussels (2016) on the international short-term students' mobility within IBW Network. This topic was explored from the point of view of the participants of 4 IBWs in academic year 2016/17 (at IUT St Denis, EPHEC in Brussels, CPJ and SAMK) and the representatives of the 4 colleges/universities involved in internationalisation/organisers of IBWs.

THE STUDY

Data were obtained through qualitative and quantitative methods. Semi-structured interviews took place during 4 IBWs in academic year 2016/17 (March – April 2017) at IUT StDenis, EPHEC Brussels, CPJ in the Czech Rep. and SAMK in Finland with international offices executives or lecturers responsible for IBW activities.

Questionnaires were distributed among the participants of the 4 mentioned IBW were completed with the help of interviewers. Questions were focused on attitudes to travelling, mobility and demographics, Likert scale was used. The students were asked in the questionnaire about their:

- Personal information (gender, nationality, semester of studies, university/college),
- Travelling decision process (including security worries),
- Travel and mobility barriers.

The students at each IBW were divided by two criteria:

- Whether they attended IBW at their home university/college or they have been visiting students
- Whether students attended IBWs that took place in the areas, that haven't been recently (up till May 2017) targeted by terrorist attacks (Czech Rep. and Finland) and IBWs that were affected by terrorist attacks (Belgium and France).

Number of participants of the 4 IBWs in total was 187, answers of 162 (87%) respondents were processed (see Table 1).

Table 1 Research respondents at 4 IBWs (March – April 2017)

IBW Respondents	Home university/college – number of respondents	Visiting university/college – number of respondents	Total Number of Respondents (Row Fr.)
IUT St Denis, France (FRA)	22 (100%)	20 (91%)	42 (95%)
EPHEC Brussels, Belgium (BE)	4 (100%)	20 (67%)	24 (71%)
Total FRA+BE	26 (100%)	40 (77%)	66 (85%)
CPJ Czech Rep. (CZE)	8 (100%)	14 (54%)	22 (65%)
SAMK Finland (FIN)	30 (100%)	44 (98%)	74 (99%)
Total CZE+FIN	38 (100%)	58 (87%)	96 (83%)
Respondents at 4 IBWs	66 (100%)	96 (83%)	162 (87%)

Source: Own research

Contingency tables are an easy way of displaying relations among categorical data, depending on the character of the data we then use suitable tests of independence (Zámková et al., 2015). According to Hebrák et al. (2007), for the case of a contingency table of the $r \times c$ type (r is the number of rows, c is the number of columns) we most often use the test statistic:

$$\chi^2 = \sum_i \sum_j \frac{(n_{ij} - e_{ij})^2}{e_{ij}} \quad (1)$$

e_{ij} is an expected and n_{ij} observed frequency. We use the statistic χ^2 in Pearson's chi-square test with asymptotically $\chi^2_{(r-1)(c-1)}$ distribution. The null hypothesis of the test assumes independence. To use the

Pearson's chi-square test the condition that maximum 20% of the expected frequencies are less than five must be met, see Agresti (1990).

FINDINGS

Results of the quantitative research among the students showed that the majority of respondents that attended IBWs in their home universities/colleges generally evaluate EU as a secure place to live in (see Table 2). Surprisingly, all students that attended IBWs in their home universities/colleges in the countries that have experienced terrorist attacks recently (Belgium and France, BE + FR) consider European territory to be a safe place to live in. Over 80 % of students that attended IBWs in their home universities/colleges in the countries with no recent terrorist attacks (Czech Rep. and Finland, CZ +FIN) consider EU to be safe. It was not possible to use Pearson's Chi-sq. Test due to small theoretical frequencies.

Table 2: Views of the students from home university/college on EU safety

Research among the students that decided to travel abroad to attend the IBWs showed almost identical results – vast majority of the respondents (almost 80%) evaluate EU as a secure place to live in (see Table 3). There was no difference whether they travelled to the countries that have experienced terrorist attacks recently (BE+FRA) or not (CZ+FIN). Again, it was not possible to use Pearson's Chi-sq. Test due to small theoretical frequencies.

Respondents were also asked in an open question to name cities, states and regions they don't want to visit because of the safety concerns. Only a few respondents filled in the answer – therefore we have decided not to use chosen categories (home and visiting students) and show the answers at the individual IBWs. As it is visible from Table 4, most of the respondents consider the Middle East as the region that raises safety concerns, as well as the states in the territory torn by the recent war conflict (Syria), or with political and security crises (Iraq, Iran and Turkey). Only minimum students mentioned European cities that they consider to be unsafe to visit. Paris (3 respondents at IBW in Finland) and Brussels (2 respondents at IBW in Brussels). It is obvious that respondents consider EU a territory that they don't connect safe concerns with.

Table 4 Views of the students – safety concerns regarding territories

IBW	Cities	Freq.	States	Freq.	Regions	Freq.
IBW Paris (FRA) 44 participants 42 respondents	Mosul	2 (5%)	Syria	12 (29%)	Middle East	10 (24%)

Negative news in media related to the safety situation tends to discourage respondents when considering their travel plans. The majority of respondents that attended IBWs in their home universities/colleges; 50% of students from Czech Rep. and Finland and 46% of students from Belgium and France; tend to agree that media coverage of the safety situation may discourage their travel activities (see Table 5). There was no significant difference between in the answers of the two respondents groups, statistical testing confirmed the independence between respondents' home university (CZ+ FIN, the countries with no recent terrorist attacks, or BE+FRA, the countries that have experienced terrorist attacks recently) and decisions regarding travelling with negative news on safety situation in mind: $\chi^2 = 0.4322$; sig. $p=0.806$ ($p>0.05$).

Table 5 Views of the students from home university/college on the influence of negative media news on their travel activities

Similarly, the majority of respondents that attended IBWs at universities/colleges abroad, tend to agree that media coverage of the safety situation may discourage their travel activities; 53% of students from Czech Rep. and Finland and 47 % of students from Belgium and France; (see Table 6). The difference between the answers is not statistically significant $\chi^2 = 0.932$; sig. $p=0.627$ ($p>0.05$).

The semi-structured interviews took part during the four selected IBWs. Those who have been interviewed, have been involved in international students' mobilities for more than eight years, taking active part in an IBW network.

On November 2015, Paris was hit by a couple of terrorist attacks in Paris, and also near IUT, in St. Denis. IUT St. Denis faced unprecedented situation: about half of the international students cancelled their attendance at IBW at the very last moment, after all the procedures had been finished (it took place after the attacks, in the week 7-11 December 2015). In an interview in December 2016 IUT representative admitted, that the media coverage on the situation in Paris may have played a negative role:

'They (the representatives of the universities/colleges which students have cancelled their attendance) clearly said to us that some families don't want to send their children here. It was the case of Zweibrücken, some students from the Czech Republic. The Dutch came, part of the Czech students came, Denmark has cancelled. It was for the first time.'

'We tried to explain them (to the partner schools) that Paris was safe, maybe even more than before because of the army and all the security measures. It is maybe psychological, it is very difficult, and essentially the foreign press they like to maximise things. It was 10 or 12 years ago, we have riots in suburbs, they set police cars on fire, the foreign press took it and my friends from America called me what is happening in Paris, that they said that they have heard about the tank in Paris etc.'

EPHEC in Brussels have been organising Accounting Week (international week organised outside IBW Network) in March 2016 when the attacks on Brussels Airport broke out. EPHEC had to cancel the programme, incoming students have been evacuated (Marketing Week and Law Week at EPHEC in Louvain la Neuve, organised at the same time, continued as planned, only one student team from Scotland left earlier). EPHEC International Relations Officer have commented in April 2016, what effect the terrorist attacks had on the student mobilities:

,'Regarding the incoming mobility Erasmus+, we have thin decrease of the Erasmus for this full semester (Summer Semester 2016/17), last semester we had less students than the years before. So, normally we are increasing (numbers of incoming students) years after years and this semester we have, let's say, 20% less students, which is actually corresponding with decrease of tourism in Brussels as well, 20% decrease because of the terrorist attack that we have had last year (2016).'

According to us, it is clearly linked to the attacks. In second semester, so right now (April 2017) there is increase again, so I think it was short term decrease because of that, and now after one year the fear has passed and things are going back to normal.'

Lecturer responsible for IBW organisation at SAMK in Finland

I think we are, or we should be somehow, the winners, because Finnish society is so stable. We haven't had any terrorist attacks or that kind of things. I think it is very peaceful here in Finland, that is why I think that perhaps our exchange students amount from France has been increasing year after year.'

Also, Head of International Office at CPJ in the Czech Republic (in April 2017) has been very specific about the influence of the terrorist attacks on the students' mobilities, mentioning also refugee crisis as a challenge:

Of course, I see present threats on international students mobility. It may be recent terrorist attacks. Our students had lower interest in Erasmus in Brussels and Paris over past 2 years. They also stopped travelling to Turkey or even Greece or Malta. It may be affected by the refugee crisis.'

She had also been persuaded, that security issues after the terrorist attacks in EU may be the driver for students to choose relatively safe Czech Republic for their mobility stay:

On the other hand, lately we have increase in incoming students from France or Finland – it seems that we are viewed as a safe country. Western Europe begins to discover us again. In my opinion the trend will be stronger.'

Korstanje (2016) speaks about symbolical milestones starting a new era where the psychological fear predominates not only within the United States but also elsewhere, in connection with terrorist attacks such as 9/11. Choudaha (2017) similarly defines waves - the key events and trends impacting international student mobility within temporal periods. At the present time, according to Choudaha (2017), internationalisation of the higher education institutions are on the macroeconomical level predominantly affected by Wave III, that is being shaped by the slowdown in the Chinese economy, UK's referendum to leave the European Union and American Presidential elections. The time will show if the recent rise in terrorism attacks in the regions, which have been considered relatively safe, have started a new era (or wave) when the international students' mobility would be more often affected by the rise of violence and international terrorism.

CONCLUSIONS

The current state of international tensions shows how fragile the environment can be for cross-boarder education. Internationalisation of higher education remains a major strategic goal of higher education institutions, emphasising change and growth through openness, dialogue and connectedness. It is undeniable that international terrorism is one of the forces that can impede international initiatives. As our study showed, terrorist attacks in 2015 Paris and 2016 Brussels had a quick and prompt impact on IBW and student mobilities; however, the situation returned to the normal state eventually. Also, research among the students from various EU states that attended IBWs in Belgium, France, Finland suggests that the respondents consider EU a safe place, they rather connect real danger with areas that are affected by war conflicts and political or security instability. This can be viewed as some signs of optimistic perspectives on the future of student mobilities within EU.

Hawawini (2016) predicts the future in a creation of 'metanational university' (the ultimate, although yet non-existent form of a global higher education institution). The author describes it as '*an interconnected and integrated knowledge and learning network spanning the world and composed of complementary campuses that operate in a symbiotic mode*', that should be '*driven by a desire to learn from the world by melding together the knowledge acquired at each location and create new insights*'. Larsen (2016) also feels that the future of internationalisation process of higher education institutions lies within networks as they need to take into account '*existence and productive effects of networks of socio-spatial relations in shaping individual motivations, identities and experiences as transnational students and scholars*'.

It is undeniable that, international terrorism can have the impact on international students' mobility. This factor is significant for the higher education institutions policy-making, even though this is just the first step to find out more. Internationalisation is about so much more than just student mobility. Over the past years, there was a steady

growth in short-term credit mobility, branch campuses and other forms of transnational education, such as joint and double degree programmes, international research collaboration, international service learning and internships and internationalisation of the curriculum. Further research on this subject is recommended. Above all, it is necessary to search for an answer to the question which action can be taken to diminish the impact of the international terrorism on the international students' mobility and the possible positive role of the international networks of higher education institutions – define how it can help diminish impacts of security threats on students' mobilities and if they can become more important stakeholders for the policy makers on the national and subnational level.

The long-term impact of international terrorism on the higher education sector is yet to be examined. It is possible that we are at the beginning of a new era when terrorist attacks in the main European centres of education (such as Berlin, Brussels, Paris and London) will have a strong effect on higher education systems, due to the interconnection of higher education institutions in different parts of the world. However, it seems inevitable to accept that the international students' mobility is threatened by terrorist attacks, although perhaps only indirectly.

TERTIARY LEVEL STUDENTS' INITIAL EXPERIENCES OF LEARNING MEDICAL ENGLISH ONLINE

Mustafa Naci

Kayaođlu

naci@ktu.edu.tr **Rařide**

Dađ Akbař

raside@ktu.edu.tr

ABSTRACT

As a part of a quasi-experimental research, the current study was conducted at an accredited medical faculty of a mid-size university in the northeastern part of Turkey. In order to alleviate the problems including space and time limitations, crowded classrooms and lecturers' inability to perform their qualifications in the classrooms which were inappropriate for language education, an online English course with a focus on EMP, English for Medical Purposes, was designed. In this online medical English course, *EMPonline' 2016*, the students had the chance to attend the course both synchronously and asynchronously. After 8 weeks of implementation, the students were invited to share their experiences and views. In this context, this content-analytic study aimed to describe these tertiary level medical faculty students' initial experiences of learning medical English in an online learning environment. The data was collected via an online structured interview. A total of 37 volunteer students responded to the interview questions. The students were asked to answer 13 questions in Turkish. The data was analyzed via content analysis method.

This study was funded by TUBITAK (Project No: 115K790).

TESTING HYPOTHESIS ON THEORY OF SOCIAL NETWORKING, COMMUNITY BANKING AND EMPOWERMENT OF PEOPLE: A CONCEPTUAL VIEW

Muhammad Mahboob Ali, Post Doctorate

Professor, Dhaka School of Economics, Bangladesh

pipulbd@gmail.com, bdmahboob2016@hotmail.com

Abstract: Poor and underprivileged people should come under the banking system so that equitable distribution and social justice can be achieved. Informal sector is playing vital role than formal sector of the country. Micro savings should under the working purview of the micro investment for which social networking and community banking is needed. Research question of the study is whether social networking and community banking can transform micro savings to micro investment? The theory was developed for considering financial inclusion, to attain equitable distribution and social justice. A theory was developed by Ali(2016) which need to be tested. The theory was also interlinked with some goals of Sustainable development goal. The theory which is in a process of development by Muhammad Mahboob Ali on Social networking, community banking and empowerment of people may be empirically tested in different countries of the world and also at Bangladesh by various researchers to give a structural formation, cost-benefit analysis, shadow pricing, validation and reliability of the theory in the real life scenario both global and domestic perspectives with a request to inform the result to the author.

Keywords: Micro savings, Community banking, empowerment of People

INTRODUCTION:

Poor people of the country often did not getting any sort of banking services. Without banking involvement they have to depend on informal sector. As such informal sector have been playing vital role in the economy without accountability and transparency. Micro savings should under the working purview of the micro investment for which social networking and community banking is needed. Otherwise micro savings cannot give good result rather it will have some problems which raised in Uganda, Rwanda etc. countries. In case of Pareto's optimality criteria of utility theory, Hicks, Kaldor and Scitovsky described that social welfare could be increased without making value judgments. As such Pareto optimality of the people can be attained in line of social welfare so that compensation package can be attained. In the free market economy govt. can intervene at least invisible manner.

Social networking is the exercise of intensifying the quantity of one's business and/or social contacts by constructing acquaintances from side to side entities, often through social media along with social capital, social business and social investment. Social entrepreneurs are the people most able to deliver that innovation (Leadbeater, 1997). This is a social structure entailing of persons or collections who are associated to each other, for example through relationships. When these networks are characterized in a database and with a web interface, it is frequently mentioned to as a "social network service". However, in traditional system there is no web interface or social media but social capital, social business and social investment works simultaneously. A social network perspective on alliances can have both descriptive and normative outcomes that provide valuable insights for theories of strategic management, organizational theory, and sociology. Incorporating social network factors into our account of the alliance behavior of firms not only provides us with a more accurate representation of the key influences on the strategic actions of firms, but has important implications for managerial practice as well, many of which have yet to be explored (Gulati, 1998).

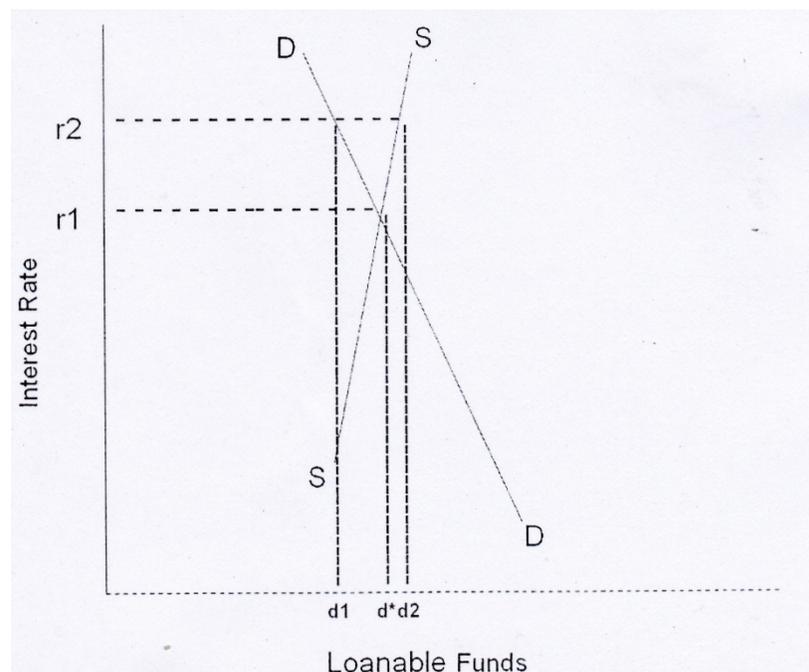

Rahman (2013) described that financial inclusion promotes inclusive growth, productive capacity, youth employment and combats poverty by unblocking advancement opportunities for the disadvantaged poor. Lack of access to basic financial services leads to significant extent of social exclusion in education, employment opportunities and social safety net. The finance minister AMA Muhith has proposed to increase the volume and coverage of the government's social safety net programmes in the 2017-18 fiscal year to improve the living standards of the poor in the budget speech. He proposed to raise the number of recipients of old age allowance to 3.5 million from 3.15 million, widow and oppressed women allowance to 1.27 million, disability allowance to 825,000, education stipend for students with disability to 10,000 at both primary and secondary levels, and maternity allowance to 600,000. Tk11.35 crore has been allocated as a special allowance for transgender people, while the allowance for financially insolvent disabled people has been increased to Tk700 per month. In addition, the government will continue the existing social protection programmes, including the Vulnerable Group Development

(VGD) programme. The government has already employed emergency schemes to provide 30kg rice every month to each of the 330,000 bona fide destitute and flood-affected families in Haor areas, the finance minister said in his budget speech. In addition, Tk57 crore has been allocated to provide cash assistance to the affected people on a monthly basis. Tk82.07 crore has been allocated for 91,447 beneficiaries under the Employment Generation Programme for the Poorest (EGPP). (Source: Dhaka Tribune, 2nd June, 2017)

Still in Bangladesh informal sector is much larger than formal sector where employment opportunity is very high in Bangladesh. In the country, 87 per cent of the labour force is employed in the informal economy according to the labor report on 2010. Those who working in the informal economy include wage labourers, self-employed persons, unpaid family labour, piece-rate workers, and other hired labour (Source: <http://ilo.org/dhaka/areasofwork/informal-economy/lang--en/index.htm>, viewed on 1st March, 2017).

Informal credit market in the absence of regulatory framework is working without any sort of hindrance in the country which needs to bring under supervisory framework. Siddique (2008) described that in the country credit is provided by informal lenders who may be friends and relatives, by mahjans who are intermediaries with trade and/or production relationships with enterprises, and by traditional money-lenders. The informal market is potentially large and expanding. Below we have seen the informal credit market of the country in Figure: 1.

Figure:1 Bangladesh Informal credit Market

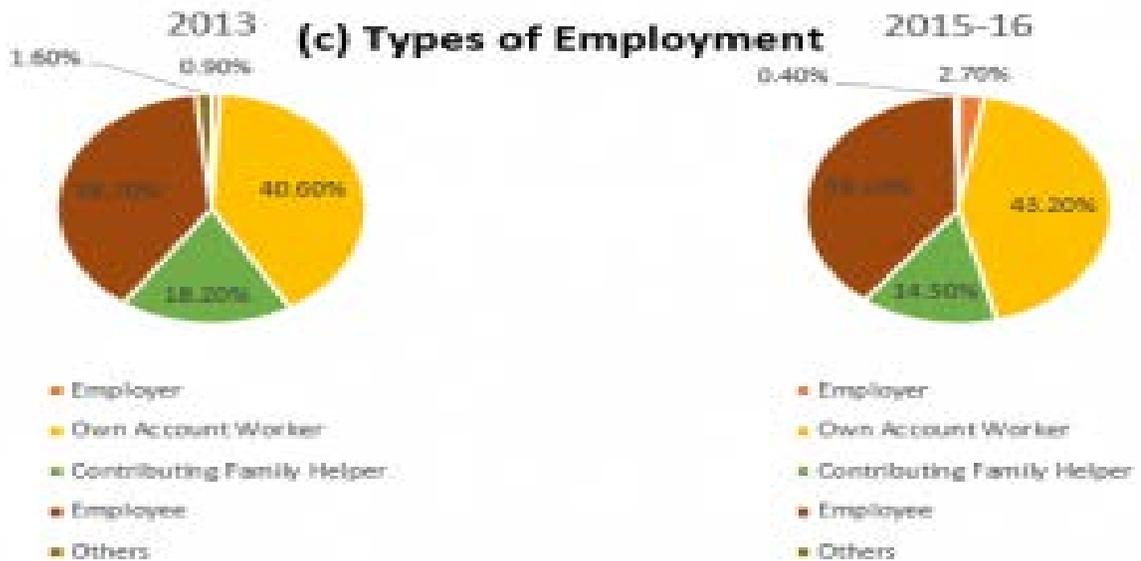

(Source: Siddique, 2008)

Interest rate in the informal market is much higher than formal market and job security as well as obtaining direct taxation from the informal sector is not feasible. As such social networking and community banking may help to convert formal sector.

Rahman (2017) quoting labor force survey 2015-16, majority of employment is generated in the agriculture sector, but employment is gradually shifting to the services sector. Contribution of service sector employment has been growing, with 36.9% of employment generated in 2015-16, compared to 34.1% in 2013 is shown in following Figure: 2.

Figure:2 Types of Employment in Informal sector

(Source: Rahman ,2017)

Entrance to the formal monetary system leftovers to a contest for the underprivileged people of the country as existing financial system mostly ignoring them. Current banking system of the country has a missing services for a larger portion of the people. As such the country need alternative banking framework at a least cost combination and helping the underprivileged people. Moreover, some NGOs are not working due roles as they are charging higher interest rate which is not feasible for borrowers to repay without cutting welfare and social ignorance. Micro savings need to be encouraged to bring the unprivileged people to the banking system. With the introduction of the electronic banking current commercial banking rate is much higher.

Research question of the sturdy is whether social networking and community banking can transform micro savings to micro investment?

LITERATURE REVIEW

Acemoglu and Ozdaglar(2009)described that social and economic networks refers to a set of people or groups of people with some pattern of contacts or interactions between them. Face book, friendship networks, business relations between companies, intermarriages between families, labor markets. Recent years witnessed a substantial change in network research. From analysis of single small graphs (10-100 nodes) to statistical properties of large scale networks (million-billion nodes).Motivated by availability of computers and computer networks that allow us to gather and analyze large scale data. Gangopadhyay and Dhar (2014) described that social networking and online privacy seriously turn out to be a serious concern when sensitive information is being shared and with the changing definition of ‘social networking’ in this internet age.Riggio (2014) described that Social intelligence (SI), is mostly learned. SI develops from experience with people and learning from success and failures in social settings. It is more commonly referred to as “tact,” “common sense,” or “street smarts”. Lake and Huckfeldt (1998) argued that politically relevant social capital is generated in personal networks, that it is a by-product of the social interactions with a citizen's discussants, and that increasing levels of politically relevant social capital enhance the likelihood that a citizen will be engaged in politics. Further, the production of politically relevant social capital is a function of the political expertise within an individual's network of relations, the frequency of political interaction within the network, and the size or extensiveness of the network. The consequences of social relations within networks are not readily explained away on the basis of either human capital effects or the effects of organizational engagement. Actually social relations are very important. As such social intelligence and social entrepreneurship works with

social networking. Social mixing should form an integral part of social intelligence development in teenagers. It argues that parents may have an important role to play, as older generations own circles also remain relatively closed to different cultures, backgrounds and upbringing. (Source: <http://movingonmagazine.co.uk/has-too-much-social-networking-stunted-your-social-intelligence/> (Viewed on 1st January, 2017)). The success of a new venture often depends on an entrepreneur's ability to establish a network of supportive relationships.

Leadbeater (1997) argues that social entrepreneurs need to lead the way with schemes for self-help, particularly by promoting local, national and international twinning arrangements between projects to share ideas, contacts and staff. For liberal feminists, the optimum level of gender arrangement is one that facilitates the individuals to adopt the life style that suits him or her and also accepted or respected (Ritzer, 2001) by the society at large. However, liberal feminists are not in favor of structural change to a great extent. Furthermore, some of liberal feminists think that individual woman cannot make change; therefore, state intervention is prerequisite. BarNir and Smith (2002) argued that the social networks of senior executives account for 11–22 % of the variance in the degree to which firms engage in alliances, depending on the type of alliance. Results also show that the number of inter firm alliances is positively related to several networking properties (propensity to network, strength of ties, and network prestige. Hunt and Kasynathan (2002) pointed out that only a few number of women receiving credit had the ability to control their loans. Many women received loan by their own name and passed on the full amount of their loans directly to their husbands, sons or sons-in-law. Swain (2006) conducted a study following experimental research design in rural India and assessed the potential impacts of a microfinance institution named Self Help Group (SHG). The concept of women empowerment was defined as the process in which the women challenge the existing norms and culture to effectively improve their well-being. Karnani (2007) summarized following problems of microcredit from various studies: Microloans are more beneficial to borrowers living above the poverty line than to borrowers living below the poverty line microcredit; seems to do more harm than good to the poorest; microcredit is the businesses it is intended to fund. Williams & Durrance (2008) found that across a number of instances of community technology, technology use is directly influenced of social networks, and social networks are directly influenced by technology use. Perron (2011) examined case by case the various approaches from companies, public sector entities, philanthropy, etc., and also institutional and private investors in their availability as well as their specific legal capacities and limitations to deliver the funding required supporting the growth. Such initiatives are vital in the fight against poverty and income inequalities. Batool (2013) commented that implementation of emotions intelligently in any organization by a leader to be effective and efficient plays a vital role to leader effectively. Emotional intelligence is one of the useful tools which helps a leader to judge people more clearly and closely and build a connection between people.

Bhattacharya et al. (2014) described that social networking has affected the process of marketing and how present day marketing activities is highly dependent on this phenomenal process of social networking. Also focus has been laid on how social networking affects the process of market signaling and hence reduces the possibility of asymmetric information within a market and lowers the possibility of market failure for a particular product. Yang et al. (2014) observed that social intelligence and technology explore the roles of information, the Internet, and mobile technology in improving our understanding about human behaviors and social interaction in human society at the individual, interpersonal, and community levels—building a sustainable social environment, developing social intelligence, and having practical applications with major impacts in solving societal problems such as health, security, energy, and the environment. Ali (2016) suggested that establishment of integration fund to encourage creative entrepreneurship so that poor downtrodden people can come out with innovative business process through financial inclusion process, to remove poverty. Rattanawiboonsom and Ali (2016) more intensive and pragmatic policy should be developed for the development of the social enterprises particularly for self-motivated entrepreneurs. Experiences from the research work, they observed that the rural poor are mobilized and working together in self-controlled community based organizations which ensures social welfare and Pareto optimality. Not only small and medium enterprises but also micro enterprises should get special priority and inclusion through financial organizations are being required for developing proper steps to poverty alleviation, public-private and foreign strategic alliances are required in the small and medium enterprise sector with special emphasis on micro enterprises of the country.

This alternative framework was an attempt to develop a theory on how social networking facilitates to empower people which were developed by Muhammad Mahboob Ali (2016) to test any country. The study will extensively

tries to display an integral part regarding different dimensions of empowerment before involving in social networking and after involving in social capital, social along with business and social investment along with social intelligence ,social enterprises along with micro savings transformed to micro investment. Social intelligence is also one of the key components to readdress to come out from poverty. In Current century a greater role is being played by social media for which interpersonal connectivity is vital. Environmental scanning for doing the business is vital especially to ease the business process and local economies. Empowerment of people rises from decision making process when people do have purchasing power capability. Community banking framework should be developed under a regulatory framework which will work starting in joint effort of Pali Sanchya bank, Karmasonsthan bank and postal savings deposit and creating postal investment sector.

Community banking idea is larger than agent banking or mobile banking. It will give the scope of financial inclusion and current 80% people who are working informal sector will gradually transformed to the formal sector. This will also help to raise direct taxation as well as employees' job satisfaction and job security.

Technological diffusion, innovation, creativity and suitable regulations by the local level planning with local level law of the province are the key to deepening financial inclusion analysis where nano saving must be transformed to nano investment. Community banking will help to expedite the process of social networking and ultimately empowerment of people.

In Figure:1 we have seen a model as concept developed by Ali(2016) based on aforesaid discussion in this section as Social Networking Model and empowerment of people through transformation of Micro savings to micro investment with the help of community banking .However social education in the form of formal or non-formal is very important to act as a complementary.

The Rabobank view(2005) described that Rabobank was founded in the Netherlands more than a hundred years ago as a co-operative bank providing access to financial services for small farmers and offering a secure option for savings to the local community. The driving force behind the Rabobank Group has always been to create opportunities for individuals and organisations to participate fully and independently in economic activities. Rabobank has developed an integrated concept of sustainable rural financing in developing countries. n addition, Rabobank participates through its different departments in international platforms and partnerships concerning the challenge of economic development in developing countries.

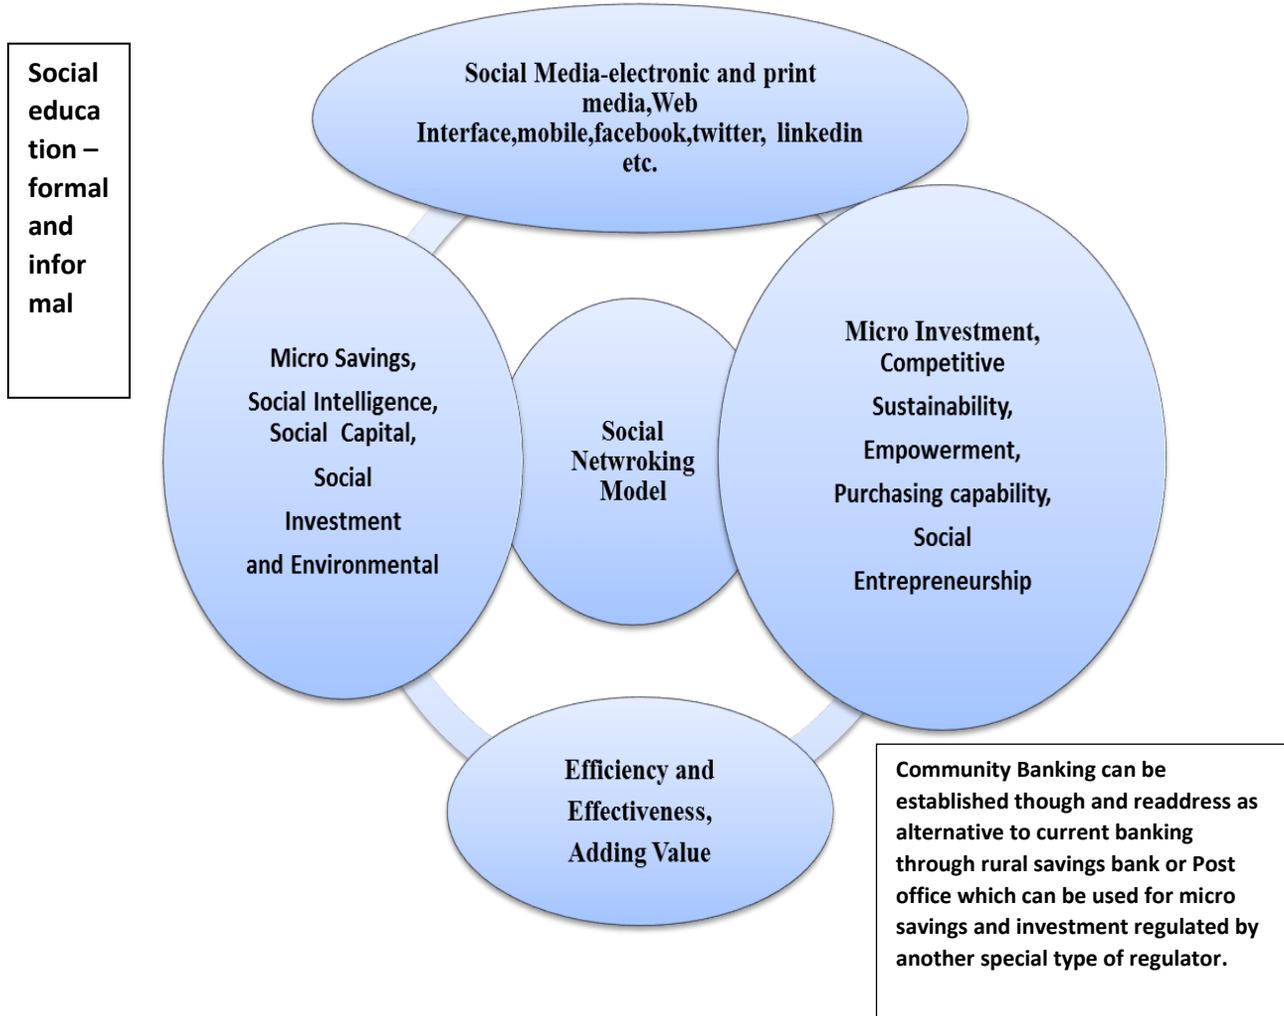

Dupas et al.(2012) depicted that while simply expanding access to banking services will benefit a minority, broader success may be unobtainable unless the quality of services is simultaneously improved. There are also challenges on the demand side, however. More work needs to be done to understand what savings and credit products are best suited for the majority of rural households. Ngalemwa(2013) described that village Community Banks (VICOBA) have benefited people in reducing their income poverty by playing an important role in enabling the poor to save and access credits. VICOBA lending model is a unique and an effective tool for development of rural communities.

Valkenburg and Piotrowski(2017) argued that the negative spin that youth and media research often receives in the news can give most people the idea that media primarily have negative effects on children and adolescents.

The Sustainable Development Goals (SDGs) possesses 17 Goals build on the successes of the Millennium Development Goals, while including new areas such as climate change, economic inequality, innovation, sustainable consumption, peace and justice, among other priorities. The goals are interconnected – often the key to success on one will involve tackling issues more commonly associated with another. The SDGs work in the spirit of partnership and pragmatism to make the right choices now to improve life, in a sustainable way, for future generations. They provide clear guidelines and targets for all countries to adopt in accordance with their own priorities and the environmental challenges of the world at large. The SDGs are an inclusive agenda. They tackle the root causes of poverty and unite us together to make a positive change for both people and planet. “Supporting the 2030 Agenda is a top priority for UNDP,” said UNDP Administrator Helen Clark. “The SDGs provide us with a common plan and agenda to tackle some of the pressing challenges facing our world such as poverty, climate change and conflict. UNDP has the experience and expertise to drive progress and help support countries on the path to sustainable development.”(Source: <http://www.undp.org/content/undp/en/home/sustainable-development-goals.html>, 1st March,2017)

PROPOSED MODEL

Chart:1 Social Networking Model ,Community Banking and empowerment of people is shown below:

(Source: Concept of a model built by Muhammad Mahboob Ali, 2016)

Note: Aforesaid model may be tested by other researchers of various countries and inform to the author so that it can be scrutinized and further improvement of the model can be done, if necessary.

Chart:1 Social Networking Model ,Community Banking and empowerment of people through transformation of Micro savings to micro investment with the help of community banking .However, there have been report that by a section of the people that misuse occurs in case of social medial towards under 18 years and female group. Further some reports indicated that social media misuse by terrorists. Constant monitoring on social media is required to be arranged by the competent authority and cyber police of the respective country. Social integration should form an essential part of community aptitude expansion in adolescents. Guardians should have a significant role to play as adult age group hold loop so that staying comparatively closed to dissimilar societies, surroundings and rearing up in a meaningful manner when global world is opened.

ANALYSIS OF THE FINDINGS AND DISCUSSIONS

The result from the study tried to describe those people's empowerment which is closely related with Social Networking, Social intelligence and social entrepreneurship along with social capital and social investment all work as a holistic approach. Community bank will help financial inclusion which in turns endorses wide-ranging development, creative ideas and ventures, increasing occupational opportunities and contests lacking by releasing progressive changes for the underprivileged and deprived people of the country with the help of digitalization process. This will also reduce the fraudulent activities of the cooperative banks and fraud syndicates due to lack of proper supervision and monitoring. As such Govt. should take initiatives to set up community banking for the unbanked people at a cheaper rate but effective manner. Acemoglu and Ozdaglar(2009)comment on social and economic networks for improving the livelihood of the people as well as creating employment opportunity is feasible through using social networking and community banking. Social welfare is needed for the betterment of the poorer group of the country.

People's conditions are not good before getting involved in social networking and after getting involved in the income of the family had been increasing. After involving in social networking the women started to participate in different income generating activities. Then, they also started to control over income, expenditure, credit and savings. They could then participate in household decision making more than before. Rural savings will be turned to rural investment lead to social entrepreneurship for which we need implementation and help from local level planning. It will be found that in dimensions the people started to become more empowered than before involving in social networking. This may be supported by Technology, innovation and suitable regulations -the key to deepening financial inclusion analysis where nano saving must be transformed to nano investment. Leadbeater(1997) proposed social entrepreneurship can be systematically developed through community banking which can act for social welfare.

Rabobank at Netherlands works as a co-operative bank providing access to financial services for small farmers and offering a secure option for savings to the local community which may create an example for our country. Ngalemwa(2013) suggestion can be followed as village Community Banks (VICOBA) have benefited people in reducing their income poverty by playing an important role in enabling the poor to save and access credits Employment opportunities with economic growth must be ensured at the formal sector for which informal sector should be squeezed out.

CONCLUSION

Social networking and community banking may be applied for transforming micro savings to micro investment through creating social capital. This will also help to transfer to formal sector from informal sector. Employment opportunity accompanied with economic growth should be raised. This will help to attain equitable growth, social justice and removing income inequality. If we cannot take the benefits of demographic dividend then it may transform to demographic bomb. Actually financial inclusion is feasible thorough arranging community banking under regulatory measures otherwise it may create a disorder. As present government of the country is pro people so they need to take initiative to arrange community banking with a separate and strong regulator and reducing percentage of informal sector to formal sector. Emotional intelligence should be used to judge people and to empower themselves. This will also help to attain some goals of sustainable development goal. Social welfare and grand utility will be tangent when equitable distribution can be attained. As such micro savings must be transformed to micro investment both rural and slum dwellers of the urban area. However, service charges and cost of transaction of the community banking must be kept very low so that the compensation criteria provided by the Hicks, Kaldor and Scitovsky.

The theory which is in a process of development by Muhammad Mahboob Ali on Social networking, community banking and empowerment of people may be empirically tested in different countries of the world and also at Bangladesh by various researchers to give a structural formation, cost-benefit analysis, shadow pricing, validation and reliability of the theory in the real life scenario both global and domestic perspectives with a request to inform the result to the author.

ABSTRACT

The aim of the study was to examine to what extent personality traits and individual variables are related to the use of proactive and preventive coping. The research sample consisted of 442 full-time university students in helping professions. The results showed that older students tended to be more proactive while men used slightly more preventive coping strategies than women. Moreover, controlling for respondents' well-being had a significant effect on the strength of the relationship between these two variables. In addition, proactive coping, social support and depression explained 47% of the variance in well-being, with the strongest unique contribution being depression.

Key words: Personality, proactive, well-being

INTRODUCTION

The concept within the forward-looking coping strategies which links successful ways of managing life with self-regulatory goal achievement is called proactive coping. Proactive coping is seen differently than traditional conceptions of coping. Proactive copers do not perceive potential imminence, risk or negative situation in the future as negative threats. Instead, they perceive the stressful experiences with more positive motivation than in the traditional view of coping ([Greenglass, 2002](#); [Schwarzer & Taubert, 2002](#)). In this sense, proactive behavior is associated with a focus on potential future obstacles and overcoming them through positive motivation and personal growth. Moreover, proactive copers manage an effort to build up general resources to manage challenging goals without sense of potential threat or assessment of harm.

Proactive coping is characterized by individuals who are able to handle negative events in the distant future (such as health complications, widowhood, job loss or poverty). Whereas those negative situations may or may not become the reality, preventive copers generate resources needed to overcome such situations, for example by purchasing insurance, drawing up their last will, and/or creating a financial reserve ([Reuter & Schwarzer, 2009](#)). Both proactive and preventive constructs are future-directed, called future-oriented coping constructs ([Gan, Yang, Zhou, & Zhang, 2007](#)).

The employment of proactive and preventive coping may be facilitated by a feeling of personal well-being ([Greenglass & Fiksenbaum, 2009](#)). Moreover, someone who proactively controls his or her life is more often in a better condition than those who feel that their life is worthless, do not experience happiness and see ordinary life situations only through a negative lens. Social support is another personality trait that facilitates coping behavior, since the perception and actuality that one is cared for and is part of a supportive social network means that one pays more attention to cope with stressful changes effectively ([Greenglass, 2002](#); [Greenglass, Fiksenbaum, & Eaton, 2006](#)). On the contrary, proactive coping creates the conditions for reducing the feeling of depression ([Almásy, Pék, & Papp, 2014](#)). In order to answer research questions summarized below, these personality traits as well as individual sociodemographic variables (gender, age, level and field of study) were analyzed.

Moreover, the presented study was focused on a sample that experienced their path through the university while studying chosen specialization in helping professions. This profession represents a wide range of teaching, life coaching, specialization in social work, social education, linguistics and medicine. Graduates find application in various institutional contexts and social networks. What unites these professions is direct work with people requiring the necessary skills to be able to manage the job role. These skills include problem-solving, future-planning and communication skills belonging to a well-honed set of soft skills. Having earned these skills effectively, one may generate knowledge about how to behave and decide during difficult life situations. Therefore, acquisition of these skills seems to be especially important for those working in helping professions. Further, we believe that the development of coping behavior represents not only the necessary professional skill of future professional, but also represents individual personality development of each student.

To summarize, the aim of this study was to examine to what extent personality traits (well-being, social support and depression) are related to the usage of proactive and preventive coping in university students in helping

professions. Explained variance of the selected individual variables (gender, age, level and field of study) was also tested. The research questions were set as follows:

- Q1 Is there a significant difference of selected individual variables on overall coping scales? Is there a significant difference if the dependent variable is considered separately?
- Q2 After controlling for respondents' well-being, is there still a significant relationship between proactive coping and depression?
- Q3 Which variable in a set of independent variables (proactive and preventive coping, social support and depression) is the best predictor of an outcome of well-being?

METHODS

Participants

442 full-time university students attending the traditional face-to-face classes at a public university were a part of this study. The age ranged from 18 to 28 with the mean age of 20.86 years ($SD = 1.59$). 301 (69%) respondents were in the age category of 18-21 years and 135 (31%) in the age category of 22 to 28 years. 89% (393) of full-time students were female pursuing bachelor's degrees (183, 47%) in the field of Social education (106, 27%). Preference of females in the research sample was expected, reflecting the real proportion of students in the helping professions. Details of the individual variables are listed in Table 1.

Table 1. Frequency of the individual variables in the research sample ($N = 442$)

Descriptive variables		Frequency (N)	Valid %	
Gender	male	49	11.1	
	female	393	88.9	
Age	18-21 years	301	69.0	
	22-28 years	135	31.0	
Level of study	Bachelor's degree	1 st year	218	49.7
		2 nd year	131	29.8
		3 rd year	62	14.1
	Master's degree	1 st and 2 nd year	28	6.4
Field of study	Social education	112	25.7	
	Preschool teacher training	96	22.0	
	General nursing	56	12.8	
	Midwifery	39	8.9	
	Health and social care worker	34	7.8	
	English for business administration	99	22.7	

Measures

The original version of the Proactive Coping Inventory (PCI; [Greenglass, Schwarzer, & Taubert, 1999](#)) has been widely used to measure the proactive coping behavior on diverse research samples ([Sirota & Yaroslavskaya, 2014](#); [Vernon, Dillon, & Steiner, 2009](#)). The proactive and preventive subscales were firstly measured by the identical Czech validated version of the PCI ([Šolcová, Lukavský, & Greenglass, 2006](#)). Then scores were calculated based on the followed study where the underlying factor structure and psychometric properties were empirically assessed suggesting refinements of the scales ([Vaculíková, 2017](#)). These changes affected item 48 ("When I apply for a position, I imagine myself filling it") and also item 8 ("I try to let things work out on their own" – reverse scored) from the proactive coping scale and item 39 ("I make sure my family is well taken care of to protect them from adversity in the future") from the preventive coping scale. Since items did not load highly on any of the factors, they were deleted from the scales. Furthermore, 21 remaining items from the PCI covering proactive and preventive coping were used in this study. The proactive coping scale included 12 items with $\alpha = .82$, explaining 22% of the variance. The preventive coping scale included 9 items explaining 10% of the variance with α of .75. The proactive coping subscale includes autonomous goal setting and goal attainment behavior of the respondents (i.e., "I like challenges and beating the odds") and the preventive coping subscale is focused on a potential but not actual events that can be managed by the experience gained from the previous situations before stressor is fully developed (i.e., "I prepare for adverse events"). A four-point Likert scale ranging from 1 (*not at all true*) to 4 (*completely true*) was used with the individual variables added (i.e., gender, age, level and field of study).

The Social Support Survey (MOS; [Sherbourne & Stewart, 1991](#)), a 19-items measure, was used in this study in the Czech language ([Kožený & Tišanská, 2003](#)) to measure social support. A four-point Likert scale ranging from 1 (*none of the time*) to 4 (*all of the time*), with higher scores indicating a higher level of social support, was

employed. A degree of psychological well-being was measured by the Czech version ([Dragomirecká, Lenderking, Motlová, Goppoldová, & Šelepová, 2006](#)) of the original 10-items Schwartz Outcomes Scale-10 (SOS-10; [Blais et al., 1999](#)). A four-point Likert scale ranging from 1 (*none of the time*) to 4 (*all of the time*), with higher scores representing greater well-being, was implemented. Lastly, experiencing symptoms of depression was assessed by the Czech version ([Preiss & Vacif, 1999](#)) of the 21-item Beck Depression Inventory-II (BDI-II; [Beck, Steer, & Brown, 1996](#)). Sadness, pessimism, self-dislike, self-criticalness and other negative feelings correspond to a symptom of depression giving a single score for the BDI-II. A four-point Likert scale was used, representing no symptoms to severe symptoms of depression.

Data preparation and statistical analysis

Influential multivariate outliers were checked by inspecting the Mahalanobis distance. All outliers with extreme values were removed from further analyses ([Field, 2009](#)). A non-significant Little's Missing Completely at Random test confirmed the use of the Expectation Maximization technique for replacing missing data with predicted values.

First, descriptive statistics were calculated for the individual sociodemographic variables characterizing the research sample, as well as for the two coping scales and measured personality traits (well-being, social support and depression). Second, the statistical techniques to compare groups (MANOVA) were applied (Q1), followed by the partial Pearson correlation analysis aimed to examine the associations among coping variables and the scores on the personality traits (Q2). In addition, the significant contribution of the personality trait variables of the correlations analysis was examined by having them as independent variables in the separate linear regression model with the two proactive and preventive coping scores as dependent variables (Q3). SPSS v. 22 was used for all presented analysis.

RESULTS

The proactive coping had a mean score at 2.70 ($SD = .46$) and preventive coping reached $M = 2.74$, ($SD = .46$). The scores ranged from as low as 1.50 (two respondents) to 3.92 (one respondent). These scores are located above the center position of the four-point scale used in the questionnaire indicating high use of coping behaviour. A paired-samples t-test demonstrated no significant differences in the employment of proactive and preventive strategies ($t(441) = -1.32$, $p = .19$). Out of the measured personality traits, the social support reached the highest level on the four-point scale ($M = 3.52$, $SD = .43$), followed by well-being ($M = 3$, $SD = .48$) and feelings of depression ($M = 1.54$, $SD = .36$). In other words, participants on average positively viewed their use of a supportive social network with assistance available from other people, being in a positive condition with low signs of depression.

Significant and positive correlation was found between proactive and preventive coping scales ($r = .38$) and between proactive coping and the two personality subscales, i.e. social support ($r = .18$) and well-being ($r = .49$). Moreover, proactive coping correlated significantly and negatively with depression ($r = -.38$), whereas preventive coping was significantly and positively associated to well-being ($r = .16$) and women tended to use more preventive coping than men (see Table 2). Older students were more proactive than younger students. Personality traits correlated moderately to high with each other while women made use of a wider repertoire of social support than men. Interestingly, the education level was important in neither the formulation of any of the coping behaviors nor in personality traits. In addition, a lower level of social support and well-being was characteristic for students in healthcare and linguistic fields of study. However, there was not much of overlap of the individual variables, ranging from 3% to 1%.

Table 2. Descriptive and correlation between coping scales, personality traits and individual variables

Variable	Possible range	Proactive coping	Preventive coping	Social support	Well-being	Depression
Age	18–28	.12*	.06	.03	.09	-.05
Gender	1–2	-.00	-.09*	.15**	.03	-.07
Level of study	1–2	.06	.03	.06	.06	-.02
Field of study	1–2	-.03	-.00	-.17**	-.09*	.03

Note: ** = $p < .01$. * = $p < .05$. Gender: 1 = male, 2 = female; Level: 1 = first year of study, 2 = higher years of study; Filed: 1 = pedagogical disciplines, 2 = healthcare and linguistic disciplines.

Differences by means (Q1)

A one-way between group multivariate analysis of variance (MANOVA) was performed to investigate gender, age, level and field of study differences in coping. Two dependent variables were used (proactive coping and

preventive coping). Preliminary assumption testing was conducted to check for normality, linearity, univariate and multivariate outliers, homogeneity of variance and multicollinearity, with no serious violations noted.

There was no statistical significant difference between male and female on the combined dependent variables, $F(2, 444) = 2.26, p = .106$; Wilks' lambda = .99, $\eta^2 = .01$. When the results for the dependent variables were considered separately, the only difference to reach a marginally statistically significance between males and females was for preventive coping, $F(1, 445) = 3.98, p = .047, \eta^2 = .02$. An inspection of the mean scores indicated that males reported slightly higher levels of preventive coping ($M = 2.86, SD = .45$) than female students ($M = 2.72, SD = .45$).

Age differences were significant only on between-subjects test ($F(2, 438) = 2.50, p = .084$; Wilks' lambda = .99, $\eta^2 = .011$). The results showed statistically significant difference between age groups (group 1: 18-21 years and group 2: 22-49 years) for proactive coping, $F(1, 439) = 1.02, p = .026, \eta^2 = .011$ (1% of the variance in proactive coping score is explained by age). Older students scored marginally significantly higher ($M = 2.67, SD = .46$) than younger students ($M = 2.77, SD = .44$) on proactive coping.

Testing independent variable grouping the respondents according to the level of study did not reach statistical significance on the combined dependent variables, $F(6, 876) = .65, p = .687$; Wilks' lambda = .99, $\eta^2 = .004$, neither separately on proactive coping ($p = .347$) and preventive coping ($p = .601$). In addition, there was significant difference regarding neither field of study on the combined ($F(10, 868) = .84, p = .594$; Wilks' lambda = .98, $\eta^2 = .010$) nor on separate dependent proactive ($p = .897$) and preventive variables ($p = .336$).

Mediating effect of well-being in proactive coping and depression (Q2)

Presented correlations between coping scales do not necessarily mean that the relationships actually exist. Therefore, a third relevant variable was tested in the model. Specifically, partial correlation was used to explore the relationship between proactive coping and depression, while controlling for well-being. Zero-order correlation and the first-order correlation were tested to see if the apparent relationship is empirically significant (see Figure 1).

There was significant negative partial correlation between proactive coping and depression, controlling for well-being, $r = -.13, n = 447, p < .01$, with high levels of perceived proactive coping being associated with lower levels of perceived feelings of depression. An inspection of the zero-order correlation ($r = -.38$) suggested that controlling for well-being had a significant effect on the strength of the relationship between these two variables. The original zero-order correlation coefficient decreased by $-.25$, suggesting that the indirect effect of proactive coping was highly mediated by well-being. On this basis, the model presented in the Figure 1 was appropriate.

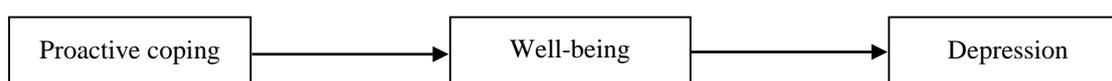

Figure 1. Tested mediating effects of well-being

Linear regression results for well-being (Q3)

Checking the assumptions

Assumptions of multiple linear regression were checked. Calculating minimum range corresponding to the sample size requirements, taking into account the number of independent variables ($N > 50 + 8m$), reached a satisfactory sample size (Tabachnick & Fidel, 2007, 123). Simultaneously, multicollinearity, singularity, normality, linearity, homoscedasticity, independence of residuals and outliers were also checked and showed no serious violation. Since there was very low correlation between preventive coping and well-being ($r = -.11, p < .01$), the independent variable was excluded from the model and analysis was recalculated. The collinearity diagnostics, i.e. Tolerance and Variance inflation factor (see Table 3), were calculated and indicated that the remaining independent variables did not violate the multicollinearity assumption. Four outliers were identified exceeding the critical value for evaluating Mahalanobis distance values (i.e., 16.27). These cases were deleted, thus improving the model for further analysis.

Table 3. Linear regression coefficients for depending variable well-being

Model	Unstandardized		β	Correlations			Collinearity Statistics	
	B	SE (B)		Zero-order	Partial	Part	Tolerance	VIF
Proactive coping	.27	.04	.26	.47	.31	.24	.84	1.19
Social support	.24	.04	.22	.36	.28	.21	.95	1.06
Depression	-.60	.05	-.45	-.60	-.49	-.41	.83	1.20

Evaluating the model and each of the independent variables

The tested model including proactive coping, social support and depression explained 47% ($Adj. R^2 = .47$) of the variance in perceived well-being and reached statistical significance ($F(3, 47) = 129.60; p < .001$). Not surprisingly, feelings of depression made the strongest unique contribution to explaining well-being ($\beta = -.45$). When the variance by all other variables in the model was controlled for with a statistical significant contribution to the equation, i.e. proactive coping ($\beta = .26$) and social support ($\beta = .22$) were significant ($p < .001$) predictors of the dependent variable (well-being). Students who had at their disposal a wide social network undertook more actions in order to prevent potential negative threats.

DISCUSSION

The aim of the present study was to examine personality traits, namely well-being, social support and depression, and individual variables, namely gender, age, level and field of study, in the use of proactive and preventive coping strategies by university students in helping professions. The focus of interest was aimed at students whose basis of study forms educational, psychological, linguistic and medical disciplines and practical skills developed largely through self-experiential learning. Acquired knowledge and a well-honed set of soft skills are further deepened and developed through teaching practice in the educational and health facilities. Graduates are prepared to work with people and for people. Therefore the ability to anticipate and manage negative stress situations is crucial for this sector. It involves not only the ability to act proactively and preventively, but also the skills to prepare others to cope with these situations.

The presented study brings the results exploring the associations among coping strategies, personality traits and measured individual variables as well as results of the significant contribution in the separate linear regression model with the two proactive and preventive coping scores as dependent variables. It was found that older students tend to be more proactive than younger students. The importance of age for coping strategies has been also suggested by other authors ([Gan, Hu, & Zhang, 2010](#); [Sollar & Sollarova, 2009](#); [Vaculíková, 2016](#)). As expected, older students were likely to be confronted with potential changes due to aging and therefore were more experienced to cope with the potential stressors. Overall, the examined students sample was quite young, with the mean age of 20.86 years, ranging from 18 to 28 years. Although the age may have made them a rather homogenous sample, the differences were seen between the age group of 18-21 years and age group of 22-49 years among students in helping professions. Gender was important for preventive coping: men used slightly more preventive coping strategies than women. On the other hand, women used wider support-relevant social interactions than men, a finding which has been noted in numerous studies ([Greenglass, 2002](#); [Matud, Ibáñez, Bethencourt, Marrero, & Carballeira, 2003](#); [Šolcová, Lukavský, & Greenglass, 2006](#)).

Findings confirming the relatively important role of education for the use of coping behavior are widely reported ([Ouwehand, Ridder, & Bensing, 2008](#); [Pill, Peters, & Robling, 1995](#); [Sollar & Sollarova, 2009](#)). This hypothesis might be explained by the idea that, through education, students acquire the necessary skills for effective coping behaviours. However, the highest achieved level of education analysed in this study did not make any difference in the use of either proactive or preventive coping. Given that the research group was a narrowly-profiled group of university students, the result is not surprising. Included respondents have already achieved the highest level of education in the sense of full-time students enrolled in public university. Presented analysis compared freshmen versus students from higher grades. We assumed that the first-year students will use less proactive and preventive strategies than more experienced students. In addition, the education level was not important in the formulation of any of the coping behaviors – nor were personality traits.

A very similar result was observed by the individual variable that covers students' study specialization. Pedagogical disciplines, namely social education and preschool teacher training, were compared to healthcare and linguistic disciplines (including general nursing, midwifery, health and social care worker and English for business administration). The results show that the field of study did not make any difference in the employment of proactive and preventive coping. In addition, while exploring the relationship with coping scales and personality traits, it appeared that a lower level of social support and well-being was characteristic for healthcare and linguistic fields of study. However, the explained portion of the variance was very low (ranging from 3% to 1%), suggesting that other unmeasured personal features may also explain additional variance in coping.

Moreover, controlling for respondents' well-being had a significant effect on the strength of the relationship between these two variables. The original association decreased, suggesting that the indirect effect of proactive coping was highly mediated by well-being. In addition to well-being, proactive coping, social support and depression explained 47% of the variance in well-being, the strongest unique contribution being depression.

Employment of proactive strategies and social supports with a lower level of perceived feelings of depression contributes to the quality of students' experiences of their lives (i.e. well-being).

A limitation of this study may be a dispositional characteristic of the PCI coping measure. Thus, responses to specific potential stressors may result in a different action. Further, conclusions arising from this study can be only generalized to presented research sample of university students in helping professions. Generalization of the results to the entire population or while investigating specific stressor situations would be inappropriate. Another limitation is that significant individual variables (gender and age) did not explain much of the portion of the variance in proactive and preventive coping. It seems that coping strategies are more dependent on other variables than on stable personality characteristics. Lastly, the obvious limitation is the use of self-reports, which always reflect declared behavior instead of the real behavior of respondents.

For future research, it would be beneficial to measure the coping strategies in the form of specific types of potential future stressors that are encountered. Depending on necessary skills to manage specific stressors effectively, a personality trait and individual characteristics may or may not explain employment of proactive and preventive coping strategies. This point has been partly confronted, showing that people handle different stressors and unpleasant life situations differently (Ouweland, De Ridder, & Bensing, 2006). Therefore, a study of situational features is a promising way to understand in which way situations shape coping behavior (De Ridder & Kerssens, 2003). In that case, multivariable analysis can indicate which specific factors account for much of the effect on coping strategies and thereby can better assist our understanding of resources.

ABSTRACT

The researches on individual differences and knowledge construction processes in education indicate the importance of the match between teachers' teaching approaches and students' preferred learning styles on academic achievements, attitude and improved behaviors in all educational levels. As a result, there is an increase in the number of researches on defining and identifying learning styles preferred by students. The aim of this study is to adapt the questionnaire that is developed by Baeten, Dochy, Struyven, Parmentier and Vanderbruggen (2016), aims to identify student teachers' instructional preferences and consists of four sub-dimensions –namely knowledge construction, teacher direction, cooperative learning and passive learning- with 40 items in total into Turkish. The study employs survey method. While the original questionnaire consists of 40 items, in the adapted version six of them were excluded because of either insufficient factor loading or taking place in more than one factor. The remaining 34 items are placed under the four original sub-dimension found in the original questionnaire as follows: knowledge construction 11 items; teacher direction 9 items; cooperative learning 9 items and passive learning 5 items. The reliability coefficients are found to be sufficient in the whole questionnaire and all sub-dimensions. The model is verified in Confirmatory Factor Analysis with a low conformity.

Keywords: instructional preferences, academic achievement, questionnaire adaptation

INTRODUCTION

Teaching-learning process is one of the most difficult issues to be examined in a curriculum. The whole process is built upon transferring or sharing a content in accordance with pre-defined objectives. When desired outcomes are reached, teaching-learning process can be called as successful. However, the most critical elements in the process are methods and techniques that direct the process and styles that focuses on individual features (Babadoğan, 2009). The researches in education that are on individual differences and knowledge construction process indicate that the harmony between teachers' teaching styles and learning styles preferred by the students affect the academic achievement and development of attitudes and behaviors significantly in primary, secondary and tertiary levels. As a result, there is an increase in the number of studies that aim to identify learning styles preferred by students (Samancı and Keskin, 2007). Learning styles term was first used by Rita Dunn in 1960. Dunn describes learning styles as different and distinctive ways that every student uses while preparing to learn new and difficult information and while learning and remembering it (Boydak, 2001; cited by Poyraz, Gülten, & Soytürk, 2012). When individual differences of the students are ignored, it is not possible to say that all students benefit the education equally (Oral, 2003). In terms of teachers' point of view, it is quite difficult to find a solution to learning inequality caused by individual differences (Demir, 2008). When teachers use a single strategy in teaching, it cannot be enough as individual differences are inevitable to occur in the class (Alşan, 2009). Every student comes to the learning environment with differences in experiences, cognitive capacity and strengths and weaknesses. Individuals prefer different ways in receiving, absorbing and processing the information (Bozkurt and Aydoğdu, 2009) and none of these ways is superior to the others (Aşkın, 2006; Berings and Poell, 2002). While some students express themselves verbally better, others do it through figures and visuals. Some learn by doing and experiencing in the learning environment while some others do it by listening, interactively or individual studies. All these direct researchers' attention towards individual differences in learning process (Can, 2011) and learning styles that is one of these differences (Ünal, Alkan, Özdemir, & Çakır, 2013).

¹ This study was supported by Scientific Research Unit (BAP) of Afyon Kocatepe University with the Project Number: 17.KARİYER.10

Learning style provides information on how an individual learns differently from the others. This lets the individual to control the learning process. Teachers should know what their students' learning styles are in order to provide an effective teaching (Güven 2004). When teachers are aware of their students' learning styles, they can organize how they will lecture, test and set the classroom rules. Such a teaching will result in success. (Murphy 1992). In other words, the knowledge of learning styles helps teachers in teaching process and students in learning process. Therefore, choosing and organizing teaching methods and strategies, classroom environment and tools appropriate to students' learning styles is an easier and more economical way than expecting students to adapt current situation. Today, there are different approaches in identifying students' learning preferences (Aksoy & Pakkan, 2011). Defining student characteristics that affect learning process and providing a consistency between teaching-learning process and these characteristics are important in designing teaching and learning processes. The way that every student use in receiving and processing the information is unique. While some students focus on data, incidents and algorithms, some are better with theories and mathematical models. While some students react better to te visual representations of the information such as schemas, graphics and visuals, some prefer written or oral explanations. Some prefer active and interactive learning while some others prefer to do it more individually and in the light of their own emotions. These differences identify students' learning preferences (Felder, 1996; cited by Kılıç, 2002). Trying to state the importance of students' preferences in teaching and learning situations within the class so far, this study aims to adapt the scale that intends to determined student-teachers' instructional preferences developed by Baeten, Dochy, Struyven, Parmentier ve Vanderbruggen (2016) into Turkish in order to provide a resource to the researchers that aim to study this topic. Determining student-teachers' teaching and learning situation preferences is beneficial in at least two ways. First, this will be an evaluation of the education that they received so far in their school life. Second, it will give an idea on what they might do when they start teaching in the class.

METHOD

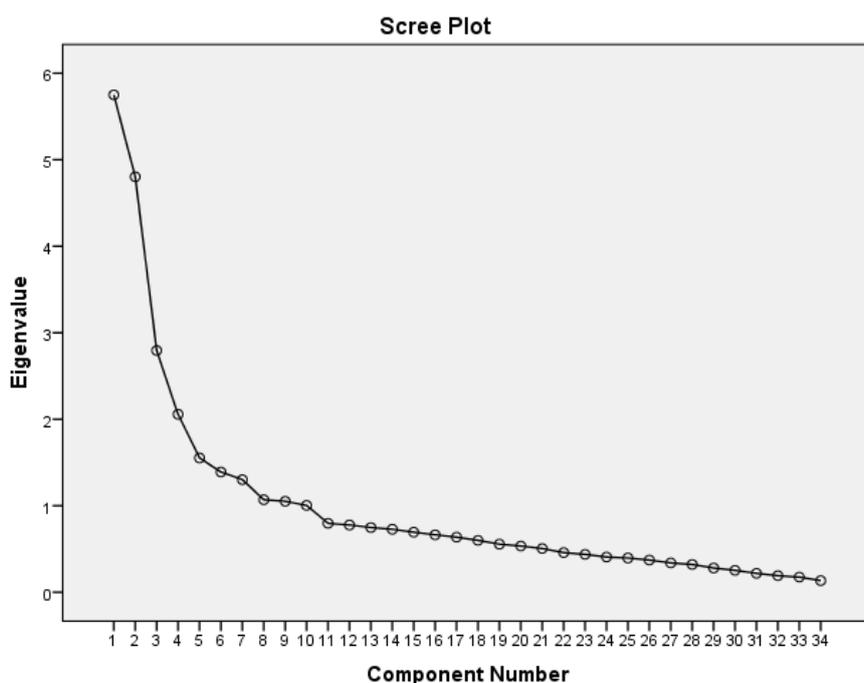

This study employs quantitative design and survey method. The studies that aim to collect data in order to determine specific features of a group are called survey studies (Büyüköztürk et al., 2012). They aim to represent a current or past situation as it is or was; the situation, individual or object that is focus of the research is identified in its own specific conditions (Arlı & Nazik, 2004; cited by Demirbaş, 2015, p. 10). Survey, indeed, is not a method on its own but is accepted as a tool that is used to collect data for a research. However, most of the survey researches are non-experimental in which the independent variable is not controlled experimentally or correlational research. The data collected through survey is used to either present a description or examine the relation between variables in this context (Hutchison, 2004, p. 285).

Data Collection (The Adaptation of the Scale)

Before starting the adaptation of the scale that is developed by Baeten, Dochy, Struyven, Parmentier and Vanderbruggen (2016), aims to determine student-teachers' instructional preferences nad consists of 40 items and four factors namely constructivist learning, teacher direction, cooperative learning and passive learning, the corresponding author was reached through e-mail for written permission to adapt the scale into Turkish. After receiving the permission, the researchers started translation process. There are different approaches in providing language equivalence such as translation-back translation (Brislin et al., 1973; cited by Çetin & Basım, 2012) or applying the scale to the same group in source and target languages after translation and then carrying out some statistical analysis. In this study, three English lecturers translated the English form of the scale into Turkish independently and the translated versions were discussed with the participation of all three lecturers in order to reach a consensus. Then, the Turkish form was examined by a Turkish lecturer to check grammar and semantics and revisions were done. After forming the final version of the Turkish form, the English and Turkish versions of the scale were applied to 72 ELT student teachers that study at Aksaray University with Turkish form was applied two weeks later than the English version. Correlation coefficients of the items and dependent samples t-test results of the two application were examined in order to check language equivalence. In these analysis, it is expected to that the correlation coefficients are statistically significant while t-test results are not (Çetinkaya, Şimşek, & Çalışkan, 2013). The correlation coefficients of the items in Turkish and English versions of the scale change between .69 and .92 while results are statistically significant ($p < .01$). The correlation between total scores is .97 ($p < .01$). There is not a statistically significant difference in t-test results ($p > .05$). As a result, it can be concluded that the language equivalence is provided.

After providing language equivalence, the scale was applied to 321 student teachers that study at Aksaray University in order to collect data for exploratory factor analysis (EFA). The KMO value is .787 and Barlett Sphericity test result is significant ($p = .000$; $p > .01$) which indicate that the data is appropriate for EFA. The criteria set for the items are to have a high factor loading only in one factor; have a difference of at least 0.1 if they take place in two or more factors and have a minimum 0.4 factor loading value (Büyüköztürk, 2012, p. 127). According to these criteria, items 10., 13., 21., 24 and 35. were excluded from further analysis because of either insufficient factor loading or having a smaller difference than .1 in two or more factors. The KMO value is

.790 and result is again $p > .01$). The was used in the number EFA and the factors is set the number above where forms an of (Field,

Barlett test significant ($p = .000$); scree plot determining of factors in number of according to of points the shape elbow (point separation) 2009).

Figure-1 AFA Scree-Plot

As seen in Figure-1, the factor loadings take an even form starting from the fifth point where elbow form is shaped. Therefore, it is concluded that there are four factors in the scale as in the original form of it.

Table-1 Factor Loadings

	Factor			
	1	2	3	4
S1	.670			
S2	.733			
S3	.510			
S4	.440			
S5	.539			
S6	.836			
S7	.485			
S8	.738			
S9	.666			
S11	.560			
S12	.446			
S14			.582	
S15			.568	
S16			.476	
S17			.695	
S18			.565	
S19			.617	
S20			.670	
S22			.598	
S23			.510	
S25		.572		
S26		.604		
S27		.620		
S28		.636		
S29		.706		
S30		.645		
S31		.529		
S32		.456		
S33		.521		

S36	.704
S37	.700
S38	.714
S39	.794
S40	.775

As seen in Table-1, factor loadings change between .440 and .836. There are 11 items in factor one and the lowest and highest factor loadings are in this factor. There are nine items in factor two and factor loadings change between .476 and .695. There are nine items in factor three too and factor loadings are between .456 and .706. In factor four, there are five items and their factor loadings change between .700 and .794.

Table-2 Reliability Analysis Results

Factor	Cronbach's Alpha Coefficient
Constructivist Learning	.842
Teacher Direction	.800
Cooperative Learning	.795
Passive Learning	.844
The Whole Scale	.820

According to Cronbach's alpha reliability test results (Table-2), the coefficients of the four factors change between .795 and .844 while it is .820 for the whole scale. The reliability coefficient of the first factor is .842; it is .800 for factor two, .795 for factor three and .844 for factor four.

Table-3 Item Total Statistics

	Scale Mean if Item Deleted	Scale Variance if Item Deleted	Corrected Item-Total Correlation	Cronbach's Alpha if Item Deleted
30	109.84	173.353	.397	.817
	109.98	173.884	.379	.817
31	109.90	172.890	.301	.817
32	110.31	177.959	.477	.821
33	110.20	176.581	.331	.819
34	108.14	179.137	.358	.818
1	108.12	177.522	.315	.816
2	108.44	175.972	.322	.816
3	108.42	176.126	.357	.815

7	108.45	173.574	.420	.813
8	108.41	174.812	.368	.814
9	108.23	181.811	.498	.822
10	108.47	178.425	.312	.819
11	108.84	174.915	.337	.815
12				

13	S	108.82	171.953	.415	.812
14	S	108.90	175.296	.385	.817
15	S	108.88	173.845	.341	.815
16	S	108.95	173.644	.327	.815
17	S	108.86	176.402	.453	.818
18	S	109.31	175.320	.481	.817
19	S	109.36	175.094	.485	.817
20	S	108.92	172.716	.412	.813
21	S	108.95	172.598	.374	.814
22	S	109.17	172.963	.353	.814
23	S	108.92	174.722	.339	.815
24	S	109.02	175.734	.350	.818
25	S	109.00	168.709	.450	.811
26	S	109.18	173.421	.304	.816
27	S	108.93	169.508	.406	.812
28	S	109.23	173.607	.311	.816
29	S	109.13	172.533	.341	.815

When item total statistics are examined, it is seen that item total correlations are between .301 and .498 (Table-3). When item total correlation values are above .30 indicates that there is not a significant problem in terms of internal consistency and no other item is to be deleted (Field, 2009).

Table-4 Explained Total Variance

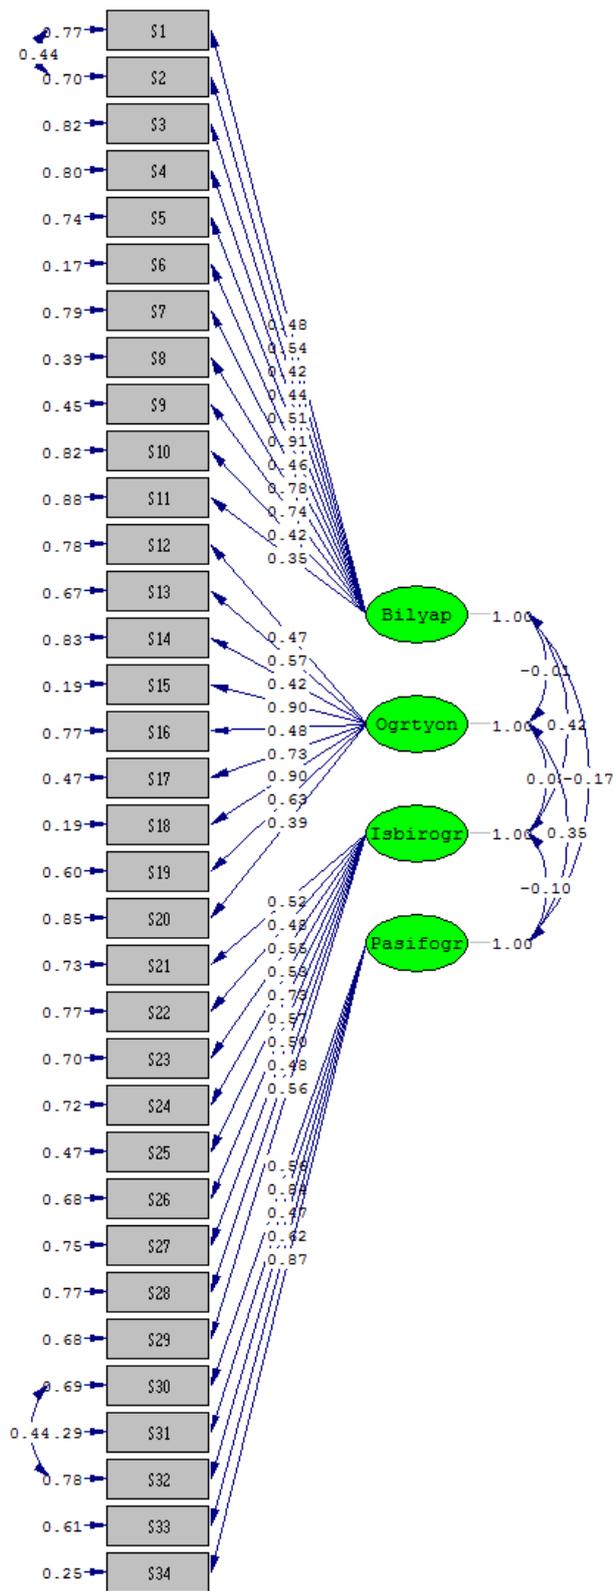

Item	Initial Eigenvalues			Extraction Sums of Squared Loadings			Rotation Sums of Squared Loadings		
	Total	% of Variance	Cumulative %	Total	% of Variance	Cumulative %	Total	% of Variance	Cumulative %
1	5.750	16.912	16.912	5.750	16.912	16.912	4.549	13.379	13.379

32	.192	.565	99.092						
33	.175	.514	99.606						
34	.134	.394	100.000						

Extraction Method: Principal Component Analysis.

According to Table-4, the variance explained by factor one which consists of eleven items is 13.379%; it is 11.254% by factor two which consists of nine items, 10.465% by factor three which consists of nine items and 10.210% by factor four which consists of five items. The total variance explained by 34 items in the scale is 45.308%. The explained variance in this research can be accepted as sufficient as variance ratios between 40% and 60% are identified as ideal (Scherer, 1988).

The model fit of the structure identified by EFA was tested by confirmatory factor analysis (CFA). The criteria such as chi-square and degree of freedom (df) ratio, Goodness of Fit Index (GFI), Root Mean Square Error of Approximation (RMSEA) that are widely used in researches (Gizir & Aydın, 2016) were used to evaluate the appropriateness of the model. As seen in Figure-2, chi-square value is 1674.40 and df is 521; chi-square-df ratio (X^2/df) 3.21. When this ratio is below three, it is considered as perfect and when it is below five it is considered as good fit in large samples (Çokluk, Şekercioğlu, & Büyüköztürk, 2012). According to it, the fit is medium level. RMSEA value is .083 and when it is lower than .05 there is a perfect fit while it indicates good fit below .08 and weak fit below .10 (Çokluk, Şekercioğlu, & Büyüköztürk, 2012). This statistics show a weak fit. When fit indexes are examined, it is seen that GFI=.76 and AGFI=.73; when they are above .90, it indicates a good fit otherwise there is weak fit. As a result, there is again weak fit in the model. The standardized RMR goodness of fit index is .083 that indicates a weak fit again as its being below .08 is a sign of good fit and below .10 is a sign of weak fit (Çokluk, Şekercioğlu, & Büyüköztürk, 2012). Finally, NNFI (.85) and CFI (.86) values also indicate a weak fit as their being above .95 indicates perfect and above .90 indicates good fit. As CFA results indicate an insufficient goodness of fit for the first model, modification indexes were examined and a modification was made between the items 1 and 2 that are within the same factor and 30 and 32 that are again in the same factor ($X^2=1432.18$, $sd=519$, $RMSEA=.074$ ($p=0.000$), $NFI=0.84$; $NNFI=0.88$; $CFI=0.89$; $IFI=0.89$; $RFI=0.82$, $GFI=0.79$, $AGFI=0.76$, $RMR=0.091$). The modification is accepted when items are in the same factor and are adjuncts (Harrington, 2008, s. 71).

Chi-Square=1432.18, df=519, P-value=0.00000, RMSEA=0.074

Figure-2 Results of CFA

RESULTS AND DISCUSSION

This is a validation and reliability study that aims to adapt the scale that is developed by Baeten, Dochy, Struyven, Parmentier and Vanderbruggen (2016) and investigates student teachers' preferences in teaching-learning situations. The scales that are applied to students generally aim to determine their perceptions. On the other hand, those applied to teachers investigate their preferred teaching methods. The difference of the scale developed by Baeten et al. (2016) is that it tries to determine student teachers' preferences on what kind of teaching should be done in the class and consists of 40 items in four factors, namely constructivist learning, teacher direction, cooperative learning and passive learning. Six items from the original version of the scale are not included in the final form of the adapted Turkish version either because of insufficient factor loading or being under more than one factor. The remaining 34 items are under four factors (eleven items in constructivist learning, nine items in teacher direction and cooperative learning and five items in passive learning) as in the original version. The whole scale and the factors have sufficient reliability scores. While the model that is provided by EFA has been verified by CFA, the goodness of fit indexes are weak. The modification has not provided a significant improvement. Still, the adapted scale can be used in order to study the teaching and learning situation preferences of student teachers from all subject field.

THE ANALYSIS OF THE VALUE ORIENTATION OF ADOLESCENTS

Anežka HAMRANOVÁ
Faculty of Education
Comenius University in Bratislava

hamranova@fedu.uniba.sk

ABSTRACT

The paper is focused on the analysis of the value orientation of adolescents. The theoretical frame composes of the basic conceptualization of values, explanation of the importance of adolescent value orientation considering their personality development and self-knowledge. The goal of this study is to stress the outcome of how the values and value orientation of adolescents – high school students are. These results are based on qualitative oriented research conducted in adolescents (N = 67), whose average age was 17,6 years. We have used the method of incomplete sentences. We have analysed incomplete sentences finished by pupils. It turned out that there is a link between the value orientation of adolescents and their perception of own personalities and social ties. Adolescents perceive themselves as a part of the community, mainly the one in school. They are aware of their strengths and weaknesses, but are not always able to use them for their good. The significant value for adolescents is a family. The present study is a part of the project VEGA 1/0623/15 Value Messages Perceived by Pupils in Formal Education.

KEY WORDS:

values, value orientation, adolescents, qualitative oriented research

INTRODUCTION

People acquire values from various sources. The first and very important source of values for a person is his family and his closest surroundings. The person later confronts his values acquired from family environment with those presented by school and various educational institutions, teachers as well as with the values of his schoolmates, peers or friends. Of course, we shall not overlook the influence of broader social environment and various social groups, in which one takes part and which also present their values. Further significant factor influencing values and value structure of an adolescent are media in all their complexity. As Vernarcová (2015) states the growth and the power of social media bring the pressure on young people with unrealistic image of beauty. Rogers claims that “a person assesses the world, objects keeping his own surviving and satisfaction of his needs in mind. The focus of the assessment is the person himself. In the process of education, a person starts to overtake the values from other adults, leaves the cleverness of own organism, resigns own assessment sources and tries to behave in compliance with values set by someone else.” (Rogers in Zelina, 1996, p. 161)

The biggest contrast between values is obvious mainly in the adolescence period, when a socializing adolescent focuses onto various social groups and continuously loosens the ties to his family. The preference of particular values is also influenced by the personality of an adolescent, his interests, needs or attitudes, but also by the events in his life. The values themselves are for us a “significant source of motivation, are considered to be goals that we strive to achieve” (Ištvániková, Čižmárik, 2007, p.12) and do hereby influence our behaviour, thinking, attitudes and preferences.

Langmeier and Krejčířová (1998) state there may be a conflict between the role and the status of the adolescent stemming mainly from the fact, that the environment expects mature and responsible behaviour of an adult (role), but ones rights and duties do not correspond with the above (status). There is also a frequent conflict between the values of young and old generation (where the older generation insists on its values and younger generation keeps searching for own values) and the conflict between the family values and values of outer society. The conflict between the characters of emotional relationships within family in the adolescence period is also critical. The individual is not anymore bound to standards and attitudes of own parents. He criticizes, revolts, but in many cases is still dependent on own parents. He still needs educational approach of his parents, where they shall with tact lead him, provide enough space for decision making, be sufficiently patient and tolerate emotional swings, provide opportunities for real intimacy, support positive activities, acknowledge strengths and values of others, support emancipation tendencies (Langmeier, Krejčířová, 1998).

The acquaintance with values, value preferences and structure is important also to support self-knowledge of the adolescent. It helps to understand one's own acting as well as the society. We agree with Prudký (2004), who states that if we do not know and do not understand values accepted and appreciated by given person, group,

nation, culture, institution, society or global world, we are not able to comprehend behaviour and striving of these social units. Not knowing values, we are getting lost in the world. (Prudký, 2004)

The meaning of term “value” is being analysed by more authors. According to Čačka, from the psychological point of view, the values are certain generalisation of human striving tendencies, leaning on his experiences and ideas and are normally formed by every individual subjectively what proves their uniqueness and bounds to a person itself. (Čačka, 1997). Cakirpaloglu (2004) states that current psychological theory normally agrees with the statement that the value is considered to be a specific psychical category creating relatively stable and durable personality structure important for individual, social and historical activities of a person. The values are convictions about good or beneficiary, but also about bad or undesirable that regulate individual or group activity. The assessment therefore is considered to be a psychical process, in which the relation between subject and object is regulated by quality and intensity of existing values. (Cakirpaloglu, 2004).

Schwartz (1999) describes values as concepts of the desirable on the basis of which people choose behaviour, assess people and events, explain own behaviour and assessments. According to him, the values are used as motivators leading to pursuance of socially accepted goals, defence of chosen solutions and regulation of human activity. In his theory he defines five basic and necessary characteristics of values, to which he later added the sixth one:

1. Values are terms or convictions, cognitive structures closely related to emotions;
2. Values relate to desirable endings or behaviours;
3. Values go beyond specific situations unlike standards and attitudes, which usually relate to particular phenomena;
4. Values serve as standards and criteria, they regulate the choice or behaviour and phenomena assessment;
5. Values are arranged according to their relative importance;
6. Motivational application of values depends on their relative importance for a personality and relevance in relation to particular behaviour (Schwartz, 1999).

One is not born with values, the values are not congenital. According to Prudký (2009) there are two processes of value creation. The first are processes used to provide an assessment: value vision, missions, preferences, orientations, frame, structures, and behaviour standards. The second process is social learning in process of socialisation of the individual. Through social learning, the individual, institution, community, even cultures adopt some values by internalisation or by identification with those. The individual integrates into society through socialization. It is so called double-hatted process, where the society desires that the person integrates into society under certain conditions, but the person also wants to be recognized together with the standards that he is complying with. When analysing values, we focus mainly on social frequency, for example life development stages (so called: socialization phasing). Under the most popular value theories we would find socialization hypothesis that presumes two mutually conditioned facts:

- a) The values get established in the social environment through socialization
- b) The values significantly tend not to change, they are resistant against changes from the moment, when the subject adopts, interiorises them.

Further important influence on the creation of values have socialization mediators. Here we speak of function and importance of the family, school, media, but also of broader social and political influences or person's development from the inception to extinction, or the development of other organisms, about community of dimensions e.g. revolution or coup in the state. According to Frankl, the subject without values walks towards extinction. For every subject, the search for meaningfulness is typical. As far as he cannot find it, it ceases to exist. (Frank in Prudký, 2009).

Considering its functions, the values may be divided into two big groups. One of them is relevant for the process of adaptation and the second one for the individual growth (McGuire, 1969). Schwartz similarly mentions two main areas, particularly growth values and security values (Schwartz et al., 2012). The relation between the values and behaviour is not straightforward. The behaviour is more likely influenced by system, by the arrangement of values rather than by the only individual value (Sak, Saková, 2004) and not even this relationship is always clear. The values belong to motifs leading us in their particular way through everyday life, but one cannot consider them to be the only motifs preceding every human behaviour. However, they influence many aspects of human life in a certain way, starting from the occupation one chooses, to lifestyle, choice of clothes, but also choice of friends. The values and value orientation that a person has make his orientation in life easier and improve his ability to choose “the right direction”.

The values are relatively stable, but they have dynamic character, they are subject to environment and personality changes. Schwartz implies (1992) that the structure of values may change relatively quickly (e.g.

through the influence of technical, economic, political and security condition changes. He claims that the conflict of values itself may precede changes in value structure, as well as the transformation of overall value orientation of an individual (Schwartz, 1992). The younger are usually more flexible towards changes, mainly in the adolescence period. It is just the age, when they need attention, help with adoption of adequate and socially, as well as subjectively, acceptable values.

All of us live in certain social environment that may be more or less complicated. Our attitudes, values, decision making, behaviour, standards are being significantly influenced by many factors e.g. society, various personalities, with which we are in direct or indirect contact, media. Social values are criteria assessing human behaviour, the own one as much as the one of others. (Zahn et al., 2008 in Koukolík, 2016). Schwartz and Bilsky (1987, 1994) also add that these social values are composing of abstract terms bound to emotional statuses and social actions.

Koukolík emphasises the significant role of neutral bases of social values that are given by society through activation of abstract term representation in prefrontal cortex and moral feelings dependent on context that is coded in frontal and infralimbic areas. This is probably basis for human ability to communicate about social values in various cultural circumstances (Koukolík, 2016). In this context, Koukolík reminds us of the problem with social standard adherence (2016). Social standards are perceived as broadly shared attitudes defining behaviour which is perceived as good and moral. They compose of basic “grammar of social interactions” (Bichieri, 2006 in Koukolík, 2016, p. 207). Social standards have many forms, starting from culturally highly specific ones through general standards, whose moral importance differs depending on society and culture (for example: standards assessing and defining sexual behaviour) to more general standards that are formalized and even legalized (e.g. standard “thou shalt not kill”) (Koukolík, 2016, p. 207). The values as a part of biological dispositions of a man have been, so Koukolík, connected with activation of instincts as source of values (e.g. Freudian concept). Values that are being perceived in such a way are currently defined as “a tool and a result of group control”.

Unlike values, value orientation is a system being established on a basis of real, living contact with values. Horák (1997) defines it as selective focus of an individual on creation and usage of values. The values contained in the value chart of an individual are consequently appearing as focus of a person on certain direction. This statement is also supported by Grác, who perceives value orientation as a “way how and why certain phenomena and subject reflect in given person as values and value systems and how the established values and value systems direct human behaviour to certain direction” (Grác in Horák, 1997, p. 26)

According to Prudký (2009), for values as an object of research, qualitative research is more adequate than quantitative one. According to the aforementioned author, it is connected with the polysemy of values, their differentiation. Values are also directly connected with subjective, group, cultural and further influences (Prudký, 2009)

The aim of our research was to find out about value preferences and value orientation of adolescents. We have formulated following research question: What kind of value system do adolescents maintain?

METHODS AND PARTICIPANTS

The participants of the research were adolescents attending high schools (N=67), composing of 43 girls and 24 boys. The average age of participants was of 17,6 years.

For our research, we have used an incomplete sentences technique. The respondents had to finish 19 incomplete sentence by stating the first thought coming to their mind. The incomplete sentences were divided into three main categories according to their content. First category composed of sentences oriented onto pupil himself, trying to find out how he perceives himself, what he considers his strengths, weaknesses, how his wishes are etc.:

1. I am....
2. At most, I would praise myself for...
3. I feel the biggest joy when....
4. Most of the times I am sad when....
5. I think I am able to...
6. I would say about myself...
7. My biggest weakness is...
8. I am the weakest ...

The second category of sentences focused on school, teachers and education itself. The pupils stated how they spend and perceive time in school, what they think of their class, what's their opinion on teachers, what is the most important thing for them in school:

9. What I like about school is...

10. I don't like being in school when...
11. When I think about school, I....
12. For me, the most important thing in the school is...
13. In the school I feel...
14. The most important thing in the school is....
15. School is for me...
16. If the teachers....

The third category dealt with family of a pupil:

17. My father....
18. My mother....
19. The most important thing in my family....

To analyse the individual finished incomplete sentences, we used the open coding method. During the analysis, we followed the adjusted method of the grounded theory (Corbin, Stauss, 2008). The individual categories of incomplete sentences have been created only roughly. We haven't analysed more detailed categories for the purposes of this study.

FINDINGS

a.) Student oriented incomplete sentences analysis

The biggest part of students (18) identifies themselves in the sentence of "***I am...***" as a "*student*", the further 13 as a "*human*" and 12 others as "*man*" or "*woman*". Therefore, the most of the students perceive themselves in connection with the school environment.

It is similar in the sentence of "***I am the weakest ...***" where as many as 29 respondents added their "*in the school*". Many of the completions of further sentences from the self-perception area have a connection to school what is comprehensible for the adolescence period, as adolescents spend a significant part of the day in a school environment.

In case of sentence "***At most, I would praise myself for...***" there was a very frequent answer (17) added, stating "*study results*". Further 22 students would praise themselves for their "*positive characteristics*" and 8 for their "*talents and skills*".

The sentence "***I feel the biggest joy when...***" was completed by the most students by "*being off*" (19), 11 students feel joy when "*others are happy*" and 10 of them when "*they make happy themselves*" through something. In this case, only 8 respondents mentioned school in connection to joy.

Similar negative statements relating to school came up in the sentence of "***Most of the times I am sad when...***" As many as 19 adolescents completed by "*when I am in school*". The other answers related mainly to "*personal failures*" (12) and to "*relationships in social groups*" (10).

The sentence "***I think I am able to...***" was completed by as many as 25 students as "*to do more*" and 19 respondents think that they are able to "*make their dreams and resolutions come true*".

The sentence "***I would say about myself that...***" was completed by 26 students by various "*positive self-reflections*" and in case of 16 students by a "*negative self-reflection*", 7 students completed the sentence by a simple "*I am / I exist*".

The sentence "***My biggest weakness is...***" was completed by students mainly negatively, 17 students stated their "*laziness*" and that they are "*bad at human relations*". 9 students stated that they "*have no weaknesses*". In their sentence completions, the students perceive themselves more as people than as students. While the first incomplete sentence of "***I am...***" was finished by "*a human*" only by 13 respondents and by "*a student*" by as many as 18, the completion of the sentence "***My biggest weakness is...***" was linked to school only in 2 cases, when the students answered by "*my choice of school*".

b.) School environment oriented incomplete sentences analysis

In the sentence "***What I like about school is...***" the students answered mainly "*social relationships*" (22), "*school equipment*" (15) and "*learning to be organized and have a regime*" (14). But there were also respondents "*liking totally everything*" (5) or 4 students "*did not like anything at all*".

In the sentence "***I don't like being in school, when...***" the students mostly completed by "*I am wasting my time*" (19) and "*demandingness of the school*" (18). 6 students did not like "*how the school is organized*" and "*the attitude of teachers*".

It is pleasant that in the sentence "***When I think about school...***" as many as 51 respondents came up with their "*positive attitude towards school*".

However it does not correspond with the completion of sentence "***In the school I feel...***", where only 22 students answered by "*good*" and as many as 33 students answered by "*bad*".

In the sentence focused on the importance of the school in the life of adolescent *“For me, the most important thing in the school is...”* almost the half of the students stated *“value of education”* (30). Almost one third of students (17) considers the *“social relationships and social climate”* to be the most important.

Also in the sentence *“The most important thing in the school is...”* the most frequent answer was *“education”* with the same number of respondents (30). The fact that a valuably spent time is influenced by also completely different factors, not only the educational ones is proven also by *“food”* to be the most important thing in the school for 6 students.

In the sentence *“The school is for me...”* 28 respondents have shown their *“positive attitude”* and 23 respondents their *“negative attitude”*. 7 students stated that they consider school to be *“a part of the life”*.

In the sentence *“If the teachers...”* 29 students would wish that the teachers had *“better pedagogical skills”* and 19 students would appreciate teachers’ *“better characteristics”*.

c.) Family oriented incomplete sentences analysis

In the case of a sentence *“My father is...”* 35 students expressed their *“positive attitude”* to their own father, 12 stated *“he was working”* and 8 stated their *“negative attitude”*.

In the sentence *“My mother is...”* 44 students equally stated their *“positive attitude”* towards their mother, *“negative attitude”* was expressed by 3 students.

In the sentence *“The most important thing in my family is...”* the students state a broad scale of completions. Except of few exceptions, this sentence was finished in the meaning of strong family values. People are wishing each other health, happiness, love and family understanding when congratulating someone. Equally, such values were mentioned in the sentence completions. The value of *“love”* was mentioned by 21 students, *“understanding”* by 10 students, *“social cohesion”* (9), *“to be a member of a family at all”* by 8 students. *“Health”* was mentioned only by 3 students, but as the proverb goes, the health will be appreciated as soon as one doesn’t have it anymore. Considering the age of respondents it is probable that the health is not absent in their life yet and they therefore perceive the value of health only marginally.

CONCLUSIONS

The goal of the study was to evaluate the value system of adolescents through quality oriented research. We have applied the method of incomplete sentences oriented onto three areas – the adolescent himself and his personality, educational environment and family of the adolescent. The research has shown that the adolescents perceive themselves as a part of the society, mainly of the school community. They are aware of their strengths and weaknesses, but are not always able to use them for their good. Many respondents have said laziness was their weakness and expressed their wish to be more persistent in following their dream or to be able to advocate their opinion.

Adolescents perceive school as a certain value and perceive it more positively, although many have negative attitude towards school or perceive it as an inevitable part of their life. They understand that the school will help them to move forward in life and to achieve something. They think that certain self-denial, motivation, self-consciousness, goal-orientation or persistence in advocating one’s opinion or persuasion are necessary to be successful in life. However they would appreciate modernization of the education system as well as changes in approach of teachers as such. As for teachers, they would welcome better characteristics, greater tolerance, empathetic attitude, openness or friendliness, but also better performance of pedagogical skills. Šramová (2014) has done a research on students preparing for teaching profession, which among others showed insufficient preparation of future teachers for practical teaching. It showed that the students are aware that to obtain a required amount of theoretical knowledge is necessary, however, they would put more emphasis on managing so called practical skills, which they lack in their preparation for the teaching profession (Šramová, 2014).

Adolescents participating in our research perceive education as an important value and part of their life, even if they feel overloaded in learning, mainly in learning of things they consider unnecessary for their future. The collective of their class, or social relationships and climate are perceived as very important part of educational environment. They appreciate, when they feel supported within class collective. It demonstrates the importance of social standards in the group they are members of.

Family and good relations within family are important value in a life of an adolescent. Positively evaluated are mainly understanding, love, and cohesion within family and even possibility to belong to a family. The value of health was present in adolescents’ expressions only marginally.

According to Machů and Navrátilová (2014), the teachers are usually not acquainted with the values of their pupils. Therefore it is hard for them to find a direction to which the pupils should be formed, although it is teachers who, along with family members of a child, may have the most significant influence on formation of pupil’s personality and value system.

According to Vernarcová and Ternényová (2016) teachers can make a world of difference for all students and can help them to succeed by implementing certain adaptations or interventions. Knowing the values of their students can lead to maximizing of learning process.

We agree with Brunclíková and Cabanová (2017), that the individual, and the formation of his value system, is affected by the closest surroundings and, last but not least, the society in which he grows up and in which his own moral attitudes, values and own worldview are shaped. An individual personally recognizes the world with its own opportunities and opportunities, and is self-confident in its own form of behavior resulting from its value orientation (Brunclíková, Cabanová, 2017). The value system keeps continually developing and a young person is therefore confronted with alternatives, outer pressures and social changes that influence his / her preferences very much. In this stage is therefore necessary to mention education to values that also leads to adolescent's personality cultivation process (Šramová, Hamranová, 2015).

Our new study opens further questions and new topic in the field of values and value systems of adolescents that we plan to analyse in the future.

ABSTRACT

Objective: This study was planned as a descriptive study to determine the anxiety levels of university students residing at state dormitory.

Materials and Methods: The research was carried out among female and male students residing in dormitories linked to Trabzon province Credit and Residence Institution. A total of 243 students (115 girls-128 boys) formed the sample of the research. Beck Anxiety Inventory (BAE) and a data collection tool developed by researchers were used. Due to the abnormal distribution of anxiety scores by gender and other grouping variables ($p = 0,001$) and the non-homogeneous distribution ($p = 0,002$), analyze was performed by non-parametric methods and Mann Whitney-U test was applied.

Findings: Of the 243 students who completed the whole questionnaire, 47.2% were females ($n = 115$) and 57.2% were males. 80.0% of female students ($n = 92$) and 72.7% of male students ($n = 93$) were found to have severe anxiety. 78.8% ($n = 115$) of students with severe anxiety were between 21-23 age group. There was a significant relationship between students' anxiety levels by gender ($p = 0.007$). The mean rank of anxiety scores of females (134,88; $n = 115$) was found to be higher than that of male anxiety scores (110,43; $n = 128$) ($Z = -2,710$; $p = 0.007$). No significant relationship was found between students' regular drug use and anxiety levels ($p = 0.072$).

Results: It has been determined that a large part of the students residing at dormitory have severe anxiety. The relatively small number of the sample restrains the generalization of the results. It is suggested that similar studies should be carried out with larger samples to achieve more generalized results.

Keywords: Anxiety Level, University Students, State Dormitory

INTRODUCTION

University youth is the most dynamic indicator of the sociocultural structure of society. The most important features which distinguish university youth from other youth groups are; they are managers, decision makers and well-equipped individuals. It is a social task to determine the problems of university youth and to offer solutions in order to make it possible for the countries to develop and advance. The years of university studenthood are one of the most turbulent stages of development and the last phase of adolescence, which is considered to be a transitional period, both socially and biologically. In addition to the general confusion of adolescence, this period has been a period of many problems such as separation from the family and home, friends and group selection, candidacy for a job and uncertainty about finding a job (Hergüner, Arslan, and Dündar, 2002).

University youth and the problems that this young group faces are important issues that need to be addressed. These problems have different dimensions. Failing to find answers on many questions about physical development and sexuality, exam problems, fatigue due to extreme work, difficulties in interpersonal relations, difficulties in establishing girlfriend/boyfriend relations, neurotic tendencies, anxiety, depression, problems of adaptation to the environment, problems in dormitory, extreme dependence on parents and homeland, academic and professional problems and social cohesion are among the well known and pending problems of university youth (Kutlu, 2004). Psychological problems of this group are more common and striking; because they are more prone to change within the youth segment due to its age and development characteristics, as it constitutes the most elite group of socio-economic-cultural societies and is more sensitive to contradictions to the personal, interpersonal and socio-cultural differences of their essence. Research findings indicating the degree of neuroticism in college students are higher than those in general population suggest that this situation should be addressed to the problems of this population found that 35% of university students had generalized anxiety disorder. 70% of the first year students reporting symptoms of depression, anxiety and fear also supports the findings (Güney, 1985). The studies conducted on university students showed that the former feels more lonely than the latter; males more than females, academically unsuccessful ones more than academically successful ones, the ones who spend their free time alone more than the ones who spend it with others, the ones who don't think their monthly income is sufficient for social activities more than the ones who do, the ones who don't receive social support from people more than the ones who do, the ones who don't have a lot of close friends more than the ones who do, the ones who are unwilling to form social relationships more than the ones who are willing, the ones who think they lack social abilities more than the ones who don't the ones who don't open up about their problems more than the ones who do, the ones who are not comfortable with their relationships with their mother, father, opposite sex, same sex, siblings more than the ones who are and the ones who are not content with their parents' relationships more than the ones who are (Buluş, 1997).

Before the students begin studying at the university, there is a need for orientation and assistance in order to be able to solve the problems they may encounter in college life. These services enable students to adapt to the university environment, to adapt and to solve the problems they may encounter in the first few days and to participate more often and effectively in education and training activities. With these exercise-orientation programs, it is easier for the students to adapt to the university life, to learn the difference of being a college student and to learn the academic and social facilities organized to introduce new students to the academic and social environment (Kutlu, 2004).

Anxiety

Like other illnesses, it is also possible to treat depression, so called "disease of the century". Clinical methods for treatment are widely applied. It is known that in the eighteen-month treatment and follow-up program of depressive patients, the rates of regular and recommended use of drugs remain at around 70-80%, even if all conditions are met. This is an important reality that reduces the ability to cope with depression (Eskin, Ertekin, Harlak and Dereboy, 2008). We could define anxiety as the degree of fearing the future and worry that we can not express.

Anxiety is a warning for 'being alert'. It warns about the emerging threats and ensures that the person takes precautions to deal with them. Fear is a similar warning; but it is an outward, well-known, clearly defined reaction to a threat which is not rooted in internal conflict. Anxiety, however, is a response that is shown against a threat that is based on unknown, innate, uncertain or rooted internal conflict. It is often difficult to make a distinction between these two items; since fear may result in the displacement of an unconscious, innocent, repressed stimulus to another object in the outside world (Carvey, 1998). Anxiety, known as apprehension or grief, manifests itself in breathing problems, tremors, and the emergence of displacing an internally suppressed stimulus to another object on the outside world. In addition, psychological problems such as distress, excitement, and the feel of facing bad things are other symptoms of anxiety (Mantar, Yemez, and Alkın, 2011).

Materials and Method

The research was carried out among female and male students residing in dormitories linked to Trabzon province Credit and Residence Institution. A total of 243 students (115 girls-128 boys) formed the sample of the research. In order to obtain the data, the Beck Anxiety Inventory (BAE) was used to measure the anxiety levels of the student group, along with the Information Form containing information such as scholarship, marital status, work, family and financial status of male and female students. The Beck Anxiety Scale measures the prevalence of anxiety symptoms experienced by an individual. Based on self-report, BAE consists of 21 items, and each item is scored between 0 and 3, and the total score ranges from 0 to 63. The amount of the total scores on the scale indicates the severity of the anxiety experienced by the individual (Arlhur, Charles, 1967). It's validation and reliability study was carried out by (Ulusoy et al. 1998) in our country. For the statistical analysis of the data obtained in the study, 21.0 package program of SPSS (Statistical Package for the Social Sciences) licensed by KTU was used. Normal distributions of variables were examined by Kolmogorov-Smirnov test; and since the data were not normally distributed ($p = 0.001$), Mann Whitney-U test was used to compare beck anxiety scores between groups. Same tests were applied on new continuous variables defined on the scores of the factors representing the subgroups ($p < 0.001$), which were determined as the result of the factor analysis applied on the scale. A chi-square test was used to compare the questions in the questionnaire filled by the participants and to determine the family structure, education level, social and cultural characteristics of the participants and the scale scores categorized according to the specified criteria (Beck, Epstein, Brown and Steer, 1988). No statistically significant result was found in any of these analyzes. A chi-square test was then used to examine the answers given to each item of the BAE scale and the distributions given to the questionnaire questions. As a result of this analysis, significant correlations were found between some questionnaire items and some items of BAE scale.

Findings

Of the 243 students who completed the questionnaire completely, 47.2% were female (n = 115) and 52.8% were male (n = 128). Of the participants, 29.6% (n = 72) were 18-20 years old; while 60.1% (n = 146) were 21-23 and 10.3% (n = 25) were 23 years and over. 95.5% of the participants (n = 232) had their birth-mother, while 2.9% (n = 7) had step-mothers. 82.7% of the participants (n = 201) had their birth-father, while 2.9% (n = 7) of them had step-fathers. 25.5% (n = 62) of participants were smokers, while 12.4% (n = 30) of them used alcohol.

As for the results of the Mann-Whitney-U test regarding whether the BeckAnxiety scores of 243 students who participated in the survey and filled the questionnaire completely differed according to the gender, there was a significant difference in the distribution of Beck Anxiety scores between the genders (p = 0.007). The mean scores of the anxiety scores of females (134,88; n = 115) were found to be statistically significantly higher than the mean scores of the anxiety scores of males (110,43; n = 128) (Z=-2,710; p=0,007).

Table 1: Analysis Result Representing Beck Anxiety Scores By Gender

Gender	n	Beck Anxiety Scores	
		Mean Rank	Median
Female	115	134,88	34 (27-42)*
Male	128	110,43	31 (26-37)*
Total	243	-	32 (27-39)*

* 25. ve 75. percentile values
(U=5879,0; Z=-2,710; p=0,007)

The Kaise-Meyer-Olkin sampling adequacy measure, corresponding to the number of selected samples and the factor analysis technique, was found to be above the 0.5 threshold (0.893), which was widely accepted in the literature, and the Bartlett sphericity test result was found to be statistically significant ($X^2=1797,539$; $p<0,0001$). Findings show that factor analysis can be performed on the scale filled by the individuals who constitute our sample. In this direction, maximum likelihood (maximumlikelihood) was used as the factor deduction method for the scale, and Kaiser normalization and Oblimin rotation were applied as the rotation method. As a result of the factor analysis applied by the mentioned methods, it was determined that BAE items consisting of 21 items are clustered within three subgroups ($X^2=269,883$; $p<0,0001$).

Table 2: Factor Groups Including Clusters, Which Are Formed by Factor Analyzes (ranked by the coefficient of the most relevance to the relevant factor)

Factor	Items Contained By The Factor
Factor 1 (Physical Manifestations)	Item 2: Hot flush Item 1: Numbness or tingling somewhere on the body, Item 3: Malaise on legs, tremor, Item 18: Indigestion, dyspepsia, Item 6: Dizziness or drowsiness, Item 11: Zonesthesia, Item 20: Blush, Item 21: Cold sweat, Item 10: Irritability, Item 4: Inability to relax, Item 7: Tachycardia, Item 19: Fainting

Factor 2 (Shivering)	Item 12: Tremor in hands, Item 13: Shakiness,
Factor 3 (Fears)	Item 17: Being possessed by fear, Item 16: Fear of death, Item 5: Fear of worse thing to happen,, Item 9: Being terrified, Item 14: Fear of loosing control, Item 8: Fear of loosing stability, Item 15: Having trouble to breathe

Factor Score Statistics

Table 3: The analysis result showing the gender-specific difference of the first factor scores clustering on the items that express physical indicators

Gender	n	First Factor Score	
		Mean Rank	Median

RESULTS

When the respondents were categorized in the Beckankset scores, it was found that there was moderate or severe anxiety in all participants. This result shows that complaints of anxiety disorder, which is increasing in our country and in the world, was found to be at high level in our present sample.

In terms of our study sample, it was seen that the anxiety complaints in females were higher than the males ($U=5879,0$; $Z=-2,710$; $p=0,007$). It was found that there was a more significant difference in the level of statistical significance between this score and gender and that the physical symptom severity due to anxiety in females was higher than males ($U=5137,5$; $Z=-4,070$; $p<0,0001$).

Family structure and dependence were also found to be significantly different between the anxiety scores obtained by factor analysis. Third factor scores, focusing on fears of the step-father wise and drug-addicted (regular drug users) survey participants, were also found to be higher than those of birth-father wise and non-drug users. This result shows that the frequency of mental disorders and various fears is higher in individuals living with stepfather and using drugs regularly.

Analyzes of relationships between BAE items and other questions directed to participants in the questionnaire showed that there was a statistically significant relationship between some items of the scale and some of the survey questions. Similar to other findings, these significant relationships were found to be related to variables such as gender, family structure (parental attitude, mother's existance, father's existance, step-father), and dependency status (regular drug use). With this type of analysis; it was found that unlike other findings, the education level of the parents created significant difference in terms of some scale items.

ABSTRACT

This paper deals with the question as to how to formulate solved examples of mathematical applications, and also, how these should be presented directly in Mathematics tuition, so that these examples could motivate students to a true interest in the study of this subject. Herein, some principles - and especially, demonstrations show how it is possible to formulate motivating examples from mathematical applications; and more specifically, from Linear Algebra. Linear Algebra is usually taught during the first term at most universities – as is the case for Tomas Bata University in Zlín. Linear Algebra is not one of the most difficult parts of Mathematics. For these reasons, it is useful - in the course of teaching Linear Algebra to demonstrate in an intelligible way, the wide scale and possibilities of its use in the solution of real problems. The authors are preparing a collection of solved Linear Algebra and Single and Multivariable Calculus examples; and in this paper, want to describe their experiences - which could be of use to other university teachers, or students.

Keywords: Linear algebra, teaching Mathematics, ISO Standards

INTRODUCTION

"A student is not a vessel in need of filling; but a torch in need of lighting". This is quotation of Jan Amos Komenský alias Comenius (*1592-1670†), the internationally recognised Czech thinker. He was entitled "Teacher of Nations ". The selection and presentation of some suitable motivational solved examples of linear algebra for teaching this part of Mathematics courses can most certainly, contribute to Comenius' quotation above such that it could become a reality.

These solved mathematical problems were - and still are, very popular with students. After studying them, the solved examples are much easier for individual students to calculate. However, it is not an easy task to select some suitably motivational solved examples from practice for the introductory lessons in which is applied linear algebra is presented in an interesting manner, with lots of wide-ranging, uncomplicated, and also effective examples for students. This is - for a Mathematics teacher of course, a subjective task, although one tries to remain as objective as possible. In addition, every experienced teacher rarely uses good-quality materials unchanged without perhaps changing them in some way - because, as is generally known, everything can be improved ... and history has proven many times that Maths can approach the solution of the same task with the application of a variety of procedures.

The authors believe that this paper presents three samples of three motivational solved examples that could fulfil the above task. Incidentally, the first of the authors is a university lecturer and the second is a student. These three examples are part of the upcoming collection of solved examples of Mathematical applications for students in the first semesters of the Faculty of Management and Economics and the Faculty of Applied Informatics of TBU in Zlín.

When preparing the motivational examples, the authors pondered over their form of expression - given in PDF format, as well as to their content. Distance (Combined) Studies students as well full-time student, must sometimes make do with a passive form of presentation of such examples. The examples are, in such cases, are usually located on the web, e.g. in Moodle-based Tuition courses, for these students.

All three examples are written in such a way that any student who has absolved several hours of tuition of linear algebra should understand them. The first two examples are logically inter-connected and resolve the same problem - chosen from the Economics field, by using various mathematical tools. Students can easily understand these two examples if they can master basic arithmetic operations like vectors or matrices, and can calculate the inverse matrix. The third example is from the Traffic Flow Smoothness Control Field - and is thus, used

for ensuing greater road safety. To understand this example, it is enough to know the classical Rouché-Capelli-Frobenius Theorem and its significance for solving linear equation systems, where the Gaussian Elimination method is used. The requisite curriculum materials usually teach such examples in the introductory parts of Linear Algebra.

Let us now look in more detail at the formulation of these examples. The structure of each example starts with the name of the example. The name is in bold font, while professional terminology keywords are in bold italics in order to increase their distinction. The authors consider the inclusion of the name in the example as an extremely important fact from the didactic point-of-view because it is, somehow, an abstract that informs students with the maximum attempt for brevity; about what Mathematical tools are needed to be applied in order to solve the problem in practice. This is definitely helpful for both students and teachers if a teacher needs to work with an example, e.g., after a long time delay.

Examples are sometimes complemented by tasking instructions, concluded by a highlighted symbol. After the instructions, remarks are also sometimes included after the formulation of the example, in cases where it is necessary to complement the Linear Algebra subject matter by an explanation that connects theory with practice area under consideration. This necessarily requires the explanation of the technical terminology, but sometimes - also to describe in a solved practical problem in more detail. The remark can have a fundamental importance for the correct understanding of the example's formulation, as well as for its solution. The key professional terms are re-highlighted again.

Another part of the example is its solution. Here, the principle is respected that each figure contains its title with an intelligible content. As a matter of course, using the appropriate national standard (Czech Standard ISO 80000-2: 2012) should be used for writing mathematical symbols. Any national standard always takes into account the corresponding international standard (i.e. International Standard ISO 80000 -2: 2009). In some mathematical publications at conferences especially - this is not always respected; since the journals' editors keep an eye on complying with all such requirements.

Herein under are the demonstrations of three such examples.

RESULTS - SAMPLE SOLVED MOTIVATIONAL LINEAR ALGEBRA EXAMPLES

EXAMPLE 1

The *input-output matrix* application for the calculation of product *production* takes into consideration the *total consumption of raw materials* where the *input-output matrix* is known and this represents the *linear input-output model of that production*.

A company produces two products V_1 and V_2 and the consumption per unit quantities of the raw materials S_1 and S_2 is given by the following *input-output matrix* A

$$A = \begin{pmatrix} 1 & 5 \\ 3 & 4 \end{pmatrix} \begin{matrix} S_1 \\ S_2 \end{matrix}$$

$$\begin{matrix} V_1 & V_2 \end{matrix}$$

We can interpret the first column of matrix A in a way such that the production of 1 piece (more generally speaking, of one measurement unit) of the product V_1 consumes the raw materials S_1 and S_2 , respectively, with the values of 1 and 3 currency-units respectively. Thus, matrix A describes the mapping between the consumed input S_1 and S_2 and output V_1 and V_2 ; and that we can sketch this situation schematically as follows

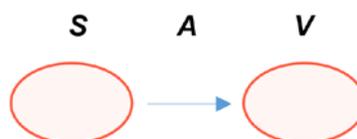

Fig. 1: Relationship between raw materials S and products V , as defined by input-output matrix A

The company has secured a contract in a given year with a supplier for 1,400 units of material S_1 , and 2,000 units of material S_2 .

1. Discover whether it is possible for the company to determine the number of pieces k_1 and k_2 respectively, of products V_1 and V_2 in which all of the contracted raw materials are consumed.

2. How will production change, in the course of which – and using the given production model, it processed only 950 units of raw material S_1 and 650 units of raw material S_2 which is already available in the company's stores? ■

SOLUTION:

Ad 1. Define the "input" vector of the raw material items

$$\vec{x} := (1,400; 2,000) \quad (1)$$

and, examine the change in coordinates when it is expressed as a linear combination of certain vectors \vec{a}_1, \vec{a}_2

$$\vec{x} = k_1\vec{a}_1 + k_2\vec{a}_2, \quad (2)$$

where the respective real coefficient k_1 and k_2 determines the number of measurement units - (here, units/pieces), of a product V_1 and V_2 and vectors $\vec{a}_1 = (1, 3)$, $\vec{a}_2 = (5, 4)$ are defined by the columns of input-output matrix A . It is sometimes useful to substitute the coordinate form of the "input" vector \vec{x} from (1) in the **standard basis**

$$Be = \langle \vec{e}_1, \vec{e}_2 \rangle = \langle (1, 0), (0, 1) \rangle, \quad (3)$$

whose coordinates in (1), define the consumption of raw materials, it is sometimes highly useful to move over to its **Semi-Cartesian** form to express the linear combination in the initial standard base Be from (3). It holds

$$\begin{aligned} \vec{x} = (1,400; 2,000)_{Be} &= 1,400\vec{e}_1 + 2,000\vec{e}_2 = 1,400 \cdot (1, 0) + 2,000 \cdot (0, 1) = \\ &= (1,400; 0) + (0; 2,000) = (1,400; 2,000), \end{aligned}$$

from which, it is clear that it is only in the standard basis that the coordinates of an arbitrary vector are the same as the corresponding coefficients of the respective linear combination are. Since our vectors \vec{a}_1, \vec{a}_2 – taken from the columns of matrix A , are **linearly independent**, these vectors then define a further basis Ba (one of infinitely many "possibles")

$$\langle \vec{a}_1, \vec{a}_2 \rangle = \langle (1, 3), (5, 4) \rangle =: Ba \quad (4)$$

in a **Real Arithmetic Vector Space** \mathbb{R}^2 , of **dimension 2**; thus the **scalars** k_1, k_2 are determined uniquely, and express new "output" vector coordinates \vec{x} , in the basis of Ba .

By substituting these into **Vector Equation** (2) and their rewriting by individual coordinates; one successively has

$$\begin{aligned} (1,400; 2,000) &= k_1(1, 3) + k_2(5, 4) \\ 1,400 &= k_1 + 5k_2 \\ 2,000 &= 3k_1 + 4k_2. \end{aligned} \quad (5)$$

The solution of this linear equation is $k_1 = 400$, $k_2 = 200$, or the **Vector Solution** $(k_1, k_2) = (400, 200)$. This "output" production solution vector, (more details on this are provided in Example 2), can be written in a more detailed manner based on Ba , as follows

$$\vec{x}_{Ba} = (k_1, k_2)_{Ba} = (400, 200)_{Ba},$$

thus, this vector's calculated coordinates in the basis Ba , defined by the columns of input-output matrix A , establish the production of 400 units (pieces) of the product V_1 , and 200 units of the product V_2 , in the course of which the total consumption of the contracted raw materials is ensured.

Also, note in addition the validity of a **matrix equation with (untraditional) row vectors**

$$(1,400; 2,000) = \boxed{\vec{x}_{Be} = \vec{x}_{Ba} \cdot \mathbf{A}^T} = (400, 200) \cdot \begin{pmatrix} 1 & 3 \\ 5 & 4 \end{pmatrix}. \quad (6)$$

Ad2. A production process - according to the given model for the total consumption only (sourced) from raw materials in stock S_1 and S_2 , respectively, in quantities of 950, respectively 650 units, cannot occur - precisely because the exactly one form of "input" vector $\vec{x}^0 = (950, 650)$ would then - according to the basis Ba , (easily verified by resolving an analogous linear equation system, like (5)) the "output" form

$$\vec{x}_{Ba}^0 = (-50, 200)_{Ba},$$

in which the negative number $k_1 = -50$ of product V_1 units does not correspond to reality, while – at the same time, each differing linear combination $k_1\vec{a}_1 + k_2\vec{a}_2$ would lead to a different vector than the required "input" vector (950, 650).

EXAMPLE 2

The application of the *inverse matrix* A^{-1} relative to the *input-output matrix* A for the solution of a matrix equation which describes the role of the production of products while considering the *total consumption of raw materials* - formulated in Example 1, and which now will represent the *Linear Production Model*.

Reformulate Example 1 - the production of products V_1 and V_2 from raw materials S_1 and S_2 , where production is given by square matrix A , into the matrix equation formulation

$$S = A \cdot V, \quad (1)$$

where S or respectively V , is given by the *Consumption Matrix*, respectively the sought *Production Matrix*. ■

Comment Regarding Theory

In Example 1 about the production of products V_1 and V_2 and the total consumption of the raw material costs S_1 and S_2 , a square 2×2 input-output matrix was considered

$$A = \begin{pmatrix} 1 & 5 \\ 3 & 4 \end{pmatrix}, \quad (2)$$

which - as is clear, is *regular*, i.e. $\det A = -11 \neq 0$, thus, matrix equation (1) has only one solution

$$V = A^{-1} \cdot S. \quad (3)$$

However, generally speaking, the matrix need not be square; but rectangular $m \times n$, with m rows and n columns. In this case, Equation (1) describes the situation where all of the raw materials cost items $S_1, \dots, S_i, \dots, S_m$ (where the below-mentioned items s_i are given by the number of consumed units S_i , so, one can use these to define the following *Consumption Matrix – Consumption Vector*)

$$S := \begin{pmatrix} S_1 \\ \vdots \\ S_i \\ \vdots \\ S_m \end{pmatrix} \quad \begin{matrix} S_1 \\ \vdots \\ S_i \\ \vdots \\ S_m \end{matrix} \quad (4)$$

total consumption in the production of n products $V_1, \dots, V_j, \dots, V_n$, where the under-mentioned items v_j are given by the number of product measurement units V_j , hence, we can define the *Production Matrix* or *Vector* as follows

$$V := \begin{pmatrix} v_1 \\ \vdots \\ v_j \\ \vdots \\ v_n \end{pmatrix} \quad \begin{matrix} V_1 \\ \vdots \\ V_j \\ \vdots \\ V_n \end{matrix} \quad (5)$$

and then, it is valid that *equation* (1), which is a *mathematical model* of the Economic Linear Production Model with matrix $A = (a_{ij})$ $i = 1, 2, \dots, m; j = 1, 2, \dots, n$. Its *element* a_{ij} *specifies the consumption of items* S_i *in the production of one product measurement unit* V_j . If its j^{th} column, (as one already knows from Example 1), expresses that - *for the production of one product measurement unit* V_j , *cost items* S_1 *are consumed* - (raw materials) a_{1j} , *etc., up to* a_{mj} *and including cost items* S_m .

In conclusion, let us note that the sum of the elements/items in the i^{th} row $a_{i1} + a_{i2} + \dots + a_{in}$ represents the *consumption per item* S_i *as per a certain matrix* (vector) *of production element/items normalized into units, (unit costs)*

$$V_E := \begin{pmatrix} 1 \\ 1 \\ \vdots \\ 1 \end{pmatrix} \begin{matrix} V_1 \\ V_2 \\ \vdots \\ V_n \end{matrix} \quad (6)$$

so, for the whole production represented by Production Matrix V from (5), a cost item S_i consumes a number of S_i consumed measurement units, which are given by the **linear combination** of values v_1, \dots, v_n with coefficients a_{i1}, \dots, a_{in} , where

$$s_i = a_{i1}v_1 + a_{i2}v_2 + \dots + a_{in}v_n. \quad (7)$$

SOLUTION:

According to Example 1 - where we used row vectors however, we can rewrite that solved linear equation system, (labelled as (5)), and which contained a given vector \vec{x} , matrix A , and a sought vector with components k_1 and k_2 and to rewrite them into matrix equation (1), using the standard column vectors, as follows

$$S = A \cdot V, \text{ where } S \equiv \vec{x} = \begin{pmatrix} 1,400 \\ 2,000 \end{pmatrix}, V \equiv \vec{v} = \begin{pmatrix} k_1 \\ k_2 \end{pmatrix}, \quad (8)$$

thus, we start from the equation

$$\begin{pmatrix} 1,400 \\ 2,000 \end{pmatrix} = \begin{pmatrix} 1 & 5 \\ 3 & 4 \end{pmatrix} \cdot \begin{pmatrix} k_1 \\ k_2 \end{pmatrix}, \quad (9)$$

or, in the equivalent form

$$\vec{x} = A \cdot \vec{v}, \quad (10)$$

from which we obtain the sought **Production Vector** by using well-known matrix operations, like

$$\vec{v} = A^{-1} \cdot \vec{x} = \frac{1}{\det A} \cdot A^{\text{adj}} \cdot \vec{x} = \frac{1}{-11} \cdot \begin{pmatrix} 4 & -5 \\ -3 & 1 \end{pmatrix} \cdot \begin{pmatrix} 1,400 \\ 2,000 \end{pmatrix} = \begin{pmatrix} 400 \\ 200 \end{pmatrix}. \quad (11)$$

Perhaps as an interesting point, let us note that - should we use row vectors $\vec{x}, (k_1, k_2) = \vec{v}$ like in Example 1; we would have to write vector-matrix equations (10) - due to the existence of the feasibility of matrix multiplication in a different order of vector and matrix, as well as the local column vectors \vec{x}, \vec{v} . These can then be transposed into row vectors \vec{x}^T, \vec{v}^T and then, it would analogically hold that

$$\vec{x}^T = \vec{v}^T \cdot A \quad (10^*)$$

$$\vec{v}^T = \vec{x}^T \cdot A^{-1}. \quad (11^*)$$

EXAMPLE 3

The application of a *parametric* form for the solution of some system of linear equations in order to calculate the maximum frequency on the controlled segment of a road traffic-flow network, consisting of four transport nodes as a necessary element of its *smooth traffic flows* and *security* in the course of fulfilling the required traffic frequencies on two exit roads

The required frequency of the road traffic network is given by the following figure

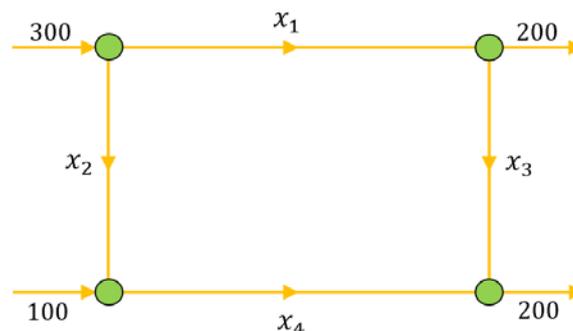

Fig. 2: Resolving smooth traffic flows

from which, it is evident that we want to reach the same traffic-load on two (parallel) exit roads that is equal to a frequency of 200 cars per minute. What are the frequencies on the roads x_1, x_2, x_4 , if we require the actually controlled frequency of only 60 cars per minute on the given segment x_3 , in addition, what is the maximum possible frequency that can be achieved on the controlled road x_3 in question, under the conditions displayed by the traffic diagram? ■

SOLUTION:

The system of linear equations that corresponds to these crossroads has the following form

$$\begin{aligned}x_1 + x_2 &= 300 \\100 + x_2 &= x_4 \\x_3 + x_4 &= 200 \\200 + x_3 &= x_1.\end{aligned}$$

The equivalent elementary (row) operations of the augmented matrix of our system, together with a Gaussian elimination, successively give its following reduced row echelon form

$$\begin{aligned}\left(\begin{array}{cccc|c}1 & 1 & 0 & 0 & 300 \\0 & 1 & 0 & -1 & -100 \\0 & 0 & 1 & 1 & 200 \\1 & 0 & -1 & 0 & 200\end{array}\right) \cdot (-1) \sim \left(\begin{array}{cccc|c}1 & 1 & 0 & 0 & 300 \\0 & 1 & 0 & -1 & -100 \\0 & 0 & 1 & 1 & 200 \\0 & 1 & 1 & 0 & 100\end{array}\right) \cdot (-1) \sim \left(\begin{array}{cccc|c}1 & 1 & 0 & 0 & 300 \\0 & 1 & 0 & -1 & -100 \\0 & 0 & 1 & 1 & 200 \\0 & 0 & 1 & 1 & 200\end{array}\right) \\ \sim \left(\begin{array}{cccc|c}1 & 1 & 0 & 0 & 300 \\0 & 1 & 0 & -1 & -100 \\0 & 0 & 1 & 1 & 200\end{array}\right)\end{aligned}$$

and from here, by means of back-substitution into this reduced system of equations and the choice of unknowns x_3 like parameter t , and as well as the requirement that the frequency values are non-negative, we arrive at the following relationships

$$\begin{aligned}x_3 &= t \geq 0 \\x_4 &= 200 - t \geq 0 \Rightarrow t \leq 200 \\x_2 &= 100 - t \geq 0 \Rightarrow t \leq 100 \\x_1 &= 200 + t \geq 0.\end{aligned}$$

Thus, when we substitute the currently-desired controlled frequency $x_3 = 60$ of cars per minute for all admissible values of the controlled frequency $x_3 \leq 100$, (as per the Rouché–Capelli–Frobenius Theorem about particular solutions from the infinite number of possible solutions), we obtain - by successive substitution, the resulting optimized frequencies

$$x_1 = 260; x_2 = 40; x_3 = 60; x_4 = 140,$$

that ensure the smooth flow and security of traffic in the monitored segment.

CONCLUSIONS

If a teacher has enough time for an active form of communicating examples, whereby the authors mean the presentation of such examples during the tuition process, they can use many effective ways to make their motivating influence much stronger. At this point, it is useful to mention motivational strategies in Mathematics teaching - these are analysed in detail by Posamentier and Krulik, (2011).

The authors hope that the examples presented in the article - which do not require any great knowledge of the linear algebra subject matter, due to its content ... and perhaps, of the form of its expression, can be an inspiration for mathematics teachers at other universities. The authors of course, would warmly welcome proposals that would improve the examples presented herein.

Note, for lectures and seminars led by Mr. Fialka (co-author), it is an advantage that - concurrent with Mathematics tuition in the first semester, there is a concurrent course in Micro-economics - this subject - more than any other requires Mathematics much more than other economic subjects. This is then, a very powerful intrinsic motivation for students to be interested in Mathematics.

This paper represents a continuation of Mr. Fialka's research into Multivariable Calculus - (Fialka, 2008a; Fialka, 2008b). The Ministry of Education, Youth and Sports of the Czech Republic supported this in the context of Research Project No. 504: Innovation in Mathematics II, on the functions of several variables by means of a web presentation with graphics and animations and its use at universities with engineering fields of studies.

ABSTRACT

The purpose of this study was to determine what changes the experience of practicing Waldorf education brought about in awareness among early childhood teachers in South Korea. Over 100 years have passed since early childhood education started in South Korea. Lots of overseas early childhood ideas have been introduced into South Korea, with Waldorf education relatively recently introduced. Waldorf early childhood education has made rapid, quantitative growth and teachers have participated enthusiastically in its development in South Korea for about 20 years since its principles and methods were introduced. This study made and analyzed interviews with four early childhood teachers practicing Waldorf education. They saw their awareness changed through such themes as 'early childhood teachers as theoretical and practical mediators,' 'early childhood teachers as models based on repetitive rhythmic life,' 'teachers' expertise as the basic premise for parents' positive-active cooperation,' and 'chances for reflection on true early childhood teachers.'

KEYWORDS: Waldorf Education, Practical Experience

I . Research Background

South Korea has been affected by educational philosophies of Frobel, Piaget, Montessori, and Dewey for over 100 years after the country started to provide early childhood education. As of 2017, the South Korean early childhood education society saw lifestyle and values changed more rapidly with accelerated social changes than ever before due to urbanization, rapid development of transportation and communication culture, and the decreased childbirth rate. In such a situation, Waldorf early childhood education was introduced into South Korea as one of the various approaches to early childhood education to improve early childhood education qualitatively.

Waldorf early childhood education was selected as the Model of 21C Innovative Model in the 44th International Education Meeting held in Geneva, Switzerland under the sponsorship of UNESCO in 1994. To meet lots of demands by those concerned with education, EBS broadcasted the visit to Waldorf education institutions in

Germany in 1997 and drew great attention from parents in South Korea. In 1999, the first Waldorf Kindergarten early childhood education site in South Korea was registered in the International Free Waldorf Kindergarten Association.

In South Korea, Waldorf education has made rapid, quantitative growth and incumbent teachers participated enthusiastically in the growth for 20 years after its principles and methods of Waldorf early childhood education with the curriculum based on the development of growing young children were introduced. Now lots of early childhood education institutions completed the course of Waldorf education and tried to change into Waldorf education institutions.

This study aimed to investigate the characteristics of Waldorf education South Korean early childhood teachers perceived through their inner stories found in their daily education journals based on rhythmic life as well as in the course of exploration into Waldorf early childhood education they experienced while practicing Waldorf early childhood education.

II. Research Questions

What changes has the experience of practicing Waldorf education brought about in South Korean early childhood teachers' awareness?

III. Waldorf Early Childhood Education Status in South Korea

Waldorf education has rapidly spread in South Korea due to Waldorf-Education Worldwide, an international touring exhibition held in South Korea with the support of the headquarter of UNESCO in 1996, and the international symposium. To meet lots of demands by those concerned with education, the Korea Steiner Education and Art Association was established in March 1997 and EBS broadcasted the visit to Waldorf education institutions in Germany in May 1997 and broadcasted it again in November 1997 and in May 1998 and drew great attention from parents in South Korea. Due to the great attention, the Center for Anthroposophy in Korea was established in 2000. In May 1999, the first Waldorf Kindergarten early childhood education site in South Korea was registered in the International Free Waldorf Kindergarten Association and lots of early childhood education institutions have completed the course of Waldorf education and tried to change into Waldorf education institutions. The early childhood education institutions pursuing Waldorf Kindergarten and Waldorf education in South Korea are as follows:

IV. Research Methods

1. In-depth interview

A. Participant selection

One-to-one in-depth interview was made with one director and three teachers at a Waldorf Kindergarten providing Waldorf education in Seoul. There are six Waldorf Kindergartens in Seoul as of 2017. The early childhood education institution in this study was a Waldorf Kindergarten, which had been a playroom and nursery. The participants in this study were teachers who had completed the expert's course in Waldorf education under the sponsorship of the Center for Anthroposophy in Korea and worked in practice.

B. Questionnaire development

The interview was based on a semi-structured questionnaire for the purpose of this study.

A one-to-one (semi-structured) interview was performed with each participant; reflective journals, observations, and educational journals, which had been written by the incumbent early childhood teachers, were collected for data to analyze; and I continued to communicate with the participants by phone calls as well as via e-mail during the course of the study.

C. Interview

At the first meeting for interview, the participants were given full explanation about the purport of the study and gave a consent and interview was performed in the handcrafts room for parents at the first basement level of the kindergarten between 6:30 and 9:00 p.m. every Wednesday in a total of 4 sessions between May 10 and 31, 2017. Although I had some difficulty in performing interview with the teachers, who were tired after taking care of young children, rapport had been formed with them, thanks to the long acquaintance with the medium of Waldorf education. Before in-depth interview, I tried to make them comfortable by sharing daily routines. During the interview, the participants were basically asked to answer the questions in the semi-structured questionnaire given in advance and were given additional questions when necessary. While this study has a limitation that only one interview was performed because of the participants' location or personal schedules, reflective journals, observations, and educational journals, which had been written by the incumbent early childhood teachers, were collected for data to analyze and I continued to communicate with the participants by phone calls as well as via e-mail during the course of the study.

2. Participants

The general characteristics of a total of 4 participants in the in-depth interview are as follows:

<Table 3> General characteristics of participants

Division	Age	Childcare career in practice (yrs)	Career in Waldorf practice (yrs)	Class operation type
Director (Female)	67 (Married)	24	17	Entire nursery
Teacher A (Female)	49 (Married)	20	16	Mixed-age class for 3- to 5-year-olds
Teacher B (Female)	35 (Unmarried)	10	8	Mixed-age class for 1- and 2-year-olds
Teacher C (Female)	45 (Married)	8	6	Mixed-age class for 0- and 1-year-olds

3. Data analysis

The interviews were recorded and transcribed with the participants' consent; of the collected data, the contents repeated in their conversations and writings in relation to the theme were extracted to arrange and analyze separately. The basic unit for content analysis was from a theme to another, as told by an early childhood teacher. I repetitively read the basic units, drew items repeated in the teachers' conversations and writings in relation to the question, grouped them into a preliminary category with a common theme, analyzed the basic units according to the preliminary category, and reorganized the category until most of the basic units were categorized. Through this course, all the themes were grouped either into a single unit or into different categories on the basis of commonness and specificity. To secure integrity and validity of this study, the categorized texts were sent to my colleague, who was a graduate student; then, the participants were asked to review them.

V. Research Results

The changes in awareness among teachers practicing Waldorf education were categorized as follows:

1. Early childhood teacher as theoretical and practical mediator

Early childhood teachers in South Korea experienced conflicts between theory and practice through Waldorf education or felt confused in their values when they discovered any difference from their own and became embarrassed to find a gap between theory and practice. However, they got their own practical knowledge and attitude while experiencing the course of Waldorf education.

“I'm sure that it was quite different in practice before I received Waldorf education. The class was quite different as well. Oil application, wet water painting, wax clay, wax crayon, woodwork, telling children's stories, outdoor play, (...), still, I tried to give instruction naturally. And I tried to pursue children-centered practice rather than fixed plans. Of course, at first, I felt unfamiliar and was poor at it, but I tried to apply Waldorf education properly to meet the rhythmic life in practice through self-reflective thinking in order to narrow the gap between its theory and practice.”

(One-to-one interview with Teacher A, May 10, 2017)

“Applying the major in early childhood education in South Korea and the experience of Waldorf education, regardless of length, in practice, we need to make steady efforts in each region or situation.. And we need to be able to apply the theory to practice properly, instead of thinking that Waldorf education is different from practice. Don't say it's hard...”

(One-to-one interview with Teacher B, May 17, 2017)

Early childhood teachers' efforts to find a more realistically appropriate solution through critical and reflective thinking in the conflicts between theory and practice and to explore and apply their own theoretical knowledge to

practice was not different from the finding from literature review (Oh & Lee, 2006). They critically assessed even the educational philosophy of the institution that didn't meet theirs according to their own criteria and made efforts to connect their existing ideas, values, and theories with practice through reflective thinking during the course of Waldorf education to narrow the gap between the initial theory and practice.

2. Early childhood teacher as a 'model' based on repetitive rhythmic life

Rhythmic life means living in harmony among the orders of humans, nature, and the universe through breathing based on interaction with the world. The basic units of rhythmic life are inhalation and exhalation, which are repeated. This refers to continuity of the same, but not same, repetitions. Young children like repetition. In early childhood education institutions, yearly, monthly, weekly, and daily routines are all continuity of repetitions. Repetitive rhythmic life allows young children to trust the world and makes their physical rhythm healthy. In the rhythmic life, which is repeated every day, young children become aware of the order in the stream of time and make life rhythms inherent in their consciousness while experiencing the stream of time. They experience weekly rhythms through different activities on a weekly basis. What they have experienced repetitively are internalized and they memorize even its details. What happens is repeated through repetitive experiences and is expressed in continuous rhythms.

Teachers also repeat rhythmic life each moment together with young children. In a stable daily rhythmic life, young children learn about the world by imitating and modeling teachers, who indicate a direction as a model for the children. Early childhood teachers became aware of the roles and meanings of a teacher as a model in living with children by practicing Waldorf education.

“I observed children during free play time. They imitated their parents at home and teachers at the nursery. So I came to check if I did something wrong all of a sudden. What the children see and learn.. Children's playing mom tells how their parents live, and I worried how parents thought of teachers while observing them play. But after I repeated a stable daily rhythmic life steadily with children, I could find them follow the teacher's serious attitude.”
(One-to-one interview with Teacher A, May 10, 2017)

“I think that teachers need to pay attention to their movements and tones of voice because they become a model for young children all the time. Because teachers' roles can strongly affect young children's imagination, teachers need to be receptive to young children's imaginative world. I think it is better to give a suggestive answer to children in this period who are curious and ask lots of questions so that they can widen the space of imagination about questions.”
(One-to-one interview with Teacher B, May 17, 2017)

“At first, I didn't think that anyone could give Waldorf education. Because it was unfamiliar and hard to have a rhythmic life with children, taking into account even invisible parts.. But I made

up my mind to become a Waldorf early childhood teacher and grow along with them in the 21st century so that they could make physical, inner, mental, and social growth healthily.”

(One-to-one interview with Teacher C, May 24, 2017)

3. Teacher's expertise as basic premise for parents' positive-active cooperation

Early childhood teachers practicing Waldorf education were realizing that they could obtain positive and active cooperation from parents when they made efforts to establish themselves as Waldorf education professionals. The factor having the strongest impact in early childhood is parents. Teachers need to provide knowledge and information about good parenting to parents, who have the strongest effects on young children, in pursuit of their healthy and sound growth and development (Korea Parent Education Association, 2007). In particular, Waldorf early childhood education institutions need to make effective preparation and efforts related to what Waldorf education is, how daily rhythmic life is led, and how cooperation with parents is realized. This is because parent education based on Waldorf education needs to be preceded by changes in teachers' awareness.

“While I received Waldorf education, I wanted to give up sometimes because it was poorly recognized in society and required a long course and long instruction. But I was willing to receive it because an early childhood teacher was selected in an inevitable course. I can give correct knowledge and information about Waldorf education to parents and cooperate well with them only when I have knowledge about Waldorf education.. This is very important... When I have hard times, I recollect each of the children and find myself smile and cheer up. I made a shout sometimes because children refused to listen to me, but their cute expressions help me release my anger immediately. I think cooperation based on parent education is helpful in daily living for all of teachers, parents, and children.”

(One-to-one interview with Teacher A, May 10, 2017)

“Waldorf teachers need to be open. To be open means to be likable and to be empathic, not to be antipathic. Children are open themselves, but we need to recognize and respect their individuality. In other words, openness based on empathy is needed. The most significant problem in practice is to be open to parents. Waldorf parent education has helped both parents and teachers be open and respect each other to reach an agreement in relation to children and reduced educational confusions.”

(One-to-one interview with Teacher B, May 17, 2017)

(Observation of wet water painting).. “In an art class, they used three natural colors—red, yellow, and blue—to paint freely on wet paper. They did it with a teacher in the morning every Wednesday. The children made a natural brush creatively and had fun. (...) Although

it was not a picture with a theme, I could find them paint red, dilute the color in water, drain water with a towel, and use another color to repeat painting attentively. I found that young children could make even more creative and various expressions than adults through simple repetition. This work is regularly performed through parent education and is very effective. I came to understand children's traits and became receptive to their behaviors. So I've got positive attitude toward them.”

(Interview with Teacher C, May 24, 2017)

It was confirmed that teachers could be understood and supported by parents through parent education about Waldorf education and there was changed awareness that teachers' expertise in educational theory and practice was very important.

4. Chances for reflection on 'true' early childhood teacher

While practicing Waldorf education, early childhood teachers asked such questions as 'What being is a young child?,' 'What being should an early childhood teacher be?,' 'What is true education?,' and 'What being am I?' and experienced inner changes accordingly. This experience suggested that teachers need to make constant self-growth so that they could help children grow and teach them properly on the basis of love of children through Waldorf education.

I can clearly recall the time when I started working at ○○ Nursery with two children and recollect hard times with a smile. After starting to study Waldorf education, small changes occurred in my mind. Although I had to receive training related to Waldorf education all day long until Sunday, the contents of the training began to make small changes in my mind. In seven sessions of the whole life, which involved 'ideas about my life,' 'everything has a good point of time,' 'so is children's development,' 'the course is important than the result of anything,' and 'the course, which is really performed truly, is more excellent than the result, Waldorf theory strongly helped me look back on and plan my life. Now Waldorf ideology of education is still of great help to my personal life and gives power of a will. All of these were realized through Waldorf education. So Waldorf education is very special to me and I want to make more development in order to make my life richer.

(Teacher A, e-mail, May 31, 2017)

While I studied Waldorf education, I spent some time in adapting myself to a new system but it gave me lots of changes over time. At first, I felt awkward about laughing... I was a person of few words and introverted, so I failed to speak to a stranger.. Then, I thought that 'my character has been changed a lot,' finding myself try to smile a lot, be talkative, and speak to a stranger friendly as Waldorf education gave me inner power. It was true that the rhythmic

life with children in Waldorf education gave me lots of changes. My once schoolmates said to me, "I think you've been changed." I can't explain it clearly, but I examined myself. Lighting an inner kindle and seeing it become larger and larger and light up my inner world. It is still not so large, but I want to make efforts to make more growth with Waldorf and make myself shine.

(Teacher B, e-mail, May 31, 2017)

Waldorf education gave me teaching methods and understanding of children; I think the greatest gift is that I communicate with children and listen to their inner stories while performing it. While Waldorf involves lots of activities, including singing, hand play, and Reigen, its essential element is that it deals with life profoundly in human formation and life in terms of anthroposophy. I've felt 'myself', treating the contents for a long time. I came to devise a plan about my dream and I felt embarrassed to know that I was strongly affecting someone's life, whether it was revealed clearly or not. I lack inner power.. I want to continue to study in order to get a better understanding of these children and Cultivate my inner power.

(Teacher C, e-mail, May 31, 2017)

VI. Conclusion

It was confirmed that early childhood teachers saw their awareness of educational activity changed while practicing Waldorf education. While interest in a new theory makes early childhood teachers continue with practical behaviors, love and efforts related to early childhood education may allow them to take interest in a new educational theory and give a chance to change themselves. Still, thorough analysis was not performed to determine what property specific to Waldorf education changed early childhood teachers' awareness.

THE COGNITIVE IN THE SEPARATION TECHNIQUE OF THE CHEMISTRY LABORATORY BY USING THE SAMPLE OF MORINDA CITRIFOLIA FOR APPLICATION IN THE HERBAL SOAPS

Chanyapat Sangsuwon

Department of Chemistry, Faculty of Science and Technology,
Rajabhat Suansunandha University, Bangkok, Thailand
chanyapat.sa@sru.ac.th

ABSTRACT

The column chromatography was the method for the separations techniques. It was useful for isolated the pure compounds. The glass column contained the stationary phase by using silica gel and the eluents were organic solvent as mobile phase. The leaves of *Morinda citrifolia* (*M. citrifolia*) were the plant in this experiment for the isolation of the chemical constituents. *M. citrifolia* is the herbal that has coumarinoids which have bioactivities of anti-inflammation, invigorate the blood, speeds the healing of wounds and strengthens bones, expels parasites and fungus. The undergrad students in the second year separated the components and detected under ultra-violet spectrometer. For the understanding of students, the coumarinoids components from *M. citrifolia* were applied to ingredients of the cosmetics soaps. The herbal soaps have the natural compounds and have the bioactivities of antioxidant anti-ageing and inflammatory. The students have knowledge for investigation the components in *M. citrifolia*. The pre-lab and post-lab questions were tested for the undergraduate students in the second year for the activities to learn in organic chemistry laboratory, understanding, interesting and application of this laboratory.

Keywords: chromatography, cognitive, separation, *Morinda citrifolia*.

INTRODUCTION

Chromatography is a widely used experiment technique for the separation of the mixture of compounds into its individual components. Many kinds of chromatographic techniques for the organic chemistry for the basic of the laboratory the second year graduate students were learn the about Thin layer and column chromatography (TLC). TLC is a very commonly used technique for examined the compounds chemistry or identifying compounds, determining their purity and it only requires small quantities of the compound (~ng) and is much faster as well. It also permits the optimization of the solvent system for a given separation. Column chromatography (CC) is a solid - liquid technique in which the stationary phase is a solid and liquid is mobile phase. CC is one of the most useful methods for the separation and purification of both solids and liquids (Mohrig, 2014). The adsorbent is adsorption of substance and, is based on differential the adsorbents employed in column chromatography as Alumina (Al_2O_3), silica gel cellulose gel (sephadex), RP18(reverse phase) and the general absorbent often are silica No.7734 (60-200 μ m). The mobile phases are often use organic solvents as hexane, methylene chloride, ethyl acetate, acetone, ethanol and methanol (Solomons, 2006).

Morinda citrifolia (MC), commonly known as “noni”, belongs to the Rubiaceae family. This plant is native from South-East Asia. MC is grown wide in Thailand, leaves are cooking for curry, fruits mixed in the salad. Reported, MC is one of the most popular medicinal plants used for against various diseases such as scabies, gonorrhoea, malaria, amoebiasis, haemorrhoids and worms (Wang, 2016, p.13). MC is known for its many anthraquinone constituents (Nguyen, 2017, p.40), quercetin and kaempferol 3-rutinosides, acacetin 7-glucopyranoside and apigenin 5,7- dimethylether 4'-galactoside were isolated from the leaves and flowers of MC. (Cimaga, 1995, p.1301)

Experiments

Plant Material

Noni leaves bought 2 kg. from the local market in Bangkok, Thailand and dried them in the hot oven at 40°C gave the dried noni leaves (200 g) and powdered in an electric blender. The powder was extracted suspended in 1,000 ml

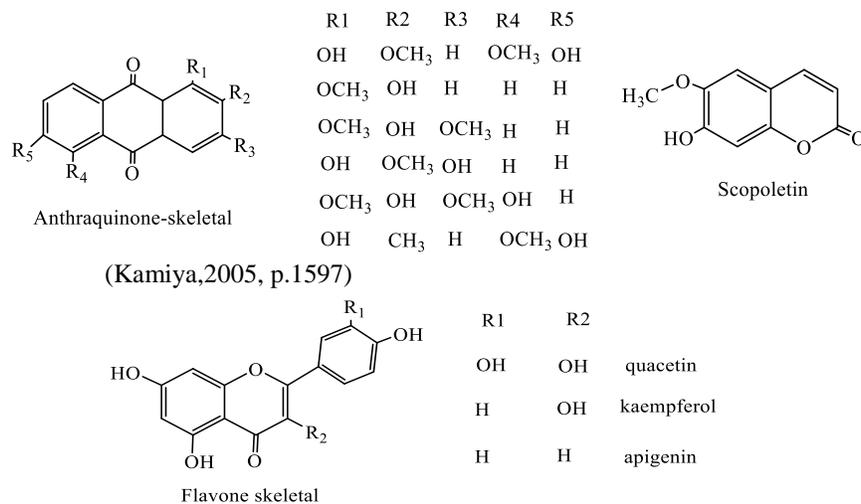

Figure1: The chemical constituents isolated from *Morinda citrifolia*

of ethanol for 72 h at room temperature. The crude ethanol extracted remove the solvent by rotary evaporator and gave 100 g. Partition the crude ethanol extracted with chloroform and water (2:1: 300ml:150ml). Dried crude chloroform 60 g was fractionated by column chromatography used stationary phase by silica gel Merck 7734(60-200 μ m) and ingredient organic solvent with hexane, ethyl acetate and methanol gave 5 fractions (F1-FV). TLC: pre-coated Kieselgel 60 F₂₅₄(Merck). NP/PEG or NEU- spray reagent was detected for flavonoids and coumarinoids compounds, FeCl₃ was detected for phenolic compounds and 10% H₂SO₄-ethanol was universal spray reagent.

Thin-layer chromatography

Each crude extract of ethanol and crude chloroform and fractinaotion of F1-F5 were dissolved in appropriate solvent, applied to silica gel plates (Merck, Darmstadt, Germany), and developed using solvent systems: CHCl₃/MeOH/water (80:9:1, v/v/v). Scopoletin were detected by spraying with NP/PEG reagent (flavornoids, phenolic acids) and with vanillin-sulphuric acid (VS), reagent (saponins and sterols) (Wagner & Bladt, 1996), 10% H₂SO₄/ethanol (universal reagents) (Harborne,1973). The DPPH test, performed directly on TLC plates (0.2% DPPH in MeOH (w/v) used as spray reagent), revealed contributions to the antioxidant activity of different compounds separately (Cuendet, Hostettmann, & Potterat, 1997).

DPPH radical assay

Each extracted of crude ethanol was diluted in concentration of 500, 100,10,1 μ g/ml with methanol.Pipetted 2 ml of each concentration and mixed with 1 ml of 0.5 mM 2,2-diphenyl-1-picrylhydrazyl radical (DPPH) in MeOH. Mixtures were virgously shaken and left for 30 min in the dark. Absorbance was measured at 515 nm using MeOH as blank. 1 ml of 0.5 mM DPPH diluted in 4 ml of MeOH was used as control. Neutralisation of DPPH radical was calculated using the equation: $S(\%) = 100 \times (A_0 - A_s)/A_0$, where A_0 is the absorbance of the control(containing all reagents except the test compound). A_s is the absorbance of the tested sample. The IC₅₀ value represented the concentration of the extract that caused 50% of neutralisation (Cuendet et al., 1997). Results were compared with the activity of L-ascorbic acid. Repeated were crude chloroform and F1-F5.

Apply the antioxidant component in glycerin soap

Glycerin 2 kg bought in the Hong Huat Co.Ltd in Bangkok. Herbal soap 1 piece contained 100 g and had ingredient of glycerin soap 95%, propylene glycol 1.0%, perfume 0.5 %, collagen 1.0%, and anti-oxidant compounds which calculated from the IC₅₀ of percentage of radical scavenging of scopoletin. Set A is Glycerin soap 400 g for four students and boil them on the hot plate at 80-90°C. Set B mixed the collagen 1.0%, propylene glycol 1.0%, and scopoletin. Set B was poured in set A and stirred until the glycerin soap were homogeneous reduce the temperature to 45°C poured perfume 0.5 %. Pour the liquid herbal soaps in the plastic molds. For 2 h, the herbal soaps were set solid in the room temperature.

Pre-lab and Post-lab questions of the knowledge in the separation technique of chromatography

In the table time of organic laboratory were in 9.00-10.00 on Fridays, 20 students are divided into five groups for the laboratory experiments. Only in the separation technique by column chromatography experiments, students must add three days Monday-Wednesday in the time of 15.00-17.00 pm for preparing noni leaves for experiments in 9.00-10.00 on Fridays. The pre-lab questions tested for 30 minutes before the students worked in the laboratory. For three weeks on Fridays that the instructors were summarized after that the post-lab questions were tested in 30 minutes. The pre-lab has 20 questions each question has 3 scores were 1 2 and 3, the best answer is 3 scores. The cognitive of the second years' undergraduate were understood in the separation technique of organic chemistry laboratory showed in Table 1.

Table 1: The score of understanding in the separation technique in the organic chemistry laboratory of second year undergraduate.

The cognitive for the second years undergraduate were understand in the separation technique of organic chemistry laboratory	Amount of undergraduate received the scores					
	Pre-lab			Post-lab		
	1	2	3	1	2	3
1. Students are ordered priority of organic solvent in the experiment.	5	12	3	3	5	12
2. The stationary phase used in this study and known others stationary phase.	5	12	3	3	5	12
3. TLC detected the components in the first step for chromatography and used a microgram sample.	5	12	3	2	6	12
4. TLC showed absorbance in UV 254, 366 nm and used for fractionations	5	12	3	2	6	12
5. TLC showed Rf value of the polarity components.	5	12	3	1	3	16
6. UV 366 absorbed the scopoletin compounds gave a blue light spot as the predominant of this compound.	9	10	1	1	3	16
7. Column chromatography separated the scopoletin compounds for apply ingredient of soap.	9	10	1	3	3	14

RESULTS AND DISCUSSION

Extraction and chromatography

Dried powder of the leaves of *Morinda citrifolia* 2 kg extracted by ethanol gave crude 100 g. The crude ethanol partition with chloroform and water gave dried crude chloroform 60 g. For the purified by column chromatography with gradient of hexane: ethyl acetate and ethyl acetate: methanol was giving F1-F5 fractions which were summarized the percent yield showed in Table 2.

Table 2: The weight and the percent yield of crude fraction and fractionated fraction F1-F5

Fraction	Crude ethanol	Crude chloroform	F1	F2	F3	F4	F5
Weight (g)	100	60	9	13	12	3	19
Percentage from 2kg of fresh leaves	5	3	0.45	0.65	0.6	0.15	0.19

TLC monitoring of the crude fraction and fractionated fraction F1-F5 showed the components in MC plants detected by sprayed reagent. The retention factors (R_f) values is defined as the ratio of the distance of spot moved by solute and the distance the solvent front moved above the base line origin. It can be calculated using the formula $R_f = \text{distance spot moved} / \text{distance solvent moved}$. Spray reagent and UV 255, 366 nm were detected the components compounds were summarized in Table3.

Table 3: The R_f value and the chemical sprayed reagent showed the components on the TLC

	Predominant of chemical constituents	R_f value	UV 255 nm	UV 366 nm
Crude ethanol	red color spot indicates the presence of triterpenes by VS reagent	0.9	X*	X*
Crude chloroform	flavonoids	0	X*	yellow light
Fraction 1	Blue color spot indicates the presence of essential oils by VS reagent	0.95	violet	violet light
Fraction 2	violet color spot indicates the presence of stigmasterol by 10% H ₂ SO ₄ /ethanol reagent	0.78	X*	X*
Fraction 3	Blue light spot indicates the presence of coumarin by NP/PEG reagent	0.7	violet	Blue light
Fraction 4	Blue light spot indicates the presence of scopoletin by NP/PEG reagent	0.6	violet	Blue light
Fraction 5	yellow light spot indicates the presence of scopoletin by NP/PEG reagent	0.1	violet	yellow light

X* = components were not detected.

DPPH radical assay

Due to the purification by column chromatography gave F1-F5 which had the most active anti-oxidant was took to apply ingredient in glycerin soap. F1-F5 were showed the IC₅₀ 220.54, 119.32, 132.67, 46.02 and 128.76 $\mu\text{g/ml}$, respectively. The graph of IC₅₀ showed in Figure 2 and the most anti-oxidant in F2.

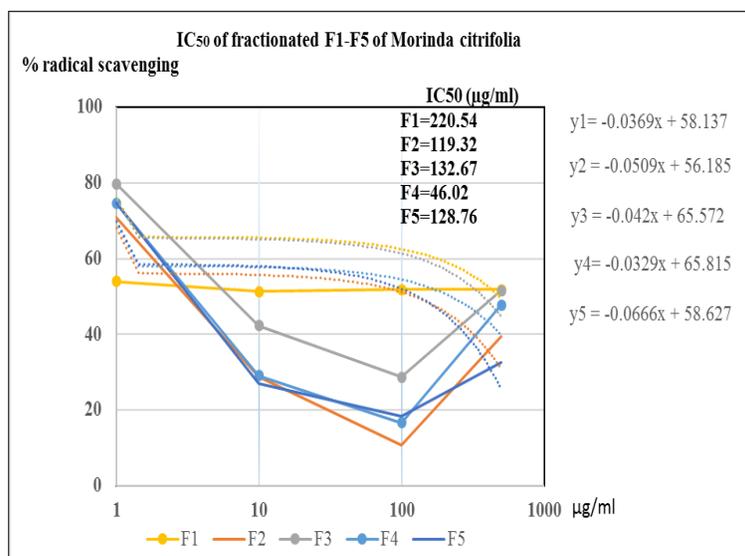

Figure 2: IC₅₀ of F1-F5 of the leaves of *Morinda citrifolia*.

Pre-lab and Post-lab questions of the knowledge in the separation technique of column chromatograph. Pre-lab showed the scores 1, 2 and 3 were 36, 44.7 and 10.7%, respectively but the post-lab showed the scores 1, 2 and 3 were 8.3, 18.4 and 64.8%, respectively. The studied showed the second year students were understood in the cognitive of separation techniques with the scores 3 added from 10.7 to 64.8% which summarized in Table 4.

Table 4: Percentage of scores 1-3 for pre-lab and post-lab questions for the understanding in the concept of chromatography.

cognitive in Table 1	pre-lab questions			post-lab questions		
	percentage of scores (1-3)			percentage of scores (1-3)

9	60	30	10	5	15	80
10	60	30	10	5	15	80
average	36	44.7	10.7	8.3	18.4	64.8

Apply the antioxidant of scopoletin in herbal soap

The anti-oxidant of F4 was 46.02 $\mu\text{g/ml}$, and glycerin soap 400 g were approximated 400 ml. Therefore scopoletin were $46.02 \times 400 = 18,408 \mu\text{g} = 18.408 \text{ mg}$ which was activated for anti-oxidant.

CONCLUSION

MC commonly known as noni, has a long history of widespread use as a food in tropical regions and it is used as a herbal remedy for multiple diseases. It has been found that has antioxidant potential equivalent or similar to that of synthetic antioxidants, have no side effects. Thus the chemicals constituents of MC were studied for the cosmetics. Therefore, MC was separated compounds by extracted, partition and column chromatography which have many steps and used times to experiments. Purification the components of MC were assessed and apply for ingredient herbal soaps. Further, the graduate students used the separation technique for the senior project that were understood.

ABSTRACT

“The biggest problem in education today”, as Pychyl defined procrastination, is one of the most studied topic due to its negative effects on students’ academic paths. Assuming that procrastination is a self-regulation failure of performance in stressful situations and in cognitive load conditions, the construct has been analyzed also from the self-regulated learning perspective referring to the application of models of regulation and self-regulation to learning processes. In order to further establish the role played by the self-regulated learning strategies in predicting academic procrastination, this study intended to analyze to what extent the cognitive components of self-regulated learning, that is, metacognitive self-regulation and critical thinking, explain a statistically significant amount of variance in procrastination after accounting for time management. To this purpose, a sample of 352 students from universities of Southern Italy filled out a battery composed by the Tuckman Procrastination Scale, the Time Management subscale of the Learning and Study Strategies Inventory, the Metacognitive Self-Regulation and Critical Thinking subscales of the Motivated Strategies for Learning Questionnaire. Results showed that the most predictive factor was the difficulty in time management, followed by the difficulty in metacognitive self-regulation.

Keywords: Academic procrastination, Metacognitive self-regulation, Time management, Critical thinking

INTRODUCTION

In 1994 Ferrari opened one of his works on procrastination by reporting a comment of Ellis and Knaus (1977), according to which such a construct would be “one of the least understood minor human miseries affecting about a quarter of the adult population” (Ferrari, 1994, p. 673). This is why a large body of psychological research has been focused on procrastination generally considered as a trait or behavioral disposition to postpone, delay, and thereby avoid performing tasks or making decisions (Milgram & Tenne, 2000, p. 141). The phenomenon, even though there is no agreement in the literature on its exact definition (Corkin, Yu, & Lindt, 2011; Steel, 2010), can be termed as *functional* when it is occasional and useful for obtaining additional information to maximize the likelihood of task success, and as *dysfunctional* when it becomes chronic, i.e., it is not an effective technique for life success and may be a maladaptive personality tendency (Ferrari, 1991a, b, 1994).

More recent studies have examined procrastination with regard to specific life-domains, such as academic, work, everyday routines, health, leisure, family, and social contacts (e.g., Kliengsieck, 2013). Among these domains academic procrastination has received considerable attention in literature because it has been seen as a risk factor influencing students' academic satisfaction and success, as well as their mood and psychological well-being (Moon & Illingworth, 2005; Pychyl, Morin, & Salmon, 2000; Steel, 2007; Wolters, 2003). Associations between procrastination and lower levels of self-efficacy and self-esteem, and higher levels of anxiety, stress, and discomfort (e.g., de Palo, Limone, & Monacis, 2016; de Palo, Monacis, Miceli, Sinatra, & Di Nuovo, 2017; Rabin, Fogel, & Nutter-Upham, 2011; Strunk, Cho, Steele, & Bridges, 2013). Following the assumption that procrastination is a self-regulation failure of performance in stressful situations and in cognitive load conditions (Ferrari, 2001), the construct has been analyzed also from the self-regulated learning perspective referring to the application of models of regulation and self-regulation to issues of learning in classroom contexts. The existing models of self-regulated learning that propose different conceptualizations of the construct (Boekaerts & Niemivirta, 2000; Zimmerman, 2000) are generally based on four shared assumptions: (1) an active, constructive assumption arising from a cognitive approach; (2) a potential for control assumption; (3) a goal, criterion, or standard assumption (Miller, Galanter, & Pribram, 1960); (4) a mediating assumption according to which

self-regulatory activities mediate between personal and contextual characteristics and actual achievement or performance (Pintrich, 2000).

It follows from these assumptions that self-regulated learning could be defined as an “active, constructive process whereby learners set goals for their learning and then attempt to monitor, regulate, and control their cognition, motivation, and behavior, guided and constrained by their goals and the contextual features in the environment” (Pintrich, 2000, p. 453). Accordingly, learning strategies, that is, mental processes recruited by students to learn new concepts, are of great importance for self-regulated learning and procrastination. These strategies are frequently operationalized in terms of organization (if a methodical approach has been adopted during the learning phase), of deep vs. surface processing (whether new knowledge is merely rehearsed and memorized or carefully evaluated and integrated) (Entwistle & Ramsden, 1983), or of usage of various cognitive (rehearsal and elaboration) and metacognitive (planning and regulating) strategies (Pintrich, Smith, Garcia, & McKeachie, 1993).

Within the self-regulated learning framework, previous research highlighted how the cognitive factors of self-regulation are centrally important to the explanation of procrastination, since academic procrastination was found to be associated with a reduced use of cognitive and metacognitive self-regulated learning strategies (Corkin, Shirley, & Lindt, 2011; Howell & Watson, 2007; Wolters, 2003).

Among self-regulated learning strategies, time management is a further factor that determines procrastination. Its role has been highlighted by some empirical studies on the individual differences in self-regulation (Mannetti *et al.*, 2009; Phillips, Jory, & Mogford, 2007; Pierro, Giacomantonio, Pica, Kruglanski, & Higgins, 2011).

To further establish the role played by these self-regulated learning strategies in predicting academic procrastination, this study aimed at examining whether and to what extent the cognitive components of self-regulated learning, that is, metacognitive self-regulation and critical thinking, explain a statistically significant amount of variance in procrastination after accounting for time management.

METHOD

Participants and procedure

The sample size consisted of 352 undergraduates at the Universities of Southern Italy (134 men and 218 females) who participated in the study on a voluntary basis. Their mean age was 21.05 years ($SD = 2.35$).

Data collection took place from January to March 2017. The respondents were voluntarily invited to participate in the research by completing individually a battery of anonymous self report questionnaires in approximately 20 min during an ordinary 50-min classroom lesson. Respondents provided written informed consent. The study was conducted in accordance with the ethical principles of the Declaration of Helsinki for conducting research with human participants. The instruments were back-translated from English into Italian.

Instruments

The *Tuckman Procrastination Scale* (TPS; Tuckman, 1991) is a 16-item instrument that assesses the tendencies to delay task initiation or completion, as well as toward poor time management in the completion of tasks. Items are rated on a 7-point Likert scale (from 1 = *strongly disagree* to 7 = *strongly agree*). Sample items are: “I postpone starting in on things I don’t like to do”, “I am an incurable time waster”. A total score is obtained by adding the responses from all items and higher scores indicate greater procrastination. The internal consistency of the scale was good (Cronbach’s $\alpha = .82$).

The *Time Management* (TM) subscale of the *Learning and Study Strategies Inventory* (LASSI - II ed.; Weinstein, Palmer, Shulte, 2002) was used to measure the degree to which students apply time management principles to academic situations. The subscale is composed of 8 items rated in a 5-point Likert scale (from 1 = *at all typical of me* to 5 = *Very much typical of me*). Sample item is “I put off studying more than I should”. Low scores indicate difficulty in the use of time management techniques. The internal consistency was found to be satisfactory (Cronbach’s $\alpha = .65$).

The *Metacognitive Self-Regulation* (MSR) and *Critical Thinking* (CT) subscales of the *Motivated Strategies for Learning Questionnaire* (MSLQ; Pintrich, Smith, Garcia, & McKeachie, 1993) assess strategies that students use to control and regulate their own cognition and to apply previous knowledge to new situations or make critical evaluations of ideas. The MSR is composed of 12 items and the CT of 5 items rated on a 5-point Likert scale (from 1 = *not at all true of me* to 5 = *very true of me*). Sample items are “When reading for this course, I make up questions to help focus my reading” for MSR and “I often find myself questioning things I hear or read in this course to decide if I find them convincing” for CT. The total score for each scale was obtained by averaging the responses to the items. The internal consistency of the scales were acceptable to good (Cronbach’s $\alpha = .63$ for CT and $.75$ for MSR).

RESULTS

Preliminary data analyses included screening for missing data and outliers, as well as for assessing for normality. The univariate normality of the scores was checked through skewness and kurtosis values. The univariate outliers were identified using the graphic approach (inspection of Boxplot), whereas the Mahalanobis Distance analysis and the critical value based on the chi-square distribution values were used to identify multivariate outliers.

Descriptive statistics (Maximum, Minimum, Mean, Standard deviation) for the total sample and for gender groups are displayed in Table 1. Zero-order correlation coefficients are presented in Table 2. Findings demonstrated that procrastination was negatively associated with time management, metacognitive self-regulation and critical thinking, although the correlation with the last variable was weaker than the correlations with the other two variables. Moreover, the positive correlation of time management with metacognitive self-regulation was found to be stronger than the correlation with critical thinking. Finally, metacognitive self-regulation was positively associated with critical thinking.

Table 1 – Descriptive statistics (minimum, maximum, mean, standard deviation)

	Total sample (N = 352)		Males (N = 134)		Females (N = 218)	
	Min-Max	Mean (SD)	Min-Max	Mean (SD)	Min-Max	Mean (SD)
Procrastination	16 – 63	33.10 (8.87)	16 – 53	33.28 (8.47)	16 – 63	32.98 (9.13)
Time management	15 – 40	29.74 (3.93)	15 – 40	28.53 (4.03)	15 – 38	30.52 (3.67)
Metacognitive self-regulation	1.58 – 4.92	3.81 (0.54)	1.58 – 4.92	3.69 (0.55)	1.67 – 4.92	3.89 (0.52)
Critical thinking	1.20 – 5.00	3.42 (0.63)	1.80 – 5.00	3.45 (0.65)	1.20 – 5.00	3.40 (0.62)

Table 2 – Bivariate correlations

	Time management	Metacognitive self-regulation	Critical thinking
Metacognitive self-regulation	.556**	-	
Critical thinking	.234**	.590**	-
Procrastination	-.586**	-.516**	-.298**

** $p < 0.01$

A forward stepwise regression was used in order to investigate whether and to what extent learning strategies would have determined lower procrastinatory tendencies. The variables were entered in the regression model on the basis of the above mentioned correlations. Thus, time management was entered in Step 1, metacognitive self-regulation in Step 2, and critical thinking in Step 3. The final model (Model 2) explained the 39.2% of the variance in procrastination (R^2 corrected = .392) and R^2 change was significant at each step (R^2 change = .052, $p < .001$). Both time management and metacognitive self-regulation negatively predicted procrastination. Critical thinking was removed from the last model as it became nonsignificant. The standardized coefficients are shown in Table 3.

Table 3 – Stepwise regression

Model		B	t	Sig.
1	Time management	-.586	-13.887	.000
2	Time management	-.433	-8.880	.000
	Metacognitive self-regulation	-.275	-5.639	.000

Dependent variable: procrastination

DISCUSSION

This research aimed at analysing whether and to what extent self-regulated learning strategies referring to metacognitive self-regulation, to critical thinking and to time management predicted the tendency of university students to procrastinate. The preliminary data emerging from correlations showed that all the learning strategies were negatively associated with procrastination and that, of the three strategies, critical thinking had the lowest correlation coefficient. In other words, the continued postponing of academic tasks was strongly associated with an inability to organize and

plan studies, to control and regulate cognitive strategies, and to critically elaborate information and new knowledge. Associations of this type were partially confirmed by the regression models which highlighted how the primary determining factor is difficulty in time management, while the second most important factor is metacognitive self-regulation. The results that emerged were in line with the assumption that the construct of procrastination is closely connected to an individual's predisposition to fail to meet deadlines in a given period of time (Díaz-Morales & Ferrari, 2015; Ferrari & Pychyl, 2000; Vodanovich & Seib, 1997), and with previous research showing that chronic procrastinators underestimate the time needed to complete a task (McCown, Johnson, & Petzel, 1987), devote less time to seeking out necessary information (Ferrari & Dovidio, 2000), and begin academic tasks at the last minute (Pychyl, Morin, & Salmon, 2000).

The role of metacognitive self-regulation in negatively predicting the tendency to postpone tasks provides further empirical evidence of the fact that procrastination is caused not only by problems with time management but also by complex series of factors of a cognitive-behavioral nature (Díaz-Morales & Ferrari, 2015). The ability of the student to establish and organize objectives to monitor the actual process of understanding and to adapt his learning strategies to the task would significantly reduce the probability of his pointlessly postponing academic tasks.

Finally, critical thinking did not emerge as a significant predictor of procrastination, although there was a correlation. The nature of this association needs to be further investigated in order to ascertain to what extent this learning strategy, which involves specific processes of cognitive elaboration of information, can help to explain the phenomenon of procrastination in the sense of a failure of self-regulation.

The results of this research open up interesting possibilities for the planning and implementation of psychological and educational measures aimed at reducing procrastination in university students. Various studies in this field have for example demonstrated that training in the principles and techniques of time management contribute significantly to decreasing the tendency to postpone academic tasks. Similarly, interventions designed to develop self-regulation skills that enable the student to exert metacognitive control of the learning process and to effectively activate the personal resources needed to complete the tasks, might prevent the phenomenon of procrastination.

Some limitations are related to the use of self-report measures and to the unequal distribution of gender.

**THE COMMON EUROPEAN FRAMEWORK AND THE EUROPEAN LANGUAGE
PORTFOLIO: INVOLVING LEARNERS' JUDGMENTS IN THE ASSESSMENT PROCESS**

Sedat KORKMAZ

Uludağ University
Turkey
sedatkorkmaz@uludag.edu.tr

ABSTRACT

Self-assessment as an alternative technique for traditional assessment has come into prominence in order to provide additional insight into foreign language learning and teaching due to the European Language Portfolio which uses the Common European Framework as a criterion for the language competence. The European Language Portfolio is a document which puts the standards for this aspect of education and files individual information in terms of learners' language experience and knowledge. Accordingly, this study aims to scrutinize to what extent elementary level learners' self-assessment concerning listening/speaking comprehension skills carried out within the scope of Common European Framework of Reference for Languages is congruent with their listening/speaking actual performance. Therefore, a prep school was selected as the scope of research, since it has started to adapt the English language teaching curriculum, syllabuses, instruction methods and assessment in line with the Common European Framework for the teaching of English as a foreign language. Fifty preparatory school students who enrolled at Elementary English preparatory class at the School of Foreign Languages in Uludag University were administered The Self-Assessment Checklist of Common European Language Portfolio with 24 "can-do" statements related to listening and speaking skills. The quantitative data obtained from the checklist with a Cronbach's alpha score of $\alpha = .87$ were analyzed through descriptive statistics such as mean and frequency results and the Pearson's correlation coefficient was used to find out whether there was a significant correlation between learners' self-assessment of their listening and speaking skills and their academic success in these skills. The results revealed that there is a strong positive relationship between the participants' listening proficiency scores and their speaking proficiency scores and also there is a strong positive relationship between participants' listening proficiency scores and spoken interaction component. The findings were discussed via the interview results obtained from the teacher interview to triangulate the result of the quantitative data.

Key Words: European Language Portfolio, Common European Framework, Listening & Speaking Proficiency, authentic assessment

INTRODUCTION

Knowing at least one foreign language has become a major factor today due to globalization which postulates the interaction among a variety of cultures and societies. Foreign language policies need to be revised in such a way that foreign language learners communicate effectively and appropriately. Because of this fact, there appears a need for having a common basis so as to describe and discuss stages of language development and the skills needed to reach different levels of language proficiency. To that end, the Council of Europe has presented The Common European Framework Reference for Languages: Learning, Teaching, and Assessment (CEFR). The CEFR describes language proficiency in reading, writing, speaking, and listening on a 6-level scale, clustered in three bands: A1–A2 (Basic User), B1–B2 (Independent User), and C1–C2 (Proficient User).

The recent publication of the CEFR and the increasingly widespread espousal of its guide, the European Language Portfolio (ELP) resume the challenge to evolve a culture of assessment that both promotes and takes full account of learner self-assessment (Little, 2005).

The potential contribution of the CEFR and ELP to the development of self assessment in second and foreign language learning must be appreciated (Council of Europe, 2001). The ELP is in favor of reflective learning in

which goal setting and self-assessment perform an important role. However, since self-assessment in the ELP is based on the common reference levels of the CEFR, self-assessment, teacher assessment and external assessment can all adjust themselves to the same behavioral descriptions. Up to now, there is not any published affirmation that test users will receive self-assessment in high-stakes frameworks; but then, there is some experimental affirmation to propose that when learners are involved in self-assessment, it can yield precise results (Ross, 1998). Among them, the CEFR and the ELP conceivably might add to the development of an assessment culture in which self-assessment can facilitate to take the learning process into a closer and more productive association to tests and examinations than it has been traditional case. (Little, 2005)

THE COMMON EUROPEAN FRAMEWORK OF REFERENCE FOR LANGUAGES AND THE EUROPEAN LANGUAGE PORTFOLIO

In an examination of procedures for linking language tests, North (2000a: 566) defines ‘social moderation’ as ‘the process whereby a group of raters establish a common understanding of a set of standards by discussion and training’. One possible role of the CEFR is to help this process. At its center, there are scales that describe second language (L2) proficiency in three wide bands (in ascending order: A, B, C), each of these bands is subdivided to generate six levels (A1, A2; B1, B2; C1, C2). A global scale defines overall communicative proficiency at each level (Council of Europe, 2001: 24); overall proficiency is then resumed in relation to five communicative skills – Listening, Reading, Spoken Interaction, Spoken Production, and Writing (pp. 26–27); and, finally, these activity-based summaries are enlarged in 34 illustrative scales.

The CEFR does not pinpoint entirely on the behavioral dimension of L2 proficiency. It also provides a scaled summary of what it calls ‘qualitative aspects of spoken language use’ – range, accuracy, fluency, interaction, and coherence (Council of Europe, 2001: 28–29) and scaled descriptions of general linguistic range, vocabulary range, vocabulary control, grammatical accuracy, phonological control, orthographic control, sociolinguistic appropriateness, flexibility, turn-taking, thematic development, coherence and cohesion, spoken fluency, and propositional precision (Council of Europe, 2001: 110–29).

The CEFR scales do not allege to model progression in second language acquisition, rather, they present a hierarchy of communicative tasks whose successful performance relies on fundamental linguistic competence. To illustrate, If one can perform the spoken interaction tasks specified for A2, it follows that one can also perform the spoken interaction tasks specified for A1. How well one can perform the A2 tasks will depend on the learner’s linguistic competence. Key features of linguistic competence are seized in the scales of vocabulary range and control, grammatical accuracy and phonological control. If the learner has not achieved A1 in these features, it is unlikely that he or she will advance far towards mastering the spoken interaction tasks specified for A2.

In addition to supplying a means of associating language tests, the CEFR is proposed as a device for devising both L2 curricula and individual learning programmes. This demonstrates the Council of Europe’s sustained dedication to learner autonomy as a prerequisite for efficient lifelong learning (Holec, 1979). Within the principles of Council of Europe, learners too should be drawn into the procedures of ‘social moderation’, and through its practical means, the European Language Portfolio (ELP) can achieve this goal. Elaborated in line with the CEFR (Council for Cultural Cooperation, 1997; Little, 2002), the ELP has three compulsory components:

- a language passport, which resumes the owner’s linguistic identity by succinctly recording what is learnt in L2, achieved formal language qualifications, important L2 usage experience, and the owner’s assessment of his or her current proficiency in the L2;
- a language biography, which is employed to establish language learning targets, supervise advancement, organize the development of language learning skills, and record and reflect on specially crucial language learning and intercultural experiences;
- a dossier, which incorporates a collection of work which best represents the owner’s L2 capacities and achievement according to his or her own judgment.

The ELP serves supplementary pedagogical and reporting functions. On one hand it reinforces the progress of learner autonomy through goal setting and self-assessment; on the other hand the individual ELP owner is liable for keeping an up-to-date self-report, accordingly self-assessment, of his or her own L2 learning achievements and intercultural experience. Both functions are backed up by the common reference levels of the CEFR. (Council of Europe, 2001)

The ELP postulates two types of self-assessment: summary and summative in the language passport, of which the so-called self-assessment grid (Council of Europe, 2001: 26–27) is a chief component in models devised for

adults and adolescents; formative in the language biography, which employs goal-setting and self-assessment checklists obtained from the CEFR's illustrative scales, and in the dossier, which holds the language samples (perhaps in audio and video as well as in writing) that confirm the determinations recorded in the biography.

PILOT PROJECTS INVOLVING THE EUROPEAN LANGUAGE PORTFOLIO (ELP)

Little and Perclova (2001) reports that in the pilot projects carried out in Europe in 1998-2000, different versions of the ELP were piloted in the fifteen member states of the Council of Europe. The pilot projects were carried out at every level; primary, lower secondary, upper secondary, vocational, university and adult.

Generally speaking, positive feedback was received mostly from the pilot projects. According to the official report (Little, 2002b), the ELP provided the teachers and learners the opportunity to reflect on the reasons for language learning, the language learning process, and the criteria by which learning might be assessed. To illustrate, sixty-eight percent of learners stated that the time they spent for the ELP was time "well spent". Seventy percent of the teachers believed that the ELP was a beneficial tool for learners, and 78% of the teachers considered that it was a useful tool for teachers. In addition, the learners were motivated with the idea of self-assessment in the ELP according to the common reference levels of the CEFR. Seventy percent of the learners stated that the ELP helped them to assess their own language proficiency, and 70% of the learners pointed out that they found it useful to compare their teacher's assessment with their own. Sixty-two percent of the teachers stated that their learners were able to assess their own language proficiency (Little, 2002a).

Virtually every project involving the ELP yielded positive results. Little (2003) states that based on the reports of the pilot projects in Europe such as in the Czech Republic, the Finnish ELP pilot project, the feedback for the utilization of the ELP was generally positive. The learners found it stimulating to be involved in such a project, young learners found the ELP enjoyable, and so they were motivated. Teachers also reported positive feelings towards the ELP as well although the ELP demanded a lot from them (Little, 2003). One teacher from the Czech Republic stated that ELP helped them to make their job easier: "I was helped by the portfolio's clear statement about the aims of teaching and the transparency of teaching and learning results. The descriptors encouraged me to reflect more deeply on my objectives as a teacher" (as cited in Little & Perclova, 2001; p. 17).

The ELP was also piloted at universities apart from elementary or secondary level schools. One of the pilot projects took place in an Italian university. As Evangelisti reports it was employed in the University of Calabria between 1998 and 2001. Bilotto (2006) reports that the project was carried out with students taking a combination of two or three of the foreign languages taught in the unit of the Faculty of Economics. The aim of the project was to enquire what kind of support the students and teachers need in order to work with the ELP, to assess the effect of the ELP on the language learning process at university context, and to find out whether the employment of the ELP in learning experience is making learners more aware of themselves as language learners in terms of objectives, strategies, strengths and needs. The data was gathered through questionnaires, structured student and teacher interviews and through assessment to ascertain the utilization of the ELP in classifying skills required for assessment and into its effectiveness as a pedagogical instrument towards learner autonomy (Bilotto, 2006). The number of the participants was not over 100 initially, but later it increased to 1000.

According to the result of the pilot project at Calabria University, pedagogically, the students learnt how to use their linguistic knowledge, improve their self-assessment skills, set their objectives, and obtain insight into their own strategies. As, the students' self-awareness increased, they reacted positively towards the ELP. However, the data revealed that the students needed guidance with regard to developing their self-assessment skills since it was clear that they were affected by their previous learning experience and expectations. Moreover, it was obvious that it was difficult to deal with such a high number of students concerning guidance for self-assessment (Evangelisti, 2002).

To sum up, the ELP can be employed as an instrument to motivate learners to make them aware of their own language learning process with the self-assessment and reflection components of the ELP. Thus, the ELP can stimulate the learners to develop their autonomy and lifelong learning.

ELP IN TURKEY

The ELP is a newly introduced learning tool in Turkey. The validation of the ELP Turkish model was authorized in 2003 by the Validation Committee of ELP (Demirel, 2005). An ELP project launched in Turkey in 2001 with the chief role of the Education of Ministry. Demirel (2005) reports that the project was planned first to be piloted in the private schools, Anatolian High Schools and High School with one year English teaching program, later the project was going to be extended to other schools. Initially, the ELP was piloted in 20 state schools and 4

private schools in Ankara and Antalya. In 2004, the piloted cities augmented to 30. It was intended to conduct pilot projects of the ELP gradually in an expanded way in whole Turkey in 2005 and later. Moreover, Mirici reports that learner autonomy and ELP were piloted in Turkey in 2002, and seminars were organized for the teachers (Mirici, 2008). It can be said that both ELP and the term learner autonomy are new concepts in the Turkish Education system.

The ELP projects were launched in secondary schools. Demirel (2005) stated that the target group for Turkish ELP Project was chosen from secondary schools. The learners were not complete beginners. They had sufficient knowledge of language to perceive and adapt to the philosophy of the ELP. He adds that a survey was carried out to the teachers and learners by the Ministry of Education, and there was a consensus that the ELP led to positive contribution to the language learning process, and it also motivated most of the students so that most of them got some degree of learner autonomy (Demirel, 2005).

In addition to the pilot projects, the ELP is employed by a language school and some private language courses. TÖMER is the first language school in adult education which utilizes the ELP in Turkey. The use of (Ankara University) TÖMER, Turkish and Foreign Languages Research and Application Centre, to the European Council for the employment of ELP was permitted by the European Validity Committee in 2004. Therefore, TÖMER has become the first language school that provides its students with language passports in the field of teaching adults foreign languages. With the enterprise of TÖMER and the Ministry of Education, the ELP was submitted to the Council of Europe and it has been approved.

In university context, no pilot projects have been conducted but one study related to the ELP was carried out. The study took place in preparatory school at Mugla University and it took for six months and carried out by Glover, Mirici, and Aksu (2005). Fifty students and six teachers collaborated with the ELP. The findings of the study revealed that the teachers and students yielded positive attitudes towards the ELP. The field notes indicated that the students favored the ELP, and most students improved their autonomy through ELP. In addition, the instructors reported that the motivation of the students who employed the ELP was higher than the ones who did not employ it. Another result stated by the teachers was that students' attendance to classes increased compared with the previous years (Glover et al., 2005).

All in all, both the term "learner autonomy" and the European Language Portfolio have recently been introduced to educational contexts in Turkey. By the start of the curriculum renewal projects of the Ministry of Education to be in harmony with the education system in the European Union, the Turkish education system is taking a further step from the teacher-centered classes to the learner-centered classes.

Reaching the proficiency level determined by CEFR becomes the main aim of most language teaching programs. It is crucial to measure learners' proficiency in speaking and listening from the perspectives of both the learners and the instructors. Therefore, this study aims to investigate to what extent elementary level learners' self-assessment regarding listening/speaking comprehension skills conducted within the scope of Common European Framework of Reference for Languages is congruent with their listening/speaking actual performance. The study aimed to investigate the following research questions:

- RQ1. How do learners assess themselves with regard to their listening and speaking skills within the scope of Common European Language Portfolio?
- RQ2. To what extent is learners' self-assessment of their speaking and listening skills congruent with their proficiency scores?

METHOD

The study followed mainly quantitative method in order to answer the above research questions. In addition, qualitative method via a semi-structured interview was also included to triangulate the results emerged from the quantitative part.

Setting

In the first year, there are three kinds of foreign language education classes for the students in different programs in the preparatory department. The first type optional preparatory classes for the students who are enrolled in Faculty of Engineering and Architecture, Faculty of Agriculture, etc., the second type is compulsory preparatory classes (%30 and above) for the students who are enrolled in Faculty of Medicine, Industrial Engineering Program, Faculty of Veterinary Medicine, etc., the third class type is again compulsory preparatory classes (%30 and below) for the students who are enrolled in the programs of Textile Engineering, Environmental Engineering, Food Engineering, etc. At the end of the spring semester, the students who could obtain average

grade (70) from the quizzes and two mid-term exams are entitled to enter the Proficiency Exam. The ones who pass the Proficiency Exam become eligible to proceed with their undergraduate programs.

Participants

The participants in this study consisted of 50 elementary level prep school students enrolled in Uludağ University, School of Foreign Languages. Most of them have been learning English for more than eight years. Since they come from different types of high schools, their English level varies. Therefore, the classes might be referred to as mixed-ability classes.

Firstly, the demographic feature of participants based on their gender was investigated through descriptive statistics. Regarding gender, there were 50 participants 37 of whom were female (74.0%) and 13 of whom were male (26.0%) in this study. The first Elementary level class consists of 26 students 17 of whom were female (65.4%) and 9 of whom were male (34.6%) whereas the second Elementary class consists of 24 students 20 of whom were female (83.3%) and 4 of whom were male (16.7%).

Data Collection Instruments

In this study, The Self-Assessment Checklist of Common European Language Portfolio was used for prep school language learners' self-assessing their speaking and listening skills within the scope of Common European Language Portfolio (See Appendix A). CEFRL is comprised of two skills; namely, listening, and speaking. Speaking has two sub-components: spoken interaction, spoken production. This scale consists of 24 items, of which 6 items (items 1, 2, 3, 4, 5, 6) are related to listening skill, 18 items (items 7, 8, 9, 10, 11, 12, 13, 14, 15, 16, 17, and 18 to spoken introduction; items 19, 20, 21, 22, 23, 24 to spoken production) to speaking skill. Due to the participants' low level of English, the Turkish version of the aforementioned survey adapted from Ataç (2008) was administered to the participants (See Appendix B). They were asked to respond on a three-point Likert scale ranging from 3 (Quite good) to 1 (Hardly ever). Cronbach's alpha coefficient of .90 was reported for The Self-Assessment Checklist of Common European Language Portfolio (1986) and the reliability of the adapted scale revealed a Cronbach's alpha score of $\alpha = .87$ over 24 items by the researcher. This score indicated high reliability for the survey to be used in the study. Moreover, to measure the learners' listening and speaking proficiency regarding the criteria of reaching the A2 level based on European Language Portfolio (ELP), at the end of the 2016-17 Fall Term, speaking and listening final exam results of the participants were used with regard to the target subjects in the course book "Cambridge English Skills: Real Listening & Speaking".

Data Analysis

The data obtained from the quantitative data through the scale were analyzed via the SPSS program version 20 by using descriptive statistics to answer the first research question regarding how learners assess themselves with regard to their speaking and listening skills within the scope of Common European Language Portfolio. Moreover, Pearson's correlation coefficient was used to find out whether there was a significant correlation between learners' self-assessment of their listening and speaking skills and their academic success from these skills. Finally, content analysis was used to analyze the answers of the interview.

FINDINGS AND DISCUSSION

RQ1: How do learners assess themselves with regard to their speaking and listening skills within the scope of Common European Language Portfolio?

Table 1 Descriptive Statistics of the mostly acquired five listening/speaking skills items of Participants

	N	\bar{X}	SD
S2 Identifying the discussion topic when spoken slowly	50	2.84	.422
S16 Being able to say one's likes and dislikes	50	2.84	.422
S1 Being able to understand what is said if it is repeated	50	2.82	.388
S15 Being able to make and accept apologies	50	2.80	.452
S19 Being able to describe oneself, one's family and others	50	2.78	.418

The results presented in table 1 reveal that the first two most acquired language skills with the highest equal mean scores ($M = 2.84$) were about listening skill (item 2), which means that majority of the participants (86%) in this study generally identify the topic of discussion around themselves when people speak slowly and clearly and were about spoken interaction component (item 16) which means that 86% of the participants can say what they like and dislike. The third mostly acquired language skill ($M = 2.82$) was related to listening skill (item 1). 82% of the participants can understand what is said clearly and directly to themselves in simple everyday conversation if the speaker can take the trouble of repeating what he/she said slowly. The explanations of the teacher can shed light on the reasons for the above findings. The teacher of the aforementioned classes state that:

“I give importance to pre-listening activities to enable my students to understand what they are listening to more easily. Moreover, I prefer skipping uninteresting topics of conversation. Instead, I sometimes bring different topics to practice the same target structure. Therefore, they can comprehend easily what is said.”

The results also indicated that the fourth mostly acquired language skill ($M = 2.80$) was about spoken interaction (item 15) that 82% of the participants can make and accept apologies. Lastly, the fifth mostly acquired language skill was ($M = 2.78$) about spoken production (item 19), which means that 78% of the participants in this study can describe themselves, their family and other people. This shows that these participants were able to improve their listening and speaking skills pretty good relating the above-mentioned items.

With regard to the least acquired five listening/speaking language skills, descriptive statistics were used and table 2 indicates the items with the lowest mean scores.

Table 2 Descriptive Statistics of the least acquired five target language skill items of Participants

	N	\bar{X}	SD
S17 Discussing with other people what to do, where to go	50	1.98	.589
S12 Asking for or giving directions by referring to a map or plan	50	2.08	.634
S18 Asking and answering questions about what a person do at work and in his/her free time	50	2.28	.536
S7 Making simple transactions in shops, post offices, or banks	50	2.34	.519
S21 Giving short, basic descriptions of events	50	2.42	.575

The results shown in table 2 indicated that the first least acquired language skill was about spoken interaction component which means that 66% of the participants can't discuss with other people what to do, where to go, and make arrangements to meet (S17; $M = 1.98$). The second least acquired language skill with the mean score ($M = 2.08$) was about again speaking skill (item 12), which means that 60% of the participants in this study can't ask for and give directions by referring to a map or plan. The third least acquired language skill ($M = 2.28$) was concerning spoken interaction (item 18), which means that 64% of the participants can't ask and answer questions about what they do at work and in their free time. Moreover, it can be inferred from the findings that the fourth least acquired skill ($M = 2.34$) was about spoken interaction (item 7) in that 62% of the participants can't make simple transactions in shops, post offices or banks. With regard to the reasons for the most and the least managed language use, the teacher stated the below reasons:

“When the topics are about the students themselves, their own lives and experiences, they seem to speak more. On the other hand when they need to practice functional expressions related to other people, they have difficulty in speaking.”

Finally, the fifth least acquired skill ($M = 2.42$) was regarding spoken production (item 21) which means that 50% of the participants can't give short, basic description of events. The teacher's statements are also in line with this result. She says:

“Students could produce spoken language at the sentence level; however, they seem to fail in the organization of their speech beyond the sentence level.”

Therefore, the results revealed that the participants are aware of their own learning and do self-assessment successfully.

RQ2: To what extent is learners' self –assessment of their speaking and listening skills congruent with their proficiency scores?

Table 3 shows the correlation values of the participants' proficiency scores and their listening and speaking skills.

Table 3 Correlation of proficiency scores, listening and speaking skills components (N = 50)

		Listening Score	Speaking Score	Listening	Spoken Interaction	Spoken Production
Listening Score	Pearson's r P (2 tailed)	1	.814** .000	.195 .175	.458** .001	.334* .018
Speaking Score	Pearson's r P (2 tailed)	.814** .000	1	.106 .466	.231 .106	.165 .253
Listening	Pearson's r P (2 tailed)	.195 .175	.106 .466	1	.422** .002	.212 .139
Spoken Interaction	Pearson's r P (2 tailed)	.458** .001				
Spoken Production	Pearson's r P (2 tailed)	.334* .018	.165 .253	.212 .139	.530** .000	1

** . Correlation is significant at the 0.01 level (2-tailed)

* . Correlation is significant at the 0.05 level (2-tailed)

Table 3 clearly demonstrates that there is a strong positive relationship between the participants' listening proficiency score and their speaking proficiency score, $r(50) = .814, p < .001$. This value shows that as students get higher scores from their listening proficiency exam, they tend to get higher scores from their speaking proficiency exam too. Another considerable finding is that there is a strong positive relationship between participants' listening proficiency score and spoken interaction component, $r(50) = .458, p = .001$. It can be concluded from this finding that as participants get higher scores from their listening proficiency exam, they tend to interact with others more in the target language. Furthermore, there is also a positive but not strong relationship between participants' listening proficiency score and spoken production component, $r(50) = .334, p = .018$. It can be inferred from this finding that the scores they get from their listening proficiency exam encourages them to speak a bit more in the target language.

CONCLUSION

The positive correlation between the participants' listening proficiency score and their speaking proficiency score indicated that these two variables are interacted, and mutually developed. Thus, positive and significant effects of speaking scores can be considered together with students' listening scores. Furthermore, it was determined that students' English listening and speaking skills and proficiencies did not differ in terms of gender and the high school type variables.

When the CEFR and the ELP are fitted to a particular realm of language learning, they open up the prospect of developing an assessment culture in which language tests are much more closely related to teaching and learning than has usually been the case. The ELP plays a crucial role in such a culture since it appoints a key role to self-assessment and the development of the individual language learner's reflective abilities. By developing learners' self-assessment skills, they obtain 'insider' admission to the processes of 'social moderation' which form a basis for the CEFR's common reference levels and to the interaction between curriculum and assessment that is underlying to any useful educational programme (North 2000b).

There aren't many studies about students' assessing their own listening and speaking proficiency of English based on Common European Framework Reference studied in the universities in Turkey. Notwithstanding this limitation, the findings in this study bear crucial implications for useful practices in teaching learning policies of listening and speaking skills. It is vital that language learners be aware of and can assess their own learning process. The results in this study indicate that the students seem to be able to identify how to assess themselves so efficiently. To put it differently, they have the capacity for self-assessment in monitoring their own language learning process.

THE COMPLETE OF SENIOR PROJECT BY STUDIED THE CHEMICAL CONSTITUENTS AND BIOACTIVITIES TEST OF LEPISANTHES FRUITCOSA (ROXB.) LEENH

Chanyapat SANGSUWON
Department of Chemistry, Faculty of Science and Technolog,
Rajabhat Suansunandha University
Bangkok, Thailand
chanyapat.sa@ssru.ac.th

ABSTRACT

The senior project of the fourth-year undergraduate students are important that they used the total knowledge of chemistry from course syllabus. The students were studied the natural products by using the technique of extraction, isolation by chromatography and using the spectroscopy for proved the structures of compounds. The goal of the senior project were apply the herbs for cosmetic, phamacognocny which the bioactivities were tested by antioxidant and anti-acetylcholinesterase. *Lepisanthes fruticosa* (Roxb.) Leenh (*L. fruticose*) is studied, it is a Sapindaseae family, that is used as medicinal plants, antipyretic, antidiarrheal. The previous study for cosmetic tests, *L. frutico* isolated the glycosphingolipid which using for anti-ageing and phenolic compounds for anti-tyrosinas. The phytochemical study and pharmacological activity of this plant are scarcely found. The researched includes the extraction of dried leaves powder of *L. fruticosa* by maceration using MeOH, MeOH: H₂O in ratios 4:1, 1:4 were C1, C2 and C3, respectively. TLC screening test using the solvent system CHCl₃: MeOH: H₂O (8: 2: 1) and sprayed with 10% H₂SO₄/ethanol on C1, C2 and C3 showed chemical constituents of terpenoids, phytosterylglucoside and glycosphingolipid. C1-C3 showed an IC₅₀ values of antioxidant by radical scavenging of DPPH (2,2-diphenyl-1-picrylhydrazyl) are 149.5, 224.8 and 160.9 µg/ml, respectively. Antiacetyl cholinesterase used Ellman's method showed IC₅₀ of C1, C2 and C3 are 11.1, 137.8 and 160.9µg/ml, respectively. The bioactivities were guided C1 was fractionated by column chromatography (CC) using silica gel No.7734, and solvent system were using ethyl acetate and methanol gave 5 fractions (F1-F5). TLC screening test of F1-F5 used the solvent system CHCl₃: MeOH: H₂O (90: 10: 1) under UV-spectrophotometer 366 nm showed scopoletin and spray reagent with 10% H₂SO₄/ethanol detected friedelin, stigmasterol, phytosterylglucoside and glycosphingolipid. F1-F5 showed an IC₅₀ of radical scavenging of DPPH were 44.4, 32.8, 35.2, 43.1 and 55.3 µg/ml, respectively and an IC₅₀ of anti-acetylcholinesterase were 85.5, 47.12, 18.21, 11.26 and 16.96 µg/ml, respectively.

Key words: anti-acetylcholinesterase, Ellman's method, glycosphingolipid, hyaluronic acid.

INTRODUCTION

L. fruticosa (Roxb.) Leenh is the plant in Sapindaceae family Shrub or small tree, up to 5-8 m high. This plant found in the central and southern of Thailand (Samitinand, 2001). *L. fruticosa* used a tea infusion of the root regularly against rheumatism or impotence and drank to relive to backache against (Leenhouts, 1969). The medicinal used for antipyretic antidiarrhea (leaves and twigs)(Jansen et al., 1991).The phytochemistry of Sapindaceae family found triterpenes (Spitzer,1996), flavonoids (Bradley et al., 2011), phytosterylglucosides (Saburi, 1999) and sphingolipid (Alabdul, 2005.). Hyaluronic acids (HA) and glycosphingolipid are the same functional group of amide. HA is finding in the cell of bacterial (Sugahara et al., 1979.) but glycosphingolipid is isolating from plants (Perveen et al, 2015). Reported, glycosphingolipid was used for anticancer (Menaldino et al, 2003) and in the cosmetic used antiaging (Sacket et al, 2009.). The study is predominant for glycosphingolipid compounds which have activities of antiacetylcholinesterase (anti-AChE) by using Ellman's method (Bulaj et al,1998). The causative of Alzilemer disease (AD) is mainly characterized by the pre-synaptic decrease of acetylcholine (ACh) due to damage of cholinergic neurons in some especial parts of the brain or ACh was inhibited of acetylcholinesterase (AChE). AD is suggestive of memory loss, cognition defect and behavioral impairment (Asadipour et al, 2013). Four anti-AD drugs approved by the FDA namely, tacrine, donepezil, galanthamine, and rivastigmine were synthesized drugs and have side effect (Sugimoto et al. 2000). Previously, many plants drugs have been observed for evaluation for AChE inhibitors in essential oils(Zarrad et al, 2015), coumarins (Anand et al,2012), phenolic compounds(Ouattara, 2013) and steroids(Cortesa et al, 2015). The study of crude methanol of *L. fruticosa* was active in anti-AChE with an IC₅₀ value of 11.1µg/ml. Interesting to discovery the new conpounds for inhibition of AChE from this plant.

MATERIAL AND METHODS

Phytochemistry

General ^1H and ^{13}C NMR spectra data recorded on Bruker DPX-300 and 75 MHz, respectively, with CDCl_3 as solvent and TMS reference. APCIMS, Perkin Elmer. IR spectra were recorded in CHCl_3 by Perkin-Elmer. UV spectra were recorded in MeOH using Hitachi, U 320 spectrophotometer. Melting point measured Digital Electromol 9100. Separation by CC were carried out using silica gel (15-40 μm , Merck 7731), TLC: pre-coated Kieselgel 60 F₂₅₄ (Merck). NP/PEG or NEU- spray reagent was detected for flavonoids and coumarinoids compounds, FeCl_3 was detected for phenolic compounds and 10% H_2SO_4 -ethanol was universal spray reagent.

Plant materials

The leaves and twigs of *L. fruticosa* were collected in Bangkok Thailand in January 2015. The plant was identified by taxonomist and deposited at Forest Herbarium with the voucher specimen number of BKF No. 098164, Royal Forestry Department Ministry of Agriculture and Cooperatives, Bangkok, Thailand

Extraction and isolation

The dried powdered of leaves and twigs 720g were percolated ethanol (2L), ethanol: H_2O in ratio(2L) and H_2O in (2L) gave C1, C2 and C3, respectively. C1, C2 and C3 gave dried crude extracted 92, 84 and 70 g, respectively.

The dried crude methanol 92 g was fractionated by column chromatography(CC) applied on silica gel (si gel) (60-200 μm , Merck 7734) in column size 6 cm i.d., 50 cm length, eluted with gradient system hexane-ethyl acetate, ethyl acetate-methanol and the final eluted with methanol, gave 5 fractions (F1-F5). F1 (12g, hexane-EtOAc, 9:1, 1L) appeared as oily liquids, F2 (8 g, hexane-EtOAc, 1:1; 1L) appeared as green gum, and recrystallized with Et_2O appeared as white needles gave **1** (9mg) and filtrate dried with rotary evaporate gave dried cruded, recrystallized with methanol appeared as transparent crystal gave **2** (12mg). F3 (20 g, hexane-EtOAc, 3:7; 1L) appeared as brown gum, and recrystallized with chloroform:methanol (99:1) appeared as yellow crystal gave **3** (7mg). F4 (18 g, EtOAc: methanol, 9:1; 1.5L) appeared as green gum, and recrystallized with ethyl acetate appeared as amorphous powdered gave **4** (6mg). F5 (15g, EtOAc: methanol, 7:3; 2L) gave green gum, and recrystallized with chloroform: methanol: H_2O (8.5: 1.0: 0.5) appeared as amorphous powdered gave **5** (2mg). F1-F5 were removed solvent on rotary evaporator (RE). Compounds **1** **2** **3** **4** and **5** were isolated from *L.fruticosa* were classified for 4 groups. Compounds **1**(friedilin) (Alam,1996) and **2** (stigmaterol) (Mahato et al.,1994), **3**(scopoletin) (Sangsuwon, 2013), **4** was phytosteryl glycoside (Mahato et al., 1994) were compared with literature, and **5** (sphingolipid). **1-5** elucidated by UV IR ^1H , ^{13}C -NMR and mass spectrometer.

Compound **1**: white needles (diethylether). mp 258-260°C. UV (EtOH) λ_{max} 220 nm. IR (CHCl_3) ν_{max} 2980, 2927, 2870 (CH), 1706 (C=O), 1462, 1389 (CH) cm^{-1} . APCI-MS 427.4156 $[\text{M}+\text{H}]^+$ (calc. $\text{C}_{30}\text{H}_{50}\text{O}$ 426.7244). ^1H NMR (CDCl_3 , 300 MHz) δ 0.75 (3H, s, H-24), 0.90 (3H, s, H-23), 0.98 (3H, s, H-25), 1.04 (3H, s, H-29) 1.04 (3H, s, H-30), 1.04 (3H, s, H-26), 1.07 (3H, s, H-27), 1.20 (3H, s, H-28), 1.3-1.4 (18H, complex m, H-6, 7, 11, 12, 15, 16, 19, 21, 22), 1.4-1.6 (3H, complex m, H-8, 10, 18), 1.74 (2H, dd, J 5.5, 3.0 Hz, H-1a, H-1b), 2.2 (1H, m, H-4), 2.34 (1H, m, H-2b), 2.40 (1H, m, H-2a). ^{13}C NMR (CDCl_3 , 75 MHz) δ 213.1 (C3), 59.4 (C10), 58.2 (C4), 53.1 (C8), 42.8 (C18), 42.0 (C5), 41.5 (C6), 41.5 (C2), 39.7 (C13), 39.2 (C22), 38.3 (C14), 37.4 (C9), 36.0 (C16), 35.6 (C11), 35.3 (C19), 35.0 (C29), 32.8 (C21), 32.4 (C15), 32.1 (C28), 31.8 (C30), 30.5 (C12), 30.0 (C17), 28.1 (C20), 22.2 (C1), 20.2 (C26), 18.6 (C27), 18.2 (C7), 17.9 (C25), 14.6 (C24), 6.8 (C23). TLC chromatogram with MeOH: ethylacetate:hexane (1:80:2) as a mobile phase revealed at R_f 0.65 and gave violet color with 10% H_2SO_4 spray reagent.

Compound **2**: (mixture composed of two phytosterols i.e. stigmaterol and β -sitosterol) white needles (MeOH). mp 165-166 °C. UV (MeOH) λ_{max} 221 nm. IR (CHCl_3) ν_{max} 3200 - 3656 (OH), 2958, 2870 (CH), 1667 (C=C) cm^{-1} . APCI MS 412.1256 $[\text{M}]^+$ ($\text{C}_{29}\text{H}_{48}\text{O}$), 414.1256 $[\text{M}]^+$ ($\text{C}_{29}\text{H}_{50}\text{O}$). ^1H NMR (CDCl_3 , 300 MHz) δ 0.70 (3H, s, H-18), 0.80 (1H, d, J 7 Hz, H-27), 0.83 (3H, d, J 6.4 Hz, H-29), 0.86 (3H, d, J 7.1 Hz, H-26), 1.02 (3H, d, J 6.8, H-21), 1.03 (3H, s, H-19), 1.4-1.6 (15H, m, H-8-H-9, H-11-H-12, H-14 - H-17, H-25, H-28), 1.85 (1H, m, H-1), 1.9 (3H, s, H-20), 2.04 (2H, m, H-4, H-7), 2.2 (1H, m, H-24), 2.29-2.31 (2H, m, H-2), 3.54 (m, H-3), 5.2 (1H, dd, J 8.3, 15.3 Hz, H-22), 5.38 (1H, dd, J 5, 11 Hz, H-6), 5.5 (1H, dd, J 15.3, 8.3 Hz, H-23). ^{13}C NMR (CDCl_3 , 75 MHz) δ 140.2 (C5) 138.0 (C22), 129.2 (C23), 121.7 (C6), 71.8 (C3), 56.8 (C24), 56.6 (C20), 56 (C14), 55.9 (C17), 51.1 (C8), 50.1 (C9), 42.5 (C13), 41.5 (C4), 39.6 (C12), 39.4 (C11), 37.1 (C1), 36.7 (C10), 33.6 (C25), 31.7 (C7), 31.6 (C2), 28.6 (C16), 25.4 (C28), 24.0 (C15), 21.5 (C21), 19.3 (C27), 19.0 (C26), 16.2 (C19), 12.0 (C29), 11.6 (C18). TLC chromatogram with MeOH : ethyl acetate (5:95) as a mobile phase revealed at R_f 0.55 and gave blue color with 10% H_2SO_4 -ethanol spray reagent.

Compound **3**: (6-methoxy-7-hydroxy-coumarin or scopoletin): pale yellow needles (CHCl₃:MeOH; 9.5 : 0.5). mp 203-204°C. UV (MeOH) λ_{\max} 254, 366 nm. IR (CHCl₃) ν_{\max} 3400-3550 (OH), 1685 (C=O), 2998, 2938, 2856(CH), 1589, 1511 (C=C) cm⁻¹. APCI-MS 192.2008 [M]⁺(calc. C₁₀H₈O₄192.1708). ¹H NMR (CDCl₃, 300 MHz) δ 7.61 (1H, d, *J* 9.5 Hz, H-4), 6.90 (1H, s, H-5), 6.85 (1H, s, H-8), 6.28 (1H, d, *J* 9.5 Hz, H-3) and 3.85 (3H, s, 6-OCH₃). ¹³C NMR (CDCl₃, 75 MHz) δ 161.5 (C2), 150.2 (C6), 149.7 (C7), 144.0 (C8a), 143.4 (C4), 113.4 (C3), 111.5 (C4a), 107.5 (C5), 103.2 (C8), 56.4 (OCH₃). TLC chromatogram with MeOH: dichloromethane (5:95) as a mobile phase revealed at R_f 0.50 and gave blue fluorescence under UV 366nm.

Compound **4**: (stigmasterol-3-O- β -D-glucopyranoside): appeared as amorphous powdered (ethylacetate), mp 258-260°C. UV (MeOH) λ_{\max} 220 nm. IR (CHCl₃) ν_{\max} 3200-3450 (OH), 1685 (C=O), 2980, 2927, 2870(CH), 1560 (C=C) cm⁻¹. APCI-MS 576.11 [M]⁺(calc. C₃₅H₆₀O₆576), and showed the molecular ion [M-180]⁺ at 397.4002. ¹H NMR (CDCl₃, 300 MHz) δ 0.59 (s, H-18), δ 0.91 (s, H-19), δ 1.12 (d, *J* = 7 Hz, H-21), δ 0.92 (d, *J* = 7.3 Hz, H-26), δ 0.85 (d, *J* = 7.3 Hz, H-27), δ 0.90 (t, *J* = 6.5 Hz, H-29). The signals of methylene protons appeared at δ 1.74 (m, H-2a), at δ 2.18 (m, H2b) and methine protons at δ 5.31 (d, *J* = 4.6 Hz, H-6) and δ 3.32-3.28 (m, H-1', H-2', H-3', H-4', H-5', H-6'). ¹³C NMR (CDCl₃, 75 MHz) δ ¹³C NMR (CDCl₃+CD₃OD, 75 MHz): 140.1 (C5), 138.3 (C22), 129.3 (C23), 121.9 (C6), 100.9 (C1'), 79.0 (C3, C3'), 76.2 (C5'), 75.7 (C2') 73.4 (C4'), 61.8 (C6'), 56.6 (C20), 55.9 (C17, C24), 50.0 (C9), 45.6 (C8), 42.1 (C13), 40.0 (C12), 39.9 (C4), 37.5 (C1) 36.5 (C10), 33.8 (C7, C22), 31.7 (C14), 29.8 (C2), 29.4 (C16), 29 (C25), 28 (C23), 24.1 (C15), 23 (C28), 22.9 (C11), 22.9 (C21), 20.9 (C26), 19.5 (C27), 19 (C19), 11.7 (C29), 11.6 (C18). TLC chromatogram with methanol: chloroform: water (15:85:2) as a mobile phase revealed at R_f 0.30 and gave violet color with 10% H₂SO₄-ethanol spray reagent.

Compound **5**: (glycosphingolipid): white amorphous powder (CHCl₃:MeOH, 3:97). mp 252-254°C (MeOH), UV (EtOH) λ_{\max} : 236nm, IR (KBr) ν_{\max} : at 3230-3450 (OH), 3384 (NH), 2998, 2935, 2851 (CH), 1642 (C=O), 1540, 1537, (N-H) and (CH₂)_n at 721. APCI-MS m/z 931.5689 [M]⁺(calc. for C₅₀H₉₃NO₁₄ = 931.28). ¹H NMR (pyr-d₅, 300 MHz) δ 4.24 (1H, dd, *J* 10.5, 5.5 Hz, H-1a), 4.66 (1H, *J* 10.5, 5.5 Hz, H-1b), 4.75 (2H, dd, *J* 10.0, 5.0 Hz, H-2, H-3), 5.51 (1H, d, *J* 6.6 Hz, H-4), 5.34 (1H, m, H-5), 0.85 (2H, t, *J* 7.2 Hz, H-18, H-20), 4.05-4.58 (12H, m, H-1'', H-2'', H-3'', H-4'' H-5'', H-6'', H-1''', H-2''', H-3''', H-4''', H-5''', H-6'''). ¹³C NMR (pyr-d₅, 75 MHz): 175.7 (C1'), 130.9 (C4), 130.7 (C6'), 123.8 (C5), 122 (C7'), 105.6 (C1''), 102.7 (C3''), 78.6 (C3'''), 78.5 (C3'''), 78.4 (C5''), 78.2 (C5'''), 75.4 (C2'') 75.2 (C2'''), 72.5 (C3), 71.8 (C2', C4''), 71.5 (C4''') 70.5 (C1) 63.0 (C6''), 62.7 (C6''') 57.7 (C2), 34.3 (C6), 33.3 (C8'), 33.0 (C5'), 32.3 (C4'), 32.1 (C16), 30.3 (C3'), 29.6 (C7-C15), 29.6 (C9-C17), 22.9 (C17), 21.4 (C19), 14.3 (C18), 14.1 (C20). TLC chromatogram with methanol: chloroform: water (15: 85: 2) as a mobile phase revealed C11 at R_f 0.25 and gave violet color with 10% H₂SO₄-ethanol spray reagent.

DPPH radical assay

Prepared 0.2 mM of DPPH in MeOH. Crude fraction of C1 of *L. fruticosa* was prepared of serial concentration as 15.25, 31.25, 62.5, 125, 250, 500, 1000 ppm. Pipettes 100 μ l each of concentration of sample and added 100 μ l of DPPH to each well. Mixtures were variously shaken and left for 30 min in the dark. Absorbance was measured at 516 nm using MeOH as blank. Percentage of radical scavenging was calculated using the equation: S(%) = $(A_0 - A_s) / A_0 \times 100$, which A₀ is the absorbance of the control (0.2 mM of DPPH, 2 ml), A_s is the absorbance of the tested sample and L-ascorbic acid was positive control. The half maximal inhibitory concentration (IC₅₀) value represented the concentration of the samples which have the antioxidant activity. This experiment was repeated with C2-C3 and F1-F5.

Acetylcholinesterase Inhibition assay

Acetylcholinesterase (AChE from *Electrophorus electricus* (electric eel), Type V-S, lyophilized powder from 518 unit/mg, Sigma) enzymatic activity was measured according to Ellman's method. The buffers used in the assay were prepared as follows: buffer I is Tris-HCl (50 mM Sigma) pH 8.0; buffer II is Tris-HCl (pH 8.0; 50 mM), containing 0.1% bovine serum albumin (Sigma); buffer III is Tris-HCl (pH 8.0; 50 mM), containing 0.1 M NaCl and 0.02 M MgCl₂·2H₂O. 5, 5-dithiobis-2-nitrobenzoic acid (DTNB, Aldrich) (125 μ l, 3 mM) in buffer III. acetylthiocholine iodide (ATCI, 15 mM, Fluka), AChE 0.22 U/ml in buffer II. C1-C3 and F1-F5 fractions were serial dilutions 15.25, 31.25, 62.5, 125, 250, 500 and 1000 μ g/mL using 10% methanol and 10% DMSO in buffer I dissolved the sample, and then 25 μ l of each solution was added to a 96-well microplate. The formula $A_{\text{real}} = [(A-B) - (C-D)]$; A = absorbance of control, B = absorbance of blank of control, C = absorbance of sample and D = absorbance of blank of sample. Added reagents in each well of A B C and D are showed in Table 1.

Table.1: Prepared reagents of A, B, C and D for absorbance under UV-spectrometer λ_{\max} 405 nm

A(control)	B(blank of control)	C(sample)	D(blank of sample)
15mM/L ATCI in 25 μ l			
3mM/L DTNB in buffer III in 125 μ l			
buffer II in 50 μ l			
10%MeOH in buffer I in 25 μ l	10%MeOH in buffer I in 25 μ l	Sample in 25 μ l	10%MeOH+10%DMSO in buffer I in 25 μ l
0.22 Units/mlAChE in 25 μ l	buffer II in 25 μ l	0.22 Units/ml AChE in 25 μ l	buffer II in 25 μ l

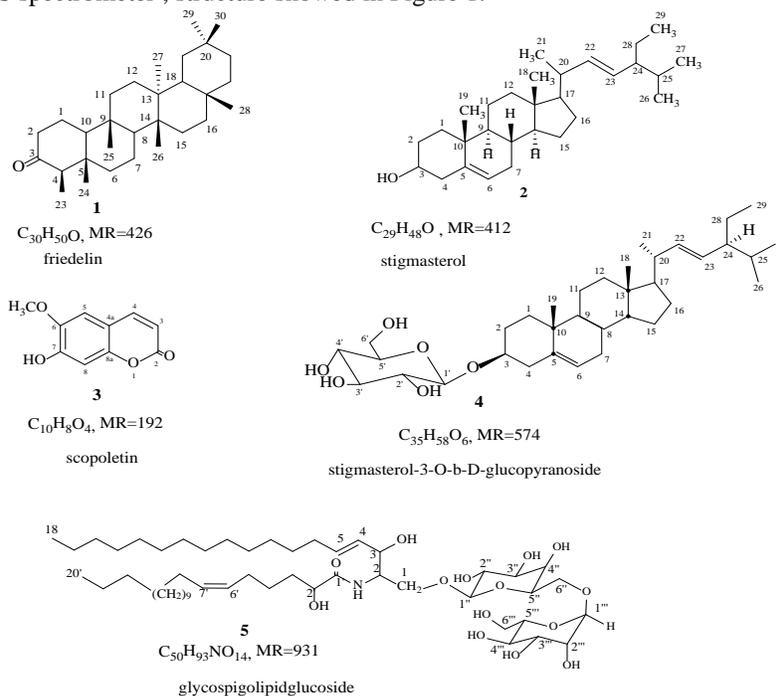

Statistical analysis

The experiments were performed in triplicate with three independent experiments. Data were expressed as the mean \pm standard deviation. The R-square equation was used to calculate the IC₅₀ and EC₅₀ value. A p-value less than 0.05 was considered statistically significance.

RESULTS AND DISCUSSION

Phytochemistry

Leaves and twigs 720 g of *L.fruiticosa* is extracted using ethanol, ethanol: H₂O and H₂O gave C1, C2 and C3, respectively. The dried crude of C1-C3 were 92, 84 and 70g, respectively. C1-C3 shown antioxidant activity by DPPH in IC₅₀ were 80.5, 120.5 and 140.5 μ g/ml, respectively. C1 was predominant of antioxidant and isolated using by CC on si gel by solvent system of hexane- ethyl acetate and ethyl acetate-methanol gave 5 fractions (F1-F5). F1-F5 were detected the chemical constituents on TLC and showed terpenoids, phytoesterol glycoside and sphingolipids by spray with 10%H₂SO₄-ethanol, coumarinoids under UV 366. F1-F5 were 12, 8, 20, 18 and 15 g, respectively. F1 was oily liquid, F2 isolated 1(9mg, friedilin) and 2 (12mg, stigmasterol), F3 was isolated 3 (7mg, scopoletin), F4 was isolated 4 (6mg, phytosteryl glycoside) and F5 was isolated 5 (2mg, glycosphingolipid). Compounds 1-5 was elucidated by UV, IR, NMR (¹H, ¹³C) MS spectrometer , structure showed in Figure 1.

**Figure 1:** Structure of compounds 1-5.

Antioxidant and anti-acetylcholinesterase activities

The reduction ability of DPPH radicals formation was determined by the decrease in its absorbance at 517 nm induced by antioxidants. DPPH is a stable free radical and accepts an electron or hydrogen radical to become a stable diamagnetic molecule. This activity of DPPH can be attributed to the presence of the phenolic compounds and other components in plant for studying the bioactivities in plant. *L. fruticosa* (Roxb.) Leenh is medicinal plant in

Sapindaceae family and used a tea infusion, for antipyretic antidiarrhea (leaves and twigs). The crude fractions of ethanol, methanol and water were showed percentage of radical scavengers against DPPH in IC_{50} were 80.5, 120.5 and 140.5 $\mu\text{g/ml}$, respectively (Figure 2). The most active fraction was crude ethanol fraction. Consequently, the crude ethanol was fractionated by CC on si gel gave F1-F5 and isolated compounds 1-5. F1-F5 showed the antioxidant by DPPH were 88.5, 65.5, 52.2, 32.2 and 26.9 $\mu\text{g/ml}$, respectively compared with VitaminC was 5.2 $\mu\text{g/ml}$. The antioxidant were guidance for separated the components which were activities for anti-acetylcholinesterase. Acetylcholine (ACh) is one of the major compounds by which nerve impulses are transmitted from nerve cell to nerve cell or involuntary muscles. At the cholinergic synapses, acetylcholinesterase (AChE) rapidly breakdowns ACh into choline and acetate. AChE therefore regulates nerve impulse transmission across cholinergic synapse. Inhibition of AChE has been considered as a promising strategy for the treatment of neurological disorders such as Alzheimer's disease, senile dementia, ataxia and myasthenia gravis, in which a deficit in cholinergic neurotransmission is involved. Potential AChE inhibitors isolated from plant sources have been studied, including glycospingolipidglycoside. The isolation of F5 gave compound 5 that has anti-acetylcholinesterase in IC_{50} was 9 $\mu\text{g/ml}$ compared with the Alzheimer drug of Donepezil was 0.381 $\mu\text{g/ml}$. The antioxidant by DPPH and anti-acetylcholinesterase were summarized in Figure 2.

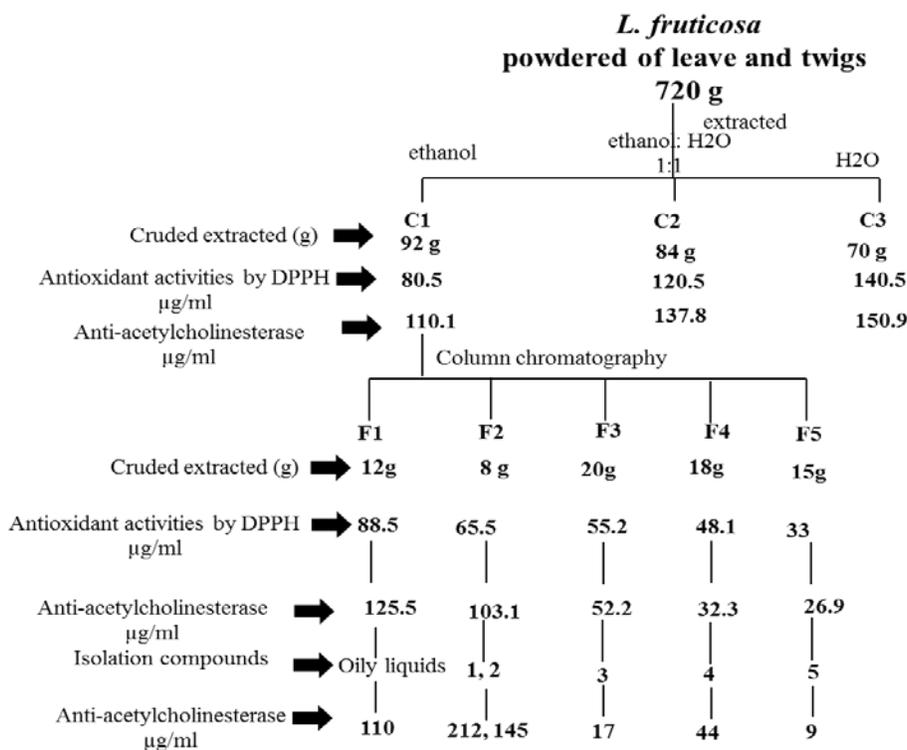

Figure 2: Antioxidant, anti-acetylcholinesterase and isolation of compounds 1-5 from *L. fruticosa*.

CONCLUSION

This research had many steps of experiments, the graduate students educated the knowledge of the medicinal plants, extraction, isolation and the chemical constituents of *L. fruticosa* were elucidated the structure by ^1H , ^{13}C of Nuclear Magnetic Resonance (NMR), 2-dimension of NMR, Mass spectrometer, and IR spectrometer which are the instruments use in the laboratory of chemistry. Students expanded the chemistry subject by applied to bioactivities tests which showed the useful for the medicinal in plants. *L. fruticosa* will further to study and the chemical constituents will be isolate for inhibitors of AChE. The isolation of scopoletin, phytosteryl glycoside and glycospingolipidglycoside were anti-acetylcholinesterase and showed in IC_{50} 17, 44 and 9 $\mu\text{g/ml}$, respectively. These data were useful for search the new drugs from plant and eaten the fresh plants are prevent AD disease. The research project of the fourth-year undergraduate students accomplished and valuable.

THE CONCEPT OF “CHECK-IN” ON SOCIAL NETWORKS WITHIN THE CONTEXT OF TERRITORIALITY AND PLACE IDENTITY

Assoc. Prof. Dr. Güliz Muğan

Sanat Tasarım ve Mimarlık Fakültesi, Okan Üniversitesi Tuzla Kampüsü, 34959 Akfırat-Tuzla / İSTANBUL
guliz.mugan@okan.edu.tr

Introduction

In this paper, what is aimed is to form a discussion about check-in locations about which I am also newly and hardly familiar with and to admit that not very good at using all those check-in applications and this might be one of the reasons why I am started to understand the term in theoretically in my profession. First of all, I want to develop some questions that keep popping my mind while I am lecturing some behavioral patterns in managing spaces within the field of environmental psychology which are territoriality, place identity and place attachment. Therefore, I hope that this paper would be a preliminary study for a future research.

One of the important consequences of contemporary technological developments is about the changes in our communication socialization experiences. Those changes infiltrated to our everyday life through social networks and smart phones. Location and place-sourced connections and their sharing are seen as the most common usage of social network in mobile platforms. Accordingly, the notion of “check-in”, which can be conceptualized as the sharing of our locations in different places and their notifications through different social networks, becomes significant to discuss varied behavioral experiences within the scope of places. Technically, users of mobile phones through internet connection, getting access to GPS can share their places where the location has been determined, make comments and share the visual information through these platforms. These kinds of social media platforms are also commercially convenient. The research indicates that, for instance, Foursquare, as being one the most popular of these platforms, has more than 30 million users worldwide and these users “check-in locations” more than 3 billion times every day.

As I have checked the literature, Foursquare, Swarm or some many other applications in mobile platforms but mostly Foursquare are mostly assumed as a new convenient course in globalization arguments (Canpolat, 2013). In those arguments, these applications are considered to be taking into accounts of main topics including transformation of places,

global interconnectedness, non-places and deterritorialization. However, as far as I have noticed there are not many researches discussing these apps in terms of behavioral experiences in spaces except the ones revealing some data in terms of socio-demographic differences among different individual groups in using those apps. Therefore, in this paper a discussion platform is tried to be provided about using these kinds of check-in apps and behavioral experiences of individuals about places by focusing on a key behavioral pattern related to managing spaces: territoriality behavior and some connected terms such as place attachment and place identity.

The interaction between territoriality behavior and 'check-in'

Territoriality behavior, which can be defined as a pattern of behavior and attitudes held by an individual that is based on control, defense, occupation, and personalization of a definable, visible physical space or an area is an important discussion field within the scope of environmental psychology (Gifford, 2002). Julian Edney, who have many insightful articles about territoriality, relates the term also with marking (placing an object or substance in a space to indicate one's territorial intentions) and personalization (marking in a manner that indicates one's identity). Of course, like many other behavioral patterns in managing places territoriality behavior also show some variations according to gender, age, personal factors, social class, culture and ethnic factors etc. For instance, researches on dormitories show that males claim larger territories than females in dormitory rooms (see Mercer and Benjamin, 1980), or males claim larger spaces at work more (Gifford, 2002). Or in terms of cultural differences territoriality is merely expressed differently in different cultures. For instance, in Britain the behavior show itself as in the form of working class reaction to middle class who reveals territoriality in prefer to live different regions of the cities (Campbell, Munce and Galea, 1982). It is also possible to find many researches which try to understand the territoriality behavior that we experience with objects. For instance, the study indicates that marking plates by touching them about three times at least in a restaurant when the plate was served is also a kind of territoriality behavior in the form of defense and control through marking for familiarity (Truscott, Parmelee and Werner, 1977).

Accordingly, all the studies of territoriality behavior might be characterized in organizing human behavior, promoting a sense of security and order through control, reduced

aggression and familiarity which gives a sense of competence that would be impossible if people moved from place to place or from object to object or even from idea to idea. In other words, a sense of identity seems to be developed by simply being spatially separate from others. Theories about genes and evolution explain the territoriality behavior with an instinctual basis and evolutionary heritage—of course a big question mark for me since, under the field of environmental psychology, I prefer to focus on habitual occupation of places and how it affects social behavior and cognition of occupants and visitors and I believe that this might be reasonable to explain why we continuously check-in; it seems to be a self-esteem need that we have and becomes easy to satisfy through the help of technology.

According to discussion regarding territoriality it seems that check-in and territoriality behaviors are interconnected and also it seems easy to understand why we check-in locations after we have understood the motivations behind the territoriality. However, of course this is a very naïve perspective since it seems that we are not satisfied and we are continuously to be checking-in with several places. Hence, it becomes inevitable to ask *how is it possible to feel familiar with places while constantly checking-in several locations through our mobile phones in our everyday life and whether it affects the territoriality behavior in a negative manner since it prevents us to develop an attachment with places?*

John Tomlinson (2004) in his work of “Culture and Globalization” indicates the concept of deterritorialization as a significant point in the cultural aspects of globalization and describes the process as places are no longer obvious determinants and supporters of our identities. This might also be related to what Giddens (2012) talks about modernity and modern societies where the relationships are beyond the restrictions of face to face relationships among individuals in traditional societies and moved to a more flexible basis that is far beyond the place and time. In other words, we are moving between places without necessarily having any connections with the physical and social environments of those places but just simply leaving a mark in cyber space by pointing out our trace in it through check-in. However, what about the psychological and social processes of our check-in behavior? Of course the reasons and the preferences behind many different groups of individuals’ check-in behavior might be the context of many different researches. Nevertheless, the starting point that we should

keep in our minds must be that our preferences with places are directed not only by individualistic tastes but also by our interaction with social environment (Hubbard, 1996). Even if it is talked about the disappearance and melting of boundaries and limits of time and places, it is still not possible to understand the nature of individual preferences about places independent from the social context of those places. Therefore, it is also impossible to form out a discussion without considering the relationship between the concepts of place and identity. In other words, our cognitive connection with place never disappears, it only becomes something else that we do not know with its changing social context and continuous flow of identities in it.

The role of place identity and place attachment in check-in behavior

One of the prominent concepts that might be considered to be interconnected to this discussion is the place identity, which is defined as the relationship between an individual and a place where there is the existence of information transmission from the environment to the individual, so that the self-identity of the person is affected and influenced. The interaction of the individual with a place and the experiences within the place assist the construction of the identity (Proshansky, Fabian and Kaminoff, 1983). Even if it is a mark on a cyber-space, it tells a story about our relationship with that place and about who we are.

Place identity is closely related to the term place attachment that is the idea of developing special bonds with certain settings that have deep meaning for us (Altman and Low, 1992). As Gifford (2002) argues, “[territoriality], place identity and place attachment researches are concerned with the acquisition, interaction and loss of relationship with places that are important to the individual sense of self. [...] Sense of place, an also related concept, varies from **superficial level** (which are mostly experienced by tourists) to the **partial level** of long term visitors, the **personal level** of immigrants to the place and to **cultural level** where people experience the place as an integral part of their entire society (p. 272). In other words, to feel attached to a place is not necessarily to have an affective bond, or cognitive and emotional connection since the scale is too large. At this point, we can argue that the form of attachment that we have developed is turning to a more superficial or partial level through the usage of mobile technology—we walk around the city as if we are tourists or long terms visitors who are trying to capture every moment we experience in the spaces and

it seems that check-in behavior helps to form-out this kind of sense of place; just simply another form of territoriality behavior in the form of place (identity) that tries to demonstrate being spatially separate from others through dominance and control in a quantitative manner. It is possible to explain this changed form of territoriality behavior and place identity through the process of cognition as well; even though some scholars (Gazzard, 2011; Scholte, 2008) argue that check-in behavior is processing by being independent from the cognition process since checked-in locations are so transitory and flying that they are not a part of memory to be recalled.

For instance, according to Gazzard (2011) who claim that the with usage of check-in applications physical travel among places no longer appears which result in disappearance of meaning and identity of places as well. This means that for users of check-in apps the major aim is put a mark on the location instead of being physically, cognitively and psychologically to be there. It is only a kind of 'listing the places' where you have been or even just passed by. However, in the light of above mentioned arguments, I believe that this is not the case. Searching for places to be checked-in is also a search for place identity and territoriality where the cognition is at work. Moreover, using way finding properties which are linked to these check-in apps such as 'google or apple maps' are also important determinants of cognitive process and for sure sharing these information through social media time-lines, profiles or histories promotes the identity construction process through places.

The 'process of cognition', which occurs on both conscious and unconscious level of an individual is an outcome of a relationship between self and environment and with the help of cognitive processes, the experiences with the physical environment become reorganized. The characteristic and role of cognition process are related with the individual's situation of being aware or not aware with his or her physical and social environment. Proshansky et al. (1983, p.93) discuss this subject in relation with the 'not in awareness' property of place identity:

"the individual is generally not aware of the variety of memories, feelings, values and preferences that subsume and influence his or her responses to the physical world. One is simply comfortable in certain kinds of physical settings, prefers particular spaces [...]. This not in awareness property of place identity insofar as its content and

influence are concerned is an important and significant feature of its role in shaping the behavior and experience of the person in given physical settings”.

In other words, while realizing check-in behavior, the place identity mostly at the unawareness level is on the agenda where our identity is affected, influenced and constructed continuously. Other than the territoriality behavior that we have been experiencing in some places such as our room in the house or our office where the awareness level with the socio-physical environment is high, it is not necessarily to be that high or might even be completely missing, but still territoriality behavior and place identity can be experienced. It seems that this is what we have been experiencing in check-in behavior

Setha Low (1990) argues that territoriality, place identity and attachment are processes that occur at the individual level as well as at the level of different cultural mechanisms such as genealogy, loss and destruction, ownership, cosmological, pilgrimage and narrative. Among those cultural mechanisms, the narrative refers to stories through which place attachment and identity can develop. They explain the important issues and questions of life in terms of individual-place interactions. Actually this is what we are doing during check-in. In that case at the cultural level we tell stories about places and us. We develop place attachment and place identity at this level as well.

To sum up

According to the above mentioned discussions, it is possible to describe ‘check-in’ behavior as promoting territoriality and place identity at the individual level with superficial unawareness level as well as promoting territoriality and place identity at the cultural narrative level. Therefore, accordingly it is hard to claim that ‘places are no longer obvious determinants and supporters of our identities’.

Now, even maybe it is necessary to correct the question that was brought to the discussion previously as: whether constantly ‘check-in locations’ affects the territoriality behavior in a negative manner by preventing us to develop an attachment with places? Maybe the answer is ‘no’ since a new form of territoriality behavior and place identity seem to emerge with a

reconstructed definition of place where the information transmission from the socio-physical environment to the individual and from individual to the other individuals using the mobile platforms is so intense; maybe not necessarily qualitatively but obviously quantitatively. Moreover, this argument also related to different conceptualization of place identity that give more emphasis some belongingness, distinctiveness, self-esteem and self-efficacy (Twigger-Ross and Uzzell, 1996) which I believe also suit well with the behavioral conceptualization of check-in.

THE DESIGN SKILL OF TEACHER: THE ANALYSIS OF THE *PROJECT WORKS*

Laura Agrati
University of Bari, Italy
laurasara.agati@gmail.com

ABSTRACT

Designing is a complex competence (Snelbeker, 1987; Freiberg, 2002; Loughran, 2006) involved in the teaching function itself (Laurillard, 2012), which derives into a planning capability and a real authentic “pre- vision” capability (Zingale, 2015).

How to train the teacher for this complex and 'hybrid' (Davey, 2013) competence therefore? What tools facilitate the acquisition of mental patterns useful to the inexperienced teachers in order to practise a design skill (Nikolaeva, 2012)?

In the first part of this contribution, the training experience for the design competence carried out in the training courses for the special education teaching certification (d.m. 249/2010, d.m. 81/2013) at University of Bari is described.

In the second part, the structure and the first outcomes of an exploratory study aimed at knowing how the trainee teachers develop design models are illustrated.

The study carried out at the above-mentioned training course in 2014-15, involved about 240 trainee teachers and was performed through the comparative analysis (Fereday & Muir-Cochrane, 2006; Snow & Cress, 2000) of the *project works*. It found that the trainee teachers already possess 'personal' design models at the beginning of their training but also are able to modify them in more formalized structures.

INTRODUCCION

Designing the didactic actions will be always more one of the main competences of the teacher, since it is a prerequisite contributing to make real the “curricula autonomy” and “organizational flexibility” required by the school today (L. 13/07/2015, n. 107; European Commission, 2013).

Designing - involved in the teaching function itself (Laurillard, 2012) – leads the teachers to open sceneries, to meet common and specific student needs, to provide educational offers compliant with the indications of the System of Education and Training and meeting the territorial needs (cfr. Curricular and extracurricular projects - Capperucci, 2008).

What does *designing* mean in educational context? How specific is it, compared to designing in other contexts? And, above all, what does the teacher design skill consist in?

Design

According to a “minimum ontology” (Rossi & Toppano, 2009) and independently from the application field, design can be considered an activity producing *in output* the description (a project, indeed) of an artefact including sufficient information to build/create and meeting specifications given *in input* (such as aims, objectives, limitations to be respected) (p. 57).

In other words, designing is “a mental and/or material representation of an object/activity (i.e.: a didactic action), aiming at its building/creation” (p. 11).

From a multidimensional point of view and in perspective of the complexity it is possible to describe the design as a “situated and collaborative activity of production, elaboration and transformation of models” (p. 16), both mental and/or material.

According to the well-known reflexive and situated paradigm (Schön, 1983; Brown, Collins, Duguid, 1989; Gero & Kannengiesser, 2002), the designers would possess a sort of “toolbox” made of mental models, symbolic representations, conceptual contents and representation languages more or less specific (Rossi e Toppano, 2009, p. 15); they would not be limited to follow mechanically a rule, an applicative procedure, but would rather be able to choose which “tool” to implement depending on circumstances and the phases of the design project. They would therefore follow a “guideline for the action and would communicate with it in a reflexive way” (p. 15) rather than a linear and prescriptive methodology – based on technical rationality.

Having clarified the design conditions, it is suitable to go deeper in the activated processes.

The designers, that are to say who build a model of an object/activity to be performed, carry out three sub-activities (Toppano, 2007): a. *internalization* – they create a mental image of the object/activity; b. *representation* – they use a language of the representation and conceptual contents that give shape to the mental image; c. *externalization* – they use a notation system and a specific instrumental tool to communicate the representation. These sub-activities are integrated and simultaneous therefore the level of the thought and of the medium are mutually determined (Rossi & Toppano, 2009, pp. 42-43).

Apart from *building* the model, the designers also need to *share it socially* (Stahl, 2000). It is therefore essential that the individual knowledge of the designer and the shared culture are ‘aligned’.

This alignment takes place through a comparison of the experiences and the creation of a “tacit knowledge” (Polanyi, 1967; Fabbri, 2003), of a shared, explicit and formal conceptualization, that facilitates the sharing of

a controlled *vocabulary*, a *glossary*, a *taxonomy* and a *thesaurus* (Rossi & Toppano, p. 53).

Having clarified the main elements of the design process – internalization, representation, externalization and socialization (see also, SECI - Nonaka & Takeuchi, 1995) - it is suitable to consider the second level, that is to say the training to the design process.

Training for the design

As already mentioned, the designers do not use planning rational procedures, but they rather interact with the context in specific situations. They do not merely apply preordained patterns to a certain area of reality (i.e.: the problem to be solved, the action to be performed), but instead activate a sort of continuous conversation – even though sometimes unaware – with that area. In other words, there should be a continuous link (Gero, 1990) among the concepts of function (F), behaviour (B) and structure (S) that they possess in:

- “expected world”, that is to say the conceptualizations/interpretations that they have of the external world - such as the idea that they have about how to solve a problem (cfr. the mental image of the *internalization*);
- “internal world”- that is to say the same conceptualizations/interpretations, yet formalized (cfr. the mental image of the *representation*);
- “external world” – to be meant as the cognitive artefacts taking place during the design activity – i.e.: schemes, formal models, demonstrative prototypes etc. (cfr. the mental image of the *externalization* to be communicated and shared).

If the design is always performed about a specific situation, the training of the future designer – based on the “situated” method (Gero & Kannengiesser, 2002; Masclat & Boujut, 2010) – must in theory facilitate the conversation (Schön, 1983) between the “expected” and “internal” world of the designer and the “external” one of the artefacts; in practice, it must be structured so that the designer initial knowledges meets the symbolic models/artefacts proper to the design and the practical experience in designing. Such aspects mutually influence each other and affect how the designer training takes place (Toppano, 2007; Sim & Duffy, 2000). This should therefore be performed so that it is:

- *retrospective*, offering the trainee some concrete examples of design projects;
- *in situ*, through concrete design activity, even though in a simulated form;
- *preventive*, through a gradual introduction to the vocabulary, the taxonomy, the thesaurus of the design - the so-called “toolbox”.

According to Gero, this demonstrates the inevitably active role of the designer in his/her training consisting in the capability, very often unaware, to modify/adapt/interpret the design internal and external models – meant as cognitive artefacts – since “he is the one who choose the variables where to focus, who give an order to the problematic situation (...), who give meaning” and is “basically free” (Rossi & Toppano, 2009. p. 99).

AN EXPERIENCE AT THE UNIVERSITY OF BARI

The last reformation law about initial teacher training (dm. 249/2010; dm. 30/2011; dm. 81/2013) provides a series of common guidelines that the teacher training courses need to comply with, in order to train to the design skill.

First, the qualifying teacher training courses in primary and secondary school are organized according to the model “induction” through a) alternating courses, school internship and reflexion/synthesis moments in the university internship; b) using connecting professional roles facilitating the construction of a professional knowledge on several levels – teachers, university supervisors, school tutors (Agrati & Gemma, 2015¹).

Secondly, among the disciplines, specific theoretical courses about design have been organized such as '*Planning and evaluation of the training processes*', '*Design of the PDF, of the PEI - Life Project and Life Quality models: from designing to evaluation processes*'. These should provide those “external” models, those “performance design knowledge” both theoretical and practical that is essential to give shape to the personal knowledge possessed by the trainee (Gauthier, 1997; Damiano, 2007).

Third, it will be possible to evaluate the design skill during the training through the analysis of a *project work* in which the trainee teacher needs to describe the didactic action performed during the school internship, elaborated during the university internship meetings and recorded in the final course report. Writing the *project work* would, this way, fulfil two functions: on the one hand, it represents the practical exercise of the design skill, on the other hand it reports the construction of the exercise itself.

It follows the experience gained during the two-year period 2013/14 and 2014/15 at the training courses for the special education teaching certification (*Corso di formazione per il conseguimento della specializzazione per le attività di sostegno didattico agli alunni con disabilità*) at University of Bari. The description of the university internship is focused. This could be consider as a “borderline” between practice and theory that leads the trainees to reflect *in fieri* and subsequently about the experienced carried out and about the theoretical knowledge gained with the university courses. For the description of the structure of the university internship, inspired to the dialogical-reflexive method, please refer to Agrati & Gemma (2015).

The model of process for the didactic design subtended to the meetings dedicated to the design skill was

inspired by the training model in situation (Gero & Kannengiesser, 2002) and by a systemic, multidimensional and complex vision of the design (Rossi & Toppano, 2009). It as well guarantees the trainee teacher that *retrospective*, *in situ* and *preventive* training useful to meet and compare the “expected”, “internal”, and “external” design models. On a curricular level, this would be possible through the orchestration of theoretical (theoretical course), practice (school internship) and reflexive training (university internship) – see the model in figure 1. On an operational level, this would be possible through a *project work* re-writing process – meant as “design artefact”- consisting in three moments, correspondent to the first, second and third draft.

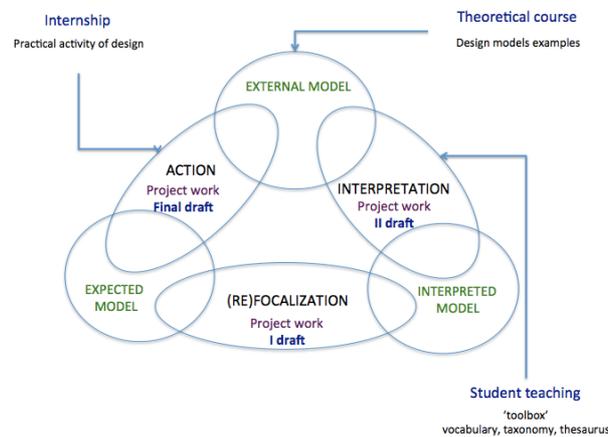

Figure 1 – The situated model of teachers training – adapted from Gero & Kannengiesser (2002).

Figure 1 is merely representative of the process for the didactic planning, of an aware reduction of the complex dynamics difficult to formalize. Nevertheless, it clarifies the *project work* drafting phases, as presented in the university internship meetings. Those meetings have to be considered as the place dedicated to the elaboration, *personal* at first, then *collective*, finally *formal*, of the *project work* - object of this study.

Meetings of the university internship and elaboration of the project work

Building the design skill is part of a pluralistic, multi-level process in which the trainee has experienced designing in first person and through the comparison of his experience with the experienced colleagues, has received and criticized theoretical designing models, has been followed through the elaboration process of his/her “toolbox”.

It follows the elaboration process of the *project work* within the university internship meetings and, at a later time, some aspects of the redrafting technique used.

The project work as design 'artefact'

A design model is a symbolic model, a particular type of “cognitive artefact”, belonging to what Popper (1979) defines as “World 3”. It can be defined as an “artificial tool (...) ensuring a representative function and affects the human activity” (Norman, 1991, in Rossi & Toppani, 2009, p. 25). The use itself of the artefact transforms the activity it was designed for. In particular, it modifies how the set target is meant to be reached. This is why the *project work* – meant as a “design artefact” (Agostinelli, 2007) elaborated during the university internship meetings – is a tool both *of* and *for* the design (Magnoler, 2008), a tool that has facilitated the trainee teacher in the preparing of the action (*of*) and in the reflection about the action itself (*for*).

It is constituted by a) a totality of *statements*; b) a *language* of representation; c) *conceptualizations* about the thing/action to be represented and it is reified in d) an instrumental *vehicle*. As a matter of fact, whoever drafts a *project work* is to respect conceptual and linguistic bindings such as:

- the *structure*, or the ‘form’. It helps to make explicit the process laying under the action to be performed, for example the model WBS - *Work Breakdown Structure* (Nepi, 2006) represents as a hierarchy the activities and sub-activities. Elaborating a *project work* in WBS leads to adapting the “internal” model to a particularly structured “external” model typology but still supporting the process socialization (see also, Seels & Glasgow, 1998);

- the *language*, that is to say the *vocabulary*, the *syntax*, the *semantic* specific to the design (Coyne et al., 1990). The designers of a didactic action use expressions such as “didactic activities”, “tools”, “learning contents”, “objectives”, “targets”; they aim at a balance between the personal language and the specific language of the designing to avoid committing linguistic mistakes (see Wittgenstein, 1953). Each participant to the course wrote three drafts of the *project work*. Each one of these drafts has been defined based on the formal organization that it has acquired (see Figure 2). The first draft is a *narration*. The trainees described in a

narrative way how they meant to act to solve a certain problem without any reference structure and based only on personal experience, on the debate with the school tutor during the school internship. This draft aimed at facilitating the expression of the “expected” design model and at observing the so-called spontaneous configuration. The second draft is a *report*. The trainee activated a first comparison between the “expected” model expressed in the first draft and the different models deriving as well from the debate with the colleagues. This has not only promoted the sharing of the contents included in the first drafting, but it has, above all, promoted the reflection about the structure to be used to formalize the hypothetical action – comparison between “expected” and “internal” model. The third draft – *structure* – has been elaborated in a formal way. The structure of the planned action took place through the respect of the linguistic bindings – vocabulary, taxonomy etc. – of the model proposed by the university supervisor. This has facilitated the comparison between “internal” models, deriving from the debate with the colleagues and the “external” design model shared with the community of experts.

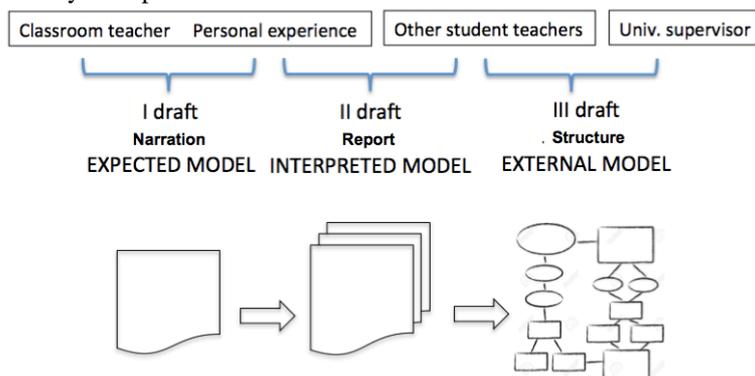

Figure 2 – The three *project works* drafts.

It is useful to refer to some aspects about the re-writing technique, often used in the didactic practice (Corno, 1999), in particular in the teacher professional training (Perla, 2012).

The re-writing technique used during the university internship meetings might be defined as a “cognitive” technique (Corno, 1999, p. 117) since it allows the writer to transform the basic text considering new points of view and/or a deeper analysis or reconfiguration of previously underlined elements, properly basing on the incentives received on the second step (cfr. the text transformation process that each participant could perform following the debate with the other participants and the school tutor). Re-writing techniques of this kind require a complex and specific cognitive work as they stimulate the “strong” creativity (Corno, 1999) of the involved writer: first of all the activation of the memory, secondly the way knowledge (*principle of data accessibility*) is accumulated in the mind, the inevitable respect for the bindings or binding criteria to the creative act – for example the textual structure, the context aspects etc. (*principle of the bindings*); last but not least, the elaboration of something felt as new and original (*principle of the originality*).

This ‘new and original’ something is described by the cognitive sciences (Schank & Abelson, 1977; Russel & Norvig, 1995) as *script*, mental concept that let re-configure the elements of a knowledge (events, typical scenes, stable organizations in the memory) in a more and more complex and specific ways. Those *scripts* could be somehow associated, even if not properly, to those how have been defined “expected”, “internal” and “external” models of design, that represent the focus around which the project work analysis was carried out.

A STUDY ABOUT DESIGN MODELS

The exploratory study was carried out at the training courses for the special education teaching certification (*Corso di formazione per il conseguimento della specializzazione per le attività di sostegno didattico agli alunni con disabilità*) at University of Bari in 2014-15. It has involved about 240 participants in order to investigate how trainee teachers build design models and, in particular, how they transform the “expected”, personal models into “external” models elaborated by debating with the colleagues, the school tutors and the university supervisors.

This first phase of the study was carried out through the comparative analysis (Fereday & Muir-Cochrane, 2006; Snow & Cress, 2000) of the three drafts of the about 240 *project works* provided by the trainee teachers during the university internship meetings and focused the attention on the formal organization of the documents – defined *narration*, *report*, and *structure* (see above). A second phase of the study, still in progress, aims at analysing in depth the aspect of the *language* and of the *syntax* of the final *project works*.

Through the qualitative analysis of the data (Miles & Huberman 1994; Anderson, 2003) and following the comparative way, the material was read in a cross-reference way through the usual inductive phases of the a. classifying the files, b. codifying the significant aspects (*coding data*), c. identifying recurrent typologies (*structuring data*). A double-way matrix was used: it is worth reminding that this is the “*form* on which

particular characteristics of the multiple cases or utterances that the analyst need to take into consideration can be recorded” (Miles & Huberman, 1994, pp. 93–95). On it, macroscopic characteristics of the formal documents organization have been reported.

Some "emerging categories" (Bryant & Charmaz, 2007) among the design models reported in the three drafts of the *project works* have been deducted from the comparison of the matrixes, . The drafts having no reference model have been coded as “informal”; those having some sort of linear structure in phases – linked to the most known example is the ADDIE meta-model, Analyse, Design, Develop, Implement, Evaluate (Seels & Glasgow, 1998) – have been coded as “ADDIE”; those referring to hierarchical models following a time logic have been coded as “WBS” – referring to the most known meta-model WBS (*Work Breakdown Structure*).

Analysis of the data and first evidences

The figure 3 represents the absolute values of the design model typologies (ADDIE, WBS, informal) found in the three drafts (Narration, Report, Structure) of the *project works*.

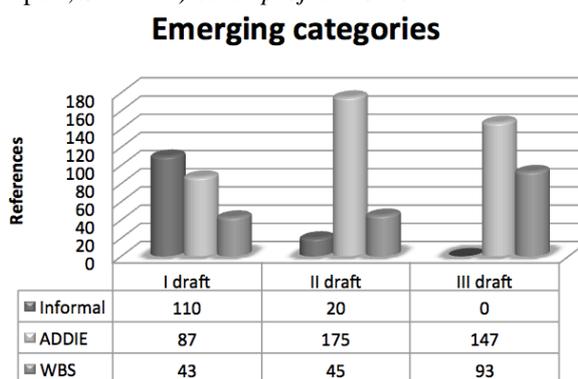

Figure 3 - Emerging categories in the three drafts of the *project work*.

Hereunder some aspects of the evidences are focused. In the first *project works* draft (Narration) the trainee teachers have used “external” models more or less formalized such as ADDIE (87) and WBS (43), even though in most cases they have not used any model. In the second draft (Report) the number of informal models has considerably decreased (from 110 to 20), whereas the use of model ADDIE has increased (175), following the debate with the course colleagues, as it is worth reminding. In the third draft, all the trainee teachers have used “external” design models such as ADDIE (147) and WBS (93) following the debate with the course colleagues and technical-practical indication received by the supervisor, as it is worth reminding.

As known, the model ADDIE represents a meta-model describing a linear process of action in phases (analysis, design, development, implementation and evaluation - Seels & Glasgow, 1998). The ADDIE models found in the three drafts of the *project works* were not hardly “canonical”: sometimes the *design* phase was elicited, sometimes the structure was roughly respected but the vocabulary used was different etc. Nevertheless, as previously mentioned, the models inspired to the ADDIE typology have been collected in the same “family”.

Looking at the figure 3, it is noted that the reference to the design ADDIE model are present in a consistent way (87) even in the first draft of the *project works* (Narration), increase further in the second draft (Report) (175) and then balance in the third draft (Structure) compare to the WBS model.

This is sufficient to consider the ADDIE model as an indicative expression of the “implicit” teacher knowledge (Perla, 2010) – on a design modelling level – that the teacher itself uses mostly not being aware of it. It is worth considering that the knowledge repertory used by the trainee teaches in the first draft is merely experiential, originated by the memory of the previous training experiences as well as by the debate with the school tutor during the school internship (Agrati & Gemma, 2015²). This prevailing design model seems to reinforce during the debate with the course colleagues –it has increased, in fact, from 87 to 175 from the first to the second draft – but then balances to the other “external” model proposed by the supervisor. It would be interesting to further investigate each of these inferences through a detailed analysis of the drafts but, as it has been clarified, this will be a task in the second phase of the study.

CONCLUSIONS AND FUTURE PERSPECTIVE

Reading the three drafts of the *project works*, it is possible to highlight that the trainee teachers already possess some design models at the beginning of their training. These models are 'personal' but can be easily modified in more formalized structures. More or less formal design models – inspired to ADDIE and WBS – are available since the first drafts of the *project works* and keep having a more defined structure through the debate with the course colleagues (second draft) and the formal models provided by the supervisor (third draft). From the point of view of the study about the teacher training, this suggests to focus more on the “personal

knowledge” background of the future teachers that they possess at the beginning of their training.

The comparative analysis highlighted as well the advantages and the limits of the *project work* as professional teacher training “tool”. The writing activity generated an unquestionable advantage in terms of participants training, that is to say to make explicit, make 'visible' some knowledge that would have otherwise been kept implicit (Perla, 2010) and maybe unaware. The triple draft of the *project works* performed by the participants gave the opportunity to make explicit, to clarify and even to build a more “strategic” knowledge (Damiano, 2007) compared to a 'anecdotal' knowledge. This professional writing (Perla, 2012) is conditioned nevertheless by a. the chance to have a suitable space/time, independent from the practice and facilitating reflection; b. the motivation to “commit in paths (...) leading often to question the very same presuppositions of one’s own action, sometimes the very same identity” (p. 12). From this latter consideration, the main limit of this *project work* tool arises: that is to say the emotional and cognitive commitment from the participants. Several participants showed a certain reluctance towards elaborating a project work, towards the practice of writing itself.

Even through reading the material, some sort of avoiding the task has been detected, such as the use of some stereotyped writing expressions and quotations from pre-existent documents.

The re-writing technique – as a way to *produce* material – and the comparative analysis – as a way to *read* the material – allowed anyway to achieve some positive outcomes about the training efficacy of the university internship module. This made possible the comparison among the *pre* and *post* action knowledge in a direct way. In the university internship meetings, the debate with the colleagues and the incentives from the supervisor turned into the chance for the participants to re-elaborate the design models arose in the first drafts of the *project works*, facilitating its restoration.

In the university internship meetings the internship tutor used very well-known design models (ADDIE and WBS). It would be interesting to observe what kind of impact more complex, multidimensional models – such as the FBS Gero & Kannengiesser, 2002) or the FVP (Rossi & Toppano, 2009) would have on the trainee designers.

It might be interesting as well analyse in depth the informal kind of models arose in the first drafts of the *project works* to be informed about the naïve, spurious representation forms that the future teachers possess and investigate about their origin.

Finally, it could be interesting analyse more in detail each of the models found in the drafts of the *project works* and relate them to the ADDIE and WBS to clarify their special features. This would lead to better clarify the process of transformation of the “internal” models in “external”, formal models.

As often mentioned in this study, these are matters needing further in-depth analysis and further investigations.

ABSTRACT

The purpose of this research was to synthesize theoretical framework and designing framework of Constructivist Simulation Learning Environment Model to Enhance Decision-Making for the Industrial Electrical Technology Students. Research design was Model research (Richey and Klein, 2007) This study was a part of research in Phase I (Model development). Research design was document analysis. The procedures were as follows: 1. Examining and analyzing principles, theories, selected research 2. Synthesizing the theoretical framework and the designing framework of Constructivist Simulation Learning Environment Model to Enhance Decision-Making for the Industrial Electrical Technology Students . The results revealed that: 1) The theoretical framework consists of 5 foundations: (1) Context base, (2) Psychological base (3) Pedagogical base, (4) Multimedia and Simulation and (5) Neuroscience base 2) The designing framework of Simulation Learning Environment Model to Enhancing Decision-Making. Consisted of 4 Processes 1) Encourage the creation of cognitive structures that promote decision-making 2) Support for cognitive equilibrium 3) Enlarging of cognitive structure and decision-making 4) Enhancing and supporting for knowledge creation and decision-making. This Constructivist Simulation Learning Environment Model comprised of 8 components as following: (1) Problem Base 2) Resources 3) Cognitive Tools 4) Decision-Making room 5) Collaboration room 6) Coaching room 7) Related Case and 8) Scaffolding

Keyword: Simulation learning environment, Constructivist, Decision-Making

Introduction

From the past to the present, there have been changed about technology, economy, and society by using the knowledge to perform the tasks.

These changes affect many aspects. In addition, it is directly affected on society and has many problems occur in society. Moreover, there are the complex problems.

It is necessary to develop people for having the cognitive style, analytical thinking, reasoning, knowledge acquisition, and decision-making those are important with the living now. For each day, the people have to face many problems around them. Therefore, it needs to have the decision-making for each problem since they have been got up. For example, choosing clothes, shoes, traveling, and etc. For these reasons, it needs to study the concreated decision-making guidelines that are having the pattern, method, and step of decision-making to find the conclusion for decision-making.

For developing the people to have more knowledge and skills that need for living now, the government has set the study plan which has focused on the learners for having learned-behavior by setting the National Development Plan and a National Education Act.

To prepare the contents and activities be consistent with the learners' attentions and skills by regarding to the difference of each person.

However, the teaching and learning are still be a lecture which it makes the learners could remember only information, but they could not emphasis on an advanced-thinking method. Then they could not make understanding and finding knowledge as much as it could be. It is difficult to understand, so it needs to change the teaching method for making the learners to have a characteristic that is suitable for the 21st century. The teaching method will consist with the Constructivist Theory which emphasis on the learners to make knowledge by practicing through themselves, thinking method, and connecting the old knowledge with the new knowledge together after that they could expand the cognitive structure.

According to The teaching and learning in the industrial electrical technology , it will emphasis on an action by practicing about the *electrical circuit connection*, there is the complexity dealing with the *circuit connection*, materials and equipment's selection methods, and technique of the *Electrical circuit connection*. Each selection method may be fail and dangerous for doing the *Electrical circuit connection*. Therefore, it needs to bring the decision-making method to use accurately and to protect the mistake.

At present, the learners still practice to do the real electrical *circuit connection*. If the learners lack of skills, experience, and proficiency skills in decision-making, it may be dangerous because an electric current has flown all the time. From the problem above, there is the model to use with the learners for practicing and revising skills from the computer program dealing with an electrical *circuit connection by making them to have more proficiency skills before doing the real electrical circuit connection and* avoiding the dangerous situation.

The environmental learning model has been designed to assume the situation following the Constructivist Theory that supports the decision-making. To practice about decision-making on an electrical *circuit connection* and the material and equipment's selections. To increase the proficiency skills and decrease the dangerous situation meanwhile they are working dealing with an electric current.

The Teaching Integration and Neuroscience could help to understand the protocol or thing that occur in the human's brain meanwhile they are facing the problems and making decision which it is the study of brainwave meanwhile there is the decision-making. To bring it be the evidence-based results that be occurred in the cognitive process.

The purpose of this study

To synthesize the designing framework of constructivist simulation learning environment model to enhance decision making

Research design

Document analysis and survey research were employed in this study

Target Group

The target groups of this study consisted of 3 experts to assess the designing framework of the constructivist simulation learning environment model to enhance decision making

Research instruments

The instruments in this study consisted of 2 instruments as following:

- 1) The 3 experts assessed the quality of the designing framework and recorded in the designing framework assessing form.
- 2) The recording form for synthesis of the designing framework of the Simulation enhance decision-making

Data collecting and analysis

The procedure of gathering and analysis data were as follows:

- 1) Synthesis of theoretical framework of Constructivist Simulation learning environment model to enhance Decision-Making. The data were collected by using the recording form for synthesis of the theoretical framework. Summarization, interpretation and analytical description were used to analyze the data.
- 2) Synthesis of Designing Framework of Cognitive Simulation Learning Environment Model to Enhance Decision-Making. The data were collected by using the recording form for synthesis of the designing framework. Summarization, Interpretation and analytical description were used to analyze the data.

Research Results

A. Theoretical framework

Based on a review of literature related to design model Development of Constructivist Simulation Learning Environment Model to enhance Decision-Making for the Industrial Electrical Technology Students Which consists of 1. Contextual context, objective philosophy, curriculum Industrial Electrical Technology Scope of content About 1-phase AC and 3-phase AC motors 2. Fundamentals of Learning Psychology Based on the basic psychology of learning in constructivist theories, Cognitive

Constructivism. Social Constructivist and Cognitive Theory includes information processing theory and Mental model and Decision-Making 3. Teaching basics By adopting the principles of Open Learning Environments, Constructivist Learning Environments, Situated Learning Environments, Designing Instruction for Constructivist Learning model and Cognitive Apprenticeship 4. Environmental learning, multimedia and simulation. 5. Neuroscience

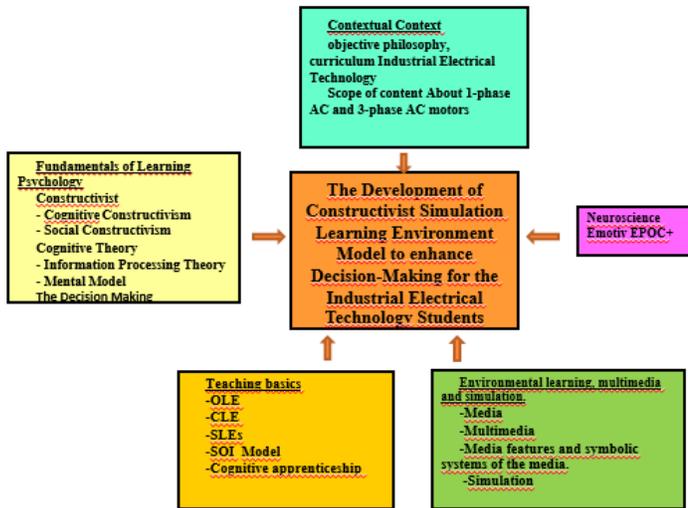

Figure 1. The Theoretical framework: The Development of Constructivist Simulation Learning Environment Model to enhance Decision-Making for the Industrial Electrical Technology Students

B. The Designing framework

According to this study, the findings of synthesis of the designing framework of the learning environments model to promote Decision-Making found 4 crucial bases as the following details:

1. Activating cognitive structure and promoting Decision-Making

The first crucial process of the designing framework was activating cognitive structure and promoting Decision-Making. the activating cognitive structure were as follows: cognitive constructivism (Piaget, 1964); cognitive conflict, Situated learning (Brown, Collins and Duguid,1989) Authentic context and Authentic activities, Simulation and Decision Making (Fred C. Lunenburg 2010 & Allen and Plunkett and Attner, 2013). Design is a problematic place that promotes decision-making. shown in figure 2

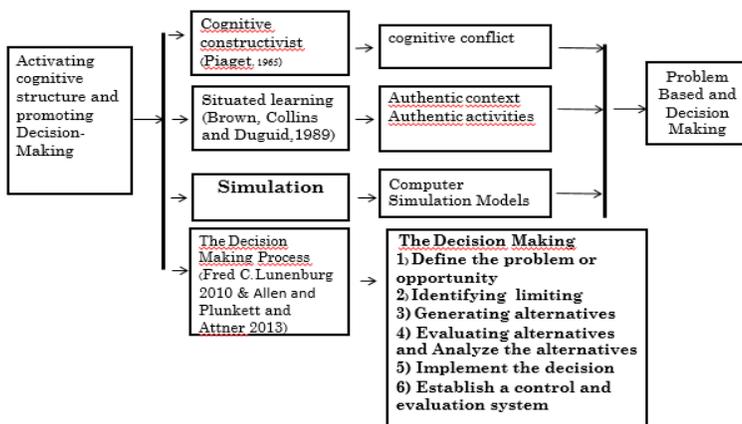

Figure 2. The designing framework: Activating cognitive structure and promoting Decision Making

2. Supporting for adjusting of cognitive equilibrium

The second crucial process of the designing framework was supporting for adjusting of cognitive equilibrium, it illustrated the theories used in design the component called "Learning Resources" and "Cognitive tools" of the learning environments to promote Decision Making. The theories used for supporting for adjusting of cognitive equilibrium were as follows: information processing theory (Klausmeier, 1985); sensory register, short-term memory, long-term memory; mental model theory; conceptual model, SOI model (Mayer, 1996) selection, organizing, integrating; and Simulation. These theories were transformed into practice as learning resources in order to provide information for the learners to construct the knowledge. This may help the learners processing information effectively and understand easily and CLEs (Jonassen,1999) Cognitive tools to seek knowledge of the learners themselves as shown in Figure 3

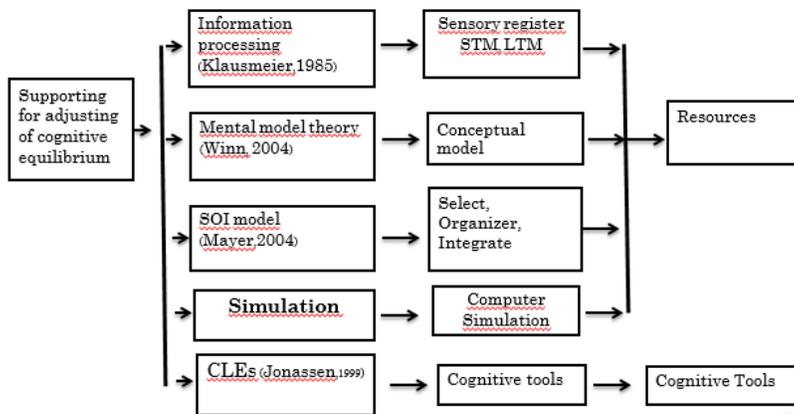

Figure 3. The designing framework Supporting for adjusting of cognitive equilibrium

3. Supporting for enlarging cognitive structure and Decision Making

The third crucial bases of the designing framework was Supporting for enlarging cognitive structure, it illustrated the theories used in design the component called "Social Collaboration Center" of the learning environments to promote Decision Making : Social constructivism (Vygotsky,196 language, culture and society. These help support learners to share experiences, multiple perspectives, and adjust misconception and Simulation Designed to be. "Knowledge exchange room" CLEs (Jonassen,1999) Problem, Question or Project and Related Cases and Simulation. Designed as a "case study" The Decision Making (Fred C. Lunenburg 2010 & Allen and Plunkett and Attner, 2013) The design is "Room to promote knowledge creation and decision-making" shown in figure 4.

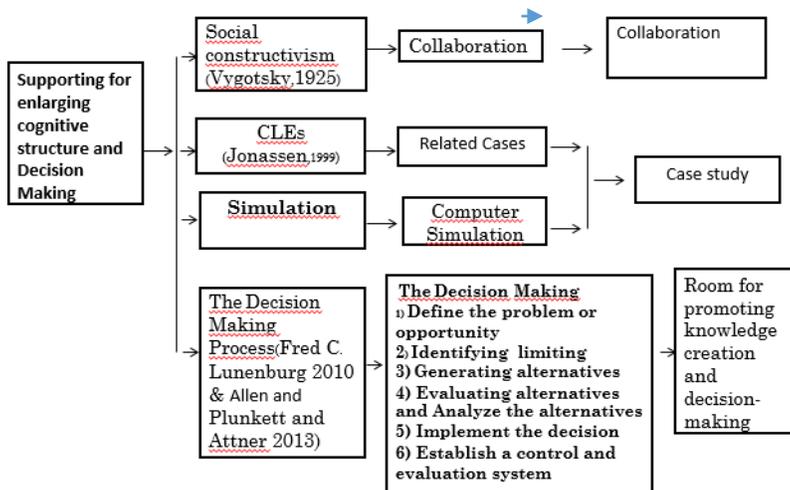

Figure 4. The designing framework supporting for enlarging cognitive structure and Decision Making

4. Supporting and encouraging knowledge construction and Decision Making

The fifth crucial bases of the designing framework was supporting and encouraging knowledge construction, theories used in design the component called “Scaffolding center” of the learning environments to for promote Decision making. The theories used for supporting and encouraging knowledge construction were as follows: Social Constructivism (Vygotsky, 1978) Zone of Proximal Development; 4 scaffolding (Hannafin, 1999): conceptual scaffolding, metacognitive scaffolding, procedural scaffolding, strategic scaffolding, and cognitive apprenticeship; coaching. These theories were transformed into practice as scaffolding center in order to guide and support learning efforts of learners. This may support and encourage the learners to construction knowledge. As shown in Figure 5

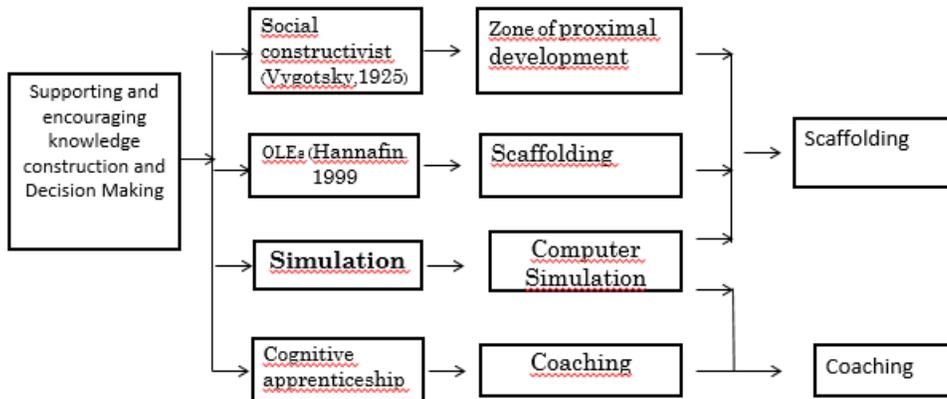

Figure 5. The designing framework supporting and encouraging knowledge construction

C. Assessment of the designing framework of the Constructivist Simulation Learning Environment Model to enhance Decision-Making for the Industrial Electrical Technology Students by experts found the congruence between the theories and the design.

CONCLUSION AND DISCUSSION

The designing framework of the Constructivist Simulation Learning Environment Model to enhance Decision-Making for the Industrial Electrical Technology Students comprised of crucial bases as following: 1) Activating cognitive structure and **promoting Decision-Making** 2) Supporting for adjusting of cognitive equilibrium, 3) Supporting for enlarging cognitive structure and **Decision Making**, 4) Supporting and encouraging knowledge construction and **Decision Making**. According to above 4 bases of the designing framework were transformed into practice as 8 elements the Constructivist Simulation Learning Environment Model to enhance Decision-Making for the Industrial Electrical Technology Students as following: 1) Problem base, 2) Resource, 3) Cognitive Tools, 4) **Knowledge exchange room**, 5) Room to promote knowledge creation and decision-making, 6) case study 7) Coaching and 8) Scaffolding

As for this research finding may be the result of Instructional design Theory (ID Theory) that used underlined theories especially the Decision Making theory ((Fred C. Lunenburg 2010 and Allen, Plunkatt, Attner, 2013) ; 1) Define the problem or opportunity 2) Identifying limiting 3) Generating alternatives 4) Evaluating alternatives and Analyze the alternatives 5) Implement the decision 6) Establish a control and evaluation system, This may help learners to foster Decision Making. In addition, the theoretical validity of the designing framework of the Constructivist simulation learning environment model was found from assessment by experts. As mentioned findings can be supported the designing framework of the Constructivist simulation learning environment model to enhance Decision Making.

THE DEVELOPMENT OF AN ONLINE TEST TO MEASURE THE INTERPRETATION OF IMPLIED MEANINGS AS A MAJOR CONSTITUENT OF PRAGMATIC COMPETENCE*

Uğur Recep ÇETİNAVCI**, İsmet ÖZTÜRK***

ABSTRACT

Pragmatic competence is among the explicitly acknowledged sub-competences that make the communicative competence in any language (Bachman & Palmer, 1996; Council of Europe, 2001). Within the notion of pragmatic competence itself, “implicature (implied meanings)” comes to the fore as one of the five main areas there (Levinson, 1983). In this regard, the present study developed an online multiple-choice discourse completion test (MDCT) to specifically measure the interpretation of formulaic, thus teachable implied meanings in English. After the initial version produced with the help of a native speaker colleague, the test was piloted rigorously with different comparison groups. At the end of the process, 112 EFL Teacher Trainees, 33 native speakers of English, 37 EFL learners at a university School of Foreign Languages and 11 high school EFL students had taken the test as the comparison subgroups with varying proficiency levels. Moreover, seven ELT professional native speakers had been interviewed about each test item to have their direct feedback on wording and all the revision/improvement alternatives. Consequently, significant performance differences were detected between particular pairs of subgroups, which is a strength of the test as it did reflect the performance variability between the participants from different proficiency levels. The outcome was a MDCT that the native speaker takers reached a good compromise on and is usable both in computerized and pen-and-paper format, which can be used in any ELT or ELT teacher training program concerned to diagnose the students’ performance in a major area of pragmatic competence to later take informed instructional decisions.

Keywords: English Language Teaching, Pragmatic Competence, Implicature (Implied Meanings), Testing, Teacher Training

INTRODUCTION

“Pragmatic competence (the ability to process and use language in context)” is an essential constituent of having an overall communicative competence. On the other hand, it is a construct relatively hard to develop in EFL contexts like in Turkey, where teaching practices could be grammar-oriented and chances of processing sufficient authentic input are minimal. This all is worthy of more note as interlocutors have been reported to tend to evaluate pragmatic flaws more severely than grammatical ones (Thomas, 1983; Bardovi-Harlig, 1998; Economidou-Kogetsidis; 2015).

When the focus is shifted onto the research agenda within pragmatics, one can see the reports that the domains other than “speech acts” have been studied to a lesser extent. They cover also “implicatures” though they are likely to prove troublesome for learners to interpret even after prolonged exposure to the target language.

In light of the abovementioned considerations, the aim of this study is to develop an online multiple-choice discourse completion test (MDCT) to investigate specifically the interpretation of implicatures (implied meanings) in English, which add up to an essential constituent of pragmatics (Levinson, 1983). In this regard, the following research questions were formulated to guide the study:

- 1) Do NSs of English reach a good compromise with their interpretations of the test items?
- 2) Are the performance differences between particular pairs of test-taker groups attributable to their proficiency differences?

* This article is based on the first author’s PhD dissertation titled “The effects of explicit film-based instruction on English as a foreign language teacher trainees’ interpretation of implied meanings”.

LITERATURE REVIEW

In terms of the historical continuum of competences that an efficient language user would need to have (Chomsky, 1965; Hymes, 1972; Canale & Swain, 1981; Canale, 1983; Bachman & Palmer, 1996; Council of Europe, 2001), years saw the inclusion of pragmatic competence as one of the basic components of overall language ability (Bachman & Palmer, 1996; Council of Europe, 2001, p. 33). In this context, pragmatic assessment is important. The argument is supported in reference to EFL environments like the one in Turkey, about which the related literature reports grammar-oriented language teaching practices, materials and assessment (Özmen, 2012; Uztoşun, 2013; Erkmén, 2014). The concern here is that even if such a learning context works in the best way possible, it is still open to question whether pragmatic competence can develop jointly with grammatical competence (Bardovi-Harlig, 1996; Jianda, 2006). In light of the reports like Yu's (2006), which suggests that language learners may need to better understand pragmatic aspects of the target culture so that they can interpret appropriately what they hear and interact effectively with members of that culture, pragmatic assessment proves to be certainly worth considering.

Pragmatic flaws and communication

In view of the abovementioned points, one could voice doubts about learners' probable communication problems in encounters especially with native speakers (NSs). Like Thomas (1983), Bardovi-Harlig and Dörnyei (1998) and Crandall and Basturkmen (2004), Economidou-Kogetsidis (2015, p. 1-2) appreciates the probable gravity of such problems by noting that a NS could attribute a grammatically competent and fluent non-native speaker's pragmatic failure to impoliteness. Accordingly, she states that when EFL learners move to the target language community, sophisticated pragmatic competence becomes essential since pragmatically inappropriate language can cause pragmatic failure by unintentionally violating social appropriateness.

Pragmatics and Implied Meanings

Within the framework set above, "implied meanings (implicature)" were addressed as the focal point of this study. Besides the significance of pragmatic competence in overall language ability, the principal reason for this choice is the fact that, among its five main areas including "implicature" (Levinson, 1983), the study of pragmatics has focused on speech acts (Aijmer, 2011; Eslami & Mirzaei, 2012; Roever, 2013; Bardovi-Harlig & Shin, 2014; Bella, 2014) and to a lesser extent on implicatures (Roever, 2006; Bardovi-Harlig & Shin, 2014). This would acquire an additional dimension when we consider the fact that implicature is an "unremarkable and ordinary" conversational strategy (Green, 1989, p. 92) used frequently and extensively in daily conversation (Pichastor, 1998; Matsuda, 1999; McTear, 2004). What is more, in terms of pragmatic testing, implicature was made a major constituent of the first pragmatic competence test developed in the field of Applied Linguistics (Roever, 2005).

In this regard, it is considered worthwhile here to touch on the blanket term "implicature" and several related points.

Implicature

It was Grice (1975) who introduced the notion of "implicature" to denote cases in which what is meant is distinct from what is uttered (Davis, 2007). He also categorized the concept into "conventional" and "conversational" implicatures, the latter of which originates from his well-known Principle of Cooperation (Grice, 1975, 1981) and Maxims (quality, quantity, relevance, manner). When an interlocutor deliberately disregards one or more of these maxims, that could well be to go beyond the extent of what s/he utters with the intention of expressing his/her aims indirectly but more effectively that way though. This played a historically important role in pragmatics (Hadi, 2013). It has led to new developments in people's understanding of conversation, in the light of which Bouton (1988, 1994, 1999) was the first researcher to study implicatures in specific relation to pragmatic assessment of comprehension. In conformity with the scholars postulating that it is often difficult for L2 learners to notice how people in a given culture express meaning indirectly (Wolfson, 1989) as they show an inclination for taking utterances at face value (Kasper, 1997), Bouton discovered that the ability of nonnative speakers (NNSs) to interpret implicatures is highly questionable. This later kept being confirmed in studies like Kubota (1995), Lee (2002), Taguchi (2005), Roever (2005) and Rızaoğlu and Yavuz (2017).

Using his research findings as base, Bouton (1994) divided implicatures into two sets: idiosyncratic and formulaic. While the comprehension of the former relies mainly on a shared perception of the context, the latter is based on a formula of some sort, which would be structural, semantic, or pragmatic and crucial to a person's effective interpretation. Bouton's key finding on formulaic implicatures was that they might prove considerably difficult for NNSs and they are less susceptible to even prolonged exposure effects. Nevertheless, they were very much teachable, which provided the direct inspiration for the implied meanings to be included in this study. To make it a basis for further "interventionist studies" where the effect of a particular instructional treatment on

students' acquisition of the targeted pragmatic feature is examined (Kasper, 1999), the idea was to develop a test that could investigate as a pretest, posttest and/or delayed posttest the interpretation of such teachable implied meanings by EFL/ESL learners and teacher trainees, who are supposed to help future EFL/ESL learners to have pragmatic competence besides other language ability areas. In this regard, the following section provides the introduction and discussion of each implied meaning type included in the test.

Implied meanings covered in the present study

To start with, the list below gives the implied meanings included in the instructional phase of this study:

- * Pope Questions
- * Indirect Criticism
- * (Verbal) Irony
- * Indirect Refusals
- * Topic Change
- * Disclosures
- * Indirect Requests (Requestive Hints)
- * Indirect Advice

It should be mentioned that Pope Questions, Indirect Criticism, Irony, Topic Change, Disclosures and Indirect Refusals had already been included in several other studies (Bouton, 1994, Roeber, 2005; Taguchi, 2005). Indirect requests and indirect advice have not been bunched together with the abovementioned implied meanings in any test before. They were included in this study on the basis of a consideration like Verschueren's (2009, p. 9), who observes that Grice's (1975) account of implicatures and Searle's (1975) definition of indirect speech acts are very similar, or Birner's (2013, p. 195), who posits that indirect speech acts are a subtype of conversational implicature.

Considering the aforementioned fact that formulaic implicatures are highly convenient to test and teach, it is also worth emphasizing here that some of the implied meanings included in this study are ones that were reported earlier as formulaic in the related literature. For the rest, which have not been overtly declared as formulaic, the researchers' claim is that some of their variations can be deemed formulaic, or tentatively formulaic at least, thus worth being included in the instructional program and tested in terms of teachability. This was both a novelty and a risk for the present study, but one that is worth taking as the intention was to respond to Bouton's (1994, p. 106) call that we should be alert to implicature types of which we are not fully aware *with an eye to including them in instruction programs*.

What follows is the discussion of the abovementioned points with a focus on each implied meaning covered in the present study:

Pope Questions

Pope Questions are reported to be clearly formulaic (Bouton, 1994; Bouton, 1999) as they always tend to work according to the following pattern:

- * One is asked a question.
- * S/he thinks that the answer is an obvious "Yes" or "No".
- * To answer that question with an indirect but emphasized "Yes" or "No", s/he asks a new question to which the answer is a clear "Yes" or "No".

The following is an example:

A mother and her daughter Jenny have been discussing the upcoming weekend. Jenny's parents are leaving town and this is the first time Jenny has been left at home alone.

Mother: Are you sure you can take care of yourself this weekend?

Jenny: Can a duck swim, Mother? (Bouton, 1988, p. 193)

As the answer to Jenny's question is an obvious "Yes", she is telling her mother indirectly that she will of course be able to take care of herself okay (Bouton, 1988, p. 193).

Indirect criticism

Like Pope Questions, utterances that contain Indirect Criticism (also called “Understated Negative Evaluation” or “Damning with Faint Praise”) are reported to be formulaic (Bouton, 1994, 1999). It happens when we are asked what we think of something or someone that we, in fact, do not like - but we don’t want to say so explicitly. Instead, we reply indirectly, commenting about features of the thing that are not central to its evaluation in any way (Bouton, 1988, p. 193). See the following example:

George and Sheila are looking for a house to buy. Sheila just went to look at a house in their price range and is reporting back to George.

George: So, what did you think of the house?

Sheila: Well, it had a nice mailbox. (Broersma, 1994, p. 3)

As Sheila responds with a praising comment on just a subsidiary feature of the house (the mailbox), she could be interpreted to imply that some more important aspects of the house merit considerable criticism. By praising the house in such a weak way, she makes it obvious that she does not really admire the features that are central to the evaluation she has been asked to make. In other words, she criticizes the whole through a slight compliment to a part.

(Verbal) Irony

Ironic utterances are a type of implied meanings that are considered in the same category with formulaic implicatures (Bouton, 1994, p. 105), thus eligible to be the focus of pragmatic instruction. Especially verbal irony, which is of interest to the present study, can be deemed as based on a particular semantic pattern. That is, an ironic statement must be contrary to the true state of affairs to be interpreted correctly. There must be some discrepancy between the reality and the utterance, and the listener must recognize this discrepancy in order to interpret the utterance (Kreuz & Roberts, 1995, p. 22). To put it differently, the speaker uses words that mean the opposite of what s/he really thinks. This is exemplified below:

Joan and Anne are classmates. Joan has some problems reading his paper and he is asking Anne for help.

Joan: Hi, Anne.

Anne: Hi Joan. What’s up?

Joan: I was wondering if I could ask a small favor of you. Would you read my Linguistics 441 paper?

Anne: Gosh, John, I wish I could, but I promised Jack I’d go bowling with him tonight.

Joan: Yeah. Well, thanks for the help. (Bouton, 1994, p. 101)

We see that after being refused by Anne, Joan’s latest remark suggests that he is thankful for the response. However, on second thought if necessary, one could see that the statement is contrary to the true state of affairs and there is a discrepancy between the reality and the utterance. That is, Joan feels dissatisfied with Anne’s response and he means to express it with a sarcastic remark.

Indirect refusals

Indirect refusals can be viewed as another type of formulaic implied meanings in the light of the pertinent literature. They are defined as routinized expressions reflecting relatively fixed patterns of discourse exchange (e.g., giving an excuse when refusing) (Taguchi, 2007, p. 329). What is more, they are cited as notably appropriate for classroom instruction of pragmatic comprehension with their abovementioned conventional features (Taguchi, 2007, p. 331). See the following example:

Mary: Hey, John, what’re you doing?

John: I’m working on my paper for the English class.

Mary: You’ve been working on that paper for a week. Why don’t you take a break? Let’s go to the movies tonight.

John: I have to finish my paper by eight in the morning. (Taguchi, 2007, p. 322)

It is seen that John does not refuse Mary’s offer with explicit linguistic markers of refusals such as “I can’t”, “No”, or “I don’t want to”, which were identified as direct refusal expressions by Beebe, Takahashi, and Uliss-Weltz (1990) (as cited in Taguchi, 2007, p. 321). Instead, he provides his reason/excuse for not accepting the offer.

Topic change

Topic Change (Change Subject) is another type of implied meanings which has been reported to be formulaic (Roever, 2011, p. 466). In terms of the relevant body of research (Bouton, 1988, p. 190; Roever, 2005), it happens when a person feels that a current line of discussion is really inappropriate and leaps into another topic. In other words, it occurs when one comes up with an irrelevant, unexpected utterance as s/he does not like what has just been said or asked. The purpose can be considered to be making the inappropriateness perceptible to the interlocutor(s). See the following example from “The Prince of Tides (1991)”, a romantic drama film based on the 1986 novel of the same name by Pat Conroy:

Susan, a psychiatrist in New York, is questioning Tom, a football coach from South Carolina burdened with many details of his dysfunctional family's secrets. Susan decides to discuss the topic of his sister Savannah's last suicide attempt after their brother Luke's death. This is one of the initial meetings between Susan and Tom. Therefore, Tom is reluctant to disclose some certain facts about his family.

Susan: Savannah's last suicide attempt was right after his death, correct?

Tom: Yeah, she had a few bad days over it.

Susan: Were there other times?

Tom: I don't know. There might have been another time when we were young, but I'm not sure . . .

How are you getting paid?

Susan: Why change the subject?

As is seen, Tom does not seem to like the turn that the conversation takes. Instead of satisfactorily answering Susan's query, he chooses to ask an irrelevant question at that moment of the talk. We also see that Susan does not fail to understand Tom's attempt to change the subject, which is uncomfortable from his own viewpoint.

Disclosures

Another type of implied meanings covered in the study is Disclosures, which are defined as indirect replies used to avoid disclosing embarrassing information (Taguchi, 2002, p. 157). To the best of the researcher's knowledge, the implied meaning type of Disclosures has not yet been openly reported as formulaic, routinized, homogeneous or predictable. Nevertheless, the researcher still thought that they could be teachable, thus suitable for being included in the study. The rationale was that the definitions and examples in the relevant studies (Taguchi, 2002; Taguchi, 2005) can be considered to contain some semantic clues that point to a tentatively identifiable pattern: When one is questioned about the reality of something and when the answer would urge him/her to give embarrassing or disturbing information from his/her own viewpoint, s/he might not make a full confession. Instead, s/he might just give the reason(s) why the consequence (to be mentioned in a direct answer of confession) really arose or not. Doing that, s/he could produce an indirect answer of revelation, confirmation or negation about the reality that is being questioned. See the following example:

Jim: Hi Mom, I'm home.

Mom: Hi Jim. Didn't you get the report card today? How were your grades this semester?

Jim: You know mom, I don't think the teacher grades fairly. (Taguchi, 2002, p. 171)

We see that Jim does not respond to his mother's question with a direct answer of confession that his grades were poor, which appears to be an item of too embarrassing information for Jim to disclose directly. Instead, he just gives the reason in his opinion (the fact that the teacher does not grade fairly) why the grades in the report card were low. In that way, he indirectly makes the revelation that the reality is his poor grades. It can be thought that the answer is intended to function also as a call for understanding and empathy.

Another example of Disclosures provided below is from the American sitcom “Friends (1994)”:

Monica, the mother hen in her group of friends and a chef known for her perfectionist, bossy and competitive nature (Retrieved on July 21, 2016 from <http://en.wikipedia.org/wiki/Friends#Characters>), is trying to organize a big special dinner. She is in search of a waitress for it. Rachel, Monica's best friend from childhood and a waitress herself, infers from Monica's telephone conversation that she has arranged for another waitress to serve in the organization.

[Phone rings. Monica answers it.]

Monica: [on phone] Hello? Oh, hi Wendy! Yeah, eight o'clock. What did we say? Ten dollars an hour?... OK, great. All right, I'll see you then. Bye. [hangs up]
Rachel: Ten dollars an hour for what?
Monica: Oh, I asked one of the waitresses at work if she'd help me out.
Rachel: [hurt] Waitressing?
Joey: Uh-oh.
Monica: Well... of course I thought of you! But... but...
Rachel: But, but?
Monica: But, you see, it's just... this night has to go just perfect, you know? And, well, Wendy's more of a... professional waitress.
Rachel: Oh! I see...

As we see, Rachel questions Monica so that she states the obvious fact for Rachel that she was not hired as the waitress to help Monica out. Instead of a direct response in the affirmative or negative, Monica just gives the reason (the fact that the hired waitress is more professional than Rachel is) why she did not pick Rachel. In that way, Monica indirectly makes the confirmation that she did choose another waitress, which seems to be an item of embarrassing information hard for Monica to disclose directly. It can be thought that her reply is also an attempt to justify her decision and a call for understanding.

Indirect requests (Requestive hints)

Another type of implied meanings included in this study is Indirect Requests, which were labeled as Requestive Hints (Rinnert & Kobayashi, 1999; Weizman, 1985, 1989, 1993) in the pertinent literature.

Considering the pursuit in this study of some formulaic implied meanings with several clues that point to a particular pattern, the fact must be acknowledged here that Requestive Hints have never been reported to be formulaic, routinized or homogeneous. They represent a heterogeneous category which includes various sub-strategies (Weizman, 2007, p. 144). According to the model that Weizman (1985, 1989, 1993) posits, requestive hints should be considered in two dimensions, which are the propositional and illocutionary meaning of the request.

The first dimension, 'propositional content' of the request, contains 3 categories: (1) *zero* (no reference to the hearer, the act or any of its components, e.g., 'There's a problem'), (2) *component* (reference to some component of the requested act, e.g. 'Are there any batteries?'), and (3) *act* (reference to the requested act, including some or all of its components, e.g. 'The sign to change the master [for the duplicating machine] came on but ...').

The second dimension, 'illocutionary device', contains 4 categories: (1) *zero* (no statement of illocutionary intent, e.g., 'Here's the mail' as a request to take the mail to the mailroom); (2) *stating potential grounder* (giving a reason why the request is necessary, e.g., 'The printer is running out of ink'); (3) *questioning feasibility* (asking about some prerequisite for the request to be granted, e.g., 'Do you have any chalk? '); and (4) *other* (illocutionary device not falling into one of the three preceding categories, e.g., 'I'm going to borrow this pen'). (Rinnert & Kobayashi, 1999, p. 1188)

In the heterogeneity of implied requests as itemized above, it was out of question for this study to be aimed at measuring the comprehension of and teaching about all the reported categories. However, considering the facts that speech acts have commanded a good deal of attention in pragmatics research (Cohen, 2012a, p. 33) and requesting is one of the especially popular speech acts (Cohen, 2012b, p. 280) in terms of instructed pragmatics as well (Taguchi, 2015, p. 5), the researcher had the intention to include the requests in the study since the very beginning.

In that regard, the decision to be made was which category of the aforementioned indirect requests would be integrated into the data collection instrument and instruction program of this study. The choice was the ones that are based on "stating potential grounder (giving a reason why the request is necessary)". The primary basis for that decision was the fact that they were found to be the most frequent English hints on the illocutionary scale (47.2%) in the naturally occurring data in Rinnert and Kobayashi (1999, p. 1189). What is more, when the analyses of the occurrences on the propositional and illocutionary scales were combined, English speakers' most frequent strategy was "potential grounder" added "component" (30.6%) (Rinnert & Kobayashi, 1999, p. 1189).

Besides the research findings on their frequency as mentioned above, the other basis for the inclusion of "requestive hints by stating potential grounder" was the fact that the way they are reported to occur sounds fairly clear: giving a reason why the request is necessary (Rinnert & Kobayashi, 1999, p. 1188). This was thought to be

compatible with the present study's principle of including formulaic, routinized or predictable, thus teachable implied meanings. For an example of the requestive hints mentioned so far and integrated into the study, see the situation and dialogue below taken from the sitcom "Friends (1994)":

Monica, a chef, is trying to finish the job of preparing enough food for a special meeting. She has figured out that it will not be possible for her to complete the preparation in time as she did not schedule things properly. While cooking, she is talking about the situation to her housemate Rachel.

Monica: Anyway, see, I planned everything really well. I planned and I planned and I planned. It just turns out, I don't think I planned enough time to actually do it...

Rachel: Hey, Mon, you want some help?

Monica: If you want.

As is seen, Monica does not use a direct statement of request like "(Could/Can you) please help me finish cooking. (?)" Instead, while cooking hastily at the same time, she just indicates the problem (Taguchi, 2005, p. 549), which is the reason why a request for help is necessary. In that way, she makes the requestive hint that her housemate Rachel cooks with her so that she can finish the job in time. Considering Rachel's offer of help that follows Monica's words, we also see that it does not take long at all for Rachel to get the hint. Monica jumping at the offer confirms the fact that her initial words were meant to function as an implied request (requestive hint) for Rachel's help.

Indirect advice

The last type of implied meanings included in this study is Indirect Advice (Matsumura, 2001; 2007), which is explained as "indirect comments with no advice" (Matsumura, 2001, p. 646) where the speaker's intentions are not made explicit (Brown & Levinson, 1987; Levinson, 1983). As is the case with Disclosures and Indirect Requests, to the best of the researcher's knowledge, indirect pieces of advice have not yet been openly reported as formulaic, routinized, homogeneous or predictable. Nevertheless, examining the advice-giving scenarios and options in Matsumura's (2001, p. 676; 2007, p. 187) multiple-choice questionnaire adapted from Hinkel (1997), the researcher believed that at least a certain way of indirect advice-giving could be teachable, thus suitable for being included in this study. The rationale was that the advice-giving way in question can be considered to contain some semantic clues that point to a tentatively identifiable pattern: Without using forms like "should (not), had better (not) etc", one offers the advice indirectly by just giving a/the reason why the hearer should or should not do the thing which is the subject of the advice. See the following example modified and adapted from Matsumura (2001, p. 679; 2007, p. 190), which was not used in the data collection instrument or instruction program of this study as it would require knowledge about the Canadian cities Banff and Vancouver, especially the distance between them:

You have just heard from your supervisor that s/he is considering a trip to Banff from Vancouver in a car which breaks down frequently. You think it would be appropriate to say:
"Taking such a long trip in this car may be risky."

As shown here, without employing some well-known advice-giving patterns like "should (not), had better (not) etc", the speaker offers his/her advice by just giving the reason why the hearer should not take the car for such a long trip and that reason is the fact that doing it might be risky. The logic here could be likened to what is typically done by people who work as financial advisors. As is known, they often set forth a good number of reasons to buy or sell some particular financial instruments. However, with the concern that their statements could be interpreted as sound advice likely to burden them with responsibility for any loss of addressees, they use warning notices like the following:

This document is for information and illustrative purposes only and does not purport to show actual results. It is not, and should not be regarded as investment advice or as a recommendation regarding any particular security or course of action (Retrieved on July 7, 2016 from <http://www.nisa.com/psrx-disclaimer/>).

The strategy described above can be claimed to be one of the advice-giving options in most of the scenarios in Matsumura's (2001, p. 676; 2007, p. 187) multiple-choice questionnaire. The only exception can be considered to be the scenario about a broken vending machine from which people cannot get a pop or the money back (Matsumura, 2001, p. 677; 2007, p. 188).

Besides viewing it as formulaic and teachable because it contains some semantic clues that point to a particular pattern, there were two more reasons why the above-discussed advice giving way was included in this study as modified from Matsumura's (2001, 2007) scenarios.

First, Matsumura (2001) reported that offering indirect advice was a strategy favored to a considerable extent by his native speaker participants. When we exclude that "broken vending machine" item from his four-option multiple-choice questionnaire, for the three scenarios where advice is to be offered to a higher status person, "Indirect" was the native speakers' most frequent choice in one of the scenarios and the second most in the other two. For the three scenarios where advice is to be offered to an equal status person, "Indirect" was the native speakers' most frequent choice in again one of the scenarios and the second and third most in the other two. For the three scenarios where advice is to be offered to a lower status person, "Indirect" was the native speakers' most frequent choice in two of the scenarios and the third most in the other one.

It is worth noting here that the lower status hearers were 1st-year university students addressed by higher-year university students, about which Matsumura (2001, p. 645; 2007, p. 172) asserts that it is a part of an existing Japanese hierarchical system where 2nd- and 3rd-year students are considered to be *senpai*, that is, to be in a higher status than 1st-year students, and according to this hierarchy, 1st-year students normally use polite expressions when talking to *senpai*. Considering the status relationships from the viewpoint of the 1st- and higher-year university students in Turkey, where it is impossible under normal conditions to talk about such a hierarchy and titles like "senpai", the higher status speaker-lower status hearer interactions in Matsumura (2001, 2007) were adapted to this study as scenarios where individuals of relatively equal statuses interact.

The second reason why indirect advice was included in this study as modified from Matsumura (2001, 2007) concerns the consideration given in the ending of the preceding paragraph. For the data collection instrument of this study, all the test items were based on either conversations that take place between people of relatively equal statuses or utterances that speakers make to themselves. Similar to what Roever (2005) did for the speech acts section of his pragmatic assessment battery, the aim was to keep the social distance and power differential relatively low so that the participants' comprehension performance of implied meanings would be measured under as controlled contextual parameters as possible. In this regard, the higher status speaker-lower status hearer interactions in Matsumura (2001, 2007) were included in the data collection instrument of this study as scenarios where people of relatively equal statuses interact.

Fillers

Like in Taguchi (2005), in addition to the item types described so far, a certain number of filler items that tested literal comprehension were included in the test. They dealt with basic, direct interpretation. They were excluded from the analyses.

The filler items were meant to deflect the participants' attention from the true purpose of the test, which is to investigate how test takers comprehend the nonliteral meanings. If the test had been composed of only implied meaning items, participants who discover it after answering some initial questions could stop examining the rest and continue by just searching for the response options that give indirect interpretation.

DEVELOPMENT AND DESIGN OF THE TEST

To the best of the researchers' knowledge, no study has so far attempted to measure specifically the interpretation of formulaic and thus teachable implied meanings. For this purpose, the previous studies on pragmatic interpretation (Bouton, 1988, 1992, 1999; Roever, 2005; Taguchi, 2002, 2005; Rızaoğlu & Yavuz, 2017) were all examined. On their basis, an online MDCT was decided to be developed following the steps detailed below.

Theoretical background to the data collection instrument

First of all, a certain number of scenarios (situations) that contain the target implied meanings had to be determined. Those scenarios were supposed to provide the basis on which the test's questions and response options would be built. To that end, all of the related studies providing appropriate scenarios were examined to be adapted to this study. The table below shows the final numbers of the test items in each group of target implied meanings and the studies from which they were adapted.

Table 1: *The Numbers of the Test Items in Each Group of Implied Meanings and their Sources*

Implied Meaning	Number of Test Items	Source
Pope Questions	5	(Bouton, 1994)
Indirect Criticism	4	(Bouton, 1994; Kubota, 1995)
Indirect Advice	4	(Matsumura, 2001; 2007)
Topic Change	4	(Roever, 2005)
Disclosure	3	(Taguchi, 2005)
Irony	3	(Colston & O'Brien, 2000)
Indirect Refusals	3	(Taguchi, 2005)
Indirect Requests	2	(Rinnert and Kobayashi, 1999)
Filler Items	5	(Taguchi, 2005)

Modification of the language in the test items

After deciding on the initial versions of the scenarios and ensuing talks in the test items, a (British) native speaker of English, who is a colleague with 25 years' experience in foreign language teaching and EFL teacher training, was asked to proofread them all. This step was seen strictly necessary as the researcher had tried to shorten and/or simplify the language of all the scenarios and utterances. The aim was to minimize the effect of language proficiency nuances between participants so that the validity of the test could be enhanced to primarily measure the construct of implied meaning comprehension.

This simplification and modification procedure was inspired by the way Roever (2005, p. 46) standardized, shortened and simplified the items he had adapted from Bouton's (1988, 1994, 1999) test. The procedure employed in this study will be described later in detail. Taguchi (2005, p. 550) as well tried to reduce the effect of some construct-irrelevant factors in the implied meaning comprehension measurement to be done by her test. In order to minimize the variance from her learners' difference in vocabulary knowledge for example, all vocabulary in her items was drawn from Longman's 2,000-word defining vocabulary list (Longman, 1995). The 2,000 words in question are identified as common and basic English words, which makes them the ones chosen to write all the word definitions in the Longman dictionary. Accordingly, the 2,000-word-level vocabulary items were considered to be relatively attainable by her L2 participants. Besides that, Taguchi (2005, p. 550) took great care to keep the lengths of all of the conversations in her test approximately the same. Her aim was to control the burden on short-term memory. Moreover, she used equal number of words in her question and option sentences across item categories so that the effect of some irrelevant variables like reading time could be lessened.

After the abovementioned colleague proofread the initial versions of this study's test items, a meeting was held with him to discuss the alteration and revision suggestions that he had come up with. In that meeting, almost all the items were refined to varying extents in terms of grammar and some word choices. With the refined versions of the test items at hand, the next step was writing response options for each item so that the instrument could serve as a multiple-choice test.

Writing the response options for the test items

Appointing the correct answers in the multiple-choice test developed for this study was fairly easy. The favored responses in the studies that the items had been adapted from were already self-evident.

Selecting some of the incorrect responses was made through adoption with no or minor change(s) from the studies that the items had been borrowed from. For the rest, the present study drew on a synthesis of three methods employed in the related literature to write response options for multiple-choice tests designed to investigate implied meanings comprehension. As mentioned above, there were a certain number of test items adapted already with some ready-made response choices. In this regard, the synthesis of the methods in question served also as a step to converting the other borrowed items (originally with no response options) into multiple-choice test items.

Bouton's (1988) method was the first to be manipulated for that synthesis. It called for having nonnative speakers of English respond to the item stems and then using their responses different from the favored ones as distractors. To that end, the first step was dividing the total number of the test items into three even groups. After that, they were printed on three separate handout forms and administered to three different EFL teacher trainee groups of 60 people. They were students who had enrolled in the summer school courses of Uludag University ELT Department, and they did not participate in any further phase of the study. They were asked to respond to each item, which consisted of a brief description of the situation, the utterance(s) and an open ended question that reads: "*What does (the last speaker's name) probably mean?*" Below is an example:

Maria and Frank are working on a class project together but they won't be able to finish it by the deadline.

Maria: "*Do you think Dr. Gibson is going to lower our grade if we hand it in late?*"

Frank: "*Do fish swim?*"

What does Frank probably mean?

As explicated before in the section devoted to "Pope Questions" in the Literature Review, the favored interpretation for the item above would be something like "he (Dr. Gibson) will of course lower our grade if we do that." Accordingly, the teacher trainees' responses that differed from such an interpretation were all recorded as the distractor alternatives for the item. An example to the erroneous interpretations was interestingly in reference to a well-known saying in Turkish where the central figure is a fish: "Battı balık yan gider." Within the context of the item above, it can be interpreted to mean something like "As we do not seem to have any other chance, let's just take the risk and hand in the project late to face the consequences." This procedure was followed for each item, and the first group of distractor alternatives was thereby obtained. Like in many other ways possible to write good multiple-choice items, this was also a response to the calls like Haladyna and Downing's (1989) for common errors of students to be incorporated in distractors.

For the second group of distractor alternatives, Taguchi's (2005, p. 550) principles for distractor writing were considered. They are as follows:

- * **Principle 1:** The option contains a meaning that is the opposite of the implied meaning.
- * **Principle 2:** The option contains words taken from the last part of the dialogue.
- * **Principle 3:** The option is related to the overall conversation.

For each item, the researcher tried to apply all the above-mentioned principles. However, just as the impossibility that Taguchi (2005, p. 560) encountered herself, it was not possible to follow all the three distractor principles for all the items. An example reason is the fact that, when the last utterance in a dialogue was extremely short containing only a few words, it was difficult to write a distractor following the second principle, "taking words from the last utterance" (Taguchi, 2005, p. 560). Nonetheless, the procedure did contribute to the pool of distractor alternatives for almost all the items in the present study. For example, two of the distractors in the item below were provided by this procedure:

Roger is thinking of taking his car to a repair shop in the city centre. His friend Melanie knows that the shop is known for doing careless work.

Melanie: "I don't usually take my car there. It has a really bad reputation."

What does Melanie probably mean?

- Roger should take his car there for only small repairs.
- She advises Roger not to take his car to that repair shop. (the favored response)
- The reputation of a place is important. (the one based on principle 2)
- Roger can take his car there. (the one based on principle 1)

As mentioned before, this study drew on a synthesis of three methods to develop the response options to be counted as the distractors. Accordingly, for the third group of distractor alternatives, Roever's (2005) viewpoint was employed. Despite finding it intuitively appealing, Roever viewed Bouton's aforementioned procedure for item design as questionable. His postulation was that incorrect response choices produced by nonnative speakers do not guarantee unambiguous, good distractors (Roever, 2005, p. 46), which is reported by Hudson, Detmer and Brown (1995) as well. In this regard, exercising his own judgment, Roever built new distractors wherever he found the ones borrowed from Bouton ambiguous. This procedure was followed in this study too when the distractors developed with the two aforementioned methods were considered quantitatively or qualitatively inadequate. Below is an item to exemplify how it was done. In it, all the three distractors were written with the

researcher's own judgment as the ones produced with the two other procedures had not been considered unambiguous or challenging enough:

Susan and Tom, friends, are talking about what is going on in their lives. Susan knows Tom had a job interview recently.

Susan: 'So how was your interview? Did you get the job you applied for?'

Tom: 'Um . . . I think I need to improve my interview skills.'

What does Tom probably mean?

- Ⓐ He did not get the job. (*the favored response*)
- Ⓑ He wants help from Susan to improve his interview skills.
- Ⓒ He will have the interview when he feels his interview skills are good enough.
- Ⓓ They gave him the job with the advice that he should improve his interview skills.

Conversion of the data collection instrument into a web-based test

After developing the initial version of the test items with the principles and procedures described above, the next step was to create a web-based MDCT out of it. The following two sections give some fundamental aspects of that web-based MDCT.

Technical aspects of the test

First of all, a professional computer programmer was paid to cooperate. Keeping in close touch with the researcher before and during the development of the system, he designed the test as a web-based one that should run on any common web browser. He wrote the codes in a way that the system would control item delivery, scoring, data storage and all other functionality.

Content aspects of the test

Each test item had the same format and elicited what a character in the item stem probably means with his or her utterance. What a test taker would say or mean in the situation was not elicited in any way, which is common in pragmatics research instruments (Roever, 2005, p. 45). The idea was to investigate test takers' interpretation of the included implied meanings rather than their favor or disfavor of particular conversational strategies.

In a similar way to Roever's (2005) test on implicatures, all the items were standardized with the details as explained below:

1. The response choices counted as "correct" were designed to occur as equally frequent as possible in all response option positions. The aim was to ensure that systematic guessing by test takers would lead to only chance-level correctness.
2. All the characters in the items have names and all are introduced in the item stems. This is intended to be an improvement to Bouton's (1988, 1994, 1999) items with generic descriptions like "two friends", "two teachers" etc. and to some scenarios adapted from studies like Matsumura's (2001, 2007) where the characters are given false names like "P.D", "C.J", "X.L".
3. Except for two of them, every item is based on a conversational situation where a male interlocutor addresses a female one or vice versa. This is for the sake of gender balancing and aimed to be an improvement to male-male or female-female items.

One of those two exceptional items includes an ironic utterance that the male speaker makes to himself like muttering. Its original version in Colston and O'Brien (2000) was already that way. Besides that, the researcher and the assisting native speaker colleagues could not figure out a way to add a female interlocutor in the situation without making the item sound unnatural. Below are the original version of the item stem and the related ironic utterance (Colston & O'Brien, 2000, p. 1581):

Henri was an avid cyclist and was eagerly awaiting a new, very expensive, high tech bicycle he had ordered from this new company. When it finally arrived, it turned out to be really heavy and poorly constructed. When Henri saw that he was cheated by the bike company, he said,

"This company is incredibly honest."

The other exceptional item includes a scenario with indirect criticism (damning with faint praise) and its original version takes place between two female characters as given below (Bouton, 1988, p. 194):

Brenda and Sally have lunch every Tuesday. As they meet on this particular day, Brenda stops, twirls like a fashion model, and the following dialogue occurs:

Brenda: I just got a new dress. How do you like it?

Sally: Well, there certainly are a lot of women wearing it this year. When did you get it?
How does Sally like Brenda's new dress?

For the initial version of the test used in the first pilot study, it was one of the items that were included in the attempt to achieve gender balancing. It was modified so that it took place between one male and one female speaker. The result is provided below:

Brenda is waiting for her boyfriend Jim at a cafe for lunch. When he comes to the table, Brenda stands up, and twirls like a fashion model, smiling.

Brenda: I just got a new dress. How do you like it?

Jim: Well . . . there certainly are a lot of women wearing it this year. When did you get it?
What does Jim probably mean?

In the period between the first pilot study and the main study, six native speakers were interviewed about each item. The consensus emerged between them on the fact that the item would sound much more natural if the dialogue happened between two female characters, which is the situation in its original version anyway. One native speaker even objected that Jim sounded homosexual in the way the item was modified as shown above. Therefore, in the versions of the test used after the first pilot study, the item was re-modified so that the conversation occurred between two female characters and with a rephrased answer to the first character's question.

4. The question before each set of response options is always in the same format, which was adopted from Roever (2005): "What does NAME of the SPEAKER probably mean?" This is intended to be an improvement to Bouton's (1988, 1994, 1999) items using different questions for different items like "Which of the following best says what Bill meant?", "Which of the following is the closest to what the friend meant by this remark?"

This standardization served also as another step to the conversion into multiple-choice test items of some adapted scenarios originally with no question and/or response options.

Vocabulary explanations in the test

In order to minimize the effects of vocabulary knowledge differences between the participants, all the salient vocabulary items were displayed as underlined on the computer screen. Whenever a test taker positioned his/her cursor on any of them, the related definition from Cambridge Learner's Online Dictionary (reference) automatically appeared. Most of the words underlined for this functionality were determined as early as when the test items were administered to teacher trainee groups in the open-ended format previously explained. Before, during and after responding to the items, the teacher trainees were systematically encouraged to ask about any lexical units that posed a problem for them. Every query of theirs was noted down so that the decision could later be made on the vocabulary that required the incorporation of explanations from Cambridge Learner's Dictionary. Besides that, the researcher included some other vocabulary items that he considered salient even though they had not been queried by the teacher trainees.

Having developed the initial version of the web-based MDCT with the procedures and aspects described above, the following step for the researchers was to conduct the pilot study to refine the test.

PILOT STUDY

Following Roever (2005) the pilot study in this research was carried out with different groups at different times.

The first group consisted of two subgroups: 69 first year EFL teacher trainees at Uludag University and 13 Turkish citizens (all over the age of 30) who had been schooled and lived in an English-speaking country for between 9 and 36 years. The first subgroup was meant to work like Roever's EFL group of target proficiency while the second one was intended to function as his English as a Second Language (ESL) group.

The second group was comprised of 23 EFL learners at the School of Foreign Languages at Uludag University. They had all been ranked at beginner/elementary level a year earlier by the university's official placement test.

They participated in this study after a year's intensive EFL instruction given to put them at a level relatively higher than intermediate. They were meant to function as Roever's EFL group below target proficiency.

The third group was 12 native speakers of English (5 American, 4 British, 1 Canadian, 1 Australian and 1 South African). They were intended to work like Roever's group above target proficiency. Besides that, as seven of them (5 American, 1 British and 1 Australian) were later interviewed one by one about each test item, they functioned also like Roever's native speaker participants that produced verbal protocols.

The aim of collecting pilot study data from such distinctly different groups was to cross-validate the decisions to refine and improve the test. In this regard, the results provided by especially the EFL teacher trainees, ESL group members and native speakers were examined to determine the test items with malfunctioning response options. The distractors that had not been chosen by any of the EFL teacher trainees and ESL group members were identified as in need of alteration. Additionally, the common items with the lowest item-total correlations for all the three groups were categorized as in need of revision or complete replacement.

The scores of the EFL teacher trainees were separately considered to identify the general suitability of the test for the target proficiency group. The test proved relatively suitable, with test takers scoring on average 52.95%. The scores of the EFL learners at the School of Foreign Languages were used in a comparison with those of the ESL group members. The objective was to have more data on the evaluation of general suitability and item revision. The expected great variability between the groups did arise in the test scores: EFL learners scored 29.19% while ESL group members scored 73.90%.

The results seemed promising in that the test proved generally suitable for the EFL teacher trainees, who could also be viewed as relatively high-level language learners to whom implied meanings can be taught. In addition, the test reflected the variability between the relatively low and higher proficiency groups. Nonetheless, as they would serve also as the referent group for the favored responses in the test, the average performances of the ESL group and native speakers were relatively unsatisfactory with 73.90% and 72.91% respectively. Besides, there were items with some particular response options chosen saliently less or more frequently than expected. The doubts arising were resolved when seven native speakers were interviewed about the test items. Their comments that overlapped with each other led to a considerable number of rightful changes in terms of the points laid below:

- * The wording of the situations in some item stems was revised. This added clarification to the contexts in which the implied meanings occur.
- * The distractors were altered or replaced when any of them was interpreted as not clearly enough correct or incorrect. This decreased the number of the ambiguous items where two or more response options were likely to be picked as the favored option.
- * Several revisions were made in the grammar and/or word choices of some items. This was to help them sound more native speaker-like.

The most important result of the debriefing sessions with the seven native speakers was that a second pilot study was decided to be conducted. This was not planned at all at the beginning of the larger research project where this study is the initial step as the test development phase for further data collection. From this point of view, while the second pilot study did serve as the second piloting stage of the larger research project in question, it was the final main phase of the present study aimed at developing an online MDCT to investigate formulaic implicatures comprehension.

MAIN STUDY

Before carrying out this phase, four (three American, one British) of the native speakers who had contributed in the previous debriefing sessions were interviewed again one by one. Their common point was that they were all trained and experienced in the field of language teaching (in Turkey as well). Before the talks, a considerable number of revisions and alterations were already done according to the data gathered in the previous phase. Moreover, thanks to the help of a friend of one of the researcher's, a new native speaker group of 14 people at the physics department of an American University had taken the revised version of the test, with five of them providing also their direct feedback on wording and some alternative distractors.

Eventually, in the printouts prepared for each one of the four abovementioned ELT professionals, beneath the revised version of every test item, there were also the alternative revision ideas inspired by the debriefing sessions of the first pilot study and the contributions of the additional 14 American test-takers. In this way, the ELT professional native speakers, who were assisting the researcher face-to-face, were provided the favored

revisions together with their alternatives so that they were able to discuss the most appropriate changes by taking account of all the options that had accumulated.

The new version of the test was developed in consideration of these four native speakers' paralleling views on the revision alternatives. The new ideas that came up during the talk with any one of them were later shared with the others via emails, and compromise was sought. Some information is provided below to exemplify how a considerable number of items evolved to varying extents through the painstaking stages of the test development procedure explained so far. First, the sample item is given in the way it was in its source (Colston & O'Brien, 2000, p. 1581):

Henri was an avid cyclist and was eagerly awaiting a new, very expensive, high tech bicycle he had ordered from this new company. When it finally arrived, it turned out to be really heavy and poorly constructed. When Henri saw that he was cheated by the bike company, he said,

This company is a tiny bit sneaky. (UNDERSTATEMENT)

This company totally stole my money. (LITERAL)

This company is incredibly honest. (VERBAL IRONY)

What follows is its final version used in this study:

Henry loves cycling. He orders a new, very expensive bicycle from a new bicycle company. When it arrives, he sees that it is really heavy and does not look well-made at all.

Henry: "Wow, this company's really honest."

What does Henry probably mean?

- The company is dishonest.
- The company is a bit sneaky.
- The company is really honest.
- It is normal as the company is new.

As illustrated above, apart from the abridgement and simplification work, the test items sometimes needed to be added characters, a question and proper response options. In addition, as Taguchi (2005, p. 549) did for the dialogues in her study, linguistic units that characterize the interactive nature of spoken English, such as discourse markers (e.g., *well, you know*), interjections (e.g., *oh*), or hesitation markers (e.g., *um*; see Biber, Johansson, Leech, Conrad, & Finegan, 1999) were included in as many utterances as possible with the help of the assisting native speakers.

Participants

Consequently, the new test with the finally decided changes were administered online to

- * 43 EFL Teacher Trainees at Uludag University (10 to 11 students from 1st, 2nd, 3rd and 4th graders each),
- * 21 native speakers of English (13 American, 3 British, 2 Australian, 2 Canadian, 1 New Zealander),
- * 14 EFL learners at the School of Foreign Languages at Uludag University, who were ranked at pre-intermediate level four months earlier by the university's official placement test and participated in this study after a three and a half months' intensive EFL instruction,
- * 11 high school students, who were grouped with regard to their previous achievements in EFL and were getting a language intensive education to enroll for such university programs as ELT, English Language and Literature, Translation and Interpreting Studies.

RESULTS AND DISCUSSION

The data were analyzed with SPSS 22. The Cronbach Alpha's Reliability Coefficient for the EFL teacher trainees (both the target and biggest group) was calculated as ".777", which can be considered acceptably high.

To see if there were any significant differences between the four participant groups, i.e. EFL teacher trainees (henceforth EFLTTs), EFL Learners at the School of Foreign Languages (EFLTs), native speakers of English (NSs) and High School Students (HSSs), one-way ANOVA was performed. As the homogeneity of the variances of groups (Levene's test) was not satisfied ($p < 0.01$), non-parametric tests (Kruskal Wallis) were conducted. The tests showed significant differences among the groups investigated: $\chi^2 = 54.589$, $p < 0.01$. The results are given in Tables 2-7.

In order to see if there were significant differences between the specific pairs of participant groups, Mann-Whitney pair-wise comparisons were performed. Table 2 shows the results comparing EFLTTs with EFLLs.

Table 2: *Mann-Whitney Pair-wise Comparisons between the Teacher Trainees and School of Foreign Languages Students*

Group	N	Mean Rank	Sum of Ranks	U	P
EFLTT*	43	34.64	1498.50	58.50	0.000
EFLL**	14	11.68	163.50		

EFLTT*: EFL Teacher Trainees
EFLL:** EFL Learners at the School of Foreign Languages

As displayed in Table 2, a significant difference ($p < 0.01$) was found between the two groups in favor of the EFL teacher trainees, which would be expectable considering the differences in terms of the length and content of their work with English. The results concerned with the comparison of EFLTTs with NSs are given in Table 3.

Table 3: *Mann-Whitney Pair-wise Comparisons between the Teacher Trainees and Native Speakers of English*

Group	N	Mean Rank	Sum of Ranks	U	P
EFLTT*	43	22.78	979.50	33.500	0.000
NAT**	21	52.40	1100.50		

EFLTT*: EFL Teacher Trainees
NAT:** Native Speakers of English

According to the results in Table 3, there is a significant difference ($p < 0.01$) between the two groups in favor of the native speakers, which is expectable considering the fact that English is their mother tongue while it is still a foreign language for the other group's members though they were at a relatively advanced level. The results of the comparison between EFLTTs and HSSs are provided in Table 4.

Table 4: *Mann-Whitney Pair-wise Comparisons between the Teacher Trainees and High School Students*

Group	N	Mean Rank	Sum of Ranks	U	P
EFLTT*	43	27.23	1171.00	225.000	.804
HSS**	11	28.55	314.00		

EFLTT*: EFL Teacher Trainees
HSS:** High School Students

The results given in Table 4 show that there is no significant difference ($p > 0.05$) between the two groups. This could be considered predictable as students like those in the high school group function as the primary source of undergraduates for university programs such as English Language Teaching. Therefore, it is possible to postulate that the teacher trainee participants had the position of the high school students a couple of years ago while some of the latter would probably be the 1st year students of different ELT departments a couple of months later. Table 5 shows the results comparing EFLLs with NSs.

Table 5: *Mann-Whitney Pair-wise Comparisons between the School of Foreign Languages Students and Native Speakers of English*

Group	N	Mean Rank	Sum of Ranks	U	P
EFLL *	14	7.50	105.00	.000	.000
NAT**	21	25.00	525.00		

EFLL*: EFL Learners at the School of Foreign Languages
NAT:** Native Speakers of English

As put in Table 5, a significant difference ($p < 0.01$) was found between the two groups in favor of the native speakers. This is expectable considering the fact that English is their mother tongue while the students of the School of Foreign Languages were officially diagnosed as "false beginners" for English nearly a year earlier.

As for the comparison of EFLLs with HSSs, according to the results provided in Table 6, a significant difference ($p < 0.05$) was found between the two groups in favor of the High School students. This would be predictable considering the fact that they were a group that was formed with regard to their former achievements in EFL and they were getting a language intensive education to enroll for university programs based on EFL study. On the other hand, as mentioned before, the students of the School of Foreign Languages were officially diagnosed as false beginners nearly a year earlier.

Table 6: Mann-Whitney Pair-wise Comparisons between the School of Foreign Languages Students and High School Students

Group	N	Mean Rank	Sum of Ranks	U	P
EFL* [*]	14	8.89	124.50	19.500	.002
HSS**	11	18.23	200.50		

EFL*^{*}: EFL Learners at the School of Foreign Languages
HSS:** High School Students

Finally, the results comparing NSs with HSSs are given in Table 7.

Table 7: Mann-Whitney Pair-wise Comparisons between the Native Speakers of English and High School Students

Group	N	Mean Rank	Sum of Ranks	U	P
NAT* [*]	21	21.29	447.00	15.000	.000
HSS**	11	7.36	81.00		

NAT*^{*}: Native Speakers of English
HSS:** High School Students

The results in Table 7 show that there is a significant difference ($p < 0.01$) between the two groups in favor of the native speakers, which would be expectable since English is their mother tongue while a foreign language for the other group's members although they were at a relatively advanced proficiency level.

The results presented in Tables 2-7 above suggest that the expectations and predictions were more satisfactorily fulfilled than the pilot study.

The first research question of the present study was aimed at exploring whether native speakers of English could reach a compromise in their interpretation of the test items. The results show that the performance of the native speakers was remarkably high, which points to a good compromise with their interpretations of the test items. At this point it would be worth mentioning that, in our day characterized by globalized communication in multiculturalism, using NS norms as a benchmark for pragmatic behavior may not be so crucial in a foreign language situation (Wyner & Cohen, 2015, p. 547). Nevertheless, in the strenuous attempt to develop a valid and recent MDCT to measure pragmatic comprehension about formulaic and teachable implied meanings, this study had the compelling need for norms to count as the "favored interpretations of the items". In that regard, no other appropriate way to have them could be conceived than taking the response options on which the native speaker participants reached a satisfactory compromise in the measurements. Apart from that, as Wyner and Cohen (2015, p. 547) put it with a comprehensive look, NS norms as a benchmark can be valuable for learners to have familiarity with what these norms are and help them figure out not only what went wrong in experienced pragmatic failures but also ways in which they could be avoided in future interactions.

The second research question was aimed at investigating whether the performance differences between particular pairs of test-taker groups could be attributable to their proficiency differences only. The findings reveal that there are statistically significant differences between the NS' performance and those of all the other participant groups. This shows that the study was able to address a problem worth pragmatic assessment and instruction. Apart from the comparison between the NSs and the other three groups, it is also seen that the performance differences between particular pairs of groups seem to be attributable to the proficiency differences. This could be argued to be a strength of the test as it seems to reflect the performance variability between participants from different proficiency levels. This is important since educational assessment is supposed to discriminate among those who are assessed, and a good test should produce scores that vary between high and low performers (Biggs, 1996). Besides, in the subsequent stage of the larger research project where this study is a part, all the above-mentioned results were confirmed (Çetinavcı, 2016). On the one hand, the mean performance of the 127 new native speakers was 26.61 out of 28 items, which verified once again the research hypothesis that the online MDCT would prove to be one on which NSs of English reach a good compromise with their interpretations of the items. On the other hand, in comparison with a new group of 144 first-year EFL teacher trainees, there was a statistically significant ($p < 0.01$) NS superiority at opting for the favored interpretations of the implied meanings. This verified once again the research hypothesis that the test will prove to be one where the performance differences between particular pairs of test-taker groups could be attributable to their proficiency levels.

Several studies (Kehoe, 1995; Hughes, 2003, p. 228; Quairain & Arhin, 2017) have indicated that distractors with no or very low choice frequency would point to their ineffective functioning. This was a concern in Roever's (2005) study as well, which reports on the first pragmatic competence test developed in the field of Applied Linguistics. In this regard, another positive feature of the online MDCT developed in this study is the fact that all the distractors of every item were chosen by the target group members (EFL teacher trainees) in varying frequencies. This means that none of the distractors was just an ineffective space filler, which could give the possibility to claim that they functioned in the way they had been supposed to.

Like Roever's (2005, p. 52) piloting experience pursuant to Hudson et al. (1995); the process explained above took nearly a year, but it was felt that a well-designed test was essential to obtaining meaningful results. From the administration of the initial pilot test till that of its final version, after receiving a thank-you note from the researchers, some native speaker participants e-mailed their comments about their experience even though none of them had been asked or encouraged to in any way. The change between the beginning and end of the process could be viewed as quite dramatic, which justifies the work during the long development period. Below are given some comments to illustrate the point that has just been made. While the first three are from the beginning, the fourth one is from the midst and the others are from the end of the process:

- 1) "Hope it works out. I'm sure you know what you're doing but some of the phrases weren't actually idioms?"
- 2) "Some parts do not sound like native English at all."
- 3) "It was still possible in most cases to see what the intent was but it just sounded weird if that makes any sense. Anyways, best of luck!"
- 4) "It was an interesting test, although I do admit, I think some of the questions had 'wrong' answers."
- 5) "The test was very well written, and one can see a lot of thought went into it."
- 6) "Good evening, I wanted to let you know that I have completed your exam, it looks great."
- 7) "Hi, I have completed the test. It was kind of fun. I enjoyed it. Glad i was able to help."
- 8) "Thought this to be very interesting. Went quickly. The discussions seemed pretty clear cut to me."

CONCLUSION

To conclude, it would be worthwhile to state that the present study took almost a year for the development of a valid, well-designed MDCT that can be used as a data collection instrument to have comparable sets of data for further descriptive and/or instructional studies. Special care was taken in the test to include some particular subsections of items in response to the calls in the literature for integration of different implied meaning types to add to our understanding of pragmatic comprehension in a target language. What is more, the overall focus of the test was on "implicature (implied meanings)" so that the study could keep out of the reported weight of "speech acts" in pragmatics research and provide a new perspective upon another important but lesser-studied component of pragmatics.

Within this framework, we could emphasize the fact that the present study gave a tangible product: A data collection instrument on the comprehension of eight particular implied meanings in English, all of which have been scholarly conceptualized. Being a test which is usable both in computerized and pen-and-paper format, it proved to be one on which a relatively big, heterogeneous group of NSs of English reached a good compromise with their interpretations of the test items. When considered together with the other phases in the larger research project that covers this study as well, in addition to the total number of 174 NSs (a heterogeneous group of 111 Americans, 39 Britons, 13 Canadians, 10 Australians/New Zealanders and 1 South African), 316 EFL teacher trainees, 37 EFL learners at a university school of foreign languages, 13 Turkish citizens who had been schooled and lived in an English-speaking country for a decade or more and 11 high-school students getting a language-intensive education made quantitative and/or qualitative contribution in the development, refinement and implementation processes of the test. They all add up to 551 people.

In addition, the online test in its final version added another important feature: ability to measure each test taker's response times for every single test item and the whole test. This was triggered mainly by the perspective put by Taguchi (2005, 2007, 2008, 2011a), who noted that not many studies had addressed fluency or processing speed in language learners' pragmatic performance.

As the last point to be made about the significance of the study, it should be restated here that some of the implied meanings included are ones that have already been reported as formulaic. For the rest, as discussed thoroughly earlier in the text, the claim in the present study is that at least some of their variations can be deemed formulaic, thus teachable. To the best of the researcher's knowledge, the test is a pioneering one in pragmatic assessment to bundle together specifically that type of implied meanings. As one could not teach what s/he

cannot initially measure, the test can serve as the starting point for any ELT or ELT teacher-training program concerned to help the students be equipped for that specific domain of pragmatic competence as one of the acknowledged requisites for overall communicative competence.

On the grounds of the limitations of this study and the experiences that accumulated throughout its conduct, some recommendations can be made for further research.

First of all, considering the fact that this study measured pragmatic comprehension with a reading instrument (like in many other previous inspiring studies) while people mostly “see and hear” in real-life communication, the procedures in similar future studies could be designed as based on a sufficient number of readymade video extracts or fictionalized dramas to the purpose. Provided that this is achieved with proper validation work in a manner where audiovisual items would not impede but aid the watchers or listeners (Gruba, 2000; Roever, 2005), the measurement of pragmatic interpretation could include such clues as tone of voice, setting, gestures and facial expressions, which all can express so much meaning together with or independently of the words there. Besides these, the ideal to be pursued within this framework would most probably be extracting discourse samples with the target implied meanings via corpora/concordance work and producing scenes out of them with proper use of tone of voice, facial expressions and gestures not open to ambiguity. The fuller the extent to which this is achieved, the more likely it would be to use the products in both testing and instruction procedures, which would give the researchers the chance to base their studies on authentic materials as much as possible.

In the context of discussing the content and scope of studies which are similar to this one, another recommendation for further research could be made about the identification and integration of even more implied meaning types into the designs so that we can add to our understanding of pragmatic comprehension/interpretation and learn which ones of them could be troublesome to EFL/ESL learners and why, which is an attempt made by the present study with the integration of “indirect pieces of advice” and “indirect requests”. What is more, the range of L1s and target languages in studies on pragmatic interpretation could be expanded so that investigators and language educators can better assess whether and to what extent findings from studies of a particular L1 or target language may be valid in terms of other language combinations. Moreover, further research could be conducted also on how competent language learners are in terms of “producing” implied meanings. This would provide a new perspective in studies of this kind beyond the focus merely on comprehension/interpretation.

APPENDIX 1. MDCT Items**Item 1:**

Tom is from Atlanta. His friend Sally has recently moved to Atlanta.

Tom: “How do you like Atlanta so far?”

Sally: “I love it!”

What does Sally probably mean?

- She thinks that Atlanta is a dirty city.
- She has not seen much of the city since she moved in.
- She thinks the city needs more great changes.
- She likes Atlanta and enjoys living there.

Item 2:

Henry loves cycling. He orders a new, very expensive bicycle from a new bicycle company. When it arrives, he sees that it is really heavy and does not look well-made at all.

Henry: “Wow, this company's really honest.”

What does Henry probably mean?

- The company is dishonest.
- The company is a tiny bit sneaky.
- The company is a really honest one.
- It is normal as the company is new.

Item 3:

Jose and Tanya are professors at a college. They are talking about a student, Derek.

Jose: "How did you like Derek's essay?"

Tanya: "Well . . . I thought it was well-typed."

What does Tanya probably mean?

- She did not like Derek's essay.
- She does not really remember Derek's essay.
- She thought the topic Derek had chosen was interesting.
- She liked Derek's essay quite a lot.

Item 4:

Judie and her classmate David are community college freshmen. Judie is considering taking a course but David has heard it is really difficult.

David: "I don't know . . . but people say it's really difficult."

What does David probably mean?

- He thinks the course may not be very difficult.
 - He thinks Judie can take that course.
 - He recommends not taking that course.
 - He thinks Judie should not listen to what people say about the course.
-

Item 5:

Rob is telling his friend Sheila about a card game he played last night. He lost money and decides not to play with those guys again.

Sheila: “They were good, huh?”

Rob: “Good? Let’s say awfully lucky”.

Sheila: “Lucky? What’s the matter? Don’t you trust them?”

Rob: “Is the sky green?”

What does Rob probably mean?

- He thinks they are OK.
- He does not want to talk about the card game anymore.
- He suddenly saw something in the sky.
- He does not trust them at all.

Item 6:

Jack sees his classmate Jane in the faculty hallway.

Jack: “Oh, Jane. I’m so glad I ran into you. I need your help!”

Jane: “What’s up?”

Jack: “I have a paper due tomorrow, but I’m working tonight in the cafe. Can you type my paper?”

Jane: “Shoot! I have to study for my finals tonight.”

What does Jane probably mean?

- She will type the paper.
- She will think about it.
- She cannot type the paper for tomorrow.
- She can type it when she is done with everything.

Item 7:

Susan and John, friends, are watching a film together.

Susan: “This film is too boring! I can’t watch it anymore.”

John: “Really? I don’t think it’s so bad.”

What does John probably mean?

- He thinks the film is really bad.
- He is doing something else, not watching the film.
- He does not think the film is very bad.
- He is not quite sure.

Item 8:

Bob and Maggie, friends, are talking about school and courses. Bob is taking introductory chemistry this semester.

Maggie: “How are you doing in chemistry?”

Bob: “So . . . did you watch that basketball game yesterday?”

What does Bob probably mean?

- The content of yesterday's lesson was completely irrelevant to chemistry like a basketball game.
 - He is doing badly in chemistry.
 - Chemistry is like an easy game for him.
 - He is doing so well in chemistry that there is no need to talk about it.
-

Item 9:

Carol, an office secretary at a university, is typing at her desk. Jeff, a teacher, is in Carol's office to make a lot of printouts.

Jeff: "The printer is almost out of ink."

What does Jeff probably mean?

- He wants Carol to refill the ink.
- He uses the printer really very often.
- He does not want to do the printing himself.
- Carol can continue what she is doing.

Item 10:

Mike is trying to find an apartment in New York City. He just looked at a place and is telling his friend Jane about it.

Jane: "So, is the rent high?"

Mike: "Is the Pope Catholic?"

What does Mike probably mean?

- He does not want to talk about the rent.
 - The rent is high.
 - He did not understand Jane's question.
 - The rent is not very high.
-

Item 11:

Felicity is talking to her co-worker Brian during a coffee break.

Felicity: "So, life must be good for you. I hear you got a nice raise."

Brian: "Um, this coffee is awfully weak. You'd think they'd at least give us decent coffee."

What does Brian probably mean?

- He does not want to talk about how much money he earns.
- He does not like the coffee.
- Reality may not be what you think it is.
- He does not care about money.

Item 12:

Roger is thinking of taking his car to a repair shop in the city centre. His friend Melanie knows that the shop is known for doing careless work.

Melanie: "I don't usually take my car there. It has a really bad reputation."

What does Melanie probably mean?

- Roger should take his car there for only small repairs.
 - She advises Roger not to take his car to that repair shop.
 - The reputation of a place is important.
 - Roger can take his car there.
-

Item 13:

Paul and Mary, two friends, are having a talk. Paul remembers that he must pay his apartment's rent today but has no money for it now.

Paul: "Oh, the rent is due today, but I don't get paid until Monday. Could I borrow \$50? I'll give it back next week."

Mary: "Sure, no problem."

What does Mary probably mean?

- She is not sure about giving money to Paul.
- She will give the money to Paul.
- It is a problem for Paul.
- She will not give the money.

Item 14:

Barbara and Brad, classmates, are talking about what they are going to do during the summer. Barbara's mother wants her to stay home, and entertain the relatives when they come to visit them at the beach.

Brad: "Do you have a lot of relatives?"

Barbara: "Does a dog have fleas?"

What does Barbara probably mean?

- She does not like her relatives and feels like an unlucky dog.
 - She does not have very many relatives.
 - She has a lot of relatives.
 - She wants to learn if a dog usually has fleas.
-

Item 15:

Toby and Ally are trying a new buffet restaurant in town. Toby is eating something, but Ally cannot decide what to have next.

Ally: "How do you like what you're eating?"

Toby: "Well, let's just say it's . . . colorful."

What does Toby probably mean?

- He thinks it is important for food to look good.
- He likes the food.
- He wants Ally to try something colorful.
- He does not like the food much.

Item 16:

Peter promises his friend Mary to help her move to a new apartment. That day, he moves the clock on the wall while Mary moves the heavy boxes.

Mary: "Thanks, you've been terribly helpful."

What does Mary probably mean?

- Peter helped her a lot.
 - Moving the clock was really important as it needed special care.
 - Peter is weak.
 - Peter was not helpful at all.
-

Item 17:

John's friend Mary asks him about their classmate Sally.

Mary: "You know. I've been curious to know if you went out with Sally."

John: "Um . . . Sally's not really my type."

What does John probably mean?

- He is not sure of his feelings.
- He is talking bad about Sally as she refused him.
- Mary is his type.
- They did not go out.

Item 18:

Dale runs into his friend Julia. He knows Julia recently had a job interview.

Dale: 'By the way, did you get that job you applied for?'

Julia: 'Good God, I'm so tired of this cold weather.'

What does Julia probably mean?

- She does not want to talk about the interview.
 - She is bored of searching for a job.
 - She did not understand Dale's question.
 - She could not attend the interview because of cold weather.
-

Item 19:

Maria and Frank are working on a class project together but they will not be able to finish it by the deadline.

Maria: "Do you think Dr. Gibson is going to lower our grade if we hand it in late?"

Frank: "Do fish swim?"

What does Frank probably mean?

- He thinks they should choose a new project topic on fish.
- He thinks Dr. Gibson will not lower their grade.
- He thinks they will get a lower grade.
- He suggests just giving in the project to see the result.

Item 20:

Hillary sees that her boyfriend Bruce has forgotten to leave a tip while leaving the restaurant they had dinner in.

Hillary: 'You know, leaving a tip is important.'

What does Hillary probably mean?

- She advises him to leave a tip.
- She indirectly asks Bruce if they should leave a tip or not.
- It is OK now but Bruce should not forget the tip next time.
- She wants to leave quickly without tipping.

Item 21:

Jenny is out in the freezing cold after basketball practice. As she often has to do, she has been waiting for her mom to pick her up for an hour. She throws a quick glance at her watch, talking to herself.

Jenny: "She's a bit late huh?"

What does Jenny probably mean?

- Her mom is not very late yet.
- She is anxious about her mom.
- Her mom is really late once again.
- She needs to look at her watch again.

Item 22:

Susan and Ronald, two officemates, are having lunch in a café and discussing their boss.

Ron: 'So, do you think Mr. Davis will give me a raise?'

Susan: 'Do pigs fly?'

What does Susan probably mean?

- She wants to change the topic.
- The boss will not give Ron a raise.
- She has seen outside a pig falling down from a high place.
- Ron will get a raise.

Item 23:

Joan and Dave, classmates, see each other in the school corridor.

Joan: 'Hi Dave.'

Dave: 'Hi Joan. What's up?'

Joan: 'I was going to ask you a favor. Would you read my paper for English 101?'

Dave: 'Oh, Joan, sorry I can't. I have a class in about 10 minutes.'

What does Dave probably mean?

- He will read the paper.
- That is a difficult thing to do for him.
- He will read it after the class.
- He will not read the paper because he is busy.

Item 24:

Susan and Tom, friends, are talking about what is going on in their lives. Susan knows Tom had a job interview recently.

Susan: 'So how was your interview? Did you get the job you applied for?'

Tom: 'Um . . . I think I need to improve my interview skills.'

What does Tom probably mean?

- He did not get the job.
 - He wants help from Susan to improve his interview skills.
 - He will have the interview when he feels his interview skills are good enough.
 - They gave him the job with the advice that he should improve his interview skills.
-

Item 25:

Ken bought a new car and he showed it to his co-worker, Tina. She drove it around for a couple of times and they are talking at lunchtime the next day.

Ken: 'So what do you think of this new car?'

Tina: 'Well, the color's fine.'

What does Tina probably mean?

- What she liked most about the car is its color.
- She thinks the color of a car is very important.
- She does not know much about cars.
- She did not like the car very much.

Item 26:

Hilda is looking for a new job. She is having lunch with her friend John.

John: "So how's the job search coming along?"

Hilda: "Um, this curry's really good, don't you think?"

What does Hilda probably mean?

- She did not understand John's question.
 - She is not looking for a job anymore.
 - She wants to talk about nothing but food.
 - Her job search is not going very well.
-

Item 27:

Tom and Mary share the same apartment. Tom finds Mary in the kitchen.

Tom: 'Hey, ah . . . could you clean the house this weekend? I have plans.'

Mary: 'Oh, ah . . . I'm going to see my parents this weekend.'

What does Mary probably mean?

- She will clean the house.
- She will try to make some new arrangements.
- She refuses Tom's request.
- She thinks the house does not need cleaning.

Item 28:

Michael is planning not to come to today's class. His housemate Angela knows one absence loses five points in the end.

Angela: 'Well, you know, one absence loses five points from the final marks.'

What does Angela probably mean?

- Michael has already lost 5 points.
 - She advises Michael to come to the class.
 - She will remind the teacher to take off five points.
 - She recommends that he should do as he wishes.
-

Item 29:

Nina, an office secretary at a university, is working at her desk. Tom, a teacher, is there to make photocopies but the machine is not working.

Tom: 'The copy machine isn't working.'

What does Tom probably mean?

- He asks permission to make the photocopies.
- He indirectly criticizes Nina for not doing her job.
- He wants help from Nina with fixing the machine.
- He wants Nina to continue what she is doing.

Item 30:

Sally and Dennis, old friends, see each other again after a long time. Sally has heard that Dennis got divorced but is not sure.

Sally: 'By the way, is it true you got divorced?'

Dennis: 'You know . . . I think we got married too young.'

What does Dennis probably mean?

- They are still in that unhappy marriage.
 - They are not married anymore.
 - They are OK, but it would have been better if they had got married older.
 - He does not want to answer the question.
-

Item 31:

Bob and Sarah, two school friends, are halfway to finishing this semester. They are talking about the courses they are taking.

Bob: 'By the way, how are you doing in history?'

Sarah: Um . . . not so well. I got a 'C' on the last test.

What does Sarah probably mean?

- She is doing really well in history.
- She loves history.
- She is not sure about her performance.
- She is not doing so well in history.

Item 32:

Brenda and Sally, friends, have lunch every Tuesday. As they meet on this particular day, Brenda stops and twirls like a fashion model, smiling.

Brenda: 'I just got a new dress. How do you like it?'

Sally: 'Well . . . it's certainly a popular style'

What does Sally probably mean?

- Brenda should have bought it earlier.
 - She really likes it.
 - Every dress is the same for her.
 - She does not like it much.
-

Item 33:

Mark and Jane work in the same factory. They are both at work.

Mark: 'Hey Jane. Are you busy?'

Jane: 'Ah . . . not right now. We just finished that big project.'

Mark: 'Wow, good for you. I know that was a lot of work. By the way, can you work my night shift this Friday Jane? My son is graduating from college.'

Jane: 'Um . . . I'm having a party Friday.'

What does Jane probably mean?

- She indirectly invites Mark to the party.
- She will not work Mark's shift.
- She will relieve her tiredness of the night shifts with the party.
- She can work Mark's night shift.

APPENDIX 2. The MDCT Item Specifications

Implied Meaning Types	Item Numbering
1. Fillers (5 items)	1, 7, 13, 23, 31
2. Pope Question (5 items)	5, 10, 14, 19, 22
3. Indirect Criticism (4 items)	3, 15, 25, 32
4. Topic Change (4 items)	8, 11, 18, 26
5. Indirect Advice (4 items)	4, 12, 20, 28
6. (Verbal) Irony (3 items)	2, 16, 21
7. Indirect Refusals (3 items)	6, 27, 33
8. Disclosure (3 items)	17, 24, 30
9. Indirect Requests (2 items)	9, 29

THE DEVELOPMENT OF AUTHENTIC ASSESSMENT IN MEASURING CRITICAL THINKING AND STUDENT PERFORMANCE IN THERMOCHEMISTRY MATERIAL

Nahadi, WIWI SISWANINGSIH

Department of Chemistry Education, Universitas Pendidikan Indonesia
nahadi@upi.edu

Dzakiyatul AZIZAH R.

Department of Chemistry Education, Universitas Pendidikan Indonesia

ABSTRACT

The study aims to obtain the product and to know the validity and reliability value of the authentic assessment instrument that can measure students' critical thinking and performance on Thermochemistry materials. The method used in this research is the R & D method (Research & Development). The subject of this research is vocational students who have studied Thermochemistry material. This research was conducted by using the form of written test in the form of multiple choice items item and description, performance test in the form of task and assessment rubric. The results of the research indicate that the authentic assessment developed is valid because the CVR count value is above the critical CVR value of 0.99 for the five validators. The authentic assessment developed is also reliable because the reliability value of the written test instrument is a multiple choice form with a value of 0.452 in the medium category and written test of the description form with a value of 0.749 in the high category, while the performance test instrument is in very high category with reliability value of 0.865. In addition, the results of authentic assessment development of written and performance tests are grouped into high, medium, and low grade categories.

Keywords: Authentic Assessment Instrument, Critical Thinking Skills, Student Performance

INTRODUCTION

The era of modernization in higher education is now undergoing a period of significant challenge and transformation. It is expected that these challenges will, in a comparatively short period of time, lead to changes in the ways in which the higher education experience is both mediated and accessed (Ashford, et al. 2014). Education becomes a very important need to balance the development of the times and technology in a broad sense education can cover all life processes and all forms of individual interaction with the environment (Wibowo et al., 2016; Taber, 2013). In a limited sense, education is one of the processes of teaching and learning interaction in a formal form known as instructional. Part of way learning, assessment very important role in improving the quality of teaching. Implementation of the assessment should be done intensively and regularly in order to foster good study habits for students. Assessment is the process of determining, collecting and using the information necessary to make judgments before the judgment of the student (Frey and Allen. (2012). Teaching conduct of students assessments, and assessments made by teachers are generally less concerned about the process (Ashford, et al. 2014). states that there is a need for development of a scoring system that is able to measure students' ability holistically as a result of learning and encourage students to learn to develop all their potential and creativity and apply their knowledge in everyday life. The application of students' knowledge in understanding the lessons in the classroom can be seen from the way each student thinks. Many varieties of thinking patterns developed by students, ranging from basic thinking to complex thinking or high-level thinking. In a Costa statement, there are four high-level thinking patterns, namely critical thinking, creative thinking, problem solving, and decision making. Among the four high-level thinking, critical thinking underlies three other patterns of thinking. This means that critical thinking needs to be mastered first before it reaches the other three higher-order thinking (Catherine And Cynthia, 2014).

Students are an educational object that is required to keep pace with technological developments and modern life today. Thus, students should be able to think ahead and criticize all circumstances. In order to be able to print competent personalities, the world of education needs to change the system or teaching pattern from conventional learning into a more innovative learning model and can optimize the ability in learning outcomes, or in the ability to

think. Among these are high-level thinking skills that are useful in helping student's problems (Barber et al., 2015). In the 2013 Indonesia curriculum, the assessment given to students is not only in terms of cognitive ability but also affective and psychomotor aspects. In a process of learning, authentic assessment can measure, monitor and assess all aspects of learning outcomes (covered in the cognitive, affective, and psychomotor domains), both appearing as the end result of a learning process, as well as changes and developments in activities and acquisitions Learning during the learning process in and out of the classroom. In other words, such a system is considered more equitable for the student as a learner, because every effort that the student earns will be more appreciated. In this respect many school systems, such as in Singapore (Koh, Tan & Ng, 2012), have undertaken fundamental reviews of school curriculum and assessment systems. In Singapore's case, it is the 'Thinking Schools, Learning Nation' agenda, created to ensure that they 'nurture thinking and committed citizens to keep Singapore vibrant and successful'.

Certainly, however, the realistic criterion is commonly presented as the underlying, critical defining factor for authenticity. For example, a discussion of the varied definitions of the terms performance assessment and authentic assessment is presented by Palm (2008). Beginning with a basic dictionary definition of authentic as meaning essentially that something is "real, true or what people say it is" (p. 6), he suggests that the term is used in various contexts as being true or real Palm concludes that authenticity is defined as assessment that is real in terms of processes and products, assessment conditions or the presented context, and true to life beyond school, curriculum and classroom practice or learning and instruction. With authentic assessment can appreciate each student's ability more justly and wisely because not all students excel in their cognitive abilities. There have been several studies on authentic assessment that can be effective in the assessment of the 2013 curriculum, one of the results of thesis research from Gustiani (2013) with the title "Authentic Assessment of Student Results Class XI on Acid Base Materials". In addition, the results of a thesis research from Purwanti (2014) entitled "Development of Authentic Assessment Instruments for Assessing Students' Vocational Practices Knowledge and Skills on the Concepts of Electrolyte and Non Electrolyte Solutions". Based on the above description of the background as well as research that has been there before, it is necessary to research that aims to provide an authentic assessment of student learning outcomes on different materials. The title raised in this study is "Development of Authentic Assessment Instruments for Measuring Critical Thinking Skills and Student Performance of Class XI on Thermochemical Material".

The purpose of this study is to obtain validity of authentic assessment instrument products to measure critical thinking skills and student performance on thermochemical materials, to obtain authentic assessment instrument product reliability to measure critical thinking skills and student performance on thermochemical materials, to find out the results of assessment instrument development Authentic multiple choice written tests and descriptions to measure students' critical thinking skills in authentic assessment instrument trials, to find out the results of authentic assessment instrument assessment of performance tests to measure students' practicum skills on authentic assessment instrument test. The authentic assessment according to Number 66 of 2013 on the Education Appraisal Standards is a comprehensive assessment to assess the start of input, process, and output (output) of learning (Basic and Medium. Kemendikbud. 2013). Create authentic learning and assessment tools, teachers need to learn how to design such tasks. McNeill, 2012; McCarthy, 2013) surveyed academics and found that many continued to target lower order learning outcomes. They state that universities increasingly value the skills such as problem-solving, critical thinking and creativity, yet the curriculum needs to be designed to support and scaffold development of these skills, and integrating them into assessment strategies has proven a challenge. While new technologies have sometimes been heralded as having the potential to address an apparent gap between the rhetoric of curriculum alignment and assessment practice in universities, academic practice is slow to change, and the uptake of new tools to support the development of higher order skills remains relatively low.

Authentic assessment is an activity to assess the students who emphasize what should be assessed, both process and results with various assessment instruments tailored to the demands of competence in the core competence (KI) and Basic Competence (KD). In authentic assessment, learners are asked to apply concepts or theories to the real world. In addition, authentic assessment also takes into account the balance between attitude, knowledge, and skill attitudes that are tailored to the characteristics of learners according to their level.

THE STUDY

The research was conducted in one of the vocational schools in Bandung. The samples involved are students who have followed the learning on thermochemical materials in class XI semester 1 academic year 2014/2015 as many as 32 students. The object of this research is the authentic assessment instrument of written test (multiple choice and description) and performance test (task and rubric) which has been tested for its validity. The research method used is research and development. Research and Development is a research method used to produce a particular product,

and test the effectiveness of the product. Cresswell (2014) reveals that research methods can be interpreted as a scientific way to get information or data with a specific purpose.

Research Procedures:

1. Preparation stage includes several steps, literature study of authentic assessment of written test and performance, review of thermochemical material based on curriculum 2013, preparation of authentic assessment instruments written test and performance, preparation of written test (multiple choice and description), preparation of performance test (Task and rubric), validity or judgment test, calculation of validity.
2. The Implementation Phase covers several steps, preparation of student ability test questions of thermochemical material and student worksheet of practicum test, essay and validity performance test, calculation of reliability, processing and data analysis, findings and discussion, conclusion.

FINDINGS

The results of the study are divided into four parts, validity of the authentic assessment instrument written test and performance, the reliability of the authentic assessment instrument written test and performance, authentic assessment instrument analysis written test in the form of multiple choice items and descriptions, and analysis of authentic assessment instruments in the form of performance tests Students of SMK on practice determination ΔH using simple calorimeter.

Based on calculating the CVR value for authentic assessment instruments written test and performance, it is known that all instruments validity. Accumulated validation results of authentic assessment instruments are shown in Table 1.

Table 1. Accumulated Validation Results of Authentic Assessment Instruments

Authentic Assessment Instruments		Item	CVR Value	CVR Critical	Validity of Instruments
Written Test	Multiple Choice	1, 2, 3, 5, 7, 11, 12, 13, 14, 15, 16, 17, 18, 19	1,00	0,99	Valid
	Essay	1a, 1b, 2a, 2b, 2c, 3a, 3b	1,00		Valid
Performance Assesment		1, 2, 3, 4, 5, 6, 7, 8, 9, 10	1,00		Valid

The result of reliability value for each type of authentic assessment instrument development on the concept of the thermochemical material is presented in Table 2.

Table 2. Reliability Value For Each Type of Authentic Assessment Instrument

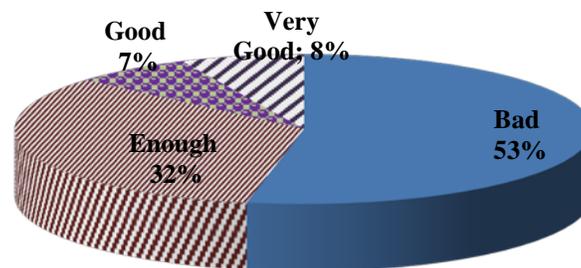

Instruments		Item Value	Number of Item Used	Reliability	Category
Written Test	Multiple Choice	15	1, 2, 3, 5, 7, 8, 11, 12, 13, 14, 15, 16, 17, 18, dan 19	0,452	Medium
	Essay	3	1a, 1b, 2a, 2b, 2c, 3a, dan 3b	0,749	High
Performance Assesment		10	1, 2, 3, 4, 5, 6, 7, 8, 9, dan 10	0,865	Very High

The result of the item analysis, it is known that the differentiating power of each item of multiple choice questions developed is in all categories ranges, among others: less, adequate, good, and excellent. While the level of difficulty in the category of difficult, medium, and easy. Detailed results of the item analysis are presented in Table 3.

Table 3. Item Analysis

Item Number	Differential of Item		Difficulty of Item	
	Value	Category	Percentage	Category
1	0,63	Good	43,75 %	Medium
2	0,00	Bad	12,5 %	Easy
3	0,06	Bad	6,25 %	Easy
4	0,31	Enough	50 %	Medium
5	0,00	Bad	43,75 %	Medium
6	0,06	Bad	87,5 %	Hard
7	0,30	Enough	75 %	Hard
8	0,19	Bad	62,5 %	Medium
9	0,75	Very Good	50 %	Medium
10	0,38	Enough	50 %	Medium
11	0,06	Bad	75 %	Hard
12	0,25	Enough	50 %	Medium
13	0,25	Enough	37,5 %	Medium
14	0,06	Bad	50 %	Medium
15	0,19	Bad	81,25 %	Hard

From Table 3 it can be seen that in the Differential of Item analysis, there is a category of problem Differential of Item, Easy, Medium, and Hard. Although there is a bad item, but no one gets a negative value so no items are omitted. With the Differential of Item, so this problem is good to be able to know the ability of students with upper, medium, and low class category. The percentage of the number of different power categories per item is illustrated in Figure 1.

**Figure 1.** Percentage of Multiple Choice Differential Item

In the analysis of the level of difficulty there are three types of problems, namely the level of difficulty easy, medium, and difficult. On the tested problem the level of difficulty is evenly distributed from the easy to the difficult, but the most problem is the medium category. Thus the ability of students in problems work can be known level. The percentage of the number of categories of difficulty levels per item is illustrated in Figure 2.

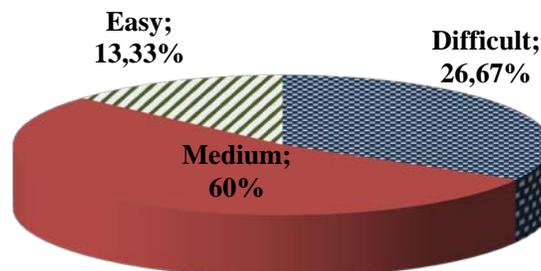

Figure 2. Percentage of Problem Difficulty Points Multiple Problems Charts

For authentic assessment instruments written the type of description on the analysis of difficulty levels, the problem is included in the category of being. With the details of 32 students follow the written test description of 3 questions developed. The maximum score is 21 and the minimum score is 0. The number of students who get 0-10 score of 19 students (meaning fail), the value of 11 as 6 students, and the value of 12-21 as many as 11 students. So the percentage of difficulty level is 59,38%. The 59.38% difficulty rate is between 28% and 72%, meaning the problem is moderate. Note: The ideal pass limit is 11 (scale 0 - 21).

The result of the student's assessment using the multiple choice instrument is then analysed as a whole and grouped according to the high, medium, and low student scores. From the division of the group, there are 4 high group students, 24 medium group students, and 4 low group students. This division of student scores is found in Appendix 19. For a percentage description of the group of knowledge scores to assess students' critical thinking skills is presented in Figure 3

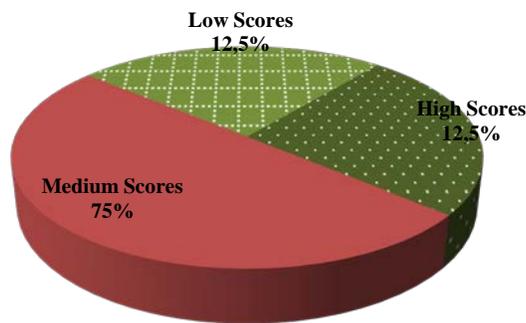

Figure 2. Percentage of Student Knowledge

Group of written tests also carried out the division of the value of student's critical thinking skills. The division of students' critical thinking skills is grouped into four categories, which are less good, good, good enough, and excellent. The division of students' critical thinking skills is presented in Table 4.

Table 4. Group Distribution of Student Critical Thinking Skills

Group	Category Value	Student
High	Very Good	-
	Good	2
	Enough	2
	Bad	-
Medium	Very Good	-
	Good	-
	Enough	2
	Bad	22
Low	Very Good	-
	Good	-
	Enough	-
	Bad	4

Based on Table 4 can be seen the distribution of values on students' critical thinking skills. In high group students there are 2 students with good grades, 2 students are good, and no students with the category of excellent and poor value. In the group students there are 2 students with good value, 22 students are bad, and no students with the category of very good and good value. Whereas in low group students there are 4 students with bad grades, and no students with very good category, good, and enough. In the grouping of performance tests conducted also the

division of student competence in carrying out the lab. The division of student competencies is grouped into four categories, which are less competent, competent, and highly competent. The division of students' competency skills group is presented in Table 5.

Table 5. Distribution of Student Practicum Competency Group Competencies

Group	Kategori Kompetensi	Jumlah Siswa
High	Highly Competent	2
	Competent	2
	Sufficient Competent	-
	Less Competent	-
Medium	Highly Competent	-
	Competent	21
	Sufficient Competent	2
	Less Competent	1
Low	Highly Competent	-
	Competent	3
	Sufficient Competent	-
	Less Competent	1

Based on Table 5. can be seen the distribution of competence on student practicum skills. In high group students there are 2 highly competent students, 2 competent students, and no students with sufficient competent and less competent categories. In the group students there are 21 competent students, 2 students are competent, 1 student is less competent and no students with highly competent category. While in low group students there are 3 competent students, 1 student is less competent, and there are no students with very competent category and quite competent.

CONCLUSION

The results of research on the development of authentic assessment instruments and authentic assessment instrument test, it can be known that some research findings have been analysed, and the discussion of the research results, can be obtained some conclusions, among others: Authentic assessment instruments developed eligible valid to assess critical thinking skills And the performance of vocational students on the concept of thermochemical materials. Authentic assessment instruments developed, i.e. written test instruments and performance have CVR value counts above the critical CVR value of 0.99 for five validators. The developed instruments are qualified to assess the critical thinking skills and performance of SMK students on the concept of thermochemical materials. The instrument of written test of multiple choice form with value 0,452 in medium reliability category and written test of description form with value 0,749 in high category, while in instrument of performance test is in very high category with reliability value equal to 0,865.

The results of the development of authentic assessment instruments of multiple choice written test and descriptions of SMK students are grouped into high, medium, and low grade categories. The value of critical thinking skills of majority students is in the category of poor value in working out the problems on thermochemical materials, both in the medium and low groups. While in the high group balanced on the category of good value and good enough there are 2 students in each value category. The results of the development of authentic assessment instruments of performance tests of SMK students are grouped as well as on written tests into high, medium, and low grade. Majority student competency score is in competent category in conducting practicum of determination ΔH reaction using simple calorimeter, good in high, medium, and low group.

THE DEVELOPMENT OF HANDOUT ON THE SUBJECT OF PSYCHOLOGY FOR TEACHER FOR EDUCATIONAL STUDENTS

Chaiwat Waree
Faculty of Education
Suan Sunandha Rajabhat University
Bangkok, Thailand
chaiwat.wa@ssru.ac.th

ABSTRACT

The objectives of this research are: to develop and discover efficiency of handout on the subject of psychology for teacher for educational students to meet with criteria at 80/80 and to study satisfaction level of students by handout on the subject of psychology for teacher. The target group herein was 30 students who studied in Academic year of 2015. Target group was determined by using purposive sampling. Tools used in this research were 40 items of post-test, student's satisfaction evaluation form towards handout on the subject of psychology for teacher usage. Data analysis was conducted to find efficiency of handout on the subject of psychology for teacher as defined by criteria at 85.77/ 83.72 and student's satisfaction level towards handout on the subject of psychology for teacher usage of 30 students. The obtained mean was 4.55 and standard deviation was 0.58. The results showed that the efficiency of handout on the subject of psychology for teacher to promote teaching skills was at 85.77/ 83.72 that was higher than defined criteria at 80/80. In addition, Overall satisfaction of students towards handout on the subject of psychology for teacher usage was in the highest level with the mean of 4.55 and standard deviation at 0.58. The obtained results were able to be used as guidelines for further development of learning activities management of other courses.

INTRODUCTION

The Royal Institute (1996, p 647) defined the meaning of handout as a material or tool with useful information and subject matter for reinforcing learning experience that can be applied to instructional process of teachers and students to meet with curriculum. Sujit Songkasri (2011, p 31-35) defined the meaning of handout as a book for children reading in order to obtain knowledge along with amusement. It is a kind of document with clear content, objectives, and theme that is easy or difficult based on class, age, interest, and background of student. It is consisted of some amused and various contents including tales, folk tales, short stories, documents, articles, diaries, and essays. The language used in Handout is easy, correct, and appropriate while its size should be suitable for children. Handout means academic work that is used for supporting any subject under university's curriculum reflecting course content and instructional method systematically. It is considered as an important tool of teacher in supporting instruction. It is in the form of document or other related media.

Course Description on the subject of psychology for teacher : This course is related to human's development, promotion on development of students with each age, factors influencing on learning, Learning Theory and its application to learning management and promotion, classroom management, classroom behavioral modification, principles of guidance and primary consulting. General Objectives are 1.To be able to explain on involvement between psychology and teacher as well as to identify importance and benefits of psychology to teacher. 2.To be able to explain on nature and development of students. 3.To be able to apply Psychological Learning Theory to learning management. 4.To be able to analyze on physical factors influencing on learning for applying to reinforce motivation on learning management. 5.To be able to analyze on problems of students for applying to guidance and consulting. 6. To be able to apply obtained knowledge for managing environment facilitating student to start learning.

From such reason, the researcher was interested in utilizing innovation to convey a development of handout on the subject of psychology for teacher for educational students.

OBJECTIVES

To develop handout on the subject of psychology for teacher to gain efficiency at 80/80 and achieve better level of student's satisfaction.

HYPOTHESIS

Handout on the subject of psychology for teacher had efficiency level at 80/80 according to standard criteria and student's satisfaction level towards handout on the subject of psychology for teacher was in high level.

SCOPE OF RESEARCH

Populations used in this research was consisted of 2,540 students who were students of Suan Sunandha Rajabhat University in all years.

Target group used in this research on handout on the subject of psychology for teacher was consisted of 30 students who were students of Suan Sunandha Rajabhat University in all years obtained by using purposive volunteer sampling.

DEFINITIONS

1. Handout means innovative media classified as publication that is created and prepared for supporting teaching of teacher or learning of student under the curriculum in order to promote student to learn by himself/herself. In addition, it is also used in managing learning of both student and teacher to be more efficient.

2. Efficiency of handout means capabilities of lesson in building the learning achievement of the target students from Faculty of Education, SSRU in order to enable them to obtain learning according to determined criteria of 80 / 80.

The former 80 means efficiency of processes evaluated from the student's scores obtained from doing practices of each lesson during the class that is averagely 80%.

The latter 80 means efficiency of the result evaluated from the scores of students for their post-test that is averagely 80%.

3. Satisfaction of students means the feeling of students toward learning by using handout on the subject of psychology for teacher. This satisfaction was measured by using 10 items of Satisfaction Questionnaire upon the likert's 5 rating scales.

RESEARCH FRAMEWORK AND CONCEPT

Research framework and concept is shown in Fig. 1.

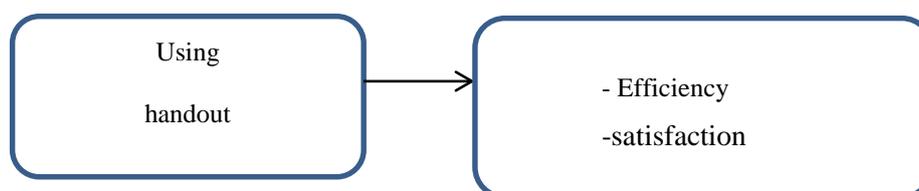

Fig. 1. Research framework and concept

RESEARCH PROCESS

1. Studied papers and researches as well as studied from philosophers through interview and focus group in order to synthesize psychology. Subsequently, the obtained results were classified and arranged systematically in Thai-language format.

2. Submit developed handout on the subject of psychology for teacher to experts for inspection and improvement.

3. Tried out improved handout on the subject of psychology for teacher with students who were not target group for further improvement and public relations.

4. Students who were target group studied created handout on the subject of psychology for teacher and took pre and post-test. Subsequently, satisfaction of students was evaluated after their usage of handout on the subject of psychology for teacher.

4.1. Tested students with test review of 11 lessons. The obtained scores were collected as scores of formative evaluation.

4.2. 40 items of achievement test on lessons were tested with students and the obtained scores were collected as scores of post-test.

4.3. 10 items of satisfaction evaluation form towards lessons were commented by students.

5. The results were checked and the obtained scores of pre and post-test were analyzed by using statistics in order to find efficiency at 80/80.

6. Student's satisfaction after using handout on the subject of psychology for teacher was analyzed and concluded.

CONCLUSION

1. From development and try out of handout on the subject of psychology for teacher, it was found that it was suitable and efficient according to defined criteria calculated to be 85.77/ 83.72 when utilizing with 30 students who were target group that was consisted with defined hypothesis.

2. From the results of student's satisfaction towards learning with handout on the subject of psychology for teacher, it was found that overall student's satisfaction towards instruction using handout was in the highest level, i.e., students had overall satisfaction towards handout in high level with mean of 4.55 and item 10 was gained the highest satisfaction level of students. Average demand of students on creating handout for other subjects was 4.74. For other evaluations, most of them had high level of satisfaction.

Handout is consisted of:

Introduction

Psychology is science of human's behavior and mind, learning and development of student under instruction or in classroom that is studied to invent some theories and principles that can be applied to solve educational problems and to promote efficiency of instruction. Accordingly, educational psychology plays the important role in creating curriculum and managing instruction by considering on individual difference. It is necessary for educators and teachers to have knowledge and understanding on student's behavior and learning process as well as to be able to solve problems on instruction. Since psychology has extensive influence on living, anyone studying on psychology should understand human nature, for example, demands, problem solving, modification, emotion and feeling in various situations. Moreover, they should be able to apply obtained knowledge to solve psychological problems, overcome all weaknesses, eliminate conflicts and anxiety, maintain good psychological health, modify themselves, and plain their life appropriately. As a result, anyone studying on educational psychological or teacher should start from studying on basic knowledge of psychology as the good foundation for further study.

Student Development

Development is changing or growing in structure or pattern and all humans have to experience the procedures of development throughout their life. Developmental psychology is important, i.e., it enables person to understand other persons in both individual and group levels therefore such person will be able to connect demands of people in different ages. Consequently, persons will be able to understand one another better and modify themselves to live with one another happily. Moreover, they will be able to work with others smoothly and efficiently. Human Development means changing happened with humans physically, emotionally, intellectually, and socially in order format. Age development can be performed by children with each age normally and success of each research can make people happy and confident as well as be the foundation of further age development. However, if it is unsuccessful, it can cause some difficulty on modification leading to unacceptable behavior and unhappiness life. To study on human's development, there are several systematic theories that have already been analyzed, studied, and proved until they have been accepted and reliable. Developmental Theory is not for attaching and following but it is for presenting as the guidelines for applying to instructional activities in each situation. The important theories are Gesell's Developmental Theory, Piaget's Intellectual Theory, Bruner's Developmental Theory, and Ericson's Developmental Theory, etc.

Human Development Theory

Development is changing or growing in structure or pattern and all humans have to experience the procedures of development throughout their life. Developmental psychology is important, i.e., it enables person to understand other persons in both individual and group levels therefore such person will be able to connect demands of people in different ages. Consequently, persons will be able to understand one another better and modify themselves to live with one another happily. Moreover, they will be able to work with others smoothly and efficiently. Human Development means changing happened with humans physically, emotionally, intellectually, and socially in order format. Age development can be performed by children with each age normally and success of each research can make people happy and confident as well as be the foundation of further age development. However, if it is unsuccessful, it can cause some difficulty on modification leading to unacceptable behavior and unhappiness life. To study on human's development, there are several systematic theories that have already been analyzed, studied, and proved until they have been accepted and reliable. Developmental Theory is not for attaching and following but it is for presenting as the guidelines for applying to instructional activities in each situation. The important theories are Freud's Developmental Theory, Piaget's Intellectual Theory, Bruner's Developmental Theory, Ericson's Developmental Theory, and Kohlberg's Moral Development Theory, etc.

Learning Theory

Learning Theory is the overall result of explanation on the belief on learning that is managed orderly. It is consisted of Learning Rules for using as the practices leading to the results upon confidence. There are 2 main groups of traditional Learning Theory including behaviorism emphasizing on the importance between stimulus and responses as well as focusing on measurable or noticeable behavior, for example, theories of Pavlov, Watson, Thorndike, and Skinner. On the other hand, Cognitivist Theory emphasizes on perception and understanding that is the physical internal process including theories of Gestalt, Lewin, and Tolman. There are 2 new theories including Gagne's Eclecticism integrating principles of Behaviorism and cognitive theory in order to develop instruction properly and Humanism emphasizing on student who has emotion, feeling, and abilities to rely on himself/herself. Accordingly, if he/she is free to choose and make decision by himself/herself, he/she will be responsible and learn efficiently. The important person of this group is Maslow, etc. For good learning management, teacher should consider on learning elements, learning process, and application of Learning Theory to suit with students and situations.

Individual Difference

Heredity and environment are factors influencing on human development causing every human different from others on both intra-individual difference and individual difference. Heredity plays a role as the indicator while environment is additional factor. Fertilization or pregnancy is caused by fertilization between sex cells of father

and mother leading to new life in mother's womb. Genetic transformation is a process for transforming characteristics of physical structure of father and mother or ancestor to child and offspring with gene as the indicator. There are 3 types of environment influencing on human development including pre-natal, natal moment, and post-natal. To reinforce human's quality, it is necessary to consider on 2 main factors including genetic factors and environmental factors.

Motivation

Learning requires many important factors including reinforcement helping to improve abilities on connection between stimulus and response to be stronger including positive reinforcement, negative reinforcement, and motivation, condition stimulating persons to express their behavior to achieve goals as demanded by such motivation, emotion and condition which body is stimulated leading to physical and mental changing as well as changing of endocrine systems, attitude, and interest. Attitude means estimated sensation towards things in any direction that affect to such thing approaching or avoiding. Interest is a part of attitude, creativity, and information technology connecting existing knowledge or experiences with new situation appropriately and variously by using imagination and effort. Consequently, it leads to new theory or process that is different from others. Teacher should manage instruction by considering on factors causing students to learn for developing and enabling students to learn with full potential.

Guidance Psychology

Guidance is an educational process helping to enable individual to know and understand himself/herself as well as environment. Consequently, they he/she will be able to lead himself/herself, solve problems, and develop himself/herself upon his/her potential and become a good member of the society. Guidance is not giving suggestion but it is giving help in order to enable such person to be able to help himself/herself. The goal of guidance is to solve problems for preventing problems as well as for developing and promoting. Guidance is classified into 3 types including educational guidance, occupational guidance, personal guidance, and social guidance. Guidance is beneficial for students, parents, teachers, and universities.

Counseling Psychology

Counseling service providing is giving help on personal, educational, and occupational problems and all necessary facts are studied and analyzed. Solutions of those problems will be figured out as well. Counseling service can be divided into 2 types, i.e., personal counseling and group counseling. Consultant should study on techniques of counseling service, for example, introduction to conversation, questioning, and silence using, etc. Moreover, it is also necessary to consider on common factors of counseling service, for example, relationship, flexibility, motivation, and guidance, etc. Consultant should select the use of each technique and consider on common factors of professional counseling techniques to meet with each situation for obtaining the ultimate benefit from such counseling.

Student Case Study

Psychological research or study will help to predict behavior and create desirable behavior as well as to control and modify behaviors of students through long-term and short-term behavioral study or cross-sectional study. Research method and data collection was conducted through many methods, for example, introspection method, observation, survey, interview, case investigation, questionnaire or checklist, testing, and experiment. Since each method has different weaknesses and strengths, teachers should have good understanding on human behavior study methods as well as abilities in selecting appropriate tools for collecting data in order to gain the ultimate benefits. Moreover, psychological study is also beneficial for teachers, for example, supporting teachers' instructional preparation and lesson plan. Moreover, it also enables teachers to perceive teaching principles and efficient methods as well as supports teachers in classroom control administration and atmosphere, etc.

Classroom Management

As a result, the meaning of classroom management is quite extensive covering physical classroom environment management, management with student's problematic behavior, classroom discipline building, teacher's learning management, and teacher's skills development to stimulate and motivate students in order to enable students to learn efficiently. Classroom management is classified into: physical classroom management including desks and chairs management, media, devices, and materials management, display board creation, learning corner preparation for facilitating and promoting students to learn with their full potential; psychological classroom management including teacher's learning management, teacher's personality for building learning atmosphere, interaction between teachers and students as well as interaction among students. This is because learning is not only learning achievement but it is also social and emotional skills development. Teachers have to rely on the psychological principles and Dharma principles to manage such classroom.

Teaching Theory

Teaching is a science related to learning and teaching that has been accumulated by the society of the world from past to present. Teaching Theories of Bruner, Gagne', and Gardner, are good examples. Teachers are able to apply these Teaching Theories to enable students to learn under defined goals and objectives of teaching. Such knowledge is obtained from thinking and analysis of philosophers or obtained from research, testing, and proof under scientific process of psychologies and educators. Such knowledge is consisted of educational philosophy,

teaching context, theories, principles, concepts, systems, formats, methods, techniques, learning and teaching psychology, learning management design and lesson plan, instructional operation, measurement and assessment.

DISCUSSION

Efficiency of these handout was in high level as expected at 85.77/ 83.72 due to creation and development of such handout. The researcher studied on basic data and analyzed work, contents, learners who were target group, and behavioral objectives prior planning on creation and development to meet those behavioral objectives under explanation and suggestions of content expert for inspecting accuracy of contents, language correctness, appropriateness of design, instructional methods, and presentation. Subsequently, the obtained lessons were improved, developed, and tried out with a small student group in order to find further faults for additional improvement and development prior performing field tryout with 40 students. The results showed that efficiency of handout was 85.77/ 83.72 that was satisfying and met with expected hypothesis that was consistent with work of Chaiwat Waree (2016) This research aims to develop Education Course Syllabus, Thai language major, according to Buddhism way of Thailand by using Taba's Approach and to evaluate the efficiency of Education Course Syllabus, Thai language major, according to Buddhism way of Thailand. The result of the evaluation on efficiency of Course Syllabus, Thai language major, according to Buddhism way of Thailand conducted by the expert showed that the quality of this syllabus was, in overall, in the highest level at mean = 4.62 and S.D. = 0.42.

Student's satisfaction towards handout on the subject of psychology for teacher was in high level for all items because the research studied on psychology of learning of learners before planning creation of handout. Subsequently, the obtained results were planned for creation and development of complete handout that was consistent with work of Sophon Ratana (2013) obtained the results on the use of an Handout on geography of Australia and Oceania continents influencing on learning of Secondary Education Level 1 students of Charat Chanupatham School in Phatthalung Province.

THE DEVELOPMENT OF TALENT MANAGEMENT INDICATORS FOR PRIMARY SCHOOLS IN THAILAND

Pachara NGAMCHAD

Faculty of Education Khon Kaen University, Thailand
pachara.ngamchad1973@gmail.com

Dawruwan THAWINKARN

Faculty of Education Khon Kaen University, Thailand

ABSTRACT

The purpose of this research were to studies the components of talent management of primary school in Thailand. Data was collected by 3 methods were using: 1) analysis the talent management 100 documentary sources; 2) in-depth interview 3 expertise in talent management; and 3) field studies 3 schools 1 that talent management model. The research found that :Talent management in primary school consisting of 4 main components are 1) identifying talent consisting of 4 indicators are: 1.1) planning personnel; 1.2) determination of the talented people; 1.3) positioning key; and 1.4) the evaluation of advanced practitioners.; 2) development the talented people consisting of 3 indicators are: 2.1) challenging assignments, 2.2) the empowerment, and 2.3) to enhance the abilities of talented people; 3) rewarding consisting of 4 indicators are: 3.1) allocation of incentive, 3.2) to strengthen the trust, 3.3) the recognition from the team, and 3.4) strengthening the spirit; and 4) maintaining the talented people consisting of 3 indicators are: 4.1) strengthening the dialogue, 4.2) to strengthen the work environment, and 4.3) developed role model.

Keywords: Talent, Talent Management, Primary Schools.

INTRODUCTION

Good human resources refers to staff members who impose excellent skills and deliver high core competence at work. A proportion of good human resources at the working level accounts for only 3-5 percent of all workers in most institutes while the figure is reported at around 10 percent at the management level. Compared to other lay workers, good human resource people stand out from other lay workers based on the extent of the current and future impacts that the persons have upon their office affiliations. The amount of these qualified people in most offices lessens over time (Garuetin Kulpheng, 2009). Based on a school perspective, being a good staff member means being a teacher or other personnel who have a high degree of work commitment, creativity, work competence, and leadership who can help to direct the schools toward their goals. Therefore, managing talented school staff to get the best out of their capacity requires well-rounded professional skills (Dawruwan Thawinkarn, 2016). The management of talented staff members is done for the purpose of helping the staff to achieve the organization's goals. The capacity exhibited by good staff members exaggerates the survival of the institution and its competitive advantage. Schools represent another form of social units which are comprised of people of different hierarchies, such as administrators, teachers and other educational personnel. These groups of people are the gears that turn the wheels of educational mobilization. School principals should pay attention to carefully carving their staff members into talented associates because learning to manage the existing talented staff is not of secondary importance in school development.

Talent management means exercising measures to support the talented staff. Stated another way, talent management means attempting to obtain, develop, hire, and maintain good staff members within the organization. The principles, relating to talent management, have been consistently developed in different arenas, such as firms in the fields of education, business, and human resources. It is a kind of development that places emphasis on increasing the performance of individuals in alignment with the success of the organizations. When attempting to successfully manage talent in schools, management is often confronted with challenges to the creation of innovation and

leadership for educational change. It is advisable for schools to continue their efforts in developing a talented staff and in encouraging networking with external institution. Moreover, it is important to tailor Training curricula that are aimed at developing leadership and talented staff. Accordingly, talent management should be set as a means for identifying, developing, hiring, maintaining and exploiting the talented staff members in the organization (Davies and Davies, 2011). Reviewing the literature related to talent management has shown that this kind of management directs the schools toward excellence. Rudhambu (2014) investigated the talent management system in Botswana University and discovered that talent management contributes to workings of a progressive school. Agrawal (2010) conducted research about the talent management system of business schools. It was observed in this research that factors indicating of the success of talent management involved the following: school quality, motivation, work advancement, and wages. Annakis, Dass, and Isa (2014) explored factors contributing to the efficiency of talent management in government and private universities. They found that the talent staff's academic perceptions, the talent staff's development, and the culture for the talent staff's development are crucial for the success of talent development. A review of several research studies revealed a similar pattern of findings given the extent that talent management is mainly based on the following factors: 1) identifying talent staff, 2) the development of talent staff, and 3) the rewarding and maintaining of the talent staff {Arunwadee Nuntawattanukul, Pornrat Sadangharn, & Apinya Ing-art (2014), Supaporn Prasongtan (2015), Dawruwan Thawinkarn (2016), Collings and Mellahi (2009), Agrawal (2010), Tymon, Jr., Stumpf, & Doh (2010), Mandloi (2014), Cappelli & Kellahi (2014), Chauhan & Bhatt (2015)}.

Based on the importance of talent management as identified above, schools should be prompted to find effective measures especially for talent staff development. Talent management has not yet been introduced for Thai schools in the basic education system. Furthermore, there are relatively few research studies about talent management in the Thai schools. Consequently, the researcher has gravitated towards exploring the factors and indicators of talent management in the Thai primary schools. It is expected that the results derived from this research will be beneficial in helping the schools to successfully manage their talented people and direct their schools toward their set goals.

RESEARCH OBJECTIVE

The purpose of this research was to study the indicators of talent management of primary schools in Thailand.

LITERATURE REVIEW

In order to be able to precisely address the facets related to talent management in the Thai schools in the basic education system, the following documents were reviewed.

Definitions and philosophies of talented people

Talented people are defined based the two classifications below:

Group 1: Talented people can be classified from other members of a group based on their state of being a creator, a rule breaker, an initiator for change, and generator of knowledge. Davies & Davies (2011) explained that talent people are those who are blessed with many different professional skills. Talented people usually spend interesting, enthusiastic and energetic lives. They exhibit high capacity in problem-solving and finally manage to find solutions to the problems via effective use of resources. Similar ideas have been dictated by Apron Phoowittayapan, (2010) who stated that talented people are persons who possess talents, gifts, and characteristics that make them stand out from other candidates. Talented people are good at work and human management. It is important that talented people possess both good virtues and good knowledge since possessing only one of these two qualities does not mean anything for the institutional development.

Group 2: Talented people are associated with the person's traits, such as their capacity and potential. The Office of Civil Service Commission defines talented people as persons with high performances that are well-recognized by their affiliations. Talented people tend to possess high levels of work etiquettes and are prompted to become the crucial strength of organization. Wichai Wongyai (Mo.Po.Po.) regards talented people as those who stand out from the crowd with their creative thinking, high potential, effective performance, talents, and natural abilities. Talented people usually exhibit high degree of achievement and are well-respected by others. They are learning persons who have a passion for escalating their work advancement. Suganya Rasamitamachot (2011) says that talented people are those with high occupational skills that enable them to create superior performances. Talents that people from different fields of professions have can be various and can be based on the nature and culture of the individual organization.

This research study has attempted to investigate the management of talented people in Thai primary schools. The term, “talented people”, is defined under the Thai school context as teachers or educational personnel who generate an outstandingly high level of performance as evidenced by their levels of education, academic positions, awards, and other empirical evidences. The impacts that talented teachers have on students, school and communities are used for locating talented teachers. More importantly, there are 11 desirable qualities for high school work potential that have been used to indicate talent teachers as follows: 1) demonstrating achievement-based performance, 2) giving good service, 3) having professional expertise, 4) endorsing justice and ethics, 5) demonstrating teamwork, 6) having bureaucratic commitment, 7) being creative, 8) having an holistic viewpoint, 9) being devoted to the public, 10) participating in interpersonal interaction, and 11) being a learning person. The evaluation of these talents was based on the criteria imposed by the Office of Civil Service Commission.

Principles relating to talented people management in schools.

Josh Bersin (2007) imposed 8 steps for talented teachers evaluation as detailed below:

1. Workforce planning
2. Recruiting
3. Onboarding new employees
4. Performance management
5. Training performance support
6. Succession planning
7. Compensation and benefits
8. Critical skills gap analysis

Birchall, Holley & Reid (2008) applied human resource principles into the development of talent people and postulated 5 steps involved in the development of talented people.

1. Identification
2. Development Opportunities for Talent
3. Transparency
4. De-Selection
5. Creating Developmental Opportunities for The Talent Pool

Factors relating to the management of talented people in schools

After reviewing a hundred of documents with themes concerned with the components of managing talented people, the factors needed for managing talented people in school have been clarified in Table 1.

Table 1: Components, definitions, and sub-components for managing talented people in basic education schools

Components	Definitions	Sub-components
1. Identifying	The process of identifying talented people should be systematically carried out in order to be able to correctly specify the members of the talented group and to direct the appropriate development for them.	1) Planning personnel 2) Determining the talented people 3) Defining the key positions 4) Evaluating the advanced practitioners
2. Developing Talented People	Encouraging talented people with respect to their professional development in order to enhance their work potential.	1) Offering challenging assignments 2) Giving Empowerment 3) Enhancing the abilities of the talented people
3. Rewarding	Finding prevailing ways to increase the motivation of the talented people via forms of subsidization or other rewards.	1) Allocating incentives 2) Strengthening trust 3) Receiving recognition from the team 4) Strengthening the spirit
4. Maintaining the Talent	Finding ways to retain talented people with the organization, increasing their patriotism & loyalty, and giving in for organizational development.	1) Strengthening the dialogue 2) Creating a supportive work environment 3) Developing role-models

RESEARCH METHOD

This descriptive research into the investigation of the indicators for managing talented people in the Thai primary schools was conducted and was based on a threefold process of data collection.

1) One hundred papers, related to the topic of managing talented people both in Thailand and internationally, were reviewed in order to uncover the most often quoted indicators. The frequency of each of the factors found in the papers were quoted in a frequency table. For the purposes of this research, those with the frequency of more than 50 percent were used as the indicators of talented people (Thunnissen & Marian (2015), Cappelli & Keller (2014), Davies & Davies (2011), Dawruwan Thawinkarn (2016).

2) Interviews were carried out with experts who had been involved with the talented people management at the national level. The three experts, who were interviewed, were as follows: 1) Dr. Tuang Untachai; Director of the Board of Education and Sport from the National Legislative Council; 2) Dr. Pisanu Tulasook, Assistant of the Permanent Secretariat of the Ministry of Education; and 3) Dr. Amporn Pinasa; Director of the Department of Human Resources and Lawsuit Development. These scholars were asked to identify the appropriateness of the indicators to be used for identifying talented people by marking their evaluative opinions on a scale from 1 to 5 with the following levels of appropriateness; (5) highly appropriate, (4) appropriate, (3) moderately appropriate, (2) not appropriate, and (1) highly inappropriate. Specific this research, the factors, that had been rated with the score of at least 3.5, were then selected as the indicators of talented teachers.

3) An area-based investigation was conducted at the three following schools having excellent talented people management: Phathai Udomsuksa School, Daroonsikhalai School, and Roong-Aroon School. The factors, contributing the success of talented people management in these schools, were decoded via conducting interviews with the school directors and teachers. The data obtained at this phase was used together with the data that had been obtained from Research Methods 1) and 2) in order to reach conclusions about the indicators for talented management in the schools.

RESULTS AND DISCUSSION

The research indicated that talent management in primary schools had consisted of 4 main components, each with sub-components as mentioned below.

1) Talent identification consists of the 4 following indicators:

1.1) Personnel planning

It is important for personnel planning to be conducted since it helps the schools to precisely allocate the number and characteristics of the people to be assigned for a particular job. It also determines that qualified persons are placed in the correct job. Jomphong Mongkolwanich (2012) articulated that personnel planning is magnificent for speculating future personnel needs. This practice is effective forensuring that the recruitment of new members is in alignment with the organizational and positional specifications.

1.2) Determining the “Talented People”

Making the positional specification is necessary for the schools to obtain the right kind of people who can fulfill the assignments with collaboration with others. Chuchai Samitigrai (2013) further explained that after coming to know what position(s) are available, it is necessary to tailor the job specifications and the related requirements. The allocation of job specifications should take into account the level of knowledge and skills as well as the personality that the applicants have. The members of Human Resources department are obliged to conscientiously carve job specifications to make sure that the right person is recruited for the task.

1.3) Defining key positions

It is important for the members of the school to recognize what positions are more crucial than others. Key positions

are high impact positions, and therefore, highly qualified people are needed to fill those job. Therefore, knowing what positions are primary helps allocate positional specifications and correct selection of applicants. Dessler (2011) explained that the act of defining key positions is fundamental to having good people fill key jobs. Key positioning is triggered from the office's internal needs. The allocation of key positions should be done systematically and consistently.

1.4) The evaluation of advanced practitioners

Performance evaluations are conducted at different degrees of intensity. In most cases, the criteria for evaluation is associated with the work hierarchies within the office. Apparently, people with high levels of responsibility are related to those from high positions, and the evaluation of this group of people is accordingly high.

2) The development of talented people consisting of the 3 following indicators:

2.1) Challenging assignments

Allocating challenging assignments to the educational personnel is important for the development of the organization as a whole. The tasks, that are challenging, increase problem-solving abilities and skills. Tactically speaking, when people are more frequently exposed to complicated tasks, they are more likely to be able to tackle a wider range of problems.

2.2) Empowerment

Empowerment is an important skill for building leadership. The work environment should be amended to cater to having learning experiences and promoting lifelong learning. Teaching other and building democratic leadership should be promoted.

2.3) Enhancing the abilities of talented people

Schools should make professional development a school policy. The school members should be encouraged to learn about their school's capacities, how they can increase their work potential, and about administrative and leadership skills. The schools should implement different short training courses and exploit different techniques to help their people master competence in these areas.

3) Rewarding

3.1) Allocation of incentives

Giving rewards to talented staff members in the schools is important since it shows that the school recognizes the importance of having outstanding people who can achieve high levels of accomplishment at work.

3.2) Strengthening trust

In order to bring about trust among their school members, the administrators should be good role models and behave in trustworthy ways. Trust from school members is developed under the circumstances when the administrators have properly projected their behaviors. Confidence and potential of the leaders should be portrayed properly to foster group harmony. Leaders should learn how to create trust by being open to different ideas.

3.3) Recognition from the team

Talented people are motivated when they are accepted and recognized. Talented people should be involved in major school events as follows: joining with the top administrators in allocating the direction of the school and being assigned to project work that they have proposed. When the leaders compliment members of their staffs after some memorable achievement, it is an impressive way to inspire workers (Davies & Davies, 2011).

3.4) Strengthening the spirit

Making people feel welcomed and uplifted is always an effective method of creating inspiration. In case any work-related disputes arise, the administrators should act as negotiators to help ease the difficulty and to even find solutions to the matter.

4) Maintaining talented people

4.1) Strengthening dialogue

The ability to communicate with other co-workers is a quality of a leadership that is crucial for the management of talented staff members. Communication reflects trust and a sincere connection between the interlocutors. During the conversations, the leaders should reveal their confidence and capacity to lead their schools while remaining open to receiving different or even opposing opinions.

4.2) Strengthening the work environment

Leaders with good leadership skills are generators in their work atmospheres. Successful leaders should be able to accomplish the following: 1) to create an atmosphere of trust, 2) to generate an energetic environment, 3) to facilitate cooperation and organizational values, 4) to create the organization's structure and direction, and 5) to support changes towards better personnel.

4.3) Setting role models

Establishing good role models is a magnet that also makes others want to also do something good as dictated by the model. Garuetin Kulpheng (2009) explained the steps in which talented people in an organization can be turned into role models. In these steps, the leaders should accomplish the following: 1) should be prompted to a) learn from the success others both inside and outside of their offices and b) should use those examples of success as a models. 2) should evaluate what makes each member of the school outstanding, 3) should refine the merits learnt from the examples of success and apply them to their cultures of their own organizations, 4) should evaluate and indicate the ability exhibited by talented people, which should be exercised systematically, 5) should identify the additional qualities that talented people have, 6) should a) make a draft of specifications for positions based on observed qualities of talented people and b) ask for the administrator's approval or suggestions, 7) should revise the qualities of the talented people based on the administrators' suggestions, 8) should a) finalize the qualities of talented people and b) establish the qualities as a model for 'talented people', and 9) should utilize the model with the organization.

CONCLUSION

The research found that talent management in primary school had consisted of 4 main components as follows: The first element was **Identifying Talent** consisting of 4 indicators: 1.1) Personnel Planning, 1.2) Determining the Talented People, 1.3) Defining Key Positions, and 1.4) Evaluating the Advanced Practitioners. The second was **Developing the Talented People** consisting of 3 indicators: 2.1) Challenging Assignments, 2.2) Empowerment, and 2.3) Enhancing the Abilities of Talented People. The third element was **Rewarding** which consisting of 4 indicators: 3.1) Allocation of Incentives, 3.2) Strengthening Trust, 3.3) Recognition from the Team, and 3.4) Strengthening Spirit. The fourth and final element is the **Maintaining of Talented People** consisting of 3 indicators: 4.1) Strengthening Dialogue, 4.2) Strengthening the Work Environment, and 4.3) Developing Role- Models.

ACKNOWLEDGEMENTS

This research has been sponsored and supported by the Nongkhai Primary Educational Service Area Office 2 and The Graduate School of Khon Kaen University. The researchers would like to express their sincere gratitude and thanks to all of the supporters who have made large contributions towards the completion of this research.

THE DEVELOPMENT OF TEXTBOOK ON THE SUBJECT OF LEARNING MANAGEMENT PROCESS FOR EDUCATIONAL STUDENTS

Chaiwat Waree
Faculty of Education
Suan Sunandha Rajabhat University
Bangkok, Thailand
chaiwat.wa@ssru.ac.th

ABSTRACT

The objectives of this research are: to develop and discover efficiency of textbook on the subject of Learning Management Process for educational students to meet with criteria at 80/80 and to study satisfaction level of students by textbook on the subject of Learning Management Process. The target group herein was 40 students who studied in Academic year of 2016. Target group was determined by using purposive sampling. Tools used in this research were 40 items of post-test, student's satisfaction evaluation form towards textbook on the subject of Learning Management Process usage. Data analysis was conducted to find efficiency of textbook on the subject of Learning Management Process as defined by criteria at 86.50/ 82.62 and student's satisfaction level towards textbook on the subject of Learning Management Process usage of 40 students. The obtained mean was 4.25 and standard deviation was 0.55. The results showed that the efficiency of textbook on the subject of Learning Management Process to promote teaching skills was at 86.50/ 82.62 that was higher than defined criteria at 80/80. In addition, Overall satisfaction of students towards textbook on the subject of Learning Management Process usage was in the highest level with the mean of 4.25 and standard deviation at 0.55. The obtained results were able to be used as guidelines for further development of learning activities management of other courses.

INTRODUCTION

The Royal Institute (1996) defined the meaning of textbook means "Academic document that is systematically arranged and may be written to respond to all contents of course or to any part of course or curriculum consisted of analysis and synthesis on related knowledge and reflecting ability of teaching in the higher education level or may be presented in other media formats, for example, CD-Rom or may be combined by both document and other media as proper as well as text made in other media formats that are appropriate for teaching that have been published not less than 1 semester."

According to the meaning of text, it shows expansion of the scope of instructional media that is over than documentary articles or textbooks. However, to write any textbook, author is required to have knowledge and thinking on the written topic deeply with advance writing method plus with experience on such topic. After writing any textbook, it is also necessary to pass with accuracy testing conducted by some experts in such field. In addition, confidence should be found through the test of students in order to make such textbook to be quality and suitable with readers. Prapapan Sengwong (2007, p 42) said that textbook referred to a kind of document indicating how to solve problems on learning management for specific topics or objectives of learning of each learning area as the materials for supporting learning management of teachers or students under curriculum. Its topics and content must be extensive and complete according to details of learning area defined in curriculum that shall not be less than 1 credit/course.

Textbook on Learning Management Process, Code No. CAI6431, aims to provide knowledge and understand on educational science and art and its application to learning management as well as to hold some activities to develop students and give some suggestions to students.

Course Objectives : To make students to have knowledge and understanding on principles of learning and learning process, application of Learning Theory to design curriculum. Therefore, students will become persons with knowledge and ability on learning management that is consistent with each student's learning style.

Course Description : The learning theories, application of Learning Theory to design curriculum, and learning management that is consistent with students' learning style.

From such reason, the researcher was interested in utilizing innovation to convey a development of textbook on the subject of Learning Management Process for educational students.

OBJECTIVES

To develop textbook on the subject of Learning Management Process for educational students to gain efficiency at 80/80 and achieve better level of student's satisfaction.

HYPOTHESIS

Textbook on the subject of Learning Management Process for educational students had efficiency level at 80/80 according to standard criteria and student's satisfaction level towards textbook on the subject of Learning

Management Process for educational students was in high level.

SCOPE OF RESEARCH

Populations used in this research was consisted of 2,650 students who were students of Suan Sunandha Rajabhat University in all years.

Target group used in this research on textbook on the subject of Learning Management Process for educational students was consisted of 40 students who were students of Suan Sunandha Rajabhat University in all years obtained by using purposive volunteer sampling.

DEFINITIONS

1. Textbook means a kind of document that is made and prepared for supporting instruction of teacher or student in any subject. It should be consisted of topics, objectives, subject matter, and activities for promoting student to learn as defined by curriculum.

2. Efficiency of textbook means capabilities of lesson in building the learning achievement of the target students from Faculty of Education, SSRU in order to enable them to obtain learning according to determined criteria of 80 / 80.

The former 80 means efficiency of processes evaluated from the student's scores obtained from doing practices of each lesson during the class that is averagely 80%.

The latter 80 means efficiency of the result evaluated from the scores of students for their post-test that is averagely 80%.

3. Satisfaction of students means the feeling of students toward learning by using textbook on the subject of Learning Management Process for educational students. This satisfaction was measured by using 10 items of Satisfaction Questionnaire upon the likert's 5 rating scales.

RESEARCH FRAMEWORK AND CONCEPT

Research framework and concept is shown in Fig. 1.

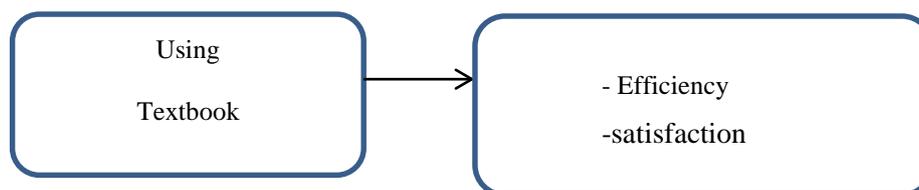

Fig. 1. Research framework and concept

RESEARCH PROCESS

1. Studied papers and researches as well as studied from philosophers through interview and focus group in order to synthesize pedagogy. Subsequently, the obtained results were classified and arranged systematically in Thai-language format.

2. Submit developed textbook on the subject of Learning Management Process for educational students to experts for inspection and improvement.

3. Tried out improved textbook on the subject of Learning Management Process for educational students with students who were not target group for further improvement and public relations.

4. Students who were target group studied created textbook on the subject of Learning Management Process for educational students and took pre and post-test. Subsequently, satisfaction of students was evaluated after their usage of textbook on the subject of Learning Management Process for educational students.

4.1. Tested students with test review of 11 lessons. The obtained scores were collected as scores of formative evaluation.

4.2. 40 items of achievement test on lessons were tested with students and the obtained scores were collected as scores of post-test.

4.3. 10 items of satisfaction evaluation form towards lessons were commented by students.

5. The results were checked and the obtained scores of pre and post-test were analyzed by using statistics in order to find efficiency at 80/80.

6. Student's satisfaction after using textbook on the subject of Learning Management Process for educational students was analyzed and concluded.

CONCLUSION

1. From development and try out of textbook on the subject of Learning Management Process for educational

students, it was found that it was suitable and efficient according to defined criteria calculated to be 86.50/ 82.62 when utilizing with 40 students who were target group that was consisted with defined hypothesis.

From try out of textbook on the subject of Learning Management Process for educational students, it was found that efficiency of process (E1) provided in tests was calculated to be 86.50% and efficiency of results(E2) was calculated to be 82.62 %. These textbook on the subject of Learning Management Process for educational students had higher efficiency than 80/80 as defined therefore it could be concluded that these textbook had high efficiency as defined by criteria and they were able to be used for classroom instruction efficiently.

2. From the results of student's satisfaction towards learning with textbook on the subject of Learning Management Process for educational students, it was found that overall student's satisfaction towards instruction using textbook was in the highest level, i.e., students had overall satisfaction towards textbook in high level with mean of 4.25 and item 10 was gained the highest satisfaction level of students. Average demand of students on creating textbook for other subjects was 4.54. For other evaluations, most of them had high level of satisfaction.

Textbook is consisted of:

Introduction

For current instruction emphasizing on learning, teachers should mainly consider on instructional methods, procedures, or techniques in order to enable students to gain benefits fully whereas students should consider on the main elements, i.e., teachers and students, teaching process and learning process or learning behavior. In this process, it is necessary for designer of teaching or teaching behavior to analyze students, curriculum's objectives, course objectives, lesson objectives, credit objectives, and terminal objectives for analyzing which technique is suitable with such objective. After analyzing the process, it can be seen that what media and devices used in such process are and what results obtained from such process are as mentioned by many academicians in various theoretical formats.

Learning Theory of Behaviorism

Learning is a process for developing abilities and potential of humans in various fields that have been interested by many philosophers and psychologists for long period. To make understanding on philosophy, theories, principles, and concepts on psychological learning upon theories given by philosophers, Learning Theory of Behaviorism highly emphasizes on "behavior" because behavior is considered as the expressed thing that can be noticeable, measurable, and tested. Conditioning learning theory was established by many experts and the first person was Pavlov followed by Watson who modified and improved the concept of Pavlov. Lastly, it is operant conditioning theory of Skinner who highly emphasized on reinforcement, both continuous reinforcement and partial reinforcement. Based on these theories, they could be the good supporters for responsive behavior of students.

Learning Theory of Cognitivist

Learning Theory of Cognitivist emphasizes on cognitive or intellectual process whereas they believes that human learning is not only classified as behavior caused by responsive behavior towards stimulus but it is more complex. There are 5 important theories including: 1) Gestalt Theory that is the main concept believing that the whole is more than the sum of the parts; 2) Field Theory believing in behavior, drive, and motivation of individual; 3) Sign Theory caused by the use of signs as the indicators expressing behavior to the destination; 4) Cognitive Development Theory under the concept of Piaget stated that children will be developed upon each age orderly and development is natural without accelerating children to cross any stage of development; and 5) Theory of Meaning Verbal Learning believing that learning will be meaningful for students if they are able to connect with their existing knowledge.

Learning Theory of Humanism

Learning Theory of Humanism has different concept, hypothesis, and methods from the concept of Cognitivist and Behaviorism without any experimental foundation. According to the concepts of any psychology, e.g., Maslow, they believed that each human was born with nature inside their body in the form of experiences, thinking under conspicuousness and sensation. However, humans are not ruled by this internal natural. Carl Roger emphasized on child-center learning whereas teachers should build the teaching atmosphere to be interesting while promoting the growth of students. Combs believed that teachers should have teaching objectives and should help each student to develop his/her positive thinking by himself/herself. However, this learning style did not pay attention on differences of students only but it also included with value and goals by focusing on participation in all learning procedures, problems solving, creativity, new contents, and sample group with participation of all members.

Learning Theory of Self-Directed learning

Learning Theory of Self-Directed Behavior could be classified into 2 types by considering on 2 foundations, i.e., one group emphasizes on individual's cognitive structure process while another group emphasizes on learning that is the social effect: 1) Cognitive Constructivism is Learning Theory of Cognitivist which Piaget emphasized on age and stages of development; 2) Social Constructivism is Learning Theory on intellectual development which Lev Vygotsky emphasized on external interaction and this theory is more limited than that of Piaget. From studying, it could be seen that our existing knowledge would be changed when we learn further. Knowledge adjustment is considered as the process of perceiving knowledge and adjusting it. For child-center learning, it does not mean that we will leave student alone but student will be emphasized as center or the most important thing of

learning.

Utilization of Curriculum in Learning Management

For utilization of curriculum in learning management, the important procedure is utilization of curriculum in classroom. Besides principles and goals, some details are also defined in curriculum, for example, curriculum structure that is consisted of some courses that are necessary for students, learning duration, and criteria on learning result assessment. For contents, teachers must consider and prioritize contents of courses defined in curriculum importance of (Sequence) to be continuous upon characteristics of learning development including student's maturity, experiences, interest, necessary basic knowledge, difficulty of course contents, and skills or processes that are suitable with students in order to enable students to have knowledge and abilities upon general objectives and goals of the curriculum.

Lesson Planning

Lesson planning starts from studying on characteristics of the course content in the course details aiming to educate students on a particular topic and then set the details. To make the teaching of the teacher effective and enable learners to learn as defined, the lesson plan must have consistency among the key elements of the lesson plan. Determination on behavioral objectives will enable students to achieve goals and perceive abilities of students that can be used as the criteria for assessing how much learning students obtain and which parts should be added or improved. For learning, students should obtain the results of assessment on knowledge, abilities, and skills gradually during classroom teaching duration in order to perceive some information on students' learning achievement, abilities, and advancement of their skills as well as their attitude. All defects obtained from the results of assessment should be defined as the remarks for further improvement.

Teaching Design

To design teaching, it is necessary to rely on 3 major theories, i.e., general system theory, communication theory, and Learning Theory. Prior designing teaching or lesson planning, designer or related person and teacher must emphasize on analyzing students in various fields related to basic behavior of students as mentioned in characteristics of students, learning abilities, and their experiences in both individual and group level in order to make such teaching design to be complete and appropriate with students of each course. Procedures, principles, or methods of those theories' systems may be similar or different slightly or may have additional details for more efficient utilization.

Child-Centered Teaching

Child-centered teaching is a kind of teaching style helping to enable students to invent and seek for knowledge by themselves whereas teachers will define situations or environment as well as problems related to situations in order to stimulate or promote students to study and search for knowledge by themselves. This is considered as the good method to improve skills of students on thinking, knowledge seeking, consulting, and decision making. Learning management allowing student to learn individually upon his/her abilities and interest will be similar to direct teaching whereas students will learn and obtain knowledge from documents or tools supported by teachers for further research and study. Teachers will ask some questions and hold some related activities or allow students to study upon the worksheets given by teachers. When comparing, it is found that teachers will be able to provide large amount of knowledge, concepts, or principles.

Cooperative Learning

Cooperative learning is a kind of learning management emphasizing on child center which supports students to have reaction among one another and learn to work in group as well as be able to communicate to one another. The behavior of one friend would be able to stimulate or promote behavior of other friends in the same group. Teachers will group students with different abilities to be in the same small group for working together and learn together. To operate cooperative teaching emphasizing on learning achievement, teachers must test and give score to students gradually, i.e., cooperative learning is a kind of learning activity supporting and promoting interaction between teachers and students as well as interaction between student and student. Teacher will prepare documents and worksheets as well as facilitate learning for students. Then important objective of preparation of cooperative learning is to support and promote each student to have freedom on thinking and giving their opinions as well as participating in teamwork, cooperating, and helping one another to be successful with their group working.

DISCUSSION

Efficiency of these textbook was in high level as expected at 86.50/ 82.62 due to creation and development of such textbook. The researcher studied on basic data and analyzed work, contents, learners who were target group, and behavioral objectives prior planning on creation and development to meet those behavioral objectives under explanation and suggestions of content expert for inspecting accuracy of contents, language correctness, appropriateness of design, instructional methods, and presentation. Subsequently, the obtained lessons were improved, developed, and tried out with a small student group in order to find further faults for additional improvement and development prior performing field tryout with 40 students. The results showed that efficiency of textbook was 86.50/ 82.62 that was satisfying and met with expected hypothesis that was consistent with work of Chaiwat Waree (2016) This research aims to develop Education Course Syllabus, Thai language major,

according to Buddhism way of Thailand by using Taba's Approach and to evaluate the efficiency of Education Course Syllabus, Thai language major, according to Buddhism way of Thailand. The result of the evaluation on efficiency of Course Syllabus, Thai language major, according to Buddhism way of Thailand conducted by the expert showed that the quality of this syllabus was, in overall, in the highest level at mean = 4.62 and S.D. = 0.42.

Student's satisfaction towards textbook on the subject of Learning Management Process for educational students was in high level for all items because the research studied on psychology of learning of learners before planning creation of textbook. Subsequently, the obtained results were planned for creation and development of complete textbook that was consistent with work of Pantipa Patjangkata (2006) Development of Textbooks by using Cartoon on Product and Service Selection of Matthayom Suksa 1 Students of Ban Hua Mu School, Mahasarakam Educational Service Area 2.

Abstract

Amidst the modern and globalised world, the Malaysian Muslim society has become more aware of the importance and benefits of memorising the holy Quran. This has caused the emergence of many *tahfiz* institutions and centres around the country. This paper describes the standards and best practices discovered in three *tahfiz* institutions namely ‘Tahfiz Pondok Durani’, ‘Pondok Bustanul Ariffin’ and ‘Maahad Tahfiz al-Kayyis’. In doing so, the study employs the qualitative method through document analysis and in-depth face-to-face interview sessions with the principals. The paper concludes with a discussion on the roles *tahfiz* institutions and centres might play in producing a well-balanced generation, and the associated standards that would allow other *tahfiz* institutions to emulate.

Keywords: *tahfiz*, Quran, standards, best practices

Introduction

Recent developments indicate that *tahfiz* institutions and centres have started to gain special attention from the public (Basirah Abu Bakar & Mohd Yakub @ Zulkifli Mohd Yusoff, 2016; Noor Hisham Md Nawawi, Nur Azuki Yusuff, Mohd Binyamin Che Yaacob & Nasrul Hakim Salleh, 2014; Mohd Aderi Che Noh, 2017; Nordin Ahmad, 2015). Many of them are in existence following the responses to the reality of today’s fast-paced world

where life is very much secularised, and the Islamic values are becoming more trivial and insignificant each day. *Tahfiz* education is introduced to all who are interested, including children as early as six years old up to adults.

Islamic Education in Malaysia

In general, the development and implementation of Islamic education in the Malaysian context can be discussed from two angles which are before and after its independence. Historically, before the British era, the Malaysian education system among the Malays was mainly concerned with the teaching and learning of Islamic teachings and the Quran (Abdul Halim Tamuri & Che Pee Saad, 2008; Rosnani Hashim, 2004; Norlizah Che Hassan, Fathiyah Mohd Fakhruddin, Ahmad Fauzi Mohd Ayub, Lukman Abd Mutalib & Wan Marzuki Wan Jaafar, 2015). Thus, for the children, attending school was equivalent to learning Islam and Quran which were mostly conducted at the *surau* (prayer hall) led by an *imam* or *lebai* (local religious leaders or scholars).

Traditionally, the memorisation of the Quran has taken place in *pondok* (traditional religious school). Circa 1966, the first Malaysian Prime Minister, Tunku Abdul Rahman Putra al-Haj has founded the *Tahfiz* Institution, inspired by the visit of Sheikh al-Azhar Sheikh Mahmud Syaltut during his official visit to Malaysia to officiate the opening of the National Mosque (Norlizah Che Hassan, Fathiyah Mohd Fakhruddin, Ahmad Fauzi Mohd Ayub, Lukman Abd Mutalib & Wan Marzuki Wan Jaafar, 2015).

Huffaz and Tahfiz Institutions

Tahfiz institutions are centres that are “accountable in educating students who can memorize and recite the whole Al-Quran” (ibid., 2015, p. 235). According to Hamidah, Maheran, Abd Halim and Muhammad Mukhlis (2014), the number of *tahfiz* centres in Malaysia has increased from only 58 to 278 in twelve years (1999 – 2011). Furthermore, it is found that more than 91% of the number is privately owned.

Memorising the Quran is no easy task, and someone who manages to do so has a special place in Islam. According to Murihah Abdullah, Abdul Hafiz Abdullah, Arieff Salleh Rosman and Mohd Faez Ilias (2016), a *huffaz* (someone who memorises the whole of the Quran) has several responsibilities which include:

1. honesty and integrity towards the memorisation of the holy book of Quran.
2. being consistent in reciting and finishing the reading of the Quran.
3. frequently and habitually reading the Quran at night time.
4. ensuring the memorisation of the Quran stays in the memory.
5. upholding the image of a *huffaz*.
6. exemplifying good manners.
7. trying to build skills so as not to make the Quran a source of income.

According to Mohd Anuar Abdul Rahman and Norshahril Abdul Hamid (2011), the immediate surrounding of students is seen as an important element in shaping the personality of an individual. Thus, in order to build and shape a successful *huffaz*, many *tahfiz* institutions will set certain routines for students which include the memorisation schedule, time management, and also the other compulsory practices which must be adhered to by the students (Murihah Abdullah et al., 2016). The routine is usually viewed as a group practice to create a suitable atmosphere for a *huffaz*. This kind of positive atmosphere will be the catalyst for students in memorising the Quran, and at the same time avoiding and blocking students from any negative or immoral elements.

In this era of the fourth industrial revolution, there are many challenges faced by humankind especially in ensuring the best education for the future generations. In fact, Azam Othman, Suhailah Hussien, Ismail Sheikh Ahmad, Adnan Abd Rashid and Mastura Badzis (2017) emphasise that in spite of the many ideals and aspirations portrayed in the 21st Century education, everything is very much “secular-oriented”, as “there is no emphasis on the students’ role as *Insan* and servants of Allah” (p.205). Although this is the reason why many parents resort to enrolling their children into *tahfiz* institutions which is to gain Islamic knowledge as a form of ‘protection’ in this demanding world, there are still negative, disapproving and pessimistic views regarding the operations of these institutions. Hence, this study proposes to look into the practices and operations of these institutions and highlight those with the best practices. The guiding research questions are:

RQ1: How are the *tahfiz* institutions managed?

RQ2: What are the characteristics of the *tahfiz* institutions deemed as having the ‘best practices’?

Thus, this paper presents the findings of a qualitative study that sought to share, impart and reveal best practices of selected *tahfiz* institutions that can be emulated by other institutions to ensure students at these institutions can be at par with students from the mainstream education system.

The Study

This study was part of a larger life-long Islamic education project funded by the Ministry of Higher Education Malaysia that was designed to look at the existing life-long Islamic learning programmes and consequently offer suitable recommendations to promote better life-long Islamic learning culture in the Malaysian society. Besides the introduction earlier, this paper discusses the research context, research design and its findings based on the research questions posed. It ends with the discussion regarding the future of *tahfiz* institutions and some recommendations regarding the issue.

Research Context

Based on the data on SIMPENI (Islamic Education Information System Portal), a website managed by JAKIM (Jabatan Kemajuan Islam Malaysia), there are 669 registered *tahfiz* institutions in Malaysia (<http://simpeni.islam.gov.my/simpeniv2/index.php>). The research team went to the different zones in Peninsular Malaysia – North, Central, South and East covering 12 *tahfiz* institutions. This paper discusses the three institutions—Tahfiz Pondok Durani and Pondok Bustanul Ariffin, both located in the central zone, and Maahad Tahfiz al-Kayyis situated in the northern zone, which are deemed to have the best practices. This is elucidated in the research findings.

Research Design

This is a qualitative study whereby the researchers employed in-depth face-to-face interviews with the *mudir* (principals) of the *tahfiz* institutions, and also document analyses of the institutions' formal documents and websites or blogs. The document analyses also include photographs of the institutions and their activities.

Research Findings

RQ 1: How are the *tahfiz* institutions managed?

Tahfiz Pondok Durani

Tahfiz Pondok Durani, located at Teras Jernang, Selangor is led by its principal, Tn. Hj. Nasir Malik. When asked what has made him sacrifice many things and set up the institution, he mentioned, *"I accidentally came across a book entitled 'Negeri Lima Menara' (A State of Five Towers) which describes Gontor, an Islamic institution in Indonesia—which amazes and inspires me to establish a tahfiz institution myself. That's how it started"*.

Despite the many challenges faced e.g. financial and staffing, Tahfiz Pondok Durani is still relevant, and it stands among the centres chosen by parents to educate their children. Indeed, its establishment is the response to the reality of today's world where life is very much secularised and Islam is marginalised. The institution's vision is to prepare its graduates and alumni to spread in a variety of fields, professions and vocations covering all aspects of life, contributing to the society, and at the same time, instilling Islamic values. The vision is hoped to be made a reality through the development of its students.

Students development at Tahfiz Pondok Durani is emphasised through three main components as described in

Figure 1.

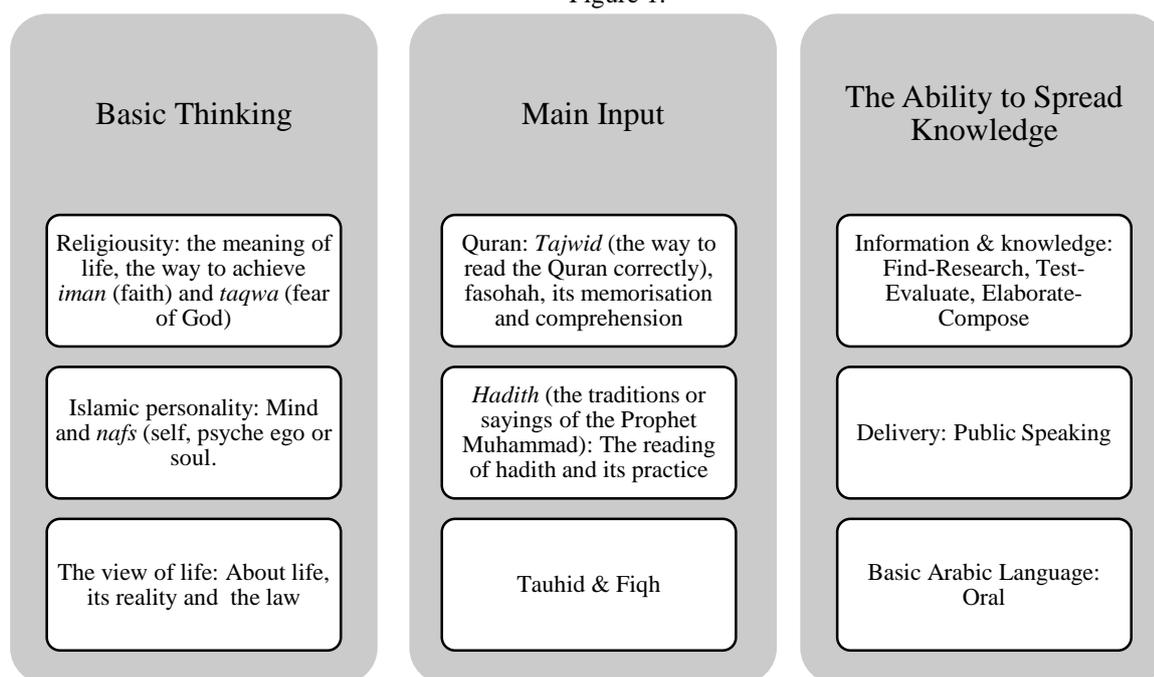

Figure 1: The Development of Students at Tahfiz Pondok Durani

These components, coupled with the vision and mission of the *mudir* (principal) as well as teachers and other school infrastructure, help in producing students who can memorise the Quran, indirectly building ‘self’ which consequently building the Ummah. Figure 2 below contains this aspiration.

TAHFIZ PONDOK DURANI						
Target			Process			
A BUILDING SELF						
A1	Level of Achievement	Know & knowing	Understand & Practise	Appreciate & Spread	Faqih (a Muslim theologian versed in the religious law of Islam)	Evaluation, Tazkirah (A brief talk (about the religion of Islam) as a reminder, Tests
A2 Development						
	A2.1 Basic Thinking	Knowledge	Iman (Faith)	Taqwa (Fear of God)	Religiosity	Forums & Discussions
		Akidah (formal statement of faith)	Fikrah (daya berfikir)	Nafsiyyah	Sahsiah (Whole nature or character of a person /	Workshops and Practices

				Personality)
	About life	Reality	Law	View of life
A2.2 Basic Intelligence	Research	Know	Understand	Manage – Use
	EQ	IQ	PQ	
	Feelings	Situation	Activities	
	Self & others	Challenges, thinking & chances	Sports & entrepreneurship	
A2.3 Main slots	SQ			Lectures
	Quran	Memorise 30 juz >> Know Harfiah >> Understand > Practise		
	Hadith	Selective memorisation >> know Interpret >> Understand > Practise		
	Tauhid & Fiqh	Learn >> Know > Understand > Practise		
A2.4 The Ability to Research, Test & Spread Knowledge	Internalising knowledge	Arrange - Adapt	Use of Techniques	Think, Compose, Deliver: Public Speaking Workshops & Practices

B**BUILDING THE UMMAH**

(Based on Tahfiz Pondok Durani's school booklet)

Figure 2:

According to the principal, new students entering the centre will be asked about basic Islamic knowledge to gauge their level of understanding towards Islam in terms of *Rukun Islam* (the Pillars of Islam), *Rukun Iman* (the Pillars of Faith), and *Solat* (Prayers).

The principal also assimilates his past managerial experience as a manager in a big factory into the management of the *tahfiz* centre. He includes some western approaches in running Tahfiz Pondok Durani.

"I include Peter Sach's Organisational Learning, Process Thinking, Personal Mastery and also Ungku Aziz's Thinking Model. We will discuss the khutbah (the primary formal public preaching in Islam carried out at (noon) congregation prayer on Friday). We also have public speaking on Saturdays".

These sessions assist in generating more well-rounded individuals who can be involved effectively in intelligent discussions and debates. In addition, with the help of some parents, for example those who own a car workshop, who offer their expertise to teach students skills such as fixing the car, students are also exposed to acquiring living skills, apart from the religious knowledge they obtain at the institution.

Pondok Bustanul Ariffin

'Pondok Bustanul Ariffin' is a well-known *tahfiz centre*, not only among the local community but also among Malaysians as a whole. It is located in Kampung Labuhan Dagang, Banting, Selangor, Malaysia. This *tahfiz* centre has been in operation since 2003 on a 3 ½ acres of land. The current enrolment is around 200 students which include foreign students from Aceh, Cambodia and Egypt, while its alumni have reached around 2,000 of

which some have come back and offered their services to the centre itself, and others who pursue their studies in and out of Malaysia.

With its comprehensive mission and vision of ‘Knowing yourself, thus knowing your God’, the centre has made it clear to the students that they will be guided in the path of Islamic teachings. In making this a reality, the centre employs capable and dedicated teachers which include the alumni of the centre, al-Azhar University graduates, and also others who are qualified to teach Islamic knowledge subjects. The daily schedule at the institution starts as early as 4.30 a.m. with *Solat Tahajjud* (night prayer), reciting the Quran and performing other *sunat* (non-obligatory) acts of worship, and *Solat Subuh* (fajr prayer). Then, at 8 – 11 a.m. the students will go into their respective classes. At 12, all students are made compulsory to have *Qailullah* (a nap before *Zuhr* prayer which was practiced by Prophet Muhammad S.A.W.). After lunch and *Solat Zuhr* (noon prayer), students will continue with classes until 4 p.m., and then they will recite the Quran again and also perform *Solat Asr* (afternoon prayer), before having their daily leisure sports activities such as playing football, archery and paragliding. Apart from that, students are also involved in the institution’s Arabic Language Club to improve in the language of the Quran.

The principal holds a B.A. Syariah degree from Al-Azhar University, Egypt and has a broad experience as a religious teacher. He has also undergone additional periods of *ilm*-seeking at different institutions which include 4 years in Terengganu, 4 years in Thailand and another 4 years in Syria. All these experiences and religious knowledge that he has gained contribute to the way he manages Pondok Bustanul Ariffin, its study system and also its students of various backgrounds. The principal has also gained the trust from parents who face problems with their children such as drug addicts or ex-convicts, to assist in their moral rehabilitation through the Islamic ways.

In addition, due to the centre’s location and its wide space, it is possible to integrate valuable skills such as wiring, welding or flooring for the students to learn as an additional element. There is also a palm oil plantation area which students help to work on, and get the benefits too. This will allow the students to be equipped with living skills that enable them to have added values.

Madrasah Tahfiz al-Kayyis

The *tahfiz* institution is located in Pulau Pinang, the northern part of Malaysia. It is managed by the *mudir* - Ustaz Zolkarnain Tan. The teaching staff include himself, his wife and another teacher who is from Egypt. Currently, there are 53 students in the institution – 30 boys and 13 girls. The boys are based in the old mosque while the girls are in a single-storey bungalow house about three kilometres away. Formally, Al-Kayyis was established in December, 2004. Since then, 150 students have graduated where all of them have successfully memorised the 30 chapters of the Quran.

Al-Kayyis embraces the vision of ‘Developing an excellent *huffaz* (a person who memorises the Quran) cum a survivor/an educator. Thus, the *mudir* ensures that the *tahfiz* is run in line with the vision. He employs the deoband system in the *tahfiz*. Ustaz Zolkarnain studied using the same system in Pakistan for 11 years, thus he believes that it produces excellent *huffaz*. This effort has been proven very successful as the number of *huffaz* produced by Ustaz Zolkarnain has reached 150 in its 13 years of operation.

Ustaz Zolkarnain did not come from a well-to-do family, therefore, he had to struggle to be what he is today. He did all kinds of jobs, from cooking to being a factory worker. However, at the same time, he was always invited to be the *imam* for *terawikh* prayers (prayers done in the month of Ramadhan). His life experience has taught him to be independent. He believes in ‘the hand that gives is better than the hand that receives’. In other words, he trusts that independence leads to success. This is evident in his management of the *tahfiz* where everything is run by the students – they cook, clean, wash their own clothes, entertain guests and others. Ustaz Zolkarnain relayed that once he received 40 guests and all was handled by his students. He said “the guests couldn’t believe that his students did the cooking. They called the students and asked. They praised: *sedap* (delicious)”. Furthermore, when we visited the two locations of the *tahfiz* – the mosque and the house, both were clean and

spotless, even the kitchen. They have to follow the timetable strictly. Besides doing the everyday living skills, the students are also exposed to horse riding. It is one of the Prophet's *sunnahs* (activities done and favoured by the Prophet). Ustaz Zolkarnain has two horses behind his house where every day, 6 students take turn to practise horse riding. He said "they could also be jockeys".

The students can usually memorise the Quran between 2 to 5 years. Once done, they can continue to take the mainstream exam and pursue their studies. In fact, one of the earlier students is doing his doctorate degree. Ustaz Zolkarnain admitted that not everyone can complete the 30 chapters of Quran memorisation. To those who cannot, he gives them a choice. He shared "if they cannot complete, I give them a choice, to stay, behave and try to complete it ...or to have the opportunity to work". He then revealed that he has set up the business wing of the *tahfiz*. This includes the drinking water factory, the clinic, the sundry shop and the fish-rearing business.

It can be surmised that the students' exposure to being independent at the institution and also the setting up of the avenues for jobs by Ustaz Zolkarnain are steps in ensuring that the students' future is guaranteed and the institution's vision and mission are realised.

RQ2: What are the characteristics of the *tahfiz* institutions deemed as having the 'best practices'?

Based on the findings in RQ1, the researchers have ascertained several key characteristics identified as the 'best practices' in the selected *tahfiz* institutions. These characteristics include:

Characteristic 1: Broad Mission and Vision

It could be seen from the case study of the three *tahfiz* institutions that each of them has very clear mission and vision which is mainly to produce a generation of students who are steadfast in upholding the Islamic teachings and values, as well as producing a generation of *huffaz* who will preserve and practise the content of the holy book of Quran.

Characteristic 2: Motivated and optimistic *Mudir* (principals)

All principals of the selected *tahfiz* institutions are far-sighted individuals who have good judgment about what is relevant in today's world, and what will be needed in the future. They are the anchor persons of the institutions, who inspire and aspire the students and also the direction of the institutions. They are also wise in making decisions, and in managing the institutions that despite the challenges faced, the institutions remain relevant and significant to the community.

Characteristic 3: Proper Time and Institutions' Management

It could be seen that all the institutions stress on appropriate time and institutional management—a crucial element that is also given paramount emphasis in Islam. This could be seen through the daily learning schedules arranged for the students, and the running of the institutions encompassing the daily routine as well as the broader management implications of risk to the institutions.

Characteristic 4: The Shaping and Development of Students

In line with the main objective of the establishment of the institutions, which is basically to revert to Islam in every aspect of life, all institutions place emphasis on the spiritual development of the students according to Islam and the Quran. Once they possess a solid foundation of the religion, they will better understand their existence as *khalifah* (servant and representative of Allah) in this world.

Characteristic 5: Integration of Living Skills

Islam is a way of life. Even though the ultimate purpose of humans' life is to obtain the blessings of Allah, Islam does not disregard the importance of living in this world. In fact, it teaches its followers to work and study hard as if they will live forever, and to serve Allah as if they will die tomorrow. This signifies that Islam puts emphasis on a balanced life. It could be observed that all the *tahfiz* institutions offer some choices of skills e.g. wiring, welding, business etc. for the students to acquire, along the journey of learning about Islam.

Discussion and Conclusion

Tahfiz institutions are seen as alternative education centres for Malaysian Muslim parents who feel that the modern, fast-paced world of today would jeopardise their children's well-being. These institutions are also viewed as worthy efforts in ensuring the balance of physical and spiritual needs of the future generations, as well as fulfilling their needs and necessities of the world and the hereafter. Nevertheless, these institutions are often criticised for being disorganised and unsystematic. This study aims to highlight some best practices of *tahfiz* institutions. Based on the research that was carried out, it can be concluded there are several key characteristics identified as the 'best practices' of selected *tahfiz* institutions. These characteristics include: 1) Broad Mission and Vision, 2) Motivated and Optimist *Mudir* (Principals), 3) Proper Time and Institutions' Management, 4) The Shaping and Development of Students and 5) Integration of Living Skills, as discussed in the Findings section.

For leaders of Islamic educational institutions, the key challenge is to meet major challenges of the 21st century while upholding the ideals of the Islamic integrated education system and realising its noble objectives. At present, a standardised framework of implementation for integrated Islamic educational institutions that is considered to be wholly accepted by Muslims is still lacking. The absence of such a framework makes it challenging for Muslim parents to make better choices for their children's education. Thus, based on the characteristics highlighted in this study, at least other *tahfiz* institutions can emulate, and pattern themselves after these *tahfiz* institutions' best practices.

Photographs of the selected *tahfiz* institutions.

THE EDUCATION OF ENLIGHTENMENT – WITH SPECIFIC REGARD TO MUSICAL EDUCATION

István Dániel SANDA

sanda.daniel@mpk.uni-obuda.hu

ABSTRACT

Considering the ideas of the Age of Enlightenment and their consequences from a social historical aspect, various different conclusions can be drawn. The effect of Enlightenment on the education system, which was almost exclusively under ecclesiastical authority at the time, has scarcely been studied. The aim of my study is to analyse the influence of the decrees issued during the reign of Maria Theresa and Joseph II and to present the characteristics of contemporary music teaching. I introduce the contemporary practise of music teaching on the basis of materials found in the University of Vienna Library, with specific regard to the use of church songs, which had a direct effect on the music teaching material of elementary schools and norm schools. The latter were contemporary training institutions for elementary teachers, based on Ignaz Felbiger's work. The materials and standard of music education in the schools of the Empire were fundamentally determined by the teachers' musical culture and knowledge of church songs.

The two axioms of Enlightenment are reason and usefulness. As a result of the new way of thinking and attitude to life, there was a surge of religious poetry in the protestant areas of Germany in the first half of the 18th century. This poetry also became popular in the Southern German region of Catholic majority. New, joyful major tunes were composed to the new poems, which suited the new world-view and sense of life.

The teaching of music and the customs of church singing, which were closely related to each other, underwent a great change not only in the Hapsburg Empire but also in Hungary. Several of the songs which became "fashionable" at that time can still be found in the songbooks of various denominations. These songs are popular even today and are happily sung in our churches by the congregation, regardless of denomination. In conclusion of my paper, let us listen to some of the most beautiful of them.

INTRODUCTION

The ideology and influence of the age of Enlightenment can be analysed from several aspects. My paper focuses on 18th century musical education, which was in close connection with contemporary church music and singing. This is how Immanuel Kant, probably the philosopher with the greatest influence in his age, summarises the ideological basis of Enlightenment in his essay entitled "What is Enlightenment?" published in 1784:

"Enlightenment is man's emergence from his self-imposed nonage. Nonage is the inability to use one's own understanding without another's guidance. This nonage is self-imposed if its cause lies not in lack of understanding but in indecision and lack of courage to use one's own mind without another's guidance. Sapere aude! Dare to know!" This imperative from Horace became the motto of Enlightenment.

THE CONSEQUENCES OF ENLIGHTENMENT FOR CHRISTIANITY

The importance and significance of Kant's work on European thought is indisputable; however, for deeply believing Christians, Enlightenment is a concept evoking painful associations. It first brings to mind the French Revolution, which degraded the Nôtre Dame Cathedral in Paris to the temple of the Goddess of Reason and sent pious monks to be beheaded under the guillotine, the "civilisational achievement" of the age. As for examples closer to home, we could mention the decrees issued by Joseph II, (1780-1790) Hungary's 'king in the hat', which led to the opening of a casino in the monastery church of the Carmelite order in Buda, as well as his instructions regarding church music, which destroyed the one-and-a-half-millennium tradition of Gregorian chant. (Dobszay, 1999)

Education, which, as we know, was primarily under ecclesiastical authority at the time, and was responsible for the teaching of music, which was the depositary of church music, underwent crucial changes.

My paper focuses on the changing repertory of songs and the reforms regarding church music, based on the decrees of Maria Theresa (1740-1780) because

- on one hand, similarly to several other figures of the age of Enlightenment, this well-educated monarch believed that improving the standard of education was the solution for society's problems. (Kéri, 1996, p. 48.)
- on the other hand, their influence can still be felt today: the customs of church singing changed not only in the

Southern German region but also in Hungary. Several of the songs which became “fashionable” at that time can still be found in the songbooks of various denominations. They are popular even today and are joyfully sung in churches, regardless of denomination. (Antonicek, 1980)

MARIA THERESA’S CHURCH REFORMS

She issued decrees concerning the church from the beginning of her forty year-reign. Even though she was a well-educated musician herself, her interference with the issue of church singing was largely motivated by political and ethical reasons. She intended to mitigate the excesses of Baroque religious life by significantly reducing the number of church holidays, in great agreement with Pope Benedict XIV. On the other hand, she ordered numerous prayer times as well as praying and thanksgiving (Te Deum) church services. Arranging her prayer decrees in chronological order, we get the chronicle of the wars she waged during her reign. (Hollerweger, 1976. p. 63-65.) On June 15, 1768, she approved the secret instruction for the construction of her state church system. It meant that thence, the internal affairs of the Catholic Church only consisted of the preaching of the Gospels, religious education, the ethical discipline of the priesthood and administering the Sacraments and the masses and other church services providing the framework for the above. The state claimed the right to oversee all the other activities of the church. The direct continuation of this trend was the Ratio Educationis, issued in 1777, the introduction of which does not constitute the topic of this paper. Suffice it to say that this was the time when institutional education first came under state control. (Burger, 2002)

THE SPREADING OF CATHOLIC RELIGIOUS POETRY AND HYMN TRANSLATIONS IN VIENNA

In 1774, the Consistory of Vienna commissioned former Jesuit monk Michael Denis to compile a new songbook. Denis composed 17 lyrics in the new religious spirit, but these did not contain sheet music as they were marked with ad notam, which meant that they could be sung to the tune of well-known songs. The majority of them were paraphrases of similar songs for similar occasions in the spirit of enlightened Catholicism. (Horak, 1991)

However, these popular tunes were relatively new, originating from the end of the 17th or the first half of the 18th century and were mostly joyful major tunes, which suited the new world-view and sense of life. Furthermore, the material of the song collection also reflects the new attitude in the following aspects:

- the ecclesiastical year was represented by songs for the most important holidays,
- the cult of Mary was restricted to only three songs,
- songs of the saints were represented by a single song: that of St. John of Nepomuk, who was the favourite saint of the age.

However, song for various occasions appeared:

- for rain,
- for good weather,
- during a time of great expenses and war,
- miscellaneous songs to be sung in all kinds of trouble.

MARIA THERESA’S NOTATION HYMNAL (1776)

Figure 1 Maria Theresa’s Notation Hymnal 1776

Denis completely replaced the Baroque or traditional lyrics, but the songs remained connected to the tradition by the well-known tunes. Marie Theresa's notation songbook (1776) presented completely new tunes to match the new lyrics, thus completely severing the connections to tradition. The influence of this is also obvious in music teaching in schools. (Bäumker, 1962)

Even after two centuries, it is still a mystery for church historians why the editor of Marie Theresa's songbook had ignored Denis's sophisticated poetry and preferred poems by Ignaz Franz (1719-1790), a vicar of Silesian origin, along with others by unknown authors. It would be interesting to find out the reason for the Monarch's decision particularly because in some of Franz's poems, the reader is shocked by their simple-mindedness and triviality already in the first line. (Watzatka, 2012)

For example:

Da wir nunmehr gehört die Messe, wie man soll / We have attended mass, as is fit...

Ich geh aus meinem Schlafgemach / Going out of my bedroom...

Ich glaube fest und zweifle nicht / I believe strongly and doubt not ...

Zum reinsten Opfer ruft die Pflicht / Duty calls for the purest sacrifice ...

Several similar examples could be listed. These lyrics reveal an apparent cultural historical contradiction: it was precisely the pursuit for rationality and common sense that allowed the silliest and most trivial lyrics to spread widely. It attests to the good taste of churchgoers that only a few decent poems from Franz several volumes remained in use for a longer period, whereas Denis's songs were sung for over one hundred and fifty years.

Ignaz Franz also had a direct effect on the music teaching of the age. This prolific poet not only composed songs to fill several songbooks [in his rather primitive style], but also had a good relationship with Johann Ignaz Felbiger, who invented and constructed the system of norm schools.

The norm school complex was an educational institution consisting of several branches which, according to the 1777 Ratio, had to be organised in the seat of every school district. The educational profiles of the branches created a complex education and training system. The branches were the following:

a) primary school;

b) teacher training branch;

c) drawing school: young people and citizens working in the guilds that took part in the training were taught technical-industrial drawing or artistic painting and graphics, and to teacher trainees, calligraphy and board drawing;

d) music school: those participating in the training and teacher trainees were taught church singing and (organ) music.

As future teachers had to be prepared/trained to teach singing in elementary schools, Felbiger compiled a set of songs for school use from Franz's poems called »Normschulgesangbuch«, (Norm School Songbook). This volume was in use in Vienna for decades and provided the songs and lyrics to be taught at schools for generations. Unfortunately, this collection of songs determined the musical culture of elementary school pupils and future teachers and through them, public taste, in a way that could hardly be called sophisticated. (Daragó, 2015)

TUNES IN THE HYMNAL

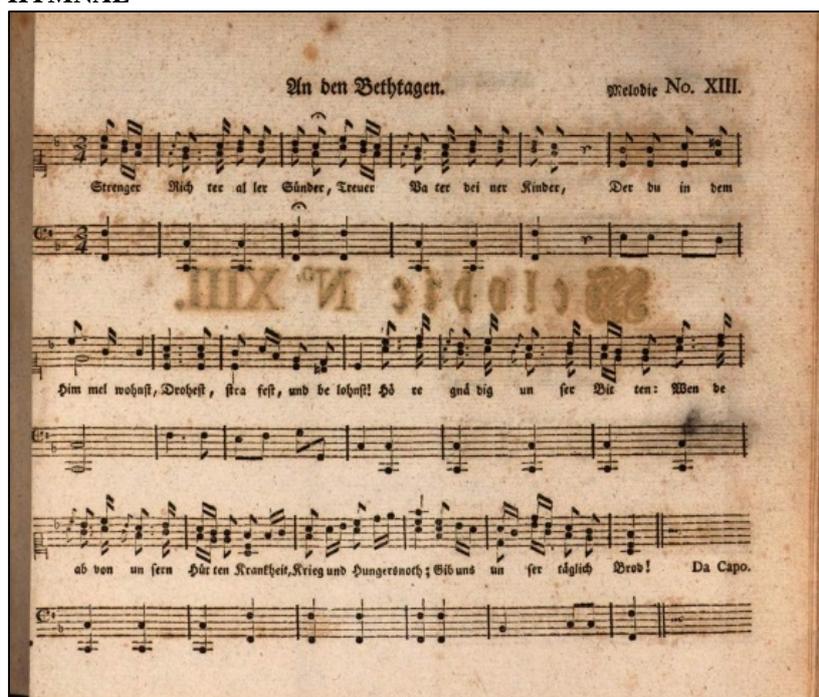

Figure 2 Notation Maria Theresa's Hymnal

The Hymnal/Hymnary contains settings for two female voices and continuo and the most of them were composed in major tonality. The instrumental-like music is dominated by eighth and sixteenth values. The musical structure of the hymns is not homogenous. However, the singing voices generally move parallel in third and sixths intervals, the voices end accidentally by five- or six-note chords. This decreased use of polyphony and the melismatic, more song-like melodies of the voices and its ornaments refer to the galant style obviously. The suspension is also a typical musical gesture at the end of the passages.

The Style of the Hymnal is also not homogenous and does not reflect any kind of ecclesiastical (not to mention liturgical) manner. (Watzatka, 2006)

CONCLUSIONS

The church reforms of the second half of the 18th century, and particularly the reforms of church music, closely related to them, were conceived in the spirit of enlightened absolutism. The customs of church singing changed not only in the Southern German region but also in Hungary. Several of the songs which became “fashionable” at that time can still be found in the songbooks of various denominations. These songs are popular even today and are happily sung in our churches by the congregation, regardless of denomination.

The two axioms of Enlightenment, reason and usefulness affected the people of the age in a way that they did not become atheists but started to orient themselves along the principles of reason and practicality also in the matters of belief: they wanted to understand their belief and make it an everyday practice in their lives.

Interference by the musically educated monarch with matters of church singing was motivated by political and ethical reasons rather than by aesthetic or musical sophistication. Nevertheless, people were not receptive to the replacement of the entire set of songs either in Austria or in Hungary. New lyrics were welcomed, but traditional tunes were often preferred to the new ones. Aggressive reforms were opposed almost everywhere, but those remaining in touch with the traditions were accepted. Lyrics by Denis, which touched spiritual depths, were preferred to those by Franz, which rhymed but were too simplistic and naïve and only became popular with norm-schoolers.

It is interesting to note that some well-crafted songs by Ignaz Franz immediately became popular and have remained so until today in German-speaking areas: »Herr, ich glaube, Herr, ich hoffe«, (My lord, I believe and hope ...), as well as a Te Deum in verse; »Großer Gott, wir loben dich«.

With some additions, these songs comprise the basis of the set of songs that determined church singing from the end of the 18th century for the next one and, at some places, even up to the beginning of the 20th century. Thus they also determined the teaching of music and singing in the Hapsburg Empire as well as in Hungary, which constituted its part.

ABSTRACT

A person must know some biological terms for bird watching. Also, specialize in bird watching contribute to improving the biological knowledge on birds. A number of biological terms can be easily learning by student in such activities. The contribution level of structured bird watching activities on student knowledge was investigated in this study. A class which consist of 30 undergraduate biology students were separated to almost equally three groups. First group joined to structured bird watching activities under control of an Ornithologist beside classroom courses. Second group joined only classroom courses and the third joined only bird watching courses. The terms were explained with examples in both courses. The students took an exam related to eight terms of systematics after courses. The exam was evaluated over 100 point. The students who joined both courses have highest achievement (85.2) between groups. The average exam score of other groups 65.5 and 71.5 respectively. The results show that the coupled courses have positive impact on learning of student. However only structured bird watching activities (groups third) are more effective than classroom courses according to study results. In conclusion, the outdoor educations such bird watching can be the best way to teaching for some biological terms. Because of this results, the biology curriculum can reconstructed according to this drawback.

INTRODUCTION

The informal outdoor education and activities can be effective way to advance learning in science (Knapp and Barrie, 2001). The ultimate goal of environmental and ecological education, other than to generate knowledge, is to develop students' awareness and concern about the total ecosystem and its associated problems and to shape students' behavior concerning the environment and conservation (Bogner, 1998). Outdoor learning in biology most often take place at specific places away from ordinary school surroundings, as field trips or visits to outdoor/environmental education centers (Fägerstam and Blom, 2013). Biology has traditionally had strong connections with fieldwork and outdoor education activities dating back to early naturalists (Cotton, 2009). Fieldwork, where whole organisms are studied, enables integration of different elements of biology showing how the biological jigsaw functions. Biology is an experimental subject, and whole organism ecological studies provide an opportunity to investigate and collect data on a topic – often intensively, over prolonged periods, in great breadth and depth. Fieldwork offers students a particularly good opportunity to collect numerical data on a large scale, either working individually or in groups, and to subject the data to statistical analysis in an open-ended manner (Barker et al., 2002). Previous research indicates that learning biology outdoors might have positive effects on both knowledge and attitudes toward biology (Fägerstam and Blom, 2013). However, fieldwork can improve student's better retention of acquired knowledge (Mackenzie and White, 1982; Nundy, 1999); enhanced motivation and higher-order learning (Kern and Carpenter, 1986); and development of practical skills (Kent et al, 1997). Despite these acknowledged benefits, published evidence suggests that bioscience fieldwork is on the decline in both higher education (Smith, 2004) and in schools and colleges (Tilling, 2004; Lock, 2010). Birdwatching is a form of wildlife observation in which the observation of birds is a recreational activity. It can be done with the naked eye, through a visual enhancement device like binoculars and telescopes, by listening for bird sounds. Birding activities may be designed to address several goals of the science curriculum: adaptation, comparing and contrasting animals and animal life cycles, to name a few. It may also serve as an inspiration for art and writing lessons (Dow, 2013).

The base of study is investigate the effect of bird watching activities on the learning systematic terms in biology lessons.

Problem Statements;

Do bird watching activities (BWA) catalyze the learning of systematics terms in biology lessons?

Do BWA's increase the achievement of student in biology lessons?

Are BWA's better than classical learning methods to learning systematics terms?

THE STUDY

This survey was conducted in the autumn of 2016. Data were gathered from students enrolled in courses at the class and bird watching activities at the Hacettepe University. To evaluate the impact of the programs had on students' knowledge toward the systematic terms, a quasi-experimental design (Isaac and Michael, 1995) was implemented using an evaluation instrument that included 8 open ended question. Tree undergraduate biology (third semester) class of students finalised their themes about systematic and classification of living things at Invertebrates Courses. The 30 students were selected from two class and split to three groups which are almost

equal in terms of; numbers of student; each groups consist of ten students, academic standing, age, gender distribution (Table 1).

Table 1: Characteristics of each group

Group	Number of Student (N)	Average Academic Standing (Over 4)	Age	Gender Distribution (F/M)
I	10	3.02±0.56	19 - 22	5/5
II	10	3.14±0.48	20 - 22	5/5
III	10	3.09±0.65	20 - 23	5/5

The study was designed at the four step as pre-test, course, activities and post-test (Table 2). Each group took a same exam (pre-exam) which consist of eight open ended questions about systematic terms, prior to attending the bird watching activities. First and second group attend a presentation class together in related to systematics. After two weeks that, first and third groups joined to bird watching activities together. All group took the same exam (post-exam) again next to the end of the course program. At the end of the program it was expected that students would be able to describe the systematic terms; subspecies, biological species, genus, family, order, classis, phylum and kingdom. To easily evaluating the exam results, each question was over 12.5 point, the total of exam on the scale of 100. The answer of each questions were divided four part. Each part has equal point. The questions are;

Explain “Biological species” term over an example?

Explain binomial nomenclature with an example?

Explain subspecies term with an example?

Explain sibling species with an example?

What does Tetrapod mean vertebrate systematic?

Explain “Phylum” in a systematic order?

Explain “Kingdom” in a systematic order?

Explain “Genus” in a systematic order?

We used different statistical test to investigate each group condition pre- and post- activities and exams. To comparing and evaluating the gathered data following tests was used; test of normality, determining for distributions of mean value; independent sample T – test for differences between two groups; one way ANOVA, for comparing of three groups each other; and Post – Hoc Test, the relations between groups.

Table 2. The steps of study design, the are eight weeks between first and last steps.

Step	Group I	Group II	Group III
I	Pre - test	Pre - test	Pre - Test
II	Course	Course	-
III	Bird watching activities	-	Bird watching activities
IV	Post – Test	Post – Test	Post – Test

FINDINGS

“C___ [male], I hope I’m doing this right. I thought your observations were right on target. I subbed for high All students took in pre- and post- examinations consisting of eight open ended questions. According to the pre-test results shown in Table 3, the average scores of the groups are close to each other. In terms of group scores, all the questions were in normal distribution and there was no statistically difference between the students according to their average scores ($p > .05$). The second group achieved the highest score, while the third group received the lowest in the pre-test the. The difference between the lowest and highest mean scores of groups is 2.8. This low score difference is another proof that students do not differ from each other in terms of preliminary information. According to the test results, the average scores from the questions are not dependent on the sex and the academic standing of the student.

The first and third group participated in bird watching activities. The number of species observed by the days in which the groups participated is shown in Table 4. At the end of four different observation days (DOA), first group observed 27 and the third group observed 24 bird species. In both groups, systematic terms are explained with appropriate examples. In terms of these results, it can be said that the groups participated in very similar activities and that they observed enough bird species to explain the related terms. In each activity day, different terms were tried to explain to the students with examples. Table 4 shows the number of terms processed during the days of activity.

Table 3. Distribution of students' scores according to groups and questions from the pre- and post-exams and the percentage (%) of difference (-) between the two exams.

Questions	Group I				Group II				Group III			
	Pre-	Post-	-	%	Pre-	Post-	-	%	Pre-	Post-	-	%
1	6,10	10,95	4,85	44,29	6,35	10,00	3,65	36,50	6,20	7,20	1,00	13,89
2	6,10	11,30	5,20	46,02	6,60	9,90	3,30	33,33	5,90	7,15	1,25	17,48
3	6,15	11,15	5,00	44,84	6,55	9,65	3,10	32,12	5,65	7,10	1,45	20,42
4	6,15	11,10	4,95	44,59	6,20	9,80	3,60	36,73	5,75	7,30	1,55	21,23
5	5,45	11,10	5,65	50,90	6,40	10,15	3,75	36,95	5,60	7,45	1,85	24,83
6	5,55	11,45	5,90	51,53	6,10	10,10	4,00	39,60	5,95	7,25	1,30	17,93
7	6,20	11,55	5,35	46,32	5,90	9,85	3,95	40,10	6,55	7,30	0,75	10,27
8	6,65	11,40	4,75	41,67	6,25	9,90	3,65	36,87	5,95	7,25	1,30	17,93
Average	6,04	11,25	5,21	46,27	6,29	9,92	3,63	36,53	5,94	7,25	1,31	18,00

Table 4. Total Number of observed bird species (NOBS) by groups by activities and number of explained systematic terms (NOET).

Groups	I.DOA		II.DOA		III.DOA		IV.DOA		Total	
	NOBS	NOET	NOBS	NOET	NOBS	NOET	NOBS	NOET	NOBS	NOET
I	12	2	26	1	22	3	27	2	27	8
II	-	-	-	-	-	-	-	-	-	-
III	21	2	18	1	24	4	23	1	24	8
Total	25	2	27	1	25	4	27	2	27	8

After bird watching activities, all groups took to the same exam again. As expected here, the students were highly successful compared to the first test (Table 3). Similarly, the first test on the post-exam shows normal distribution of the scores from the questions, and gender is not a statistically significant factor on the scores ($p < .05$). According to the results of the post-exam, the average score of the first group participating in both courses and bird watching activities is statistically different from the others ($p < .05$). The first group increased the success rate by 46.27% according to the pre-exam and increased the average score per question from 6.04 to 11.25. Likewise, there is a significant increase in success in the second group. However, the change in success in the third group is quite low. There was no statistically significant difference between the groups in terms of the results of the pre-exam, but the third group was more unsuccessful than the other groups according to the results of the post-exam. On the other hand, the third group is 18.0% more successful than the pre-exam in the post-exam.

CONCLUSIONS

The results show that students participating in both the classroom and the outdoor activities are more successful than the students who participate in the open field or only in the classroom. The fact that the first group is more successful than the others can be explained by the participation in more training hours. However, when looking at the second group participating only in the courses or the third group courses participating only in the observations, it is seen that the courses that are performed together with the outdoor have a positive contribution to the success of the student. On the other hand, the classical education in the second group, the third group, showed higher success than the students who participated in the outdoor activities only. When conducted alone, it is seen that the success rate of classical inferior education is higher than that of outdoor education. When these two training methods are carried out together, the success of the students increases as seen in our study.

ABSTRACT

The study aimed to investigate the effect of teacher training curriculum framework on water resource management and water disaster of secondary schools in Khon Kaen province, Thailand. There were two groups of sample involved to measure the efficiency of teacher training curriculum framework. The first group was comprised of 56 science subject teachers and the second group consisted of 147 Grade 9 students from three different sizes of school. The 56 teachers were equally distributed into experimental and control groups using multi-stage sampling technique while the 147 students were from large, medium, and small sized schools under the administration of Khon Kaen Educational Service Area Office 4. An experimental research pre-test and post-test non-equivalent control group design was employed. Data was analyzed using independent samples t-test and one-way ANOVA to Science subject teachers and Grade 9 students respectively. Results indicated that the teachers who participated in the developed teacher training curriculum workshop showed a better knowledge and skills on preparing learning units with integration water resource management and water disaster compared to non-participating teachers in the control group. Likewise, there was a significant difference between students who followed (experimental) and who did not follow (control) the curriculum framework using learning unit of water source and natural disaster content regardless their school size.

Keywords: Knowledge; teacher training curriculum framework; water disaster; water resource management

INTRODUCTION

Thailand is a tropical land as part of the Indochina peninsula, is bordered in the north by the Lao People's Democratic Republic (Lao PDR), in the south by the Gulf of Thailand and Malaysia, in the east by Lao PDR and Cambodia, and in the west by the Andaman Sea and the Union of Myanmar. The total land area is about 512 000 km². Thailand is an agriculture-based with more than 60 percent of the population engages in agriculture, yet agriculture production accounts for only about 12 percent of Gross Domestic Product (GDP) according to Sethaputra, Thanopanuwat, Kumpa and Pattanee (n.d.). However, water demand continues to grow in Northeast and Central Plain are the two of the four regions experience frequent droughts, and flooding also occurs more frequently because of deforestation and rapid economic development in the past decade.

Recently, Prime Minister of Thailand General Prayut Chan-o-cha on 3 February 2017 has stressed the need to raise public awareness of using water resources in a systematic manner, at the same time preparing the Thai people to cope with various types of disasters. In addition, he also emphasized the importance of water resource management which would enable Thailand to be able to have sufficient water to meet the demand for consumption, agriculture, and industry and for maintaining the ecological system. Moreover, he said that Thailand needed to improve the entire system of water resource management, covering all 25 river basins in the country, as well as irrigation and non-irrigation areas (Readers 197, 5 February 2017).

The Thailand National Hydro-informatics and Climate Data Center was developed from the Thailand Integrated Water Resource Management project, initiated by His Majesty the late King Bhumibol Adulyadej in 1998. Currently, this center links information about water and weather data with 34 agencies and monitors the country's water situation. Data gathered from various sources are analyzed in order to designate flood vulnerable areas and prevent and mitigate flood damage. This reflects Thailand government attached great importance to water resource management and the tackling of water issues efficiently. It aimed to minimize the impacts of floods and droughts across Thailand, in addition to disaster risk reduction. On top of that, Thailand government was also ready to provide financial support for integrated water resource management (Readers 197, 5 February 2017).

The Department of Water Resources' Mekhala Center at the Ministry of Natural Resources and Environment was established in 2003 to gather and analyze water resource data. It develops water resource information and forecasting and offers recommendations for decision makers as they work to ease water crises. The center also provides the public with knowledge on the water situation, as well as water-related disaster warnings. The Department of Water Resources' Mekhala Center has a plan to develop the Mekhala Center as the national water information center. In this regard, a geographic information system will be developed for water resource management, covering various water issues, such as flooding, water allocation, water quality, disaster, and the development of the Thai people's quality of life. The Thailand government is ready to support the Mekhala Center as the national water information center, working with other relevant centers operated by various ministries (Readers 197, 5 February 2017).

The current environmental management problems such as water resource management and water disaster have to be integrated in teacher training curriculum in order to match the needs of schools and society. For example, state policy should encourage teachers utilizing learning unit of water source and natural disaster content in Science subjects that are appropriate for students to handle water disaster. Teacher training is important in order to prepare teachers with appropriate competencies to teach in classroom. Certification requirements for teaching have advanced with educational opportunity although they vary widely from country to country. For example, United States allows each state to establish its own requirements while England set its national standards. The trend in certification has been toward requiring more complete training with practice teaching and extensive graduate work for specialized positions. This becomes the central focus and students' center for learning that has been followed as the educational Thailand system to reform the national education system, pivot professional training (Thailand Ministry of Education, 2002). Improvements in teacher training led to demands for professional recognition and benefits. These resulted in the formation of several international organizations as well as local and national teachers' union. The success of teacher training either for elementary or secondary school education has led some school administration to consider requiring such special training for teaching.

Water resource management is about using water as a resource to meet human and environmental needs and it is a multi-sectional and interdisciplinary field. It seemed that all water managers had to do was to develop and manage infrastructure necessary to convert the natural spatial and temporal distribution of water and its quality to that desired by us as human at acceptable levels of reliability and cost. However, the attention of the water resource management can seem indistinct without a common setting of reference to coordinate the diverse perspectives among disciplines and sectors. The incongruent views of conflicting sectors such as energy and environment are often in evidence, and academic disciplines express different views though diverse sets of journals. If these incongruities among sectors and disciplines can be alleviated, the results might be improved water resources management education and stewardship of water.

Water disaster caused by climate change has been evolving in terms of frequency, severity, timing and duration. Unfortunately, this water disaster has affected severely and negatively in some regions of Thailand. It is therefore necessary to strengthen community safety, especially from such disaster by encouraging people and stakeholders in the community to collaborative on activities to prevent water disaster in order to live safely, to prevent exposure to danger, and to protect properties and benefits (Bates, Kundzewicz, Wu, & Palutikof, 2008). Flooding issues are influenced not only by the physical causes of flooding but by the overall social, economic, and political settings in the area concerned. However, in Thailand water disaster management is not effectively

implemented (Sangthong & Rinthaisong, 2015).

As a result, teachers play a vital role to educate students so that they learn the consequences that can impact just every component in our economy and society because there are limited of water resource. According to Loucks (2017), we have to conserve, treat, reuse, find alternatives for and generally get smarter about how we develop and manage our natural resources. Consequently, we have to do it in a political environment of conflicting stakeholder expectations and in ways that minimize the damage to our natural environment as well. Teachers have to teach their students to understand so that their behavior or life style will not contribute to an environment of climate extremes and regional conflicts that are outside the ranges we and our ecosystems can thrive, or even survive.

Thailand is less vulnerable to natural hazards than many countries in the Asia-Pacific region. Flooding is the most severe hazard in the country and is frequent and destructive. Impacts from flooding vary throughout the country, but the entire country experiences flood danger each year (Report from Center for Excellence in Disaster Management and Humanitarian Assistance, 10 February, 2015). Owing to the low awareness of the public, the Center for Excellence in Disaster Management and Humanitarian Assistance had produced a handbook to be reference for individuals deploying to conduct disaster preparedness engagements or disaster response operations in Thailand.

RESEARCH AIMS

This study aimed to investigate the effect of developed teacher training curriculum framework on water resource management and water disaster of secondary schools in Khon Kaen province, Thailand. Specifically, researchers intended to:

- a. Explore teachers and school administrators' points of view regarding the current status, problems, and needs of teaching and learning related to water resource management and water disaster.
- b. Develop a teacher training curriculum framework according to qualitative finding from the first phase.
- c. Compare the efficiency of developed teacher training curriculum framework between teachers who using the developed curriculum framework and teachers who were using conventional teacher training curriculum framework.
- d. Compare students' achievement between the experimental group and control group for three different school sizes namely large, medium, and small.

METHOD

A mixed-mode survey was employed by combining different modes of collecting data for a single research. This design is extremely flexible when various combinations of modes can be employed to adapt to the particular needs of each research study. The vital principle of using mixed-mode method is the use of quantitative and qualitative methods in combination provides a better understanding of research problems than either method alone. The method employed here was a three-phase process that consisting of philosophical assumptions and effectively capturing most features inherent in a logical and structured approach to curriculum design. Essentially, the research design identifies the following phases in the development of a teacher training curriculum framework and its efficiency.

Phase 1: Drafting a teacher training curriculum framework integrating knowledge on water resource management and water disaster

In order to create the teacher training curriculum framework, two methods of data collection were utilized in the first phase. A survey design was employed to 217 school principals and teachers who are affiliated to Khon Kaen Educational Service Area Office 4 by using multi-stage sampling technique. A questionnaire consisted of 48 items with a 5-point rating scale was used as an instrument to collect quantitative data. This survey design was planned to investigate teachers and learners' problems and needs regarding water resource management and water disaster during the teaching and learning process. The Index of Congruence (IOC) is a procedure used in test development for evaluating content validity at the item development stage. This measure is limited to the assessment of unidimensional items or items that measure specified composites of skills. In this test development,

items were developed to be multidimensional assessments or measures of multiple combinations of skills. The purpose of using IOC was applicable for the multidimensional case. The IOC index was 0.87 while Cronbach alpha coefficient was 0.93. Hence, the questionnaire was found to be valid and reliable.

On the other hand, a total of 21 specialists were purposively selected to collect qualitative data. These 21 specialists encompassing 12 professional scientists who are specializing in the area of water resource management and water disaster and nine teacher educators who are the experts in the field of curriculum and instruction were involved in a unstructured focus group discussion. They were led through an open discussion by a skilled moderator. All these informants have sufficient knowledge and expertise to generate rich input to develop the teacher training curriculum framework to assist teachers to manage their teaching by integrated the knowledge of water resource management and water disaster. Content analysis and inductive reasoning were used to analyze the data in order to identify the scope of the curriculum framework. Thus the data was summarized into conceptual categories related to the learning objectives and learning areas in the curriculum framework.

Phase 2: Tryout the developed curriculum framework and teacher training manual

The developed curriculum framework and teacher training from phase 1 were tried out to five secondary school teachers in the area of Science and Social Studies in normal classroom as a mean to test for its relevance. The try-out procedure was carried out to five teachers who were teaching these four subjects of science to Grade 9 students under the administration of Khon Kaen Educational Service Area 4. The participatory action research was employed in which the researchers actively engaged in the process under investigation. In this study, the five teachers of the social system being studied and can be considered as co-researchers. Since an initial case study was performed for identification of problems, theory development and implementation of the developed curriculum framework and teacher training manual in Phase 1 were the following actions taken by researchers. The Phase 2 was employed in another full-scale project where the researchers participated and reflected upon the use of the developed curriculum framework and teacher training manual with the teachers that were studied.

A one group pretest-posttest design was employed to the 28 teachers in order to measure the differences in term of the quality of teacher training manual and their abilities before and after the training. In this design, samples serve as their own control and comparisons are made before and after treatment. An assumption is made that differences between pretest and posttest are due to the treatment. There were three instruments used in Phase 2. The first instrument was an achievement test, the second instrument was a 20-items 5-point rating scale evaluation form used to evaluate the quality of learning units and lesson plans on water resource management and water disaster, and the third instrument was a five-point Likert scale of questionnaire used to rate teachers' satisfaction in respect of the teacher training program. The achievement test had reliability by KR21 as 0.75, difficulty level of 0.20 to 0.77, and discrimination power above 0.

Phase 3: Investigation on the efficiency of the teacher training curriculum

There were two groups of sample involved to investigate the efficiency of the developed teacher training curriculum. The first group was selected using multi-stage random sampling technique, giving a total of 56 teachers. The 56 teachers were equally distributed into experimental and control groups respectively. Each group consisted of 28 teachers. A 2 (attended the developed teacher training workshop vs did not attend the developed teacher training workshop) x 2 (time of measure: pretest vs posttest) design was utilized in this study. The second group was selected from a total population of 149 Grade 9 students. There were 68 and 79 of them were randomly selected into experimental and control groups respectively by distributing into three classes from large, medium, and small sized schools. The pretest-posttest design was employed to measure students' achievements before and after the treatment. An assumption is made that differences between pretest and posttest are due to the treatment.

Quantitative data from Phase 3 was analyzed by descriptive statistic using the mean score and standard deviation and inferential statistic using paired t-test and One-way ANOVA. Paired t-test was identified to be suitable for this study because all the participants were matched pairs and it was considered as a case-control group. As a parametric procedure (a procedure which estimates unknown parameters), the paired sample t-test makes four

assumptions in this study: (i) the dependent variable must be continuous, it is interval; (ii) the observations are independent of one another; (iii) the dependent variable should be approximately normally distributed, and (iv) the dependent variable should not contain any outliers. Although in this case, t-tests are quite robust, researchers decided to evaluate the degree of deviation from these four assumptions in order to assess the quality of the results. In this paired sample t-test, the observations were defined as the differences between two sets of values, and each assumption refers to these differences, not the original data values.

The one-way analysis of variance (ANOVA) was used in this study to determine whether there are any statistically significant differences between the means of three or more independent (unrelated) groups. In this case, researchers examine the differences between the three groups of student from different school sizes. The one-way ANOVA is appropriate to compare the means between the three groups of students from three different school sizes in order to determine whether any of those means are statistically significantly different from each other. Specifically, it tests the null hypothesis as such: $H_0 = \mu_1 = \mu_2 = \mu_3$ where μ is group mean and 1 to 3 is the number of groups. If, however, the one-way ANOVA returns a statistically significant result, researcher would accept the alternative hypothesis (H_A), which is that there are at least two group means that are statistically significantly different from each other. At this point, researchers realize that the one-way ANOVA is an omnibus test statistic and cannot tell us which specific groups were statistically significantly different from each other only that at least two groups were. To determine which specific groups differed from each other, researchers need to use a post hoc test.

In order to make sure that a one-way ANOVA is appropriately used and produced a valid result, researchers have to ensure the data meet these six assumptions: (i) Dependent variable should be at the interval level or continuous; (ii) dependent variable should consist of two or more categorical, independent groups; (iii) independence of observations which means that there is no relationship between the observations in each group or between the groups themselves; (iv) there should be no significant outliers; (v) dependent variable should be approximately normally distributed for each category of the independent variable, and (vi) there needs to be homogeneity of variances. A 13-items pretest and posttest was designed to focus on the relevance of students' project to water resource management and water disaster with a four-point scale ranged from needs improvement, fair, good, and very good.

RESULTS

Results are presented according to the aim as mentioned above. The results of this study are demonstrated in three parts and organized according to quantitative and qualitative methods. The initial results highlight the current status, problems, and needs of teaching and learning related to water resource management and water disaster from the school administrators and teachers' perspectives. This is followed by development of integrating water resource management and water disaster courses into the teacher training curriculum framework process derived from 12 professional scientists and nine teacher educators from the area of curriculum and instruction through focus group discussions. The results were reported from the feedback of the 21 informants through their ratings. Finally the efficiency of the teacher training curriculum framework was evaluated from the two groups of sample namely teachers and students.

Qualitative findings regarding current status, problems, and needs of teacher and learning related to water resource management and water disaster

Generally, school administrators and teachers found that teacher training curriculum is an important tool to make educational progress in the desired direction by guiding teacher preparation. Most of the informants agreed that the integration process of water resource management and water disaster begins by reforming teacher training in order to get high quality teachers. This includes the following important features: 1) a minimum of teacher training in courses; 2) passing a test of knowledge and teaching skills on how to integrate water resource management and water disaster in all subjects to be taught in the secondary school curriculum, as appropriate; 3) teaching practice and experience, and 4) teacher training manual as guidelines of integration water resource management and water disaster as requirement for full teacher certification. Majority of the informants rated the teaching and learning problems related to water resource management and water disaster was at moderate level while the teaching and learning requirements for water resource management and water disaster were at high

level. To summarize the need of having the teacher training curriculum framework was found to be high. Moreover, most of the informants moderately agreed that there is a possibility of developing the teacher training curriculum framework.

In addition, all the 21 informants at Phase 1 indicated that the learning areas of water resource management and water disaster should cover seven themes namely water, water resource, water resource management, disaster management, proactive approach for managing water resource management and water disaster, local wisdom on resource management, and definition of water resource management and water disaster terms. On top of that, a contextual finding revealed that most of the teachers preferred to have five days' workshop. On the other hand, teachers also indicated that they need more knowledge and skills on how to design learning units and assessment on water resource disaster as well as information about community learning resources on water disaster.

Qualitative findings from the tryout the developed curriculum framework and teacher training manual

From the five teachers interview findings showed that a return of teachers to the educational setting. This boosts that issues related to the teaching profession namely the work and action of teachers are again valued and teacher role is recognized as central. All the five teachers emphasized the idea of lifelong learning, the reflective role of teachers as a constant researcher, and the importance of collaborative cultures, through teamwork, monitoring, supervision and evaluation of teachers, among others. These requirements involve the restructuring of teacher training manual. Thus recognition is essential to rethink training policies and build a policy that is consistent and that empowers teachers with knowledge, attitudes and values as well as the acquisition and development of crucial skills to integrate the water resource management and water disaster knowledge in their teaching and learning. In this regard, findings revealed that the need to implement teacher training to promote new forms of collaborative cultures together with strengthening the personal dimension and public presence of teachers.

Quantitative findings on the efficiency of the teacher training curriculum framework

After a five-days training workshop, the 28 teachers were trained using the developed teacher training curriculum framework, they were evaluated based on their abilities to integrate water resource management and water disaster in their teaching and learning process. Results indicated that all the 28 teachers were able to write learning units and lesson plans on water resource management and water disaster. A total of five out of the 28 teachers produced a high standard of teaching material (mean = 3.54) and the remaining 23 teachers produced the teaching material at good level (mean = 3.35). Moreover, all the 28 trained teachers achieved posttest scores at 70 percent which was the passing grade. There was a significant difference between the experimental group who attended the developed teacher training curriculum on water resource management and water disaster content compared to control group who did not attend the developed teacher training curriculum in the aspect of knowledge about how to design a learning unit on water resource management and disaster. Table 1 shows the Science teachers' achievement after the teacher training workshop compared to teachers who did not attend any teacher training workshop. Posttest scores for the experimental group has improved tremendously with the mean score difference from the pretest as 12.29 (40.21-27.92) while posttest of the control group has just slightly improved with the mean score difference from the pretest as 2.39 (29.92-27.53).

Table 1. Pretest and posttest results of Science teachers before and after the five-days teacher training workshop

Group	Pretest scores			Posttest scores		
	n	M	SD	n	M	SD
Experimental	28	27.92	4.29	28	40.21	3.39
Control	28	27.53	3.32	28	29.92	2.58

Note: The maximum score is 50

Table 2 below indicates there was a significant difference between the experimental group and control group in terms of their knowledge and skills using learning unit of water source and natural disaster content to integrate into their learning units and lesson plans. Paired sample t-test was used as a statistical procedure to determine whether the mean score difference between the two sets of observations (experimental and control groups) is

zero. In this paired sample t-test, each teacher or subject was measured twice, resulting in pairs of observations. The application of paired sample t-test was suitable for this case control group design. Since researchers were evaluating the effectiveness of the five-days teacher training workshop using developed water resource management and water disaster curriculum framework, researchers considered this approach to measure the performance of a sample of 28 Science teachers before and after completing the training workshop, and analyzed the differences.

Result showed a statistical significance difference which was determined by looking at the p -value ($p < .01$). The p -value gives the probability of observing the test results under the null hypothesis. The lower the p -value, the lower the probability of obtaining a result like the one that was observed if the null hypothesis was true. Thus, a low p -value indicates decreased support for the null hypothesis. The cutoff value for determining statistical significance in this study was ultimately decided as a value of .01. This corresponds to a 1% (or less) chance of obtaining a result like the one that was observed if the null hypothesis was true. Paired sample t-test finding concluded that there was a significance difference between the experimental and control group at significance level of 0.01.

Table 2. Comparison posttest results after the teacher training between the experimental and control groups

Group	Posttest results			MD	t	p
	n	M	SD			
Experimental	28	40.21	3.39	10.29	-12.769	0.00
Control	28	29.92	2.58			

$p < 0.01$

A one-way between students ANOVA was conducted to compare the effect of experimental learning utilizing water resource management and water disaster curriculum framework and conventional learning curriculum on their achievement in large, medium, and small school sizes. Results revealed that there was students from the experimental group had a much higher learning achievement than the students in the control group, with a statistically significant difference at the $p < .01$ level. However, there was no significant difference among students in the control group in relation to their school sizes. In other word, there was not a significant effect of school sizes on students' achievement at the $p < .01$ for the three conditions [$F(2, 65) = .99, p = .37$]

Table 3. One-way ANOVA findings of the experimental group in large, medium, and small school sizes

Sources	df	SS	MS	F	p
Between groups	2	25.86	12.93		
Within groups	65	849.13	13.06	.99	.37
Total	67	875.00			

DISCUSSION

This study found that teacher training curriculum framework for implementation of preventing and coping with dangerous conditions during water disaster management would help the teachers obtain the knowledge and skills on how to teach their students to cope more effectively during a disaster. In addition, findings of this study revealed that successful collaboration between school educators and communities on water resource management can be voluntarily developed by accumulating knowledge and passing on experiences and lesson learned. Results of this study are in accordance with Sangthong and Rinthaisong (2015). Santhong and Rinthaisong found that collaboration between Hullllng Sub-district Administration Organization and the Hulong communities on flood management, based on the disaster management cycle and factors which contributed to successful collaboration.

The developed curriculum framework covers various topics namely capable administrators, effective communications, capacity building, knowledge development, public relations, motivation for people, cultural activities encouraging safety, flood simulation, and improved accountability. The teacher training which utilized

the developed curriculum framework would help the teachers to prepare their students to cope with and be prepared for water disaster; collaboration can be voluntarily developed by the Local Administrative Organizations and the local people. As a result, teacher training manual should be an integral part of the curriculum development stage. Results of the study indicated that teachers are able to adjust their teaching to be aligned with the curriculum and update their knowledge and skills as well.

Teachers were found to be satisfied with the five-days workshop which seemed to provide sufficient knowledge and skills on how to design learning units and assessments on water resource management and water disaster as well as information about community learning resources on water disaster. According to Goodson (2000), a training model was a balance of being external to school and a personal mission to teachers. Moreover, the results of this study showed that there was no significant difference between groups on the pretest before the intervention. However, after the intervention, students' achievement in the experimental group, were significantly higher than the control group. On this line of reasoning, the developed curriculum framework is found to have a more significant effect on the overall students' achievements than the conventional curriculum framework. The results of this study are found to be consistent with several previous findings (Silanoi, Phitak, Nethanomsak, & Sararattana, 2015; Sittisomboon, 2003).

Since the developed teacher training curriculum framework with integration of water resource management and water disaster indicated there was a significant different effect from it, great emphasis has to place on Science teachers to use the developed curriculum framework to improve students' knowledge and skills to cope with the water disaster. With the passage of time, the importance of Science teachers' teaching styles is being rolled-out perhaps and they are taking initiatives to improve their learning units and lesson plans thus upgrading students' achievements.

CONCLUSION

The education system has to always respond to certain social demands and challenges; it reflects some ideological paradigm of a given period. Schools as educational institutions shape the fundamentals of the nation view of future citizens. As societies undergo a value shift, so the requirements for the education system also change gradually. The higher priority according to disaster risk management in international discussion mandates its assimilation in much closer development collaboration. The issue should be mainstreamed in national and local development strategies and policies through specific measures and activities. To enable people to be aware of and to act responsibly with regard to the dangers which can affect their safety, they must have knowledge, understanding, and recognition of the importance of good safety practices as well as understanding the consequences from a lack of such measures.

Procedures to help develop an understanding require local administrative organizations collaborate with school community to provide knowledge and training session by an expert or experienced teachers responsible for managing the process. If this paradigm of collaboration is regularly implemented, the villagers will develop safety consciousness automatically. Consequently, water resource management seeks to attain a mutual beneficial collaboration between the interests of local administrative organizations and school community to promote community prosperity and to improve the people's well-being through the best possible use of water resource.
